W. W. Russell, druggist, Canonsburg, Pa., writes: I handle your medicine, PERUNA. I have sold immense quantities of it, and consider it a staple article. I have a great many customers who think there is no medicine like it for a tonic or for building up the system. I recommend it as a safe and reliable remedy."

Calista Fisher, Malvern, Ohio, writes: "I take pleasure in recommending the use of PERUNA and MANALIN to any one afflicted with any form of lung or bronchial trouble. I have been for some time afflicted with a very troublesome cough, but a few bottles of PERUNA entirely cured me."

Estate of Naaman L. Shank, dec'd.

THIS IS TO GIVE NOTICE—That the subscriber, of Garrett county, hath obtained from the Orphans' Court of Garrett county, in Maryland, Letters of Administration on the personal estate of

NAAMAN L. SHANK,

late of Garrett Co, Md., dec'd. All persons having claims against the deceased are hereby warned to exhibit the same, with the vouchers thereof legally authenticated, to the subscriber, on or before the 12th day of December next; they may otherwise by law be excluded from all benefit of said estate. Given under my hand this 3d day of June 1885.

SARAH E. SHANK,
6 6 3t Administratrix.

ROAD PETITION.

This is to give notice that application will be made to the County Commissioners of Garrett county, after thirty days from the first publication of this notice, for the appointment of viewers to locate a public county road, beginning at or near the residence of Mrs. Seabold, and running by the most practicable route to the Oakland and Ryans Glade road at or near John A. Delawder's residence.

GEORGE D. WHITE,
B. REYNOLDS,
5 9 3t JAMES SEABOLD.

To Dyspeptics.

The most common signs of **Dyspepsia, or Indigestion,** are an oppression at the stomach, nausea, flatulency, water-brash, heart-burn, vomiting, loss of appetite, and constipation. Dyspeptic patients suffer untold miseries, bodily and mental. They should stimulate the digestion, and secure regular daily action of the bowels, by the use of moderate doses of

Ayer's Pills.

After the bowels are regulated, one of these Pills, taken each day after dinner, is usually all that is required to complete the cure.

AYER'S PILLS are sugar-coated and purely vegetable—a pleasant, entirely safe, and reliable medicine for the cure of **all disorders of the stomach and bowels.** They are the best of all purgatives for family use.

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.

tf 24 DAVID LITTLE.

AYER'S Ague Cure

contains an **antidote for all malarial disorders** which, so far as known, is used in no other remedy. It contains no Quinine, nor any mineral nor deleterious substance whatever, and consequently produces no injurious effect upon the constitution, but leaves the system as healthy as it was before the attack.

WE WARRANT AYER'S AGUE CURE to cure every case of Fever and Ague, Intermittent or Chill Fever, Remittent Fever, Dumb Ague, Bilious Fever, and Liver Complaint caused by malaria. In case of failure, after due trial, dealers are authorized, by our circular dated July 1st, 1882, to refund the money.

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

NEW ADVERTISEMENTS.

FROM THE PRESIDENT

OF BAYLOR UNIVERSITY.

"Independence, Texas, Sept. 26, 1882.

Gentlemen:

Ayer's Hair Vigor

Has been used in my household for three reasons:—

1st. To prevent falling out of the hair.
2d. To prevent too rapid change of color.
3d. As a dressing.

It has given entire satisfaction in every instance. Yours respectfully,

WM. CAREY CRANE."

AYER'S HAIR VIGOR is entirely free from unpleasant, dangerous, or injurious substances. It prevents the hair from turning gray, restores gray hair to its original color, prevents baldness, preserves the hair and promotes its growth, cures dandruff and all diseases of the hair and scalp, and is, at the same time, a very superior and desirable dressing.

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

DR. JOHN BULL'S Smith's Tonic Syrup

FOR THE CURE OF

FEVER and AGUE

Or CHILLS and FEVER,

AND ALL MALARIAL DISEASES.

The proprietor of this celebrated medicine justly claims for it a superiority over all remedies ever offered to the public for the SAFE, CERTAIN, SPEEDY and PERMANENT cure of Ague and Fever, or Chills and Fever, whether of short or long standing. He refers to the entire Western and Southern country to bear him testimony to the truth of the assertion that in no case whatever will it fail to cure if the directions are strictly followed and carried out. In a great many cases a single dose has been sufficient for a cure, and whole families have been cured by a single bottle, with a perfect restoration of the general health. It is, however, prudent, and in every case more certain of success, that its use is continued in smaller doses for a week or two after the disease has been checked, more especially in difficult and long-standing cases. Usually this medicine will not require any aid to keep the bowels in good order. Should the patient, however, require a cathartic medicine, after having taken three or four doses of the Tonic, a single dose of BULL'S VEGETABLE FAMILY PILLS will be sufficient.

BULL'S SARSAPARILLA is the old and reliable remedy for impurities of the blood and Scrofulous affections.

WHAT IS LIFE WITHOUT ASPIRING.

I.

Must the forms divinely fairest
Perish here to live no more?
Must the heart's rich wealth and rarest
Find beyond this earth no shore
Where life's tangled web is woven
On the fields of fadeless bliss,
Where they'll tread God's peerless heaven
That no stainless soul shall miss?

II.

Must the years that fancies brighten
Brighten but to pass away?
Must the raven hairs that whiten
Guide the fingers of decay?
Must the joys of earth all teeming
With its sunshine and its shade,
Be the transient things and seeming—
Seeming only born to fade?

III.

For the sweetest voice at morning
May be stilled ere close of day,
And the fairest blossom blooming
Soon must cast its bloom away;
And the dream of life's first dreaming
Rich in hope and tender years,
With its rosy tints and gleaming
End in sorrow and in tears.

IV.

What is life without aspiring?
What is age without its youth?
What is rest without the tiring?
What is fancy without truth?
What is man without the dreaming
That divinest dream of all—
That life's flowers that fade in seeming
Bloom where shadows never fall?

V.

For a voice comes with the morning
And a light at eventide,
Life a prophecy and warning
From across the other side;
And life's flowers that bloomed beside us
Seem to bloom beyond decay
When the mists that now divide us
Are transformed to endless day.

—*Kansas City Journal.*

LOCUSTS.

THEIR CHARACTERISTICS AND RAVAGES IN THE EAST.

From our earliest years we have all been familiar with Eastern tales in which the locust figures as the destroying angel; the overwhelming invading army which advances with irresistible might, with a sound "like the noise of chariots on the mountains—like the noise of a flame of fire that devoureth the stubble." Onward they march in dense columns, ravaging whole provinces, as in the days when the Hebrew prophet described their withering advance. "A fire that devoureth before them, and behind them a flame burneth. The land is as the garden of Eden before them, and behind them a desolate wilderness; yea, nothing shall escape them."

As in those days of old, the Syrian locusts "ran upon the wall, climbed upon the houses, and entered at the windows like a thief," so, in later days, travellers in Northern Africa have witnessed locust swarms which they compare to clouds of dense smoke, darkening the sun so that its brightest rays could cast no shadow, and which, alighting on some green crop, have devoured every blade in the field, and, marching onwards, have climbed trees, walls and houses, seeking what they might devour, and sometimes consuming the very bark of trees and shrubs.

Nor has Europe been exempt. From time to time the great army of locusts has appeared in one country or another in such appalling force as to render the visitation a historical calamity. Such was the plague of locusts which appeared to Russia in the year 1650, and thence overspread Poland and Lithuania in multitudes so incalculable that the damage sustained by these countries was beyond reckoning; the surface of the country seemed as if covered with a black cloth; the very trees bent beneath their weight; and when at length the locusts had lived their little span, the earth was in many places covered to the depth of four feet with their corpses. Even in the south of France, rewards are occasionally offered for the collection of locusts' eggs, while the live insects are caught wholesale by collecting them in sacks for destruction.

Happily their foes are many. Frogs lizards and serpents, owls, eagles, buzzards, bustards, hawks, ravens, desert-larks, wheat-ears and other carnivorous and insectivorous birds do their best to diminish the locusts, but with small results. In Smyrna and other parts of Asia Minor the russet-starling seems possessed with an insatiable desire to kill locusts, not for food, but for sheer sport. It goes on killing till its beak becomes so clogged with locust juice that it has to fly to the nearest water to wash, and then returns to the fray with renewed vigor. Another deadly foe is the grub of the bee-by, (*Bombylide*), which feeds on the locusts' eggs; and there is also a parasite which attacks the living insect.

Lady Anne Blunt tells us how in Northern Arabia she rode through flocks of ravens and buzzards sitting on the ground gorged with locusts. The camels munched them up with their provender. Her greyhounds ran snapping after them all day long, eating as many as they could catch; and, on examing the stomach of a hyena shot by her husband, it was found to be full of locusts and gazelle. She says the Bedouins often give them to their horses, and at the time of her visit to Arabia many tribes had no food whatever but locusts and camel's milk.

Lady Anne mentions them as being a regular portion of the day's provision in camp. When first she tasted them, in December, she pronounced them fairly good, but by February she had decided that they were an excellent article of diet, the red locusts being better eating than the green ones. She was uncertain whether the red are the females and the green the males, or whether all were at first green, and became red as they advanced in age. It seems probable, however, that she is describing two distinct varieties, known in Cyprus as the large green *Vrouchos* and the still larger light brown *Scarnos*. Their flavor is more like that of green wheat than of either fish or flesh, and in the daily rations they were considered in a measure to take the place of vegetables. After trying various methods of cooking it was voted that they were best when plain boiled; their long legs were then pulled off, and they were held by the wings, dipped into salt, and so eaten with much relish. They are large, handsome insects, very like grasshoppers, but three inches in length, or four inches measuring from the head to the toe of the closed wings. The best time to catch them is in the morning, when they are half-benumbed by the chill of night, and their wings are damp with dew, so that they cannot fly. Then they lie thickly clustered under every bush that can afford them shelter, and can easily be captured and shovelled into baskets. But when the sun has warmed the earth and dried their wings, they are all on the alert, and spring away at the approach of the hunter, who nevertheless can often strike them down with sticks as they fly. On December 31 Lady Anne records that the previous night had been so cold that all the locusts were dead, and the small birds of the desert were holding high festival.

I myself have seen considerable numbers of locusts winging their flight across the Red Sea, from Arabia towards Egypt. Many fell on the deck of the vessel in which I was sailing. At another time, when crossing the Himalayas, overlooking the valley of the Sutledge, I remarked a tremulous appearance in the atmosphere, as of a mirage. On further investigation, I ascertained that this strange quivering was produced by the glancing of light on the myriad wings of a great swarm of locusts, which were passing over the valley like a cloud. But those glimpses of the locust hosts were as nothing compared with the vast flights described by my brother Roualeyn, (R. Gordon Cumming,) in the interior of South Africa. He was standing in the middle of an immense plain when he first noticed their approach. On they came, like a snowstorm, flying slow and steady, about a hundred yards from the ground. He stood looking at them until the air was darkened with their masses, while the plain on which he stood became densely covered with them. Far as the eye could reach—east, west, north, south—they stretched in one unbroken cloud, and more than an hour elapsed before their devastating legions had swept by.

Not long afterwards he fell in with another swarm. He was marching through a heavy sandy country of boundless level plains, covered with rank yellow grass, varied with detached clumps of thorny mimosas. He came upon a swarm of locusts which had alighted to rest for the night on the grass and bushes. They lay so thick that they covered the large bushes, just as a swarm of young bees covers the branch on which it pitches. He could easily have collected enough to fill all his large wagons, the piercing cold of night, with white hoar frost, having rendered them unable to take wing until the sun should restore their powers.

He met a party of natives carrying heavy burdens of them on their backs, and his hungry dogs made a fine feast of those they captured for themselves. Having some difficulty at that time in procuring sufficient food for all his dogs, this locust swarm proved a most valuable addition to the larder. He took a large blanket and spread it under a bush, the branches of which were bent to the ground with the mass of locusts which covered it, and having shaken the bush, there fell on to the blanket more locusts than he could possibly carry. These he roasted for himself, his servants and his dogs. He found that they were highly prized by the natives of South Africa, as affording fattening and wholesome food to man, birds and all sorts of beasts—cows and horses, lions, jackals, hyenas, antelopes, elephants, etc., devour them.

The following morning, soon after sunrise, he looked back, and saw the locusts stretched to the west in vast clouds resembling smoke, but soon afterwards the wind, veering round, brought them back towards him, and they flew over his head, actually darkening the sun for a considerable period.

Equally wonderful is the account of a locust invasion of Syria, as related by Dr. William Thompson. He tells how, in the early spring, a flying squadron—the pioneers of the vast army—passed over the land, leaving it thickly sown with their eggs, lying in little masses, cemented together, scattered all over fields, plain and desert ground. This done, these harbingers of woe vanished; but within a couple of months the very dust seemed to awaken to life and to creep. Soon these infinitesimal moving atoms developed into minute grasshoppers, who began their destructive existence, all moving forward in one general direction, a creeping, jumping mass of living particles.

Dr. Thomson describes his first glimpse of this phenomenon. He was riding near Fuliyeh, when it struck him that the side of a hill had a peculiar appearance. Riding up to it, to his amazement the whole surface became agitated, and began to roll downwards. His horse was so frightened that he had to dismount. Then he perceived that this animated dust was composed of minute locusts, so young that they could not even jump; but in their infantile alarm they rolled over and over, producing an effect like the movement of fluid mortar.

On another occasion he rode through a district where the work of extirpation was going on. It was near the Plain of Acre, and a swarm of locusts had overrun the whole region. The Governor of Kabul had summoned every man, woman and child in the neighborhood to lend their aid in the common cause. The foe had not yet grown their wings, and being unable to fly, were compelled to run in whatever direction they were driven. So the people formed, a vast circle, beating the bushes and shouting, in order to frighten the insect host and drive them towards an isolated hill covered with dry grass. Soon the hill became black with the countless myriads which thronged it. Then the grass was set on fire in different places, and the flames, fanned by a strong breeze, soon spread over the whole hill, filling the air with an overpowering smell of roast locust. The same operation was performed at many different points in the neighborhood with very excellent results.

Some years later Dr. Tomson made a still more intimate acquaintance with these gentle destroyers. He was lying at 'Abeih, on Mount Lebanon, when an alarm was raised that incalculable swarms of young locusts were marching up the valley towards the village. The inhabitants turned out to endeavor, if possible, to turn aside their line of march. This they soon found to be altogether futile. The whole face of the mountain was black with the closely serried ranks, which advanced steadily like a well-disciplined army. There were at the wingless stage, and of the size of average grasshoppers. Nothing checked their steady onward progress. Trenches were dug, fires were kindled, thousands were slain. Still fresh hordes pressed on in bewildering multitudes. Right up the mountain they advanced, scaling rocks and walls, hedges and ditches, the corpses of the slain only serving as bridges to facilitate the progress of the new-comers. Even when the foremost ranks reached the palace of the Emir they did not turn aside to avoid its walls, but climbed straight up and went over the other side. Thus they scaled every house in the town, always going straight ahead, regardless of all obstacles. If it be true that "straightforward makes the best runner" in life, we might, perchance, find worse examples than the locusts. Hoping at least to be able to protect his own little garden, Dr. Tomson hired a number of laborers to keep up fires, and to remain on watch, beating the locusts off the walls with branches of trees. For some hours this struggle was kept up, but as the irresistible army continued to advance in ever-increasing multitude, they gave up the effort in despair, and surrendered to the conquerors.—*C. F. Gordon Cumming, in Nineteenth Century.*

OAKLAND, GARRETT CO., MD.

THE DRUID'S SACRIFICE.

A thousand years, perhaps, ago, when Britain's mountains rose
There never yet had trod the feet of fierce invading foes,
When Cymric chieftains led their bands in freedom through the vales,
And Cymric bards their triumphs sang among the hills of Wales;
When village harpers tuned their lyres with joy that seldom ceased,
Where all were happy and content, while flocks and herds increased.

There came a messenger in haste, who served the Druid priests,
To bid the people all attend the greatest of their feasts,
Then gathered they from near and far to Mona's sacred isle,
Where lived the Oracles beyond dark Menai's deep defile,
And where the mystic circles built of sacred Cromlech stones
Had witnessed many a sacrifice, heard many a victim's groans.

So when the day at last appeared, in thousands gathered 'round,
Behold the multitude arrayed upon the hallowed ground;
Three pillared rings of mighty stones around the altars swept,
While leaf-crowned priests with watchful care the fires upon them kept;
Far out beyond the mountains rose, with cloud-capped summits free,
And like a chanting choir was heard the anthem of the sea.

Then came the oak-crowned Druid priests, with slow and solemn tread,
A white-veiled maiden with her guards before them slowly led,
While harps and reeds, with silver tongues, in sweetly solemn trills,
Brought echoes of the death-song back in answers from the hills,
With garments white as drifted snow and slow majestic stride,
The patriarch of the Druid chiefs was praying at her side.

Then, as each watcher, stilled and hushed, bent with uncovered head,
The patriarch, with reverent voice, the sacred mandate read,
Which told that she, their maiden choice, was beautiful of face,
From every blemish free and clear, and filled with every grace;
All this reported by those priests, the fire-selected three,
Who watched their victim since the maid was rescued from the sea.

Then came the moment when her form was lifted from the ground;
Her feet and forehead swift and safe upon the altar bound;
Close-veiled and gagged in dumb despair upon her bier she lay,
As priests intoned their solemn chants and people kneeled to pray.
Then as a priest with rapid hand her garments tore apart,
The patriarch turned and plunged the sword of Merlin through her heart.

There, as they watched with bated breath the fated maiden die,
The patriarch priest first turned and looked into her glazing eye;
Then, as his form shook like a reed, his features pale as snow,
He fell upon the bleeding form, and with a shriek of woe,
Cried out: "O, God, whom I have served, say this can not be truth,
That this is not the daughter who was stolen in her youth!"

Then, raining kisses on the face, so pallid now and fair,
The while her blood encrimsoned deep his robe and flowing hair,
He called her "Winifred" once more, and kneeling softly there,
Bent down his head upon her breast as if in silent prayer;
The Druids spoke unto their chief, in accents sad and wild,
But he, their patriarch, was dead as she his only child.

They buried them with solemn rites, beside the moaning deep,
There where the waves which brought her home their restless vigils keep,
And many a solemn chant was sung by white-robed Druid priests,
And many a sacred offering made at festivals and feasts.
Long since have passed away those feasts, the Druids and their rites,
The Cymric dynasties and power, the worshipers and knights;
But still against that rock-bound coast the restless ocean moans,
While still unshaken stand the gray and ancient Cromlech stones,
And still the Cymrii by their fires on winter eves beguile
Their children with this legend old of Mona's sacred isle.

—*J. Edgar Jones, in Boston Post.*

JANE CARY'S OUTING.

A Mysterious Dispensation of Providence.

"You'll have to cut your cloth very savingly, Miss Cary, if you calculate to get a good full dress out of eight yards of cashmere!"

"I know it, Mrs. Barker, but I've planned it all, and I can have it made up in this style by using a sham skirt." Miss Cary took up "The Bazar" and pointed to a figure on the pattern plate.

"I was quite a while deciding whether I'd have a basque or a polonaise, and then I was bothered to know whether I'd better have the skirt box-pleated or side-pleated, but I finally settled on this pattern."

"It will be very tasty, too," replied the neighbor, "and those pleats will be worn for a while longer, I think, though the city boarders had some of their dresses made that way last summer."

While Mrs. Barker was speaking she kept rubbing her fingers over the piece of black cashmere which was lying on top of Miss Cary's sewing machine.

"I call that a pretty good piece, for the price, don't you, Mrs. Barker?" Miss Cary asked, as she took one end of the goods in her hands and held it up to the window. "You see it has a blue-black shade, and the filling is beaten up thick and firm."

"It is an excellent piece, if I am any judge; but when are you going to start, Miss Cary?"

"I hope to get off next week, while work is slack. Next month, you know, I'll be driven, for the spring sewing will come in then."

"You'll miss your daughter, Mrs. Cary," said the neighbor, turning to address the mother, who sat in an old-fashioned rocking chair by the stove.

"Yes, but Amandy Wells is coming to stay with me, and I'm glad enough to have Jane go. She's been a trying to get out to her brother Jacob's for ten years, but every time she's made up her mind to go something has happened to keep her home. Last spring I had malary, and wasn't fit to do anything about the house for three months, and the spring before Sam was under the weather and home here for quite a spell. When Jane laid her plans that fall to go, John had his bad luck, and she thought 'twas more her duty to stay and keep her money to help his folks with."

The old lady took up her knitting work and began to pick up some stitches she had dropped.

"The truth is," she continued, "Jane hain't never been nowhere. Always stayed right here and worked and tugged and took care of me."

"If there is any one who deserves an outing it's your Jane," said Mrs. Barker. "Everybody is glad she is going."

"Yes, Jane's earned a vacation, and a good long one, too," the mother replied. "But folks don't always get what they earn in this world, I've found out. Luck always does seem to go agin some folks."

"Don't talk that way, mother," the daughter replied, as she pinned a pattern on to the piece of black cashmere and traced out its dimensions with her scissors. "Don't you believe people's paths are marked out for them?"

"Well, sometimes I do. Jane, and then again I don't. But we can't none of us understand the Lord's dealings with us.

"'God moves in a mysterious way
His wonders to perform.'"

"It's time my dinner was going," Mrs. Barker said, glancing up at the face of the tall clock which stood in one corner of the room. "I'll try to run in and see you again before you go, Miss Cary."

After the neighbor went out Jane Cary pinned the different pieces belonging to the chosen pattern on to the long piece of black cashmere. She turned them around and upside down, all sorts of ways, to save the cloth. She was well used to such planning. She had worked at dress-making for nearly twenty years. She had had a great many small patterns of goods to deal with, and many customers, who knew she would make their small patterns go farther then they could themselves. A new dress was quite an event in Jane Cary's life. She was just calculating in her own mind how long it was since she had had one, when her mother said:

"Come to think of it, Jane, you haint had a new dress for over six years. You turned your black alpaca and made it over three times. It looks real good and will do to wear to save this one for a long spell, yet. And that brown merino you had dyed two years ago—that looks a'most like new. I declare its wonderful how nice they dye things nowadays. We used to have our own dye-pots and color our dresses ourselves when I was a girl, but we didn't get 'em to look as nice as the dyers do now."

While the mother was talking, the dress-maker's scissors were busy cutting out the different portions of the new garment. Jane Cary was going to have an outing, and an outing in Jane Cary's life was as great an event as a new dress. The money to pay the traveling expenses was hidden away in their great-grandmother's blue sugar bowl on the top shelf of the china closet. The same amount had been deposited there for the same purpose a number of times before, but as Jane told her mother, "The unexpected exigencies of the times had occasioned a rush upon the 'Blue Bank' and the deposits had to be drawn out." But now the financial outlook seemed to be a favorable one.

"I won't make Jacob's folks ashamed of me," she thought, as she pinned the pieces together. "If I can't go to see folks and make a good appearance, I'll stay at home. When you visit your relations you want them to feel like showing you off." The little dress-maker laid down her scissors, as she thought how proudly Jacob and his wife would say: "This is my sister, Miss Cary, from the East!"

By Saturday night the dress was finished and the new trunk was packed, for Jane Cary was going to start on the early train Monday morning. There was no settled minister at that time in the New England village, but the services were held regularly every Sunday in the church.

When Jane Cary heard the bells ringing that particular Sunday morning, it seemed to her as if they had never sounded more sweetly. She entered the church, just as the choir arose to sing the morning anthem. She was dressed in her new suit, and all eyes were turned toward her as she walked down the aisle. Everybody knew that Jane Cary was going West the next morning to visit her brother Jacob. She was a great favorite in the village and her friends were so glad that she was going to have an outing.

Deacon Brown read a sermon in a slow, drawling tone, and Jane Cary wondered why he should have selected such a dull, prosy one. She could not get sufficiently interested in it to keep her mind off from the prospective journey. She kept wondering whether she would get into the night train when she changed cars at Grand City, and whether her trunk would have to be rechecked. And then she remembered that she had neglected putting an extra pocket inside her dress to carry her money in. Vividly before her mind's eye came the placard she had seen in the picture of the large depot, and the words printed in capital letters: "BEWARE OF PICKPOCKETS."

When the service was ended, Jane Cary felt conscience smitten to think that she had allowed so many things to distract her mind in the house of the Lord. She began to imagine the possibilities of the train running off the track.

In the evening when she sat with her mother, hearing the messages that were to be given to Jacob's folks, there was a knock at the door. It was the boy from the telegraph office. He handed Jane Cary a dispatch, and as she took it in her hand she trembled violently. It was the first telegram she had ever received. She opened it and read:

"I broke my leg yesterday. Come at once.
SAM CARY."

She paid the boy the money to be collected for the message, and calming herself as best she could, she went back to the sitting-room.

"I'm not going to Jacob's, after all, mother," she said, quietly.

"Not going to Jacob's! What on earth has happened now?"

"Sam has broken his leg, mother, and has telegraphed me to go immediately to Deerfield."

"Broken his leg!" his mother exclaimed. "Well, I never did see such an unlucky fellow as Sam is! It's the strangest thing I ever heerd tell of, just as you was already to start, too! What are you going to do about it, Jane?"

"Make another run on the 'Blue Bank,' of course, and go to Deerfield to-morrow morning, and bring Sam home as soon as I can. Our expenses will be too heavy if we keep him there."

"It's too bad, Jane, too bad. You were awfully set on going to Jacob's this time, wan't you?"

"I've learned not to be disappointed at anything, mother," she replied, calmly.

Before she went to sleep she wrote in her diary: "Delays teach patience and care teaches faith, and press of business makes us look out for minutes to give to God, and disappointment is a special message to summon our thoughts to heaven. If, when they all come, we would seek not to run away from them, but to learn God's lesson in them, we should soon leave off calling them trying."

The next morning the villagers were standing in the store, the postoffice and in the street, telling each other that Sam Cary had broken his leg, and his sister Jane wasn't going West after all. An old farmer, who heard the news as he was going into the postoffice for his mail, said:

"Pity it hadn't been Sam Cary's head. He isn't worth nothing to nobody. He's so lazy that he wont do a good day's work once in a year. It's amazing strange that such critters are allowed to live in the world to hinder and torment other folks, when there are so many that it seems as if you couldn't spare, nohow, are taken out of it. It beats my theology, now, I tell you."

"I'm sorry for Jane," said the postmaster, as he handed the farmer's mail through the delivery window. "She's had a very hard time, and she is always so patient and cheerful. I expect she helped her brother John get his start again."

Meanwhile Jane Cary had started on her way to Deerfield, three stations beyond. She had unpacked her trunk the night before, folded up the new black cashmere dress, and pinned it carefully in a clean linen towel, and laid it in the bottom bureau drawer.

"I'm glad to see you, Jane; I knew you'd come," Sam said, as his sister came into the room where he was lying. "I've had bad luck again. It beats all how I done it. You know I was working for Captain Higgins, at the south end of the town. Well, me and him couldn't agree, nohow. He's dead set on getting his help up at five o'clock in the morning, and I won't do that for any live man. I went on the mountain chopping, but its hard work, chopping is, and I never had no strength in my arms, you know. I was just going to throw up my job when a tree fell on me, and here I be."

Jane Cary only said, "I am so sorry, Sam."

There was nothing else to be said. She had advised and expostulated with Sam all of his life. She felt that her efforts heretofore had been in vain, and that words in Sam's case would only be wasted.

Dr. Crawford, the surgeon, watched her as she quietly moved about doing such things as were necessary for her injured brother's comfort. There are some people, and Jane Cary was one of them, whose high qualities enable them to meet the contingencies of life calmly, and who have a clear vision as to the best methods of dealing with them. As the sister planned the removal of the patient that afternoon, and talked over the probabilities and possibilities of his case, the surgeon could not help contrasting her strength of character with that of the weak, vaccillating brother.

"One of the women whom Emerson speaks of, who do not need to lean, but to clasp hands in the journey of life," was the mental encomium he passed upon Jane Cary, as she stood before him.

"Would it be convenient for you to superintend my brother's removal in person, Dr. Crawford?" she asked.

"I can arrange to do so, if you desire it, Miss Cary," he replied.

"I think it best if you can do so without interfering with your duty toward your other patients," was her rejoinder.

Sam Cary bore the journey well, better than Dr. Crawford anticipated, but he had sustained a compound fracture, and it was going to be a long pull, the surgeon said.

Days and weeks went on. The sewing machine's click, click, click, was heard from early morn until late at night, but the little woman who was its motive power, worked with a will and a thankful heart.

"In every mysterious dispensation of providence there was always great mercy," she said, and the unexpected early arrival of some of the city boarders had brought her so much business that the money necessary to tide Sam over his misfortune was already provided for. Meanwhile the patient sister waited on the brother, whose nature could not see anything sacrificial about her devotion. He was even very exacting and irritable at times, but this was borne with patience and in quietude by the high-minded, noble woman who cared for him.

Dr. Crawford came often and was very attentive to his patient. Jane wished he would not make quite so many visits; she dreaded the heavy bills that must be presented in the future. It was for this that the sewing machine kept up its tireless round of wheel. Sometimes Sam groaned because of its monotonous tones and wished Jane would move it to a remote corner of the house, or put her customers off until his nerves were stronger.

Dr. Crawford was a bachelor. He had just passed his forty-fifth birthday. He had not married because of that grave amid the clump of pines in the cemetery of his native village. Twenty years before a lovely girl had been laid away to rest there, and the light of his life had been buried in that grave. But now, another woman had crossed his path, a woman who could clasp hands with him during the rest of his journey, a woman whom he could love and cherish as his own.

Sam had begun to get around on the crutches Dr. Crawford had brought him, and the surgeon said one evening as he bade him good-bye:

"It will not be necessary for me to come here again professionally, Sam. You'll be all right in a few days more."

"I thank you very much, Dr. Crawford," Jane Cary said, as she followed him to the door. "You have been very attentive to my brother. I would like my bill. I think I can settle it to-night."

"I am sure you can, Miss Cary, but I don't know as you will when you find what my terms are."

"I expect you have a large bill against me," she replied. "You have been very faithful to my brother's case," and she took out her pocketbook and placed her finger on the clasp.

"Not any of that sort of payment," he said, placing his large, strong hand over Jane's small, white one. "Not that, Jane. Your love is the compensation I want."

The color came to the face of the little woman as she stood in the doorway.

"What do you mean, Dr. Crawford?"

"Just what I say. I want you, you, Jane Cary, for my wedded wife, for better for worse, for richer or poorer, in sickness and in health, to love and to cherish, 'till death us do part."

"Who'd a thought, Jane, when you was making that new cashmere, that you was sewing on your wedding journey dress," said the mother, a week afterwards, when the trunk had been reopened, and Jane Cary was getting ready to go to Jacob's on her wedding tour. "Nobody knows what's before 'em, nobody. It's the Lord's doings, of course, but it's marvelous in our eyes."—*Susan Teal Perry, in Chicago Interior.*

EATING.

The Mode of Satisfying the Appetite in Different Countries.

With regard to the mode of eating, we English as a people certainly stand highest; and frequent as our intercourse with Continental nations now is, the latter still often express surprise at what they call the "elegant" way of eating peculiar to the English. Much as we have borrowed from our neighbors *d'outre manche*, none of us would surely care to imitate the Frenchman swathed in his napkin—or, rather, young tablecloth—voraciously devouring each course as it makes its appearance, and winding up by vigorously cleaning his plate with a piece of bread, and afterward swallowing the latter as a *bonne bouche*. Nor can we, alas! say anything more flattering for their neighbors, the Germans. I recollect once dining with one of the ladies-in-waiting at a German court in her own private rooms. I naturally began eating my dinner in the way I had always been accustomed to do—that is to say, cutting my meat, and carrying the piece to my mouth on my fork with the left hand. My friend, on the contrary, as is usual among German and French people, cut her meat into small pieces, then laid down her knife, and, taking her fork in her right hand, rapidly made the morsels disappear. We had been thus engaged for about five minutes, when she suddenly turned to me with a good-natured smile saying:

"Pray don't take so much trouble to eat with your left hand. It would be a different matter if her Royal Highness were here. I have to eat with my left hand when in her presence, but it is very troublesome."

I could not help laughing as I replied that I did not know how to eat in any other way. Strange to say, that very Royal Highness, although considering it the right thing to use her fork with her left hand, I subsequently saw demolishing with extreme zest a large roll which she plunged whole into a cup of hot coffee, and carried streaming to her mouth, biting off a huge piece of it, and repeating this process until the roll had entirely vanished.—*London Graphic.*

CALVES.

How They May Be Fed With Skimmed Milk at a Profit.

The calf can not be put in condition for sale in as short a time upon skimmed as upon new milk, but the time can be shortened by skillful feeding. Some of the errors most prevalent are: First, feeding the milk cold; second, feeding too much at a time; third, in feeding only twice per day; fourth, in feeding the skimmed milk alone. The young calf is not prepared to take cold milk into the stomach and warm it up. When the calf is taken from its dam and fed artificially, care should be taken to imitate its natural diet as near as it can conveniently be done. The milk should always be warm, and, as the cream has to be taken off very closely, this should be partially replaced by a spoonful of boiled flaxseed. The oil in this seed is easily digested, and practically replaces the cream to a certain extent. This flaxseed may be obtained in all the dairy districts, and costs but a trifle for each calf. It must be fed in small quantity, and it will keep the calf's stomach in a healthy condition. The calf should be fed three times per day at least, and the feeder must have his eyes open, and feed the calf but a small amount at a time. Underfeeding is better than overfeeding. If the calf appears to require more, increase the food very gradually. Close observation by the feeder is very important. We know some calf feeders who regularly make their calves worth eight dollars at seven to eight weeks old. They estimate the skimmed milk at one dollar per week for each calf. And a skillful feeder, on this plan, will have his calves about as uniform as if they sucked their dams. Skimmed milk will bring an important return when properly managed.—*National Live Stock Journal.*

—D. H. Moffatt, who is President of the First National Bank of Denver, an institution whose deposits are over $3,000,000, was approached by Ferdinand Ward about a year ago with a request for a loan based on promise of enormous profits. Mr. Moffat, in speaking of it the other day, said: "Ward wanted $100,000, and said he could make for me $50,000 on it in sixty days. I told him I didn't know why he should be so good to me; that I had never done anything for him. I guess he understood me, for he went off. I never took any stock in the fellow. He was too white-livered. I never tie up to a man when I can see through his ears, as I could through Wards."—*Chicago Tribune.*

—Pencil marks are made indelible by washing them with well-skimmed milk diluted with an equal quantity of water.—*Boston Budget.*

CROWDED TOWNS.

Serious Questions That are Pressing for Solution.

It is easy to understand why towns and cities are becoming overrun with an extra number of laborers, mechanics, tramps and idlers. At the price of farm produce farmers can not pay as high wages as are offered laborers or clerks in the towns. The young man in the country who is toiling ten or twelve hours per day, and out of the reach of saloons, billiard halls and other places of evening amusement, is not content to work for twenty dollars per month, when he learns that some of his young acquaintances are clerking in town for fifty or sixty dollars per month, with all the advantages of city life. He is uneasy and disappointed with farm life, and rashly breaks loose from home and friends and goes to the town. He probably fails in getting employment, and goes to the next town, or to some large city, where he thinks he has better opportunities of employment. He has but little money, which is soon gone. He has to abandon respectable boarding-houses and respectable company. He is thrown among the worst characters, who are shrewd and plausible in schemes for making or getting money easier than work on a farm, or even by clerking. The consequences are honest young men are frequently led astray, first apparently in honest enterprises, then by those of more doubtful propriety, until he is a tramp or a criminal. In this way the ranks of the idle and vicious are constantly recruited, and the towns are full of them, which the police are not able to detect or subdue.

The cities are already, in all departments of industry, over supplied with help. Chances to obtain lucrative or large salaries are scarce, and constant employment for the common laborer is almost impossible to be had. Public improvements do not employ half the force they did three to five years ago. The depressed price of farm produce will not justify paying higher wages or employing more hands on the farms. The reduction of the tariff two years ago to the amount of about $10,000,000 takes that amount yearly from the laborers, artisans, mechanics and manufacturers of this country and gives it to that class in Europe. These things are creating uneasiness, restlessness, and idleness. And idleness is the parent of vice and crime. It is a difficult problem in political economy to solve.

Crowding to towns for higher wages, abandoning the frugal and honest industry of the farm, is rapidly recruiting the army of idle men who will become desperate in sentiments and actions, and thinking "the world owes them a living," whether they make an honest effort to earn it, they will imbibe the communistic principle, and make war on capital and economic industry. These are serious questions to be solved in the future.—*Iowa State Register.*

A SUCCESS.

One School of Journalism That Is Unqualifiedly Successful.

One of the schools of journalism has become a great success. During a number of years many attempts to teach the art of journalism were made, but the results were so far from being satisfactory that with one exception they have all been failures. This one college, realizing the impracticability of the curriculum previously adopted, threw it aside, employed a man who had, during many years, been engaged in active newspaper work, and introduced a course of study, the achievements of which have proved that journalism can be taught in colleges. The following is a report of the exercises through which a graduating class was conducted:

"What is a law student?"

"A rising young lawyer."

"What is a medical student?"

"A promising young doctor."

"What is a young member of the Legislature?"

"A silvery-tongued orator."

"If a man should marry an ugly woman, how would you write up the affair?"

"I should speak of the beautiful and accomplished bride."

"How would you speak of a loafer?"

"I should refer to him as our enterprising fellow townsman."

"What is a drummer?"

"The handsome and popular So and So."

"In writing up the commencement exercises of the female college what would you say?"

"I would say that the beautiful young girls, soon to become ornaments of society, were charming in their feathery array!"

"If a countryman were to bring you a lot of hard apples what would you say?"

"Our farmer friend, Colonel So and So, honored us with a call yesterday. Aside from giving us the pleasure of his own genial self, he laid upon our table a collection of the most choice apples we have ever seen. Come again, Colonel, when you have longer to stay."

"Correct. How would you speak of a little girl?"

"Would call her a fairy."

"What would you say of a boy?"

"Would speak of his bright, intelligent face."

"What would you say of the man who keeps a few bolts of calico?"

"I would speak of him as one of the most successful merchants in the State."

Yes, this school of journalism is a success. It defines the true position of the local newspaper. It makes the business so clear that the student, though a fool, need not err therein. It attempts no revolution; makes no mistakes.—*Arkansaw Traveler.*

—What is most needed at this moment in Tenessee is a unanimous support by the press of the tangible and solid projects that are afloat for the benefit of the people, such as immigration, the opening of mines, and the establishment of manufactories and workshops. The material progress of the State should have the support and countenance of every man in it, and everything that looks like the fomenting of political malice, hate and discontent should be frowned down. Let us have peace and with it prosperity.—*Memphis (Tenn.) Appeal.*

A PARISIAN SWINDLE.

How a Confectioner and Tailor Were Defrauded.

Act I.—A gentleman irreproachably dressed goes into a confectioner's shop in Paris, and says to the polite proprietor:

"I want a hundred and fifty of the nicest cream tarts you can make."

"A hundred and fifty! That is a pretty large order. Do you want them at once?"

"Within three hours at the latest."

"I can have them ready at that time. Ahem! It is customary to ask a deposit on such orders—say, ten francs."

"Certainly, my friend. Here are your ten francs."

Act II.—About two hours later a gentleman, irreproachably dressed, goes into a tailor's shop across the way from the pastry cook's, and asks to be shown some overcoats. He selects one of the nicest and asks the price.

"One hundred and twenty-five francs, sir."

"Very well; I will take it. I have some money to collect at the confectioner's across the way. I presume you have no objection to let one of your young men come over with me to get it."

"Certainly not. A worthy man is my friend Mr. Puff."

Act III.—To confectioner enter irreproachably dressed gentleman, now wearing an overcoat, and tailor's young man. The confectioner greets the former with the respectful friendliness due to a good customer.

"Ah, Mr. Puff, I've called round for that one hundred and fifty, you promised to have ready for me at 12:30."

"You shall have them in five minutes."

"Very well, I have to go round the corner to see a man. You will give this young gentleman one hundred and twenty-five of the one hundred and fifty. I will return and get the remaining twenty-five myself in a few moments."

"With pleasure, sir."

Act IV.—Five minutes later the confectioner gives the tailor's young man 125 cream tarts, and a bill for balance thereon 21f. 25c. One minute thereafter a confectioner and a tailor's young man are scouring the neighborhood in search of an irreproachably dressed gentleman with a new overcoat.—*Paris Figaro.*

"READ LESS; THINK MORE."

An Opinion by a Lawyer Which was as Valuable as Any for Which He Received a Fee.

The late Charles O'Conor, perhaps the most profound lawyer New York City has produced, gave a piece of advice to a young man which is valuable as any legal opinion for which the distinguished lawyer ever received a fee. A lad wrote to him, giving a long list of books which he had already gone through, and asking advice as to a course of reading. Mr. O'Conor replied that "he had not only not read, but had not known even by name one-half of the books his correspondent appeared to have read. He would not, therefore, undertake to advise him what to read, but he could safely advise him to read less, and think more." This anecdote comes from a recent number of the *Century.*

The advice was not, however, original with Mr. O'Conor. In the Philadelphia *Ledger* some time since an older authority was quoted to the same purport. Probably the same sound wisdom could be traced back to the time of the invention of printing. "Read less (of trash) and think more" has a pithiness which makes the advice all the more easy to keep in mind. And following it would enable the "temperate" reader not only to think, but to remember more of what he reads. Remembering more would give a practical value to the ideas acquired and the facts obtained. Perhaps Mr. O'Conor's opinion on reading is to be qualified a little by his practice. It seems that his reading was very much confined to the purposes of his profession. No doubt this limit increased his wonderful efficiency in his legal pursuits. But it would be a great abridgement of mental freedom to restrict the reader to his specialty and forbid excursions outside of that. The mind is enlarged by a variety of topics, and there is scarcely any subject, however foreign to a thinking person's daily life, from which he may not derive some advantage. There is nothing in the way of learning which stands so much alone that it can not be illustrated by other and indeed apparently dissimilar matters. Still the caution holds good—to most readers—"read less and think more."—*Scientific American.*

CARPETS.

An Interesting Scrap of Carpet History.

In 1755 English Axminsters were first made. But it was not until 1749 that a loom was constructed which would produce a Brussels carpet, and just here is an exceedingly interesting anecdote, which has been handed down from father to son as an inviolable truth: During 1730 and 1735 John Broom traveled through Tournay and Brussels studying the stitch which was then known as Brussels stitch. In Brussels, particularly, weavers were at the time making a carpet named after the town—the Brussels carpet. Broom studied with much earnestness the mystery of the manufacture, and finally made the acquaintance in Tournay of a weaver understanding the secret. He and this weaver immediately repaired to England, and near Mount Skipet, Kidderminster, they put up the first Brussels loom, 1749. They operated in absolute secrecy, but in time their modus operandi was exposed. Broom and his Belgian workman labored night and day, and it being known where their operations were conducted, some enterprising fellow climbed to the window and, night after night, from his perilous perch outside, he studied the operations of the mechanism within, until he was able to carry away in his mind a model of the Brussels loom. Then a second firm and several others soon came into the field, and in 1753 Kidderminster was doing considerable in the way of Brussels. To-day there is hardly anything else but Brussels made in Kidderminster.—*Philadelphia Carpet Trade Journal.*

—The Secretary of the London Swimming Club submits the theory that salt water is a cure for lunacy.

TEMPERANCE READING.

THE CURSE OF RUM.

Who Can Tell It?

Could oceans, rivers, seas and lakes,
And all the names that water takes,
Beneath the expanded sky,
Be turned to ink of blackest hue,
With every drop of morning dew
With every shrub and every tree,
And every blade of grass we see
Made pens to write withal;
Were every man in every clime
A scribe to use those pens;
Were each Methuselah in age,
And every moment wrote a page—
A book as large could we suppose
As this whole earthly ball—
All would be tired and die,
The pens would every one wear out,
The book be writ within, without,
The ink be drained quite dry,

To write the curse of rum: O, then
Angels would fail as well as men—
Archangels e'en would fail—
And till eternity should cease
A long eternity they'd spend,
Nor then have told the tale.
—*Christian at Work.*

"BACK TO THE FOLD."

A Thrilling Scene in One of Francis Murphy's Meetings.

"Don't sign it, Fisher, I tell you don't put your hand to that pen."

"Be a man, Fisher, and follow the promptings of your own conscience. In the name of your good Creator, I say, sign that pledge."

The above exchange of opinions took place last evening at the Murphy Temperance meeting in the Methodist Episcopal Church on Liberty street, amid the most intense excitement. Mr. Murphy had been making a most earnest appeal to young men to join the Temperance cause. Three young men sat in the rear end of the church a little under the influence of liquor. Mr. Murphy personally appealed to them to walk up to the table and sign. "I haven't courage, I'm too full," shouted one. This encouraged the energetic Temperance worker and he went to the trio. After much persuasion one of them walked to the table with him. The young man's name was J. C. Fisher. He was a bright, well-educated and well-dressed young man.

His appearance at once gave the audience the idea that there was something out of the common connected with him. He stood at the table, but refused to take hold of the pen. He stood as if riveted to the spot in the deepest state of abstraction.

In response to the pleadings of Mr. Murphy and other friends he rushed out his hand to take up the pen, when up reached his companion, a barber, named Mike Brannon, and accosted him with the injunction with which this report opens. Fisher at once threw down the pen, but still seemed chained to the table. The choir sang, women prayed and men exhorted and the young man stood as motionless as a statue. His face gave evidence of internal mental conflict of the severest kind. His past life and the probable result of the action he was so strongly urged to take seemed to be passing through his mind in panoramic order. Again he essayed to take up the pen, but failed. Four more times he repeated ineffectual attempts. Shouts of encouragement echoed from all parts of the building. Fisher's friend Brannon still prevailed on him to wait "until to-morrow night."

He was willing to do this, but Mr. Murphy kept him at the table. He again lapsed into melancholy thought, and again took the pen in hand, only to throw it down. "No, not to-night, to-morrow night," he said, with tearful eyes.

"My young friend Fisher, you'll break my heart if you don't sign to-night," said Mr. Murphy. The excitement among the audience was now at its wildest pitch. Some great conflict was going on in the young man's mind. Every one present except Brannon was shouting: "Sign, sign!"

Finally he dashed a tear from his eye, took the pen, wrote his name on a pledge and took a blue ribbon. The shouts of praise were deafening. Mr. Murphy at once knelt down with the young man and prayed fervently. At Mr. Murphy's request Mr. Fisher made a few remarks. He labored under much excitement as he said:

"Friends, you don't know my case, and I can't to-night fully explain it to you. My heart is too full and the time too unseasonable for me to talk much. There are many here who know me, but I hope none will think unkindly of me. Until two years ago I was a good and earnest Christian minister. I had a good Christian home in the East and received an excellent education. In 1879 I graduated in the Morgan Park school of divinity, and was called to San Francisco in 1880. I did not go there, but I accepted a call to Bunker Hill Church, Boston. I resigned that pastorate two years since and came to Pittsburgh. I have gone from bad to worse. I have lost everything and am only a very young man. I have signed the pledge and mean to keep it for life. I hope you will all pray for Mike Brannon."

The meeting was resolved into a "love-feast," and various members related briefly their experience. Among others was William White. He stated how he had almost cut a policeman to pieces, and escaped from the "pen." Also, how he had nearly killed a "'Squire" near Washington, D. C., for which he received cruel imprisonment. Mr. Murphy made some short and effective addresses, and Mrs. Duffy sang some pathetic solos. Mike Brannon and Fisher met after the meeting, but the latter refused to go with his companion and accepted the invitation of some Temperance friends. During the evening Mr. Murphy stated that some friends had secured two little rooms for White, who, with his wife and family, again had a home.—*Pittsburgh Commercial Gazette.*

REFUSING TO DRINK WINE.

Faithful to His Principles—General Washington and a Conscientious Officer.

In these days no well-bred person shows surprise when any one refuses wine. It is only the vulgar and unrefined who significantly lift their eyebrows or make sneering remarks because a comrade shows his temperance principles. Perhaps this has always been true. At any rate, the following, clipped from the *Little Christian*, shows that Washington was as gentlemanly as he was great.

Toward the close of the Revolutionary War an officer in the army had occasion to transact some business with General Washington, and repaired to Philadelphia for that purpose. Before leaving he received an invitation to dine with the General, and, accepting, found himself in company with many distinguished guests, among whom he preserved a modest demeanor, taking but little part in the conversation. Before the close of the dinner General Washington, calling him by name, requested him to drink a glass of wine with him.

"Will you have the goodness to excuse me, General?" replied the officer. "I have made it a rule never to drink wine."

All eyes were instantly upon the young officer, with surprise and indignation—mayhap a few with approval. That a person should be so unsocial and so mean as to never drink wine was too bad; but that he should abstain from it on an occasion like that, and when offered to him by Washington himself, was intolerable.

Washington at once saw the feeling of his guests, and promptly addressed them: "Gentlemen," said he, "our friend is right; I do not wish any of my guests to partake of any thing against their inclinations; and I certainly do not wish them to violate any established principle in social intercourse with me. I honor my friend for his frankness, for his consistency in thus adhering to an established rule which could never do any of us harm if we adopted it."—*Christian at Work.*

DIED TO ESCAPE DISGRACE.

The Pathetic Story of Bella Arrell's Suicidal Shot—Ruined by a Love of Drink—A Life of Industry and Promise Marred by One Bad Habit.

A sad Temperance lecture was presented yesterday in the death of Bella Arrell, a young woman who had become addicted to drink, and who feared the exposure it would eventually lead to. The habit was begun with a physician's prescription. The patient suffered with neuralgic pains in the head and depressed spirits, caused by close application to work. She found relief, at least temporary, through the alcoholic stimulant, and continued the use of it until the habit grew upon her. Several times she resolutely abandoned the practice, only to return to the fatal cup again. None of her friends or members of her family were aware of her weakness. Her habits were as regular as clock-work. She arose early in the morning, went to her business promptly, transacted her duties for the day, and returned to her lodgings, No. 241 East Twenty-Fourth street, in the evening. She led a most exemplary life, with the exception of this one failing.

Bella Arrell entered the hair-dressing establishment of John Dougall, No. 348 Sixth avenue, fourteen years ago, as an errand-girl. She was bright, intelligent and modest, and worked hard to advance herself. It was not long before she understood the business and was promoted to the superintendency of the place. She reached the store every morning at eight o'clock and remained until eight in the evening. On Sunday she passed the day with her mother and three sisters at Arlington, N. J. In the house where she boarded for over seven years the family knew little of her history. She was very reticent and kept most of the time by herself.

Some time ago Miss Arrell complained of pains in the head both to the female clerks in the store and to her landlady, Mrs. Scott. The latter after that noticed signs of liquor on her lodger, but as Miss Arrell had always conducted herself properly the landlady did not like to offend her by mentioning that fact. Following that Miss Arrell several times came home in the evening intoxicated. Mrs. Scott made up her mind to reprove the young woman for her conduct, but each morning the lodger carefully avoided a meeting, evidently feeling ashamed of the occurrences of the previous night.

About three months since she ceased drinking, and Mrs. Scott, who was perhaps the only one acquainted with the young woman's weakness, began to hope she had abandoned the habit altogether. There was no complaint after that of sickness. Miss Arrell's health seemed to improve, and she appeared to be in much better spirits. But this reform was of short duration, for she was brought home on Monday night by two of the girls in the store in a condition that Mrs. Scott declared to be "deplorable." The lodger was assisted to her room, while the girls explained to Mrs. Scott that Miss Arrell had been taken suddenly ill while at work, and complained of dreadful pains in the head, and Mr. Dougall, who had been in Tremont all day, returned at six o'clock, and at once insisted on her returning home with them.

Yesterday morning when Miss Arrell awoke she sent for Mrs. Scott and said she felt very weak. She asked that a messenger be sent to a drug store for a bottle of brandy. Mrs. Scott secured the necessary stimulant, and the lodger partook rather generously of the liquor, after which she went to Mr. Dougall's store.

About two hours later she entered a back room used by the employes as a cloak-room, and, taking a revolver from a shelf, shot herself in the abdomen. The report of the pistol alarmed the other girls, who ran into the room to find the body of their superintendent stretched upon the floor. Life had not left the body, but she died in a few minutes after her removal to the New York Hospital.

No one was more surprised at the tragic death of the young woman than the proprietor of the establishment. The pistol she used belonged to him, and had been purchased twenty years ago to protect his place from burglars. He had been robbed shortly before that. The revolver he placed on the shelf twenty years ago, and had never touched the weapon since. He felt greatly aggrieved over the sad ending of his assistant, whose services, he said, were indispensable to him.—*N. Y. Herald.*

OUT of 200 women taken to the Massachusetts Reformatory by drink 128 began their downward career with beer, 37 with whisky, 20 with wine, 8 with gin—91 at the homes of acquaintances and 64 in saloons.

FASHION NOTES.

The Peculiar Feminine Vanities in Vogue in the Metropolis.

All shades of green are in favor.

Skirts are no longer made narrow at the top.

Fancy mock jewels are more worn than ever.

Waistcoats, real or simulated, are very narrow.

It is fashionable nowadays to be unfashionable.

Byzantine models are sought for in fancy jewelry.

Mantelets and short visites are equally fashionable at the moment.

Brocaded stufis grow more and more in vogue as the season advances.

Braids, galloons and strings of big beads are the favorite dress trimmings.

Skirts, tunics and polonaises are all made with pleats or gathers at the waist line.

Two fabrics are generally used in the small mantelets and visites now so much worn.

Fan-formed bows of etamine canvas or scarfs of gold-shot stuffs trim most hats and bonnets.

Peasant waists, with lacings in front over full white muslin waistcoats, are worn by little girls under seven.

Long traveling dust cloaks of mohair and pongee will be the favorite overalls of lady tourists this summer.

Polonaises remain in vogue in spite of all the efforts to introduce more fanciful novelties in the form of basques and tunics.

Wooden, glass, porcelain and lead, or imitation lead, beads of large size are the latest novelties in dress trimmings sent out from Paris.

Simple muslin dresses have a V-tucked piece back and front on the full waists and full gathered skirts, falling below the belt at the waist line.

Corsets and petticoats, at the present, combine to set off the slenderness of the waist to the greatest advantage by exaggerating the size of the hip.

Mantelets are smaller than ever, and have very high shoulders and such shortness of sleeves that they are little more than shoulder capes with long tabs in front.

Chantilly, the most beautiful of all black laces, is fashionable for scarfs, mantelets, fichus, and tunics or polonaises to be worn over silk dresses, black or colored.

European and American manufacturers of dress fabrics are learning the value of gold introduced in small quantities in broche and all fancy stuffs, whether of silk, wool, linen, cosmos, or cotton.

Among new fancy materials are found bengalines, glace mohairs, crape veilings, brocaded and grain de poudre etamines, and silks embroidered in broderie de Persane, in which a small quantity of gold is introduced.

The use of jute (cosmos) in textiles intended for upholstery and house drapery is creating a revolution in this class of manufactured good. Thus jute velours fabrics are more attractive than silk or wool, as durable or more so, and far less costly.

Long country walks, garden and lawn parties, and seaside rambles will soon be the order of the day, and for these pretty and suitable suits and toilets are in course of preparation in all the large and small dress and millinery stores all over the city.

The height to which hats and bonnets have attained is astounding. Every week new shapes are brought out, and Excelsior seems to be the motto of the manufacturers and milliners; for, no matter how high the crowns, the trimmings tower still higher.

The pouf at the back of the skirt is going out of fashion, but slowly. It is retained on dressy silk and etamine costumes, but for light, and especially wash fabrics, it is discarded entirely, the skirts of such frocks being simply gathered or pleated round the waist and falling loose over the steel wired tournure.

An exquisite toilet for a visit of ceremony is made by combining pearl gray faille with printed chally, the ground color of which must be of the shade of the silk and the figures in Oriental colors and designs, the trimmings gray lace and gray silk fringes, and loops of pearl gray and nasturtium red ribbon, the combined colors of the printed chally producing the ruddy effect of the nasturtium shades.—*N. Y. Sun*

APRONS.

Garments for Mistress and Maid—How They Are Made.

Very pretty aprons are made of a square of linen scrim, a hem of about two inches in width, and above that alternate places where the threads are drawn out about a fourth of an inch and left plain for the same distance. Into the open spaces the narrowest ribbon is run in and out of every three or four threads. The ribbons are of contrasting colors, and the border thus formed is unique. One apron made in this way has rainbow colors in the border. Another way is to hem the scrim both ends; in one hem run a pink satin ribbon to full it on and to serve for strings. Hemstitch the other hem and embroider a spray of pink flowers on one side. Turn the other corner over on the right side of the material and fasten with a bow of pink and dark green ribbons. These have a very dashy little look, and are especially pretty for young ladies. A very good apron for a maid is a clothespin apron made of two pieces of ticking the same size; these are fastened together in a band for the waist, the lower corners are rounded; in the upper piece of ticking make two round holes large enough to admit the hands, bind or stitch firmly around the edge. This is convenient for hanging out or taking in clothes, and the pins can be kept in it and be always ready for use. A very neat little apron can be made of the plaided crash or glass toweling. Work the alternate squares in two rows with red crewel stars; this makes a border, and if wash crewel is used the apron is very durable, and will retain its beauty after being laundered.—*Demorest's Monthly.*

—At Ash Ford, a station on the Atlantic & Pacific Railway, in Northern Arizona, the water supply is brought by rail a distance of sixty miles and sold for fifty cents per barrel.

MISCELLANEOUS.

—On the principle that everybody should be taught a trade, the Archduchess Maria Theresa, of Austria, is learning to make jewelry in a Tyrolese workshop.

—The theory has been started that since the usefulness of whales has largely diminished through the discovery of mineral oils for illuminating purposes, the animals might be domesticated and employed for towing ships.—*Norristown Herald.*

—We fail to see in the new extradition treaty between the United States and Italy any provision for the immediate return of organ grinders who, having broken loose from their native lair, threaten to devastate, destroy and lay waste the nervous systems of the hardly oppressed people of these United States.—*Boston Transcript.*

—An old jug with a war record is in the possession of Mr. Tharpe, a gentleman residing near Montezuma, Ga. The jug was captured by him at the first battle of Manassas, and, as it was filled with fine brandy, no doubt left by some Union officer, the gentleman appreciated its contents and carried the vessel through the remainder of the war.

—Whether or not one could catch a ball thrown from the top of Washington Monument led the catcher of a local base ball club to make a similar trial recently from the top of the water-works standpipe in Erie, Pa. The height was 248 feet, and upon the seventh attempt the deed was accomplished, but the catcher declared the sphere weighed a ton. The difficulty is not in the ball veering to either side, but in its accelerated velocity.—*Pittsburgh Post.*

—The dominion of the Czar of all the Russias comprises one-seventh part of the land surface of the earth, or one-twentieth part of its whole area. More than one hundred million people call the Czar father, and are under his absolute government. A child is born in Russia on an average every eight seconds throughout the year, and a death occurs every eleven seconds. The population will double in about sixty years at the present rate of increase.—*N. Y. Tribune.*

—A daring landlord in Berlin has introduced paper plates. Bread and butter, cakes and similar articles were served in a pretty papier mache plate, having a border in relief, and resembling porcelain. The landlord liked them because they were so cheap they could be thrown away after once using, waiters liked them for their lightness and because they were neither to be washed nor broken, and guests were delighted to take them away as souvenirs.

—"Life is full of compensations," says the Boston *Transcript*. "A backward April puts off the hateful spring cleaning." So it does; but if April was so backward that the spring cleaning could not commence until the first of September, the fall house-cleaning would follow in a couple of weeks. A woman is not going to be chiseled out of her spring house-cleaning, no matter how many months backward the season may be.—*Norristown Herald.*

—In speaking of minor ailments connected with digestion, Dr. Lander Brunton said recently that headaches were usually dependent either upon the presence of decayed teeth or of some irregularity in the eyes, more especially in the difference of focal lengths between the two. As persons who were subject to headaches in their youth grew older, bilious headache was very apt to be replaced by giddiness, and this change came when people needed spectacles.—*Boston Herald.*

—A correspondent of the New York *Journal of Commerce* says the idea that fortunes are to be made in Florida without sweat of the brow is the fiction of land speculators. An orange grove in Florida is not worth a cent more than an apple orchard in New England until its owner has put into it years of hard work, much money and much impatient waiting. He thinks it could be demonstrated that a good apple-orchard pays a larger interest than the best orange grove in Florida.

The "Atlantic" Editor and the Bicycle.

Trowbridge is one of a great many professional men hereabouts who are trying to renew their muscular fibres by exercise on the modern wheel. Younger and more active men prefer the greater celerity of the bicycle and enjoy the flavor of danger that goes with the uncertain poise of two wheels. Some of our clergymen, those of the more liberal persuasions, suffer no loss of dignity in bestriding the spirited steed whose only fault is an occasional kick-up behind, and young lawyers and doctors are thickly sprinkled among the riders who may be met any pleasant day on the sandpapered roads about Boston. Mr. Aldrich, the editor of the *Atlantic Monthly*, tells, with much gusto, of his attempt to conquer the bicycle, and of the amazing eccentricities that the beast displayed at his attempted mounting. The *Atlantic* editor is a brave, though modest, young man, and the father of twins; but no man knows that he ever made a second attempt on the bicycle. He is one of the few who have given up beaten on the first trial—*Boston Cor. Minneapolis Tribune.*

How the Czar is Influenced.

The following little story illustrates the way in which the action of the Czar is controlled by those immediately about him. A gentleman who had been definitely promised a large sum of money by the Emperor waited in vain for the imperial signature that would enable him to draw it. At last he offered a subordinate a large bribe, and quickly got his due. The latter explained how it was done: "We have," he said, "always a great number of things to present for the Emperor's examination. And we know beforehand what he will be pleased to read and what will be unpleasant. Now, all depends on the order in which a petition such as yours is placed. If before it we put four or five things which will be unpleasant to the Emperor, arriving at your petition he will be in a bad humor, and will refuse it. If, on the contrary, we put before it one after another five things that will be agreeable to him to read, on reaching your petition he will be put in good humor, and will grant it at once."—"*Stepniak.*"

By the Forelock.

"So you are a doctor, eh?"

"Yes, sir."

"Regular graduate?"

"Yes."

"Old school?"

"Yes."

"Have you got a stomach-pump?"

"Of course."

"Used to pumping folks out?"

"Yes, sir."

"Telephone in your house?"

"Yes—No. 52,265—ring nine times."

"Very well, sir. My wife is always threatening to take poison. She'll probably do it some day. I'll telephone you. Come and pump her out. All bills paid on sight in spot-cash. Good-bye, sir."—*Detroit Free Press.*

RIDGE'S FOOD

Statistics show that the mortality among children is far greater in the summer months than at any other season. Health and perfect action of the bowels are assured by the use of Ridge's Food. It is neutral in its action, is readily taken by the little ones, occasions no tax upon the digestive organs, and is assimilated when the stomach rejects all else.

METAL POISON.

I am a coppersmith by trade, and the small particles of brass and copper from filing got into sores on my arms and poisoned my whole system. Mercury administered brought on rheumatism, and I became a helpless invalid. I took two dozen bottles of Swift's Specific. My legs, arms and hands are all right again. I use them without pain. My restoration is due to S. S. S. PETER E. LOVE,
Jan. 9, 1885. Augusta, Ga.

ULCERS.

For six or eight years I suffered with ulcers on my right leg. I was treated with Iodide of Potassium and Mercury, and I became helpless. Six bottles of Swift's Specific made a permanent cure.
Feb. 28, 1885. M. D. WILSON, Gainesville, Ga.

Swift's Specific is entirely vegetable. Treatise on Blood and Skin Diseases mailed free.

THE SWIFT SPECIFIC CO., Drawer 3, Atlanta, Ga., or 159 W. 23d St., N. Y.

More Than Thanks.

Fort Madison, Iowa. Mrs. Lydia E. Pinkham: "I am glad to inform you that I have tried one bottle of your Vegetable Compound and have found great relief. *I more than thank you* for your kind advice. I have never felt so well as I do now since I had these troubles." Yours Resp'y, Mrs. W. C. A——. The above is a sample of the many letters received by Mrs. Pinkham expressing gratitude for the benefit derived from her Vegetable Compound. Another letter, from Kaufman, Texas, says: "Your Compound has done me more good than all the doctors ever did, for which I thank you with all my heart." Your friend, Anna B——.

If You Telephone

For the doctor, and find he is out of town, just ask your druggist to send you a bottle of

Ayer's Sarsaparilla.

It will relieve all those tired feelings, and prevent serious illness.

MRS. M. M. LEWIS, *A street, near Powell, Lowell, Mass.:* I suffered from Headache, Indigestion, and Debility, and was hardly able to drag myself about the house. Ayer's Sarsaparilla has worked a marvelous change in my case. I have taken less than two bottles, and now feel strong and well as ever.

MRS. S. EMBOSY, *11 Newton Place, Holyoke, Mass.:* For more than two years I have suffered constantly from Headache and Indigestion. A little over a month ago a friend urged me to try a bottle of Ayer's Sarsaparilla. I did try it, and before I had finished the second bottle, my headache disappeared, my appetite returned, my food digested properly, and my health was completely restored.

MRS. S. FISKE, *Chelsea, Mass.:* I have been troubled with severe Headaches, for years, but since taking Ayer's Sarsaparilla have not had an attack.

Copyrighted.

Ayer's Sarsaparilla,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists. Price $1; six bottles, $5.

PARSONS' PURGATIVE PILLS MAKE NEW RICH BLOOD.

SATURDAY, JUNE 20, 1885.

The *Democrat* finds fault with an editorial published by us sometime ago with regard to the appointment of Bailiff. That small journal of small circulation, says we "deliberately perverted the truth in regard to certain facts attending the election of a town bailiff." Now the assertions of the REPUBLICAN or *Democrat* are not proof upon the question at issue, but we beg to remind the *Democrat* that the proof can be had from the records and from the officials who were present when the election refered to took place. We stand ready to prove our assertions. We dare the *Democrat* to try to prove its assertions. The proof will convict either the REPUBLICAN or the *Democrat* of being a deliberate perverter of the truth. We dare the *Democrat* to the proof on this point.

In our editorial of week before last, in defence of the business interest of our town, we made no offensive personal attack upon the *Democrat* or its editor, on the contrary, we made an open, straightforward, truthful and manly defence of a class of business men who had been attacked by an unknown individual, (who had not the manhood or courage to sign his name to his article,) backed by the influence of the *Democrat*. In making this defence we knew full well that the merchants we were defending were a small minority in this community, and we knew just as well that the attack was prompted by the idea that the correspondent had the majority on his side. With the large majority (as he supposed) at his back, he saw proper to make the attack through an anonymous communication, which is regarded by all decent people as the most cowardly and detestable mode of attack known to modern journalism. Then the *Democrat* undertakes to gull the people into believing that this unwarantable attack, made in such an illegitimate manner, was prompted by a desire on its part to subserve the public interest. Seeing his blunder too late to remedy it the editor tries to divert attention from his conspicuous failure, by making his attack upon us, and whining about personalities. It is the old story of the thief crying "stop thief." We are perfectly willing to leave to the public to decide whether the course of the REPUBLICAN or *Democrat* has been commendable in this particular piece of business.

The *Democrat* pretends that it does not care for the "opinions or expressions of the REPUBLICAN," because, it says, "they are entitled to no respectable weight." If the *Democrat* is honest in this, why does it whine and yelp like a whipped hound every time the REPUBLICAN applies the lash, even mildly?

Again, we beg to inform the *Democrat*, and all others concerned, that the editor whose name "illuminates the editorial page" of this paper, is alone responsible for its editorial sentiments and utterances. Whatever we have to say we say editorially so there may be no doubt as to who is responsible for our utterances. We do not attack our readers and subscribers or others over a fictitious signature, nor do we call upon others to do so through our columns. We endeavor to discharge our duty to the public and to our patrons at all times, but we do so in our own way, and according to our own judgement, and not according to the wishes or desires of any self-constituted regulator of other men's affairs. In this course we shall continue, although, the whole pack "Tray, Blanche and Sweetheart" included, should continue to yelp at our heels.

We feel that, perhaps, we owe our readers an apology for taking up so much of our space with a reply to some untruthful assertions and insinuations contained in the *Democrat* of last week. There are two grave objections to making a reply of this kind. One is, that it takes up a great deal of our space, with matter which in the main does not interest the public. The other and greater is, that it gives a paper of small circulation, like the *Democrat*, an amount of advertising which it would not be likely to get in any other way.

In future, unless we have reason to change our present intention, we will only reply editorially to such matters as we deem of public importance.

The Common Ground.

The Philadelphia *Press* of the 11th inst., contains the following interesting article on all men who believe that there should be a fair vote and an honest count at every ballot-box in the land. It says:

"There is one purpose which all wings of the Republican party desire to accomplish, no matter what differences may have divided them in the past. This is the necessity of establishing fair and honest elections in every state in the Union. Until this object is attained, the people cannot give an impartial verdict upon any question of governmental policy, and consequently until it is settled, and settled rightly, all other issues must wait.

The leading place which this topic occupies in the speeches of prominent Republicans, and the interest which its discussion invariably excites, show how strong a hold it has taken upon the public mind. The injustice done to the Northern voter by the frauds and intimidation practised in the states of the South is too palpable to escape the attention of any intelligent man in the nation. That it will be permitted to continue is a libel upon their sense of right and justice.

At present a minority of voters in the Southern States, aided by intimidation and combined with a minority in the Northern States, controls the presidency, with all its vast powers, and the lower House of Congress. The representation granted the South for its colored population, who are not allowed to vote, gave Cleveland his majority in the Electoral College and the Democratic party its majority in the House of Representatives. And so, by exercising the colored man's right of suffrage as well as his own, the white man in the South can exert double or treble the influence a Northern voter can in shaping the laws and directing the policy of the general Government.

To right this wrong and place every voter in the land upon an equal footing is the object towards which the Republican party has rigidly set its face. The indignation excited by the recent appointment to a Government position of an abettor and endorser of political murder in Mississippi was one evidence only of the people's determination that they will no longer submit tamely to this gross injustice. One of the most influential of the Mugwump papers announces emphatically that upon this question it is unreservedly with the Republicans. A few white livered renegades may chatter that this is reviving the bloody shirt and thrashing over the old straws, as the rosewater patriots of 1861 were anxious chiefly to have the rebellion crushed by "constitutional" methods only. But now, as twenty-four years ago, the Republican party plants its banner upon the rock of justice and summons to its ranks all men who believe that there should be a fair vote and an honest count at every ballot-box in the land."

Good Reasons for Resigning.

Col. John E, Bryant, Republican, has been succeeded as United States' marshal of Georgia, by J. W. Nelms, Democrat, thus explains his resignation: "I saw that the Democratic newspapers of the State, voicing the wishes of the Democratic masses of Georgia, demanded my removal from office. It had been my determination, from the time that I knew of the result of the last election, to resign in December next, because I was unwilling to serve under a Democratic administration. I believe that the administration should have in the principal offices men who are in sympathy with the policy of the administaation. It is well-known that I am a Republican. I fought on that side during the war, and for twenty years since the war. I believe it would be dishenorable for me holding a position under the Democratic administration to publicly express opinions in opposition to those of the administration. I am unwilling to remain silent for four years, the length of my term of office. Therefore I decided to resign."

It is reported in New York that Gen. Grant has written a letter, addressed to the press of the country, of which this is a rough draft: "Gentlemen of the Press: It is with regret, not entirely unmixed with pleasure, that I apologise to you all for the trouble and expense which my *untimely* recovery has entailed upon you all. I am assured upon reliable authority, that most, if not all of you, have already in type lengthy obituary notices, written in anticipation of my Providentially-averted demise. It is not every person who is vouchsafed the grim satisfaction of reading his own obituary, therefore, gentlemen, I shall feel glad if one and all will send me the proof-sheets of the articles in question. The reason I ask it is this: Errors and discrepancies always are apt to creep into such articles, and I should only be too happy to devote the remainder of my life in correcting them, in order when the time actually arrives the public may have a true account.

Yours, etc.,

U. S. GRANT.

P. S.—I shall deal altogether with correcting errors in facts and not interfere with any sentiments you thought fit to express,"—*San Francisco News Letter*.

Ask for Ayer's Sarsaparilla, and do not be pursuaded to take any other. Sold by all druggists.

State of Trade.

NEW YORK, June 13.—*Bradstreet's Journal*, in its commercial summary, says: "The generally unfavorable conditions affecting trade reported by *Bradstreet's* last week continue unpleasantly prominent. The volume of merchandise moving, so far as data concerning it are obtainable, is light as compared with like periods in preceding years. The accumulation of surplus funds at leading business centers east and west shows no signs of the beginning of a permanent check. The dry goods market presents no encouraging feature. At Boston trade is dull with commission houses and only fair with jobbers. Prices in some lines are unsettled. The $3,500,000 to $4,000,000 sales of flannels at New York this week were unsatisfactory as to prices, sharp cuts in price being a prime inducement to buyers. The enforced idleness among the iron mills in the west has resulted in a somewhat better feeling in merchant iron at various points, though no large sales are reported.

There has been some slight gain in the Philadelphia pig iron market, but none of these reported improvements have been noteworthy except by contrast with previous dullness. Akron, Ohio, pig iron is reaching out into the Hudson River valley and into New England in consequence of favoring railway freights, and Southern pig iron continues to come northeast, though as reported in reduced quantities since the advance of 50 cents per ton in freight rates. The production of Eastern and Western pig iron has declined 2,800 tons per week since May 1.

The condition of the anthracite coal trade is less gratifying, the competition between carrying companies being so intense as to result in the invasion of the Philadelphia market by Delaware and Hudson coal, which sold below the market. The movement of grocery stples has been restricted, with sugar easier and coffee lower.

BOSTON, June 13.—The *Advertiser*, in its weekly review of the wool market says:

The market presents few new features, and we can make but few changes in quotations. The tone is fairly steady, and sales would have been larger had not manufacturers been interested in the large auction sales of flannels and had awaited the result before purchasing. There has not been, however, much holding back on this account, for manufacturers are now stocking up ahead of their wants and are buying only as their orders compel them to. New wools are not selling freely, and transactions, with the exception of Texas and California, are mostly in old wool. The market is, perhaps, a shade easier for lots of X fleeces, but XX is firm. There have been larger sales of Michigan. Some little Texas has been sold above 23c, one lot at 24c, and another at 25c, but these are for fancy lots and do not make a market quotation. New Texas can be sold on a basis of 55a57½c per scoured pound, but above that manufacturers are not paying in a general way.

CONNELLSVILLE, June 13.—The Keystone *Courier* says: The iron strike has as yet had no effect upon the coke trade. Shipments continue at about 530 cars daily and the prospects are even a shade brighter than they were two weeks ago though a continuance of the strike must eventually depress trade.

The Political Situation in Three Acts.

Act I.—Removal, because of alleged offensive Republican partisanship.

Act II.—Appointed because of well-known active Democratic partisanship.

Act III.—Civil Service Reform knocked out in the first round.

Afterpiece—Awaiting the action of the Senate.

BALTIMORE, MD., June 15.—Henry A. Myers was found guilty in criminal court to-day of beating his wife, Sophie, and her father, Philip Marzi. Judge Stewart, in view of the brutal character of the assault on the wife, sentenced him to receive 20 lashes, to pay a fine of $10 and to be imprisoned for one year. This is the first instance in which a white man was sentenced to the lash.

While General Grant was President, he put Mrs. A. L. Long in charge of the postoffice at Charlottsville, Va. She has held the position ever since, and has just been re-appointed by President Cleveland. There is, by the way, a peculiar interest attached to this lady. While being a daughter of that stout-hearted Union soldier, Gen, E. V. Sumner, her husband was Gen. Lee's Chief of Artillery. He is still living but is blind, and she is the sole support of him and their three children. She is described as "a model official a lovely and cultured woman."

Those who can command themselves command others.

The State tax is fixed by law at 18¾ cents on each $100 assessable property, which, added to the $1.12½ for county purposes, makes the sum of $1.31¼ on each $100 of assessable property in Garrett county for the year 1885.

Basis for State tax	$3,754,091 60
At 18¾	$ 7,040 60

G. W. MERRILL,
Clerk to Commissioners.

LOCAL NEWS.

LODGE MEETINGS.

OAKLAND LODGE, I. O. G. T., meets in Sturgiss' Hall every Tuesday night.

LOCAL BRANCH, No. 85, of the Iron Hall, meets in same Hall 1st and 3d Saturday nights of each month.

ALTA LODGE, No. 574, K. of H., meets in same Hall 2d and 4th Thursday nights of each month.

SHEALTIEL LODGE, No. 122, I. O. O. F., meets in Legge's Hall every Monday night.

PATMOS COUNCIL, No. 386, A. L. of H., meets in same Hall 2d and 4th Friday nights of each month.

—A. No. 1 butter at Harne & Lawton's Grocery.

—Wanted, 1,000 pounds rags, at Harne & Lawton's Grocery.

—Wanted, 1,000 dozen eggs at Harne & Lawton's Grocery.

—Dr. Goldsborough and family occupy their cottage on Oak street.

—The locusts have not made their appearance in this neighborhood.

—Just think of it, 16 pounds of sugar for $1, at Harne & Lawton's Grocery.

—I. W. T. H. & L. P. M. which means I will try Harne & Lawton's pearl meal,

—Persons wishing strawberries to put up for the winter should leave their orders at once at Weber's.

—The tax rate in Allegany county, for state and county purposes for 1885, is $1.03 on the $100.

—R. B. P. F. C., which means rock bottom prices for cash, at Harne & Lawton's Grocery.

—Maj. Hill's cottage has been placed in communication with the Oakland depot by a telephone line.

—Father O'Sullivan, who was for a time stationed at Oakland, has been appointed Bishop of Mobile, Alabama.

—If you want a hay rake for $15 call on John Shartzer. If it don't give satisfaction bring it back and your money will be refunded.

—The American Society of Civil Engineers will hold its annual convention at Deer Park, June 26, 27, 28 and 29.

—Died, at her home in Grantsville, Md., June 10th, 1885, after a lingering illness, Mrs. Julia Kurtz, aged 68 years, 2 months and 9 days.

—Died, near Salisbury, at Engle's Mill, June 10th, 1885, Wm. Sherman, son of John J. and Sarah Engle, aged 1 year, 10 months and 30 days.

—John Shartzer has just received a car load of bone dust, dissyoled bone, phosphate and calvert guano, which will be sold on reasonable terms.

—Married, on the morning of the 16th inst, near the Forks Lutheran church, by Rev. J. B. Shoup, Andrew J. Oester to Lucinda Brenneman.

—Bring in your buggies and wagons and have them repainted. Shop over Naylor & Richardson's wagon shop, Z. F. MALONE,
6 6 4t. Carriage Painter.

—The Lutheran congregation will have their church remodeled by June 28th, at which time there will be a re-opening service. The pastor in charge will have several other ministers to assist him on the occasion.

—There will be another pic-nic at McHenry near the Celebrated Boiling Spring, on July 4th, 1885. All wishing first-class amusement are cordially invited to attend. Refreshments will be on the ground. By order of committee.

—The improvements and additions to the Kepner house on the corner of of Alder and Fourth streets are now completed, and the property presents a handsome appearance. The carpenter work was done under the superintendence of Mr. John A. Wolf.

—The Meyersrale (Pa.) *Commercial* has been changed from a weekly to a semi-weekly journal. The days of publication are Monday and Thursday. The size has been enlarged from forty-eight to fifty-six columns, thus giving eight more columns of matter. The *Commercial* is fully up to the measure of a first class journal in every respect, and should receive the support it deserves.

—Associate Judge Henry W. Hoffman, of Cumberland, will deliver the address of welcome at the annual meeting of the State Teachers' Association, which begins at Deer Park on the 7th of July next, and Mr. P. A. Witmer, of Hagerstown, will respond. The sessions will be continued on the 8th and 9th and an exceedingly interesting and instructive programme has been arranged for by the Executive Committee of the Association.

—A number of carp were caught with hook and line in the "Dead Pond," near Oakland this week. Four, weighing between 3 and 4 pounds each were caught by Mr. Theo. F. Combs. Messrs. Thos. R. White and Wm. Coddington were also successful in taking a number. The bait used was bread, a mixture of dough and cotton, fresh meat and vegetables. Mr. Combs also caught a 17-pound turtle of the "snapper" species.

—At a meeting of the Board of Health Tuesday evening of last week, the following named gentlemen were appointed as members to act in conjunction with the Board throughout the county: Dist. No. 1, C. M. Miller, and C. T. West; No. 2, R. E. Friend and H. M. Frazee; No. 3, Drs. Getty and Bevans; No. 4, Dr. Kemp add W. A. Brydon; No. 5, Dr. E. H. Glotfelty and J. E. Gnagey; No. 6, D. H. Friend and Nathan C. Browning; No. 8, Dr. Dunham, W. F. Deakins and J. W. Mason; No. 9, Sam'l. Johnson and G. T. Layman; No. 10, Mr. Laughlin and E. C. Tilson; No. 11, John F. Robeson and John Wilhelm. Those for No. 7 had already been announced.

Church Services--Sunday.

M. E. Church—Preaching at 8 P. M. by Rev. M. W. Rider.

Presbyterian Church—Preaching at 11 A. M. by Rev. John S. Foulk.

St. Peter's, Catholic— Preaching every Sunday at 10½ o'clock A. M., except the second Sunday of each month.

OAKLAND, MD., June 15, 1885.

ED. REPUBLICAN:—Please call the attention of the Board of Health to the fact that dead carcasses are being hauled out to the east end of town and left unburied. This is not only annoying to the citizens of this end of town, but it is likely to produce disease. All dead carcasses should be buried or burned.

J. A. W.

Dentistry.

Dr. P. P. Ritter will visit Accident, Md., June 23d, and remain a few days. Persons wishing work done should call early and make arrangements, as his time is limited.

Notice!

All persons knowing themselves indebted to me will please call and settle by cash or note. All claims not settled by the 1st of June next will be given out for collection.

H. A. RASCHE.

Looking for a Summer Camp Ground.

Capt. Goddard, Lieut. Roberts, Sergt. Johnson and Corporal White, of the Washington Light Infantry, arrived at Oakland Saturday. They were here to select a point suitable for the annual summer encampment of the command. The committee were met here by Col. Wardwell and Lieut. Browning, who accompanied them to Deer Park. The members of the committee will report in favor of Deer Park, and the command will probably encamp there in July or August. The command numbers about 400.

Mountain Lake Park.

There have arrived since I wrote last week, Mr. Gilbert's family, of Piedmont, Mr. Burnes, of Pittsburg, Rev. C. P. Masden's family, of St. Louis, Mo., and Mr. H. C. Sharp, of New Philadelphia, Ohio. Dr. and Mrs. Frysinger were here from Saturday until Monday, on their way to Kansas, where the Dr. conducts an assembly. He will return in time to take part in ours in August.

Prof. J. White, from the W. Va. University at Morgantown, is now occupying the Baumgardner cottage.

Children's day was observed here in a very pleasant and profitable way. We used most of the regular programme prepared for this occasion, and in addition to this we had very interesting addresses from Rev. M. W. Rider, Dr. Frysinger, Miss Sherman and Mr. Oliver, and a reading by Miss Mollie Garthright and Mrs. F. L. Sperry. Several of the people of Oakland were present and kindly assisted us in the singing.

We held our first meeting in the new hall last Thursday night, and used the Auditorium on Sunday for the first time this season.

Accident.

Plenty good rains.

Crops all doing well, wheat excepted.

Rain every Sunday for seven weeks, they say.

Rev. J. J. Young is here on a visit. He has preached to large audiences.

Mr. John E. Gnagey and family are visiting friends in Grantsville and vicinity.

It is expected that one of the largest Normals ever held in Garrett will be held here commencing July 23d.

Miss E. C. Butler, of Washington, will commence a music class soon.

The prospect for fruit was never much better.

Dr. A. F. Speicher and wife, of Salisbury, Pa., were here on a visit last week.

Mr. Jonas Tice, who had his eye injured last winter, has visited Baltimore to consult Prof. Chisholm and the Faculty in charge of the Eye, Ear and Throat Hospital. It was deemed best to remove the injured eye which was done by Prof. Chisholm.

Quite a number of our people attended the communion services held at the Forks church. Services by Revs. Shoup and J. J. Young, former pastor here.

New barns and houses are still going up. The shingle and lumber business is good.

We have been accused of being the means indirectly of people being assessed for new buildings. It has been intimated that the tax collector scans the locals to see who are building. In the future that much news must be left out, we presume. Quite a number of Western folks take THE REPUBLICAN for the purpose of keeping run of events in their old home in Garrett. But people are very sensitive and there are so many limitations, this, that and the other being objected to by people who are always ready to imagine that their own particular toes are being pinched, when nothing of the kind would be thought of, that the simplest and easiest way would be to let the "let-alone-system" have a trial.

An Indignation Meeting.

Our quiet little neighboring town of Romney, W. Va., was yesterday treated to a genuine sensation. It appears that the office of Deputy Collector of Internal Revenue there has been held for years by a Republican named Harry Worden. Mr. McGraw, the newly appointed Democratic Collector of Internal Revenue for the West Virginia district, re-appointed Mr. Worden to the position he held under the Republican Collector. As a number of Democrats were after the office, which it is understood pays $1,000 a year, this action of the new Collector was not received with a great amount of enthusiasm; in fact, it was received with something bordering on disgust. The dissatisfaction began in mutterings deep, but soon became open, public and decided. It culminated yesterday morning in a meeting at which several speeches were made, expressive of the indignation which filled the bosoms of the faithful. After the meeting came the real fun. This consisted of cutting down the majestic Cleveland and Hendricks pole which graced the center of the town. This was done, amid considerable excitement, although, so far as reported, everybody was in a good humor. After the pole had been disposed of, the "clean sweep" broom which had surmounted it was carefully packed up and sent by express to ex-Governor Jackson, of West Virginia, one enthusiastic individual paying the freight upon it. Whether the proceedings we have described will have the effect of causing Mr. McGraw to remove Mr. Worden and replace him with a good Democrat remains to be seen.—*Cumb. News, June 12th.*

CUMBERLAND, Md., June 16,—Hand-bills are being circulated in Romney calling for another meeting of Democrats there on next Saturday, to protest against the appointment of Republicans by Collector McGraw. The circular is signed "Many Democrats."

A clerk of one of Boston's courts tells a very good story of a somewhat flighty lawyer who was once trying a case in which there was great scarcity in witnesses, and the evidence was about all circumstantial. Finally the lawyer got excited and exclaimed: "Why, Judge, the angel Gabriel came to me last night and said this man is innocent." The Judge happened to be writing, did not even look up, but said, in the most matter-of-fact way, "Let him be subpœned."—*Boston Globe.*

A Big Carp Nursery.

Mr. J. W. Wood, who owns a pleasant place about three wiles from Greenville, S. C., where he has established an extensive nursery for carp, began in 1880 with two hundred fish a few days old, and, by an accident, lost all but eighty-four of them. Now he has seven ponds filled with fish, numbering probably 200,000, after having sold several hundred dollars' worth for breeding purposes. His original fish now weigh from twelve to fourteen pounds apiece, and are valued at from $25 to $50 a pair. The ponds are divided into "spawning" and "market" ponds, and are ingeniously arranged so as to be kept full of fresh water and have the requirements of the carp at the varied stages and ages of their lives met. One of the ponds is really a wonderful sight. At the clapping of hands on the shore the water there becomes fairly thick with thousands of fish, who crowd and leap over each other and press to the bank in an almost solid mass to be fed. They readily eat from the hand, and can be stroked by those who know them and their peculiarities like so many kittens. He has facilities for supplying a practically unlimited demand, and will be able to send probably from 30,000 to 50,000 pounds of fish to market during each year. The carp begins to breed at two years old, and the number to be raised is limited only by the room to be found for them.

Lewis Mehrling, resident in Frederick, while walking in Mt. Olivet Cemetery recently, picked up a locust and was stung on the thumb, presumably by a digger wasp, although he thinks it was by the locust. The sensation was similar to that produced by a slight prick of a pin, and the matter was quickly forgotten. About 4 o'clock Monday morning, however, he was awakened by an intense pain in his arm, which, with the shoulder, was very much swollen and discolored. Everything appeared dark, he says, before his eyes. He immediately called for assistance, and was advised to bathe his arm freely with whisky, and also to take a considerable quantity of the liquor internally, which he did. Since then the stiffness and swelling have become very much reduced, but even yet his thumb presents a greenish appearance. When it was suggested that he had been stung by a digger wasp Mr. Mehrling insisted that such was not the case, inasmuch as he had distinctly noted the movements of the locust. The egg depositor of the female cicada (17-year locust) somewhat resembles the weapon of the hornet. With it she makes slits in the twigs which are as clean cut as though with the point of a lancet. The question is raised if the female locust may not poison the human flesh with this instrument.

Bill Nye on His Birthplace.

A man ought not to criticise his birthplace, I presume, and yet, if I were to do it all over again, I do not know whether I would select that particular spot or not. Sometimes I think I would not. And yet, what memories cluster about that old house. There is the place where I first met my parents. It was at that time that an acquaintance sprang up which has ripened in later years into mutual respect and esteem. It was there that what might be termed a casual meeting took place that has, under the alchemy of restless years, turned to golden links, forming a pleasant but powerful bond of union between my parents and myself. For that reason I hope that I may be spared to my parents for many years to come.

There, on that spot, with no inheritence but a predisposition to prematnre baldness and a bitter hatred to rum, with no personal property but a misfit suspender and a stone bruise, began a life history which has never ceased to be a warning to people who sell groceries on credit.—*Boston Globe.*

War Statistics.

From official records of the war department, based on losses given, and the total number of men furnished by the States and Territories during the war, it appears that:

Out of every sixty-five men, one man was killed in action.

Out of every fifty-six men, one man died of wounds received in action.

Out of every thirteen men, one man died of disease.

Out of every nine men, one man died while in service.

Out of every fifteen men, one man was captured or reported missing.

Out of every ten men, one man was wounded in action.

Out of every seven men captured, one died while in captivity.

By others' faults wise men correct their own.

Patience is the panacea; but where does it grow, or who can swallow it?

What you are doing for love you can do no longer for mere gain. The higher motive drives out the lower.

One gains courage by showing himself poor; in that manner one robs poverty of its sharpest sting.

Baltimore Live Stock Market.

[From Baltimore American.]

MONDAY, June 15, 1885.

PRICES OF BEEF CATTLE AT THE MARKET TO-DAY.

Very best on sale to-day 5½@6c. that generally rated first quality 4¾@5¼ cts; medium or good fair quality 4¼@4¾ cts; ordinary thin steers, oxen and cows 3@4½ cts; extreme range of prices 3@6 cts; most of the sales were from 4½@5¾.

REMARKS ON BEEF CATTLE.

The arrivals of Cattle during the week amounted to 801 head, against 853 last week and 1,143 head the corresponding week of last year, and the sales were 613 head, against 645 last week, and 950 head the corresponding week of last year.

Trade at the opening to-day in the yards showed some little improvement as to activity, but it did not continue very long. Some few of the dealers report their prices as a shade better than they found them last Monday; but the ruling opinion was that they were off a slight fraction compared with the prices they realized then. There were some few fatter tops—mostly Chicago stillers—than last week, but more medium and common cattle than they were then. Prices ranged from 3c. to 6c., with but few at or near the former figure, with most sales from 4½ to 5¾c.

THE SWINE MARKET.

There is a fair increase in the number of receipts over last week's offerings, and, taken altogether, some improvement in quality. Trade is only fair, no activity prevailing in any of the yards. Prices range from 5 to 6c. few sales ranging lower than 5½c. with most sales 5½@6c. Same time last year 6½@7⅛c., and extra a shade higher.

THE SHEEP MARKET.

There is a fair increase of a few hundred in the receipts over last week's record, but no material improvement in the quality of the offerings, as compared with the receipts then. Trade is fair in most of the yards, as there was some little outside demand, and butchers were buying a trifle more freely. Prices ranged from 2 to 5½c., few selling under 3c., most sales 4@4¼c.; lambs 5@7⅛c., but few at the latter. Same time last year sheep sold at 3@5⅜c., and lambs at 5@8, few over 7.

NEW ADVERTISEMENTS.

SWAN MEADOWS,

Situated about five miles from Oakland and Mountain Lake Park on Cherry Creek, near the head tributaries of the Yough river,

The Best Trout Fishing and Hunting Grounds in Garrett County,

Will be open for visitors June 15, 1885.

Livery stable attached, vehicles for hunting and fishing excursions, daily back to Oakland and Mountain Lake Park, and parties met at any train; daily mail, and accommodations for riding or driving parties, picnic grounds, lawn tenis, croquet, swings, &c.

6 20 tf J. L. BURLEY, Proprietor.

NOTICE TO TRESPASSERS.

All persons are hereby notified not to trespass upon the lands of the undersigned, for any purpose; especially for the purpose of hunting or fishing.

THOS. W. CROSS,
JOHN H. CHISHOLM,
FRANCIS R. NETHKIN,
6 20 3t. THOMAS A. NETHKIN.

TRUSTEE'S SALE

—OF VALUABLE—

REAL ESTATE.

Under and by virtue of a decree of the Circuit Court for Garrett county, as a court of Equity, passed in a cause wherein Jonas E. Gnagey, et. al. are complainants, and Mary Otto and others are defendants, the undersigned trustee will sell at Public Auction to the highest bidder

ON MONDAY,

THE 13TH DAY OF JULY, 1885,

at the hour of 2 o'clock P. M. of said day, in the town of Grantsville, Garrett county, in front of the Hotel now kept by Jos. Blocher.

1st. All that part of a tract of land called

"SPRING FIELD,"

containing 46¾ acres of land, which is more particularly described in a deed from John Warnick and wife to John Swauger, dated 12th August, 1865, and recorded in Liber H. R. No. 23, folio 308, &c., Allegany county records. This piece of land is improved by a Grist and Saw Mill, a large Dwelling House and other outbuildings, and is commonly known as the

"SWAUGER MILL PPOPERTY,"

and situated about seven miles south of Grantsville, and is one of the most valuable "Mill Seats" in the county.

2d. All that part of a tract of land called "SWANTON," containing 30¾ acres, which is more particularly described in a deed from Jos. R. Anderson and wife to John Swauger, dated the 3d September, 1873, and duly recorded in Liber W. H. T. No. 1, folio 184, &c., one of the land records of Garrett county.

3rd. Also all that other certain tract of land adjoining the aforesaid parcels of land, containing the quantity of 21½ acres of land more or less, and being the same land which is more particularly described in a deed from Jos. R. Anderson and wife to John Swauger dated the 3rd day of July, 1876, and duly recorded in Liber W. H. T. No. 2, folio 779, &c., one of the land records of Garrett county.

Said two last mentioned tracts are well timbered and partly improved.

All of said different parcels of land will be sold separately, or together, whichever will realize the most money.

TERMS OF SALE, as prescribed by the decree: One-third of the purchase money to be paid in cash on the day of sale, or the ratification thereof by the court, and the balance to be paid in two equal annual installments, in one and two years from the day of sale; said deferred payments to bear interest from the day of sale, and to be secured by the bonds of the purchaser, with security to be approved by the trustee, or all the purchase money may be paid on the day of sale at the option of the purchaser.

JONAS E. GNAGEY,
6 20 4t. Trustee.

NEW ADVERTISEMENTS.

DR. D. T. E. CASTEEL,
PHYSICIAN AND SURGEON,
OAKLAND, MD.

Office next door to Nydegger's Drug Store, on Railroad street. Night calls at Villa Casteel. All calls answered promptly, day or night. June 13, '85.

AGENTS wanted for The Lives of all the Presidents of the U. S. The largest, handsomest best book ever sold for less than twice our price. The fastest selling book in America. Immense profits to agents. All intelligent people want it. Any one can become a successful agent. Terms free. HALLETT BOOK CO., Portland, Maine.

Dissolution of Co-partnership.

EGLON, W. VA., June 1, 1885.

The co-partnership heretofore existing between Julius Scherr and George Giessman, under firm name of Julius Scherr & Co., is this day dissolved by mutual consent, George Giessman retiring.

JULIUS SCHERR,
GEORGE GIESSMAN.

Having taken entire charge of the Mercantile Business of the late firm of Julius Scherr & Co., at Eglon, W. Va., I will continue to do business at the old stand and shall be pleased to serve my many friends and old customers. I will at all times pay full market price for produce, and guarantee to sell goods at the very lowest prices.

All accounts and notes due the late firms of A. C. Scherr & Co., and Julius Scherr & Co., must be settled as speedily as possible, either by cash or produce, or by note.

To the cash buyer and prompt payer I will say: Call and examine my stock and see prices before purchasing elsewhere. It will be to your interest to buy your goods from me, believing that a "nimble sixpence is better than a slow shilling." Quick sales, prompt payments and small profits.

Very Respectfully Yours,
JULIUS SCHERR.

N. B.—Mr. M. C. Feather will remain with the new firm, and will be pleased to have his many friends call. 6 6 3t.

Estate of Daniel Fichtner, deceased.

THIS IS TO GIVE NOTICE—That the subscriber, of Preston county, West Va., hath from the Orphans' Court of Garrett county, in Maryland, Letters of Administration on the personal estate of

DANIEL FICHTNER,

late of Preston county, deceased. All persons having claims against the deceased are hereby warned to exhibit the same, with the vouchers thereof legally authenticated to the subscriber, on or before the 7th day of December next; they may otherwise by law be excluded from all benefits of said estate. Given under my hand this 2nd day of June, 1885.

NOTLEY B. BROWNING,
6 6 3t. Administrator.

NOTICE TO TEACHERS.

OFFICE OF THE
BOARD OF COUNTY SCHOOL COMMISSIONERS,
OAKLAND, MD., June 9th, 1885.

All persons intending to teach in Garrett county the coming scholastic year are hereby respectfully urged to attend the County Normal to be held at Accident, commencing July 20, 1885. This institution is regarded as of such importance that no one intending to teach should fail to attend.

By order,
C. B. LUDWIG,
6 13 tf. Examiner.

APPOINTMENT OF SCHOOL TRUSTEES!

OFFICE OF THE
BOARD OF COUNTY SCHOOL COMMISSIONERS,
OAKLAND, MD., June 9th, 1885.

List of School Trustees appointed by the School Board at its last meeting, held June 9th, 1885, for 1885—1886.

Election District No. II, School 2, E. M. Friend, Geo. W. Dunham, retained H. Collins.

Election District No. III, School 2, Sol. Yoder, *vice* H. B. Fuller; School 3, Amos Butler, Christian Gingrich, A. Bonig.

Election District No. IV, School 4, M. M. Fazenbaker, *vice* M. Dorid.

Election District No. VII, School 7, W. H. Moon, *vice* Geo. P. White; School 10 Aaron Welton, Ami Rodeheaver, John M. Browning.

Deer Park School, Dr. J. W. Laughlin, Jos. Lashorn.

Election District No. X, School 6, J. T. Harvey, D. R. Harvey, retained David Wilson.

Election District No. XI, School 1, Jarvis Custer, Wm. H. Warnick, B. Frank Green.

Fort Pendleton School, Riley Murphy, Perry Lee, retained T. J. Moorland.

Excepting these changes the old trustees were retained.

By order

C. B. LUDWIG,
6 13 2t Secretary Board.

The Republican.

OAKLAND, GARRETT CO., MD.

THE JUNE CRICKET.

In the Madison Square Park.

Tented in the short green grass,
While the moon shone in the sky
A cricket, close to those who pass,
Uttered the old familiar cry.

Little heeded he the noise
Of the crowded city street,
But blew his flute with strident voice
Unmindful of the tramp of feet.

Hundreds briskly hurry by,
Listless to the song they pass;
No policeman stops his cry,
Or orders him: "Keep off the grass!"

I who note the steady tune
That he with such relish plays,
Wonder how this note of June
Came to take the city ways.

Far from native haunts withdrawn,
He sings the old song at my feet—
The prelude of a country lawn
Salutes the curious city street.

Rustic scenes are not at hand;
No rippling rivulet wanders near:
Hard it is to understand
This voice in such an atmosphere.

Brave little cricket, pipe away;
Let your blitheness melt in song!
'Tis the cheeriest roundelay;
I shall thank you for it long.

Torn from spring-time, robbed of June,
Shut up to the city street,
Much I thank you for your tune
Uttered from this strange retreat.

—*Joel Benton, in Harper's Magazine.*

TALISMANS AND CHARMS.

How Popular Superstition is Kept Alive Everywhere.

Empiricism and Quackery—Faith in Metal Rings and Other Senseless Charms—Influence of Imagination Over Disease.

Perhaps no class of superstitions exhibits human credulity and weakness in a broader light than that connected with the history of medicine and surgery. Until within a comparatively recent period the medical practice of many a civilized country was little else than a tissue of superstitious beliefs and speculative conceits, and such even at the present day is the character of the healing art in many parts of the world. Like other general features in the history of mankind, these beliefs are founded upon certain principles in our nature—erring through that ignorance which progressive experience and reason are destined to dissipate. Man naturally seeks to avoid disease from the pain which it creates, and the consequent fear of death urges him to grasp at any proffered remedy. His own anxiety, increased by that of his friends, makes him prone to believe, and credulity is a weakness ever ready to be practiced upon by the selfish and designing. Thus quackery and empiricism originate. There is, however, another cause of the superstitions in medicine equally general with that already mentioned, namely, the unknown origin of many of the maladies which assail us. The causes of external injuries are seen and known; those of internal or constitutional disease are obscure. In rude ages such afflictions are regarded as judgments and the work of malignant spirits; hence charms, incantations and divinations are the curative means resorted to. If the patient die it is his fate; if he survive (whether from the disease having run its course or from the force of imagination acting upon his bodily system), the charm is considered efficacious, and what is said to have cured one it is but reasonable to apply to thousands. Thus it is that empiricism and superstition get established and retain the hold even long after science has taught us to laugh at their absurdity. It may, therefore, be curious to collect a few details respecting past medical practice and its still surviving superstitions.

One of the earliest and most prevalent of these beliefs was that which attributed medical virtues to rings made of certain metals and fabricated after a certain fashion. Von Helmont, who wrote in the latter part of the Seventeenth century, affirmed that he was possessed of a metal, of which if a ring were made and worn, not only the pain attendant upon hemorrhoids would cease, but that in twenty-four hours, whether internal or external, they would vanish altogether. This faith in metal rings is still far from being extinct even in this country. Some years ago a young man in Plainfield, N. J., of about twenty-three years of age, evidently in a bad state of health, went to a silversmith's shop, wishing the proprietor of the establishment to make him a strong ring out of several pieces of silver which he brought with him. By questioning him a little the silversmith ascertained that he had been long subject to fits; that nothing which he had hitherto tried had afforded him any relief, and that he had been advised by a neighbor to try a charm which she had known had been efficacious in several instances. The charm was that he must beg seven different pieces of silver from seven different persons; that a strong ring must be made containing a part of each of the pieces; that the person who made it must have no other reward for his labor than the pieces which were left after the ring had been made; that he must wear the ring upon the forefinger of the right hand, and that he might then have no further fear of recurrence of fits. The young man also said that the physician who attended him had signified his assent to the trial. The silversmith asked him if he could really bring himself to think that it could be of any service to him. He replied that, when he thought of it reasonably, he must confess he did not see how it could; but that, as he had been so tormented with the fits, and as everything that he had tried had been of no service, he was willing to try anything, for drowning men catch at straws. The silversmith forthwith undertook to make him the ring, but on condition that he would call after he had worn it for a while to let him know if it had been the means of conquering his mortal enemy or not. In about three months afterward the young man was passing the shop when the silversmith called him in. He told him that perhaps he (the silversmith) might doubt what he stated, but that, nevertheless, it was perfectly true that from the time of putting on the ring until then he had never once had a fit, though before that time he had had three or four a week, and that he was rapidly recovering his health. The silversmith was greatly amused with this confession, for the ring which he made did not contain a particle of the silver which had been brought to him. The ring was made by the silversmith himself from the shank of an old silver spoon, and yet the patient assured himself that he was cured.

Upon reflecting upon this remarkable superstition one must evidently arrive at the conclusion that the whole cause of the cure was a strong effort of the imagination. The young man forced himself to believe in the potency of the charm, and in doing so exerted an influence over the nervous energy which produced the desired result. May not this species of confidence account for many alleged cures from the use of charms? Sometimes a superstition accommodates itself to a change in the the public mind, and thus endures long after its original form has ceased to be regarded. It is by no means uncommon to meet with educated people who wear rings composed of zinc and copper, which are supposed to have a favorable effect in rheumatic affections, merely because plates of these metals with a fluid between them are employed to form a galvanic circle.

Talismans, or the doctrine of signatures, had their origin from a belief, says a French writer, that medical substances bore upon their external surfaces the properties or virtues they possessed impressed upon them by planetary influence. The connection of the properties of substances with their color is also an opinion of great antiquity; white was regarded as refrigerant, red as hot—cold and hot qualities were therefore attributed to medicines so colored. This opinion led to serious errors in practice. Red flowers were given for disorders of the sanguiferous system, yellow ones for those of the biliary secretion, etc. We find that in small-pox red bed coverings were employed with the view of bringing the pustules to the surface of the body. The bed furniture and hangings were very commonly of a red color—red substances were to be looked upon by the patient. Burnt purple, pomegranate seed, mulberries or other red ingredients were dissolved in their drink. In short, as Avicenna contended that red bodies moved the blood, everything of red color was employed in these cases. John of Gadderden, physician to Edward II., directs his patients to be wrapped up in scarlet dresses, and he says that "when the son of the renowned King of England (Edward II.) lay sick of the small-pox, I took care that everything around the bed should be of a red color; which succeeded so completely that the prince was restored to perfect health without the vestige of a pustule remaining." Wraxall, in his "Memoirs," says that the Emperor Francis I., when infected with the small-pox, was rolled up in a scarlet cloth by order of his physician as late as 1765, when he died. Flannel dyed nine times in blue was held to be efficacious in the removal of glandular swellings. Amulets in earlier times were borne alike by rich and poor, and even in our own day are not wholly discarded—showing how firmly superstition lays hold of the enlightened mind. The elder tree, to the history of which many superstitions belong, forms a charm for a variety of diseases, but has been especially employed in epilepsy.

During the severe visitation of the plague in London amulets composed of arsenic were very commonly worn over the region of the heart, upon the principle that one poison would drive out or prevent the entry of another. Quills of quicksilver were commonly worn about the neck as a preservative against the plague. The powder of toad was employed in a similar way. Pope Adrian is reported never to have been without it. The ingredients forming his amulet were dried toad, arsenic, tormentil, pearl, coral, hyacinth, smarag and tragacanth. Charms were equally prevalent with talismans and amulets, and in rural districts the belief in their efficacy is far from being extinguished.

The possibility of transplanting or transferring the ague was once commonly entertained. It is usual with many persons in Germany who are affected with ague to visit at dead of night the nearest crossroad five different times, and there bury a new laid egg. The visit is paid about an hour before the cold fit is expected; and they are persuaded that with the egg they shall bury the ague. If the experiment fails (and the agitation it occasions may often render it successful,) they attribute it to some unlucky accident that may have befallen them on the way. In the course of the walk, and in the performance of the rite, they observe the strictest silence, taking care not to speak to any one whom they may happen to meet. By breaking a salted cake of bran, and giving it to a dog when the fit comes on, the malady has been supposed to be transferred from the patient to the animal.

Fish charms have been met with among many nations. The fish called the bullhead is used by some of the Russian peasants as a charm against fever. Again, if suspended horizontally and carefully balanced by a single thread, while allowed some freedom of motion, the fish is credited with the power of indicating, by the direction of the head, the point of the compass from which the wind will blow.

That these charms are totally useless, and can produce no effect on the disease for the cure of which they are administered, must be evident to every educated mind. In the nature of things, such cases are impossible, unless, be it always remembered, the malady is of a nervous character, and one over which the imagination is capable of exercising some control. The power which the mind exerts over the body is too well known to be for one moment discredited, and certain diseases may yield to this influence, when the patient's imagination is sufficiently excited by belief in the potency of the talisman applied. Numberless instances of this kind of influence are on record; that given by Dr. Paris in his "Pharmacologia" is perhaps the most strikingly illustrative. As soon as the powers of nitrous oxide were discovered Dr. Beddoes at once concluded that it must necessarily be a specific for paralysis. A patient was selected for the trial. Previous to the administration of the gas the doctor inserted a small pocket thermometer under the tongue of the patient, as he was accustomed to do upon such occasions, to ascertain the degree of animal temperature, with a view to future comparison. The paralytic man, wholly ignorant of the nature of the process to which he was to submit, but deeply impressed from the representation of the physician, with the certainty of its success, no sooner felt the thermometer under his tongue than he concluded the *talisman* was in full operation, and in a burst of enthusiasm declared that he already experienced the effect of its benign influence throughout the whole body. The opportunity was too tempting to be lost; Dr. Beddoes desired his patient to renew his visits on the following day, when the same ceremony was performed and repeated every succeeding day for a fortnight, the patient gradually improving during the period, when he was dismissed as cured, no other application having been used. Cures effected by the imposition of royal hands, by stroking, by mesmerism and the like, are proofs of the same principle, a principle of which the judicious physician may sometimes avail himself for his patient's sake, but which he will never exercise as an instrument for his own aggrandizement. Advertising, therefore, to the numerous phases which superstition in past ages has assumed, there is none which exhibits the human understanding in a more degraded light than that connected with the cure of bodily infirmities. Few if any of these cures had a show of reason to recommend them to the cultivated mind; and even these few were so clouded with mummery and jargon that one is apt to treat them with ridicule, believing that more virtue was ascribed to the mode of administration than to the potency of the article prescribed. Nor did these superstitions exert the sway over the vulgar mind alone; the rich and great were equally under their influence, and indulged in them all the more that their circumstances afforded them the means. It was left for the progress of science to dissipate these errors, and though the simple and uninformed, in remote districts, may still cling to some of these beliefs, and quacks and empirics be ever ready to impose on their credulity, as a nation we are now happily on the path to more rational and effective modes of procedure.—*Brooklyn Eagle.*

AMERICAN WORKMEN.

How a Connecticut Manufacturer Succeeded with Imported Cutlers.

About four years ago Colonel Frary, President of the Bridgeport Cutlery Company, while on a tour through Europe, visited many of the cutlery establishments in Germany, Hamburg and England. The manufacture of razors being in a primitive state in this country, he decided that he could do no better than to bring over some of the workmen to the United States. The workmen in Sheffield, England, were as a rule, members of the trades' unions, and Colonel Frary had considerable difficulty in engaging the men whom he wanted. A few months later he had the satisfaction of seeing forty of them with their families sailing for this country, accompanied by the secretary of the trade union. In Germany and Hamburg he engaged sixty men, and at once shipped them and their families to this country. Separate rooms were fitted up for the newly-arrived razor-makers in the shops at Bridgeport, the Germans being in one part of the works and the English in another.

Colonel Frary said: "I had a great deal of trouble with my men at first. I did not have nearly as much trouble with the Germans as with the English. The latter demanded a separate workroom apart from all the other workmen in the factory. If one of the men in my employ wanted to enter the room while they were at work, they would throw down their tools and would not resume their labors until the visitor had closed the door behind him. I was the only man in the entire shop whom they would let into the room without stopping work. A peculiar feature about them was that they would not work after twelve o'clock noon on Saturdays. Whatever money was left after buying the week's supply the men would go on a spree with until the last cent was spent, which was usually about Tuesday morning. American workmen are the best in the world."—*New Haven News.*

The Ant and the Lion.

The Ant having heard that the Lion had killed a Hunter and picked his Bones, set out and journeyed through the Forest until she met the King of Beasts. After stating what she had heard the Ant continued:

"It fills me with Sadness and Sorrow to know that of you. I shall proceed to make your Future conduct my Special Mission."

At the Desire of the Ant the Lion accompanied her Home. The young Ants annoyed him and he killed them by the score. The Beetles, who were Friends of the Ants, came on a visit to be snapped up. Wishing to see how the Ant Hill was constructed, the Lion in one moment made a wreck of the Labor of Weeks. Finally, when the Philanthropic Ant had several times Narrowly escaped with her Life she felt to exclaim:

"Begone with you back to your Haunts! As a Wicked Lion you may now and then Slay a Hunter, but as a Reformed Beast you will certainly be the Death of this Whole Colony."

MORAL:

The Tramp who is taken in for the Night causes more anxiety than the Dozen sleeping in the fence-corners.—*Detroit Free Press.*

WEDDINGS.

How They Were Conducted in Olden Times.

Joining the right hands in the wedding ceremony was customary in Assyria and Persia, and the bridal veil was worn in Greece and Rome. The Bible does not mention wedding rings, but it describes the giving of them as pledges of honor and affection. Pharaoh gave Joseph a ring when he set him over the land of Egypt, and the prodigal was given a ring upon his return to his father. Legends relate that Joseph espoused Mary with a ring in which was set an amethyst, and of course this precious relic was found (by a miracle) and performed many wonderful cures, for the benefit of mankind and the treasury of the church.

The young Roman sent the maiden his family had selected to become his wife a ring in token of his fidelity. Gold was the usual material, but in the time of Pliny, iron rings set with adamant were used to denote the durability of the contract. As now, this ring was worn on the fourth finger of the left hand. It was not always plain, but often bore a device, as a key to denote the authority and responsibility of a wife in her husband's house.

The diamond was much esteemed as a wedding ring in Italy during the fifteenth and sixteenth centuries, for that gem was believed to have a mysterious power of maintaining happiness between husband and wife. Silver rings, inlaid with Niello, were also used.

Gemmed rings were in fashion forty or fifty years ago. Two and sometimes three or four delicate rings were hinged or linked together, and bore upon the top when closed clasped hands or a heart, emblem of love and fidelity. Mottoes or posies were engraved on the inside of these rings. The prettiest one I ever saw read, "Endless and pure be our love." The Anglo-Saxons used these gemmed rings, and they in turn borrowed them of the French. I for one would like to know from whom the French borrowed them, but history is silent on this point.

The wedding ring has been worn upon the thumb, and upon the right hand. But the women of all nations have been as busy as bees, and with spinning and weaving to occupy their fingers, it is easy to see why even a princess should put her prized wedding ring upon the hand and finger which would keep it the safest. The fancy that a vein or nerve runs directly from the fourth finger of the left hand to the heart, is very ancient, and no doubt helped to make it the bearer of the wedding ring, and there was in the early days of the church a curious custom of recognizing the Trinity, by placing the ring on the first finger or thumb for the Father, on the second finger for the Son, and on the third finger for the Holy Ghost. Then it was placed upon the fourth finger, from which loving and superstitious wives never remove it.

Scholars are fond of telling us that the wedding ring meant the subjection of the wife, and the placing it upon the left hand meant more subjection. But in the past the subjection of women has needed no sign to emphasize it. It was an accepted and expected fact, and was perhaps a condition of safety.

In the middle ages the wedding ring was blessed or hallowed by the officiating priest, and the form used seems to me very beautiful: "Hallow, Thou, Lord, this ring, which we bless in Thy holy name, that whatsoever woman shalt wear it may stand fast in Thy peace, and continue in Thy will, and live, and grow, and wax old in Thy love, and be multiplied with length of days. Through Jesus Christ, our Lord."

The service of the Church of England compels the use of a ring, and an odd story is told of two paupers who, too poor to buy a ring, were securely married by means of a curtain ring, supplied by a sympathetic clerk. Two rings are used in modern Greece. A gold one for the bridegroom and a silver one for the bride. The inferior metal marks the inferiority of the wife, say the antiquarians again, but it seems to me rather a survival of the old worship of the sun and the moon. The ring fell under the displeasure of the Puritans, as did all signs and symbols used by Rome, and during the Commonwealth they tried to abolish it with Christmas and Easter observances, but the descendants of those Puritans wear engagement or betrothal rings, if not a wedding ring.

When a marriage between patrician families was celebrated in ancient Rome, a loaf of bread, made of wheat and barley, was solemnly tasted by the bride and bridegroom before the priest of Jove and ten Roman citizens as witnesses. Children of marriages in which this ceremony was observed were entitled to certain privileges and offices, for this was the highest and most sacred rite of marriage. Dainty and sweet as it is, the bride-cake is the modern representative of that wheat and barley bread. Whence the Romans derived the custom is not known, but it came no doubt from Asia. Dreaming upon wedding cake is an old English custom.

In Greece the bride rode to her husband's house in a litter, seated between the bridegroom and his friend—the best man. In Rome two boys led the bride, but his attendant was a married woman whose duty it was to lead the newly married pair to the altar of the family gods. In the time of the Anglo-Saxons the bride was led by a matron and followed by a company of young girls, who were called the bridesmaids. From them the custom has descended to us. *Demorest's Monthly.*

—A Pittsburgh writer makes the assertion that in fifty years, or perhaps in half that time, coal will not be carried from the mines to its place of destination in bulk, but only its actual heat energy will be transported, and that by wire, a process which, he says, can be accomplished by converting the coal into heat, the heat into motion and the motion into electricity; a storage battery in Cincinnati would take it up as fast as generated at the mines, and from this battery it could be taken and converted back into motion and heat, or changed into light.—*Chicago Herald.*

—The last war between Russia and England was concluded just twenty-nine years ago.

TRADE DOLLARS.

How Thousands of Them Are Bought Up, Sent to China and Melted.

"Trade dollars are still offered, though not in such quantities as they were at first," said a member of the banking firm of William G. Hopper & Co. on Saturday. "During the past thirty days I should suppose that somewhere in the neighborhood of 200,000 trade dollars have been shipped from Philadelphia to New York, and from there it is a fair presumption that they go to China. To-day we purchased twelve or thirteen hundred dollars, and within a week we got 5,000 in one lot, but the general tenders are in small amounts and come very largely from the country. The price given is eighty-five cents if the coin be in good condition."

"I am positive that no trade dollars are held in Philadelphia by speculators," said Mr. Stevenson, of Sailer & Stevenson. "Since Philadelphia brokers began buying this repudiated coin after the adjournment of Congress in March, I presume that the shipments to New York must aggregate close on to half a million dollars. We have purchased lately, and are still taking all that is offered, but rarely receive at present any large amounts in single lots. At one time, I suppose, Philadelphia and immediate vicinity had 2,000,000 of these dollars, and a great deal of this is yet held here. Most of it, however, is in the possession of those who believe that Congress will eventually redeem it, and, as they are so situated as to be able to hold without inconvenience, they prefer to do so instead of selling at fifteen cents discount. We send our purchases to New York, whence they go to London, and thence to China. Here, I understand, the most of it is melted up and reissued."

At William G. Huey & Co.'s similar information was given. "So large have been the China shipments," said one of the firm, "that if Congress does redeem the trade dollar it will find but few of them on the market. We are purchasing all that is offered us, and every day we receive various amounts, ranging from $100 up. The offerings are not very large at present. Most of the holdings now are in the hands of the wealthy, who believe in their eventual redemption, and do not care to sacrifice the face value."—*Philadelphia Press.*

MAKING BOOKS.

An Expert's Opinions of the Prevailing English Method.

A great mistake with English authors is the use of the commonplace book, in which extracts from the works of others are alphabetically arranged to be used again. In my opinion we read too many books. What we want is to come in contact with life. There are those who make books from books and those who make books from what they see. There are books which are only the successors of other books, and these are simply old works done up as new. According to my ideas a book should only be written when one has something to say. Don't go to your commonplace sheets and collect together a number of extracts and dish them up in book form. Go to the window and look upon nature. Then let us hear your own ideas about it. Many people imagine they have ideas when they are merely impregnated with those of others which they have read. It is a great mistake. The greater part of the novelists of to-day never portray real life. They have certain stereotypes for heroes, certain models for heroines, certain pictures for scenery. Pshaw! it is sickening. Shakespeare was great not because he wrote "Romeo and Juliet" and "Othello," but because he came in contact with existence. All his characters are living. Their fidelity to life is simply astonishing. The same can be said of Balzac. Shakespeare and Balzac are great manufacturers of beings.—*Daudet, in New York Times.*

Vagaries of the Insane.

A lunatic at the Morris Plains Asylum was mute for five years. Even the physicians thought he had lost the power of speech. One day he caught two of his fingers in a washing machine and they were horribly mangled. To the astonishment of everybody who heard him, he exclaimed: "By the great and jumping Moses, a devil is better than an inventor." That was three years ago, and he has not spoken since. Another patient, a boy in the same institution, is a lightning calculator. The most intricate problems are solved by him in the fractions of a minute. The boy believes that his head is filled with little blocks with figures upon them, and that they instantly fall into different positions and work out the problems. He thinks his brain, in fact, is a multiplication table. His insanity seems pardonable, for only a few sane men can compete with him as a mathematician.—*Morristown Jerseyman.*

Sanitary Item.

Dr. Blister had only been in Austin a few days when a plainly dressed man called on him.

"I hear, doctor, that you are going to settle in our city?"

"Yes, I am going to identify myself with the place and help build it up. I feel a deep interest in the future prosperity of Austin."

"I am glad to hear it. I think we can work into each other's hands much to our mutual interest. I feel a deep interest in the place myself."

"Are you the proprietor of a drug store?"

"O, no; I am only a poor grave digger."—*Texas Siftings.*

—A gift of $107,000 worth of property has been made to the Case School of Applied Science at Cleveland by Mrs. Laura Axtell, sister of the late Levi Kerr, in compliance with a wish expressed by him before his death. The property includes 300 acres about five miles from Cleveland and large lots in the manufacturing districts of that city. The Case School of Applied Science was founded by Mr. Case, and Mr. Kerr's gift is for the purpose of establishing a professorship of mathematics.—*Chicago Journal.*

SCHOOL AND CHURCH.

—Eight hundred thousand colored children were taught in the Methodist schools last year.—*N. Y. Sun.*

—The centednial anniversary of the Protestant Episcopal Church in the State of Massachusetts was celebrated recently.

—A "Museum of Religions" is, it is stated, to be established in Paris. As the title suggests, this museum will contain all the articles used by various nations in the observance of their religious rites.

—Linear drawing has been introduced, by recent enactment, into all the elementary schools of England. The theory is that a knowledge of this kind of drawing is useful in almost every kind of trade or handicraft.

—The Theological Seminary in San Francisco has done a good work in its early years. It has sent more than fifty graduates into the field, and the majority of these are now at work on the Pacific coast.—*San Francisco Call.*

—Seventy-nine per cent. of the soldiers in the Russian army are unable to read or write. This is supposed to indicate the proportion of illiterates in the population of the Empire. The Czar, who is jealous of his despotic privileges, is opposed to free schools.—*Current.*

—Superintendent Bennett, of Piqua, O., has been investigating the extent to which tobacco is used in the schools of that place. He finds that in two grades of seventy-three boys from twelve to fifteen years old, thirty-one habitually smoked cigarettes, and only seven could say they never had smoked. Of ninety-six boys from ten to twelve there were sixty-eight smokers, and in the A B C class many had begun the practice.—*Cleveland Leader.*

—The Year Book of Boston University gives the present number of students in all departments as 620. Last year it was 610, two years ago 555, three years ago 505. There has thus been a steady and healthy growth for four years. Of the present total no less than 223 have already received literary, scientific or professional degrees. One hundred and one Bachelors of Arts are candidates for the degree of Doctor of Philosophy.

—Rev. Sydney Smith was once asked by a friend for a reserved seat in St. Paul's. This was the witty canon's reply: "To go to St. Paul's is certain death. The thermometer is several degrees below zero. My sentences are frozen as they come out of my mouth, and are thawed in the course of the summer, making strange noises and unexpected assertions in various parts of the church; but, if you are tired of a world which is not tired of you, and you are determined to go to St. Paul's, it becomes my duty to facilitate the desperate scheme. Present the enclosed card to any of the vergers, and you will be well placed."

PUNGENT PARAGRAPHS.

—A baby born during a terrible storm was named Cyclonia. Its father says the appellation is a misnomer; a cyclone doesn't howl every night.

—In these hard times, when borrowing is so difficult, we'd like to know whether distance keeps up its time honored habit of lending enchantment to the view.—*Exchange.*

—"What is the safest way to transfer bees?" asks a correspondent. Our experience teaches us that the safest way is to stand off as far as possible and let the bees transfer themselves.—*Burlington Free Press.*

—Customer—"I can't pay you to-day. You see the shoemaker has just been here, and—" Tailor—"Yes; I met him on my way up, and he said you'd put him off because you'd got to pay the tailor to-day. So here's your bill, sir."—*Harper's Bazar.*

—"Adulterations in Limburger cheese have been discovered." The flavor of that delicacy has long led us to suspect that something was the matter with the Bismarckian food. We thought maybe it was not pulled until it was over-ripe; but if it is adulterated, that explains it.—*Norristown Herald.*

—Embarrassed Young Man (trying hard to say something)—"I think, Miss Belleairs, that I have had the pleasure of meeting you before." Miss Belleairs—"It is possible, but I do not remember it." E. Y. M.—"Was it not at Mount Desert?" Miss B.—"I have never been there." E. Y. M.—"Neither have I."—*Life.*

—"I believe I've lost my wits," said a worried husband to his wife. "Indeed? I didn't know you had any to lose," she answered, sarcastically. "O, yes, dear, I had some once." "Well, I never observed them." "No, love, I lost them just before I met you." He didn't want to say it, but she drove him to it.—*Merchant Traveler.*

—"See here," said a citizen of St. Louis to the proprietor of a bookstore, "you'll have to take the book back. I asked you to give me a volume of poetry to put on the parlor table, but every durned word in this book is straight prose." "Why, man alive, that was written by Shakespeare." "I don't care who writ it, it's prose; I've looked it all through. For instance, here's a specimen:

How silver-sweet sound lovers' tongues by night,
Like softest music to attendin' ears!

Do you call that poetry, rhymin' ears with night? You can take it back. I don't want it."—*N. Y. Times.*

—"Music hath charms to soothe," and our latter day homes would indeed be incomplete without the piano, the culture of the voice and all that tends to bring the soul *en rapport* with the harmony of the great masters. So it happens that the Shuttles family endure the "hum ti tum" of practice hours that they may enjoy the completed sonata of the evening, when there are callers. "Job, my dear," said Mrs. Shuttle, "don't go down town this evening. Stay, and listen to Selina's new nocturne in G minor. It's perfectly lovely." "Which reminds me," said the practical Job, "I've got to go down town and pay Signor de Poundhecingero six sonatas in X and a nocturne in V. That's what takes the poetry out of music, my dear."—*Hartford Post.*

FOR OUR YOUNG FOLKS.

THE LONG SERMON.

O the sun is bright and the day is fair,
And the sweet breeze wanders everywhere,
And the sweet birds sing as they lightly fly,
And I wish we could join them, Madge and I

We are bidden to listen, and so we do,
Shut up in the narrow and stuffy pew;
Behaving just as well as we can
We look over there at the preacher-man.

We can't understand, though we take such pains;
All sense seems gone from our little brains;
So we just sit quiet as best we may,
And wait till the long hour wears away.

My poor little sister tried to keep
Her blue eyes wide, but she fell asleep.
'Tis so close and stupid and dull and warm,
And I hold her safe in my tired arm.

O how can he have so much to say,
The preacher-man, such a lovely day,
And what in the world he is talking about
We do not know and we can't find out.
—*Wide Awake.*

THE CRIPPLED HEN.

How Her Large Family of Chickens Were Provided for.

Bobby came in one morning crying. Mamma said: "Where have you been, Bobby, and what *is* the matter?"

"Old Speckle has—boo-hoo! boo-hoo! —freezen her foots off!"

"*Frozen*, Bobby, not *freezen*. And *feet*, not *foots*. But what do you mean, and how could old Speckle freeze her feet off?"

"I forgot to shut her in the hen-house last night, and she roosted up in the apple-tree, and this morning both her feet are gone."

Mamma began to look grave, and taking Bobby by the hand, went down stairs to the kitchen, where Bridget told the story over again.

"Och! 'Ave ye plaze, mum, the crayther sot up in the tree all the cold night through, and when she came down this mornin', sure she left her feet behind her!"

So it was only too true that Old Speckle, Bobby's pet hen, who had reared two broods of beautiful chickens already, had had her feet frozen off through careless Bobby forgetting to shut her into her nice warm house at night.

At first, papa said she must be killed right away, and put out of her pain. But on going out to look at her, she seemed not to be in pain at all, and to be getting on nicely without any feet.

She hobbled about on her funny slim black legs, looking so like an old soldier just home from the war that they all laughed, except Bobby, and he cried for shame.

So papa said Old Speckle should be allowed to live without her feet, and I can tell you there never was a hen better taken of after that.

Bobby fed her himself every day, and shut her up every night in a warm box half-filled with hay, where she cuddled down in one corner and went to sleep, for you see, she could not roost any more after she lost her feet.

But when the spring came, Bobby again ran in to mamma with another piece of news, his bright little face almost as bright as the sunshine outside.

"Mamma, Old Speckle is setting! She's goin' to hatch out some little chickens! Oh, I'm so glad!"

"Mamma thought for a moment, and then said: "You must drive her off the nest, Bobby. The poor old thing is too lame ever to get about with a brood of chickens. Besides, how could she scratch for them?"

Bobby's face fell. He was very fond of the soft, downy little balls, and he felt badly that Old Speckle could not have her family. Suddenly his face brightened again.

"Mamma, why couldn't *I* scratch for the chickens?"

The picture of Bobby going about all day followed by a large family of little yellow chickens was too much for mamma, and she laughed very heartily, much to Bobby's disgust.

But Old Speckle was not to be made to believe that she was not able to be as good a mother as ever. The more Bobby drove her off from the eggs, the more she went back and sat on them again, until at last papa said:

"Let the poor old thing have her chickens and see what she will do with them."

Bobby was very glad of this, for Whitey and Susan and Mrs. Brown had all refused to have families, and he did long for some little chickens!

So the days flew by, and at last the little yellow things pecked and pecked their way out of their shells, and Bobby counted fourteen of them.

"What a family for poor Old Speckle!" said mamma. "And how will she ever manage to take care of them?"

One she did not take care of, for before he had been two hours out of his shell he climbed up the side of an old tomato-can that stood in the hen-yard half-filled with water, and tumbling in, was drowned to pay for his curiosity.

But as there were thirteen left, I really do not think Old Speckle ever missed him.

And now Bobby watched very carefully to see how this good mother was going to take care of her children. And he saw something so funny that he came flying in at last with his red cheeks redder than ever, and his eyes big with the excitement of what he had to tell, crying out:

"Quick, mamma! Quick papa! Run to the window and see Old Speck!"

There she was, hopping along on her two brown sticks of legs, followed by her thirteen chickens, and by her side walked the stately Miss Brown, who every few minutes stopped and scratched up a nice little breakfast for her friend's young family, while the poor old mother-hen clucked at them to teach them how to pick up the bugs and worms.

"Yes," shouted Bobby," and I *saw* her ask Mrs. Brown to go with her and scratch! She went up just as *close* to her, and whispered with her head right up to Mrs. Brown's. I s'pose she was tellin' her how much she'd pay her to go and scratch for her little chickens!"

"A nursery-governess!" laughed papa.

As I did not know the hen-language as well as Bobby does, I can't tell you whether this was true or not, but I do know that until Old Speckle's children were big enough to take care of themselves, Mrs. Brown went with her friend every morning, and did the scratching for the little folks' breakfast.—*Gene H. Underwood, in Youth's Companion.*

MONKEYS.

Some Short Stories Illustrating Their Propensity for, and Delight in, Mischief.

A monkey's chief delight is in mischief, and it does seem as if a spice of cruelty in the mischief makes it have a greater relish for Jocko. Captivity makes most animals lose their spirits, but the monkey, unless he is sick, is always ready to play some prank.

Nothing seems to give a monkey quite as much pleasure as copying after his human master, and many are the funny stories told in consequence. Sometimes poor Jocko's fun turns out badly for himself, but as a rule he may be trusted to come off free from harm.

The monkey that stole his master's razor and tried to shave himself was unlucky enough to slice off a piece of his cheek. That was bad, certainly, but it is doubtful if he suffered any more than the monkey that saw his master bathe his forehead with cologne for headache, and tried to imitate him. Instead of cologne, however, the poor fellow got hold of a bottle of ammonia, and slopped that on his head. Ah! how he did chatter and dance about when the stinging stuff reached his eyes and nose! You may be sure that monkey never touched a bottle again.

Jocko has such a serious air when he is planning his mischief that unless one is always on the lookout he will accomplish it. A story is told of a monkey that took the greatest delight in watching the nurse wash his master's baby. The family was divided as to whether he enjoyed Miss Mabel's shrieks or the performance as a whole. One day the question was settled.

The family was at dinner down-stairs, when there came a terrible wail from Kittie, and another and another, till one of the boys jumped up and ran to the nursery, where the noise came from. There was Master Jocko copying, as well as he could, the actions of nurse with little Mabel. Only Jocko's baby was poor Kittie, who was wailing, spitting and scratching with all her might. No doubt Jocko looked upon the resistance as quite in order, for Mabel never could be washed without many protests.

Those people were fortunate in that the monkey did not insist upon trying his experiments with the real baby instead of the kitten, as once did happen. In this case the monkey, which was a large one, snatched the baby from its cradle, and, when pursued, climbed to the house-top, and there, to the anguish of the baby's parents, dandled and played with the little thing with great glee. It was only after great trouble that the baby was rescued.

We are used to seeing monkeys kept only as pets or as curiosities; but in Africa or Asia they are sometimes trained to serve their masters in many ways. They are so given to mischief, however, that they can never be very trusty servants.

An example of this is shown in the story told of a baboon which had been left in charge of the kitchen while his master went off for awhile. On the stove was a pot in which a chicken was being boiled. The baboon sat very quietly for some time, but at last his curiosity got the better of him and he lifted the lid from the pot.

Well, you can guess the rest. The chicken smelled good, so he smelled again; then he took a little taste; then he took another taste; and behold! when Sir Baboon had finished tasting there were only some bones left.

When he had eaten the chicken up it seemed to occur to the baboon that his master might be angry when he looked into the empty pot. What to do to avoid the certain punishment that was in store for him was the greedy fellow's great concern now. He sat in the doorway looking very much cast down, when suddenly a bright idea seemed to strike him, and he hurried quickly but stealthily to a field, not far away, where a number of crows were feeding. He drew as near to the birds as he could without frightening them, and then, hiding his head, remained as motionless as a log of wood. In a little while the incautious crows approached so close to him that he was able by a quick movement to capture one of them. In a second he had wrung the crow's neck and was on his way home again. Once there, and seeing no sign of his master, he triumphantly tossed his crow, all unplucked, into the pot, and then sat down, quite satisfied that his theft would never be discovered. No doubt it was always a mystery to that baboon how his master discovered that the crow in the pot was not the chicken he had left there.—*John R. Coryell, in Harper's Young People.*

Elementary Education.

Taxpayers in London have begun to complain of the cost of public education, and a controversy has arisen as to the best means of securing a reduction of the charges. It is shown that teachers were paid last year nearly twice as much per child as ten years ago, and many believe this expenditure excessive. The cost is much less in the provincial cities, and it has not been shown in justification of the difference that a higher standard obtains in London. *St. James' Gazette* remarks in the connection that elementary education has proved immensely more expensive than either the advocates or opponents of the compulsory system believed when that system received the sanction of Parliament.—*Current.*

—A French engineer has conceived an idea for enabling vessels upon the high seas to communicate with the shore by means of the existing submarine cables. He proposes that these cables shall be supplied at convenient intervals with short branches, the free ends of which shall be buoyed in such manner that passing vessels, provided with the necessary batteries and with a key by which to obtain access to the wires, may telegraph home.

—An Ohio skating rink has gone into the hands of a receiver, and the New York *Sun* sees in it a sign of the decadence of the great craze.

FARM AND FIRESIDE.

—If an egg is added to the batter for flour griddle-cakes they will be surprisingly improved, and brown nicely.—*Boston Budget.*

—Bathe a sprain with arnica diluted with water, and bandage with soft flannel moistened with the same. A sprained wrist thus treated will grow well and strong in a few days.—*Exchange.*

—Ginger Cookies: One cup of sugar, one-half cup of molasses, one-half cup of shortening, two-thirds cup of water, one teaspoonful each of ginger and soda, one-fourth teaspoonful of salt, and flour enough to roll. Bake in a quick oven.—*The Household.*

—The secret of stiff shirts and collars is to have the starch worked in thoroughly while hot. Use a little kerosene in the hot starch, and just before ironing wring through hot water which keeps the cold starch from sticking. Use white wax to polish the irons.—*N. E. Farmer.*

—Cheap Mountain Pound Cake: To one egg and four ounces of butter well beaten together, add a teaspoonful of pepper, pint of molasses, teaspoonful salaratus, dissolved in a teacup of cream and milk, and flour enough to make a batter; set it where quite warm to rise, and when perfectly light bake moderately.—*Boston Globe.*

—Milk Soup: Four large potatoes, two onions, two ounces of butter, one pint of milk, three tablespoons of tapioca, salt and pepper to taste; boil the vegetables slowly with two quarts of water several hours, then strain through the colander and add the milk and tapioca; boil slowly and stir constantly for about fifteen minutes, then serve.—*Household.*

—If you wish to have potatoes mealy do not let them stop boiling for an instant, and when they are done pour the water off and let them steam for ten or twelve minutes over the fire. In the spring of the year it is better to boil the potatoes in two waters, pouring off the first as soon as it comes to boil, and then cover the potatoes a second time with cold water, adding a little salt.—*N. Y. Post.*

—Buttermilk Muffins: These have but to be tried to become a standing breakfast dish. Beat hard two eggs into a quart of buttermilk; stir in flour to make a thick batter, about a quart, and lastly a teaspoonful of salt and the same of soda. Bake in a hot oven in well-greased tins. Muffins of all kinds should only be cut just around the edge, then pulled open with the fingers.—*The Caterer.*

—Everybody has a cure for sore throat, but simple remedies appear to be most effectual. Salt and water is used by many as a gargle, but a little alum and honey dissolved in sage tea is better. An application of cloths wrung out of hot water and applied to the neck, changing as often as they begin to cool, has the most potency for removing inflammation of anything we ever tried. It should be kept up for a number of hours; during the evening is usually the most convenient time for applying this remedy.—*Philadelphia Press.*

PLANTS.

The Sanitary Value of these Household Adornments.

It was only a few years ago that plants and flowers were considered very injurious to health, when cultivated in our living rooms, particularly at the winter season, when windows and doors are kept closed.

To such an extent did this absurd idea prevail, that many a flower lover banished them from their windows altogether; and the sick "shut in" ones were not allowed one green twig or bright blossom to tide them over the dreariness of winter, because, it was said, they sapped their life blood. That proportionately, as the plants grew and flourished, the sick ones drooped and faded. These foolish ideas were not promulgated by an ignorant class of people, but by those deemed most wise in their day and generation; hence their words were accepted as words of wisdom and heeded accordingly.

Those old chimeras of the brain have given place to a more rational view of the uses and value of plants when grown in living rooms, for they are now cultivated more extensively than ever. It seems to me a libel on the wisdom of the Creator, to think that He has decked this earth with beauty and fragrance, given us the senses to enjoy them, and then so constructed the flowers that they shall prove a curse, instead of a blessing. But let me quote a little from a magazine of note that lies open before me:

"Recent investigations have proved that plants in rooms have great sanitary value. Dr. Andrews, from tests made at Christ Hospital, Philadelphia, has shown that plants in sleeping or sick rooms perform two functions, namely, that of generation of ozone and exhalation of vapor, by which the atmosphere of the room is kept in a healthful condition of humidity. It is stated that in two rooms, alike in all respects save that one contained some flowers and the other none, the one containing the flowers was cooler by one and one-half degrees than the other. The ozone thus generated by budding and blossoming plants has been found to have great value, in that it purifies the air, ridding it of disease-breeding germs and of vapors of decomposition.

"It has also been recently stated that Prof. Mantogazza, of Pavia, Italy, has discovered that ozone is generated in immense quantities by all plants and flowers possessing green leaves and aromatic odors. Hyacinths, mignonette, heliotrope and the like all throw off ozone largely on exposure to the sun's rays. So powerful is this great atmospheric purifier that it is the belief of chemists that whole districts can be redeemed from the deadly malaria which infests them by simply covering them with aromatic vegetation.—*Portland Transcript.*

INVALIDS' HOTEL AND SURGICAL INSTITUTE

No. 663 Main Street, BUFFALO, N. Y.

Not a Hospital, but a pleasant Remedial Home, organized with

A FULL STAFF OF EIGHTEEN PHYSICIANS AND SURGEONS,

And exclusively devoted to the treatment of all Chronic Diseases.

This imposing Establishment was designed and erected to accommodate the large number of invalids who visit Buffalo from every State and Territory, as well as from many foreign lands, that they may avail themselves of the professional services of the Staff of skilled specialists in medicine and surgery that compose the Faculty of this widely-celebrated institution.

A FAIR AND BUSINESS-LIKE OFFER TO INVALIDS.

We earnestly invite you to come, see and examine *for yourself*, our institutions, appliances, advantages and success in curing chronic diseases. Have a mind of your own. Do not listen to or heed the counsel of skeptical friends or jealous physicians, who know nothing of us, our system of treatment, or means of cure, yet who never lose an opportunity to misrepresent and endeavor to prejudice people against us. We are responsible to *you* for what we represent, and if you come and visit us, and find that we have misrepresented, *in any particular*, our institutions, advantages or success, **we will promptly refund to you all expenses of your trip.** We court honest, sincere investigation, have no secrets, and are only too glad to show all interested and candid people what we are doing for suffering humanity.

NOT ALWAYS NECESSARY TO SEE PATIENTS.

By our original system of diagnosis, we can treat many chronic diseases just as successfully without as with a personal consultation. While we are always glad to see our patients, and become acquainted with them, show them our institutions, and familiarize them with our system of treatment, yet we have not seen one person in five hundred whom we have cured. The perfect *accuracy* with which scientists are enabled to deduce the most minute particulars in their several departments, appears almost miraculous, if we view it in the light of the early ages. Take, for example, the electro-magnetic telegraph, the greatest invention of the age. Is it not a marvelous degree of accuracy which enables an operator to *exactly* locate a fracture in a submarine cable nearly three thousand miles long? Our venerable "clerk of the weather" has become so thoroughly familiar with the most wayward elements of nature that he can accurately predict their movements. He can sit in Washington and foretell what the weather will be in Florida or New York as well as if several hundred miles did not intervene between him and the places named. And so in all departments of modern science, what is required is the knowledge of certain *signs*. From these scientists deduce accurate conclusions regardless of distance. So, also, in medical science, diseases have certain unmistakable signs, or symptoms, and by reason of this fact, we have been enabled to originate and perfect a system of determining, with the greatest accuracy, the nature of chronic diseases, without seeing and personally examining our patients. In recognizing diseases without a personal examination of the patient, we claim to possess no miraculous powers. We obtain our knowledge of the patient's disease by the practical application, to the practice of medicine, of well-established principles of modern science. And it is to the accuracy with which this system has endowed us that we owe our almost world-wide reputation of skillfully treating lingering or chronic affections. This system of practice, and the marvelous success which has been attained through it, demonstrate the fact that diseases display certain phenomena, which, being subjected to scientific analysis, furnish abundant and unmistakable data, to guide the judgment, of the skillful practitioner aright in determining the nature of diseased conditions. The most ample resources for treating lingering or chronic diseases, and the greatest skill, are thus placed within the easy reach of every invalid, however distant he or she may reside from the physicians making the treatments of such affections a specialty. Full particulars of our original, scientific system of examining and treating patients at a distance are contained in **"The People's Common Sense Medical Adviser."** By R. V. Pierce, M. D. 1000 pages and over 300 colored and other illustrations. Sent, post-paid, for $1.50. Or write and describe your symptoms, inclosing ten cents in stamps, and a complete treatise, on your particular disease, will be sent you, with our terms for treatment and all particulars.

SIGNS OF DISEASE.

MARVELOUS SUCCESS.

COMMON SENSE AS APPLIED TO MEDICINE.

It is a well-known fact, and one that appeals to the judgment of every thinking person, that the physician who devotes his whole time to the study and investigation of a certain class of diseases, must become better qualified to treat such diseases than he who attempts to treat every ill to which flesh is heir, without giving special attention to any class of diseases. Men, in all ages of the world, who have become famous, have devoted their lives to some special branch of science, art, or literature.

By thorough organization, and subdividing the practice of medicine and surgery in this institution, every invalid is treated by a specialist—one who devotes his undivided attention to the particular class of diseases to which the case belongs. The advantage of this arrangement must be obvious. Medical science offers a vast field for investigation, and no physician can, within the brief limits of a life-time, achieve the highest degree of success in the treatment of *every* malady incident to humanity.

OUR FIELD OF SUCCESS.

NASAL, THROAT AND LUNG DISEASES.

Recognizing the fact that no great institution dedicated exclusively to the treatment of chronic diseases, would meet the needs of the afflicted of our land, without the most perfect, complete and extensive provision for the most improved treatment of **diseases of the air-passages** and lungs, such as **Chronic Nasal Catarrh, Laryngitis, Bronchitis, Asthma,** and **Consumption,** we have made this branch of our institution one of the leading Departments. We have every kind of useful instrument for examining the organs involved, such as rhinoscopes, laryngoscopes, stethoscopes, spirometers, etc., etc., as well as all of the most approved kinds of apparatus for the application of sprays, fumigations, atomizations, pulverizations, inhalations, and all other forms of approved medicinal applications.

We publish three separate books on Nasal, Throat and Lung diseases, viz.: A Treatise on Consumption, Laryngitis and Bronchitis; price, postpaid, ten cents; A treatise on Asthma, or Phthisic, giving new and successful treatment; price, postpaid, ten cents; A treatise on Chronic Nasal Catarrh, price, postpaid, two cents.

DISEASES OF DIGESTION.

Dyspepsia, "Liver Complaint," Obstinate Constipation, Chronic Diarrhœa, Tape-worms, and kindred affections are among those chronic diseases in the successful treatment of which our specialists have attained unparalleled success. Many of the diseases affecting the liver and other organs contributing in their functions to the process of digestion, are very obscure, and are not infrequently mistaken by both laymen and physicians for other maladies, and treatment is employed directed to the removal of a disease which does not exist. Our Complete Treatise on diseases of the Digestive Organs will be sent to any address on receipt of ten cents in postage stamps.

KIDNEY DISEASES.

BRIGHT'S DISEASE, DIABETES, and kindred maladies, have been very largely treated, and cures effected, in thousands of cases which had been pronounced beyond hope. The study and practice of chemical analysis and microscopical examination of the urine in our consideration of cases, with reference to correct diagnosis, in which our institution long ago became famous, has naturally led to a very extensive practice in diseases of the urinary organs. Our specialists have acquired, through a vast and varied experience, great expertness in determining the *exact* nature of each case, and, hence, have been successful in *nicely* adapting their remedies for the cure of each individual case.

The treatment of diseases of the urinary organs having constituted a prominent branch, or specialty, of our practice at the Invalids' Hotel and Surgical Institute, and, being in constant receipt of numerous inquiries for a complete but concise work on the nature and curability of these maladies, we have published a large illustrated treatise on these diseases, which will be sent to any address on receipt of ten cents in postage stamps.

BLADDER DISEASES.

INFLAMMATION OF THE BLADDER, Gravel, Enlarged Prostate Gland, Retention of Urine, and kindred affections may be included among those in the cure of which our specialists have achieved marvelous success. These are fully treated of in our illustrated pamphlet on Urinary Diseases. It includes numerous testimonials from well-known people. Sent by mail for ten cents in stamps. Send for it at once.

STRICTURE.

STRICTURES AND URINARY FISTULÆ.—Hundreds of cases of the worst form of strictures, many of them greatly aggravated by the careless use of instruments in the hands of inexperienced physicians and surgeons, causing false passages, urinary fistulæ, and other complications, annually consult us for relief and cure. That no case of this class is too difficult for the skill of our specialists is proved by cures reported in our illustrated treatise on these maladies, to which we refer with pride. To intrust this class of cases to physicians of small experience, is a dangerous proceeding. Many a man has been ruined for life by so doing, while thousands annually lose their lives through unskillful treatment. Send particulars of your case and ten cents in postage stamps, for a large, illustrated treatise containing many testimonials.

NERVOUS DISEASES.

Epileptic Convulsions, or Fits, Paralysis, or Palsy, Locomotor Ataxia, St. Vitus's Dance, Insomnia, or inability to sleep, and threatened insanity, **Nervous Debility,** arising from overstudy, excesses, and other causes, and every variety of nervous affection, are treated by our specialists for these diseases with a measure of success heretofore regarded as impossible. See numerous cases reported in our different illustrated pamphlets on nervous diseases, any one of which will be sent for ten cents in postage stamps, when request for them is accompanied with a statement of a case for consultation, so that we may know which one of our Treatises to send.

DISEASES OF WOMEN.

So alarmingly prevalent are those chronic diseases peculiar to females, and so famous have our institutions become for their cure that we were long ago obliged to create a special department, thoroughly organized, and devoted *exclusively* to the treatment of these cases. The physicians and surgeons in this Department have made these delicate diseases their sole study.

Hundreds are brought to our institutions from far distant States on beds, and they go home well and strong. Every case consulting our specialists, whether by letter or in person, is given the most careful and considerate attention. Every important case (and we get few which have not already baffled the skill of all the home physicians) has the benefit of a full Council, composed of skilled specialists. Our Department and rooms for ladies in the Invalids' Hotel and Surgical Institute are so arranged as to be very private, and free from the annoyances so common in other institutions. Send ten cents in postage stamps for our large Complete Treatise on Diseases of Women, illustrated with numerous wood-cuts and colored plates.

PILE TUMORS.

PILES, FISTULA IN ANO, and other diseases affecting the region of the lower bowel, are largely treated, and with marvelous success, by specialists, who give their whole time to the study and treatment of this class of affections. We never fail to cure pile tumors, however large. When the patient can come here for treatment, **we will guarantee a cure.**

RUPTURE.

Fortunately for suffering humanity, a method of treatment has been perfected and thoroughly tested in our institutions, by which in from six to fifteen days radical and perfect cures of the worst forms of piles are effected without causing any severe suffering. Send ten cents in stamps for our large illustrated Treatise on Piles.

Hernia (Breach), or **Rupture,** no matter of how long standing, of what size, or what the age of the patient may be (if not under four years), is **speedily and radically cured in every case undertaken by our specialists, without the knife, without dependence upon trusses, without pain, and without danger.**

THROW AWAY TRUSSES, and **NOT SAFE.**

There is no longer any need of wearing clumsy, awkward, chafing, old trusses, which, at best, give only partial relief, which never cure, but often inflict injury and induce inflammation and strangulation, from which thousands annually die.

There is no safety in depending upon any kind of truss, though, no doubt, every man who has suffered the agonies of a strangulated hernia, and died, thought himself safe. Both the rupture and the truss keep up a mental strain and induce nervous debility and various organic weaknesses of the kidneys, bladder, and associate organs.

CURES GUARANTEED in every case undertaken. Can any sufferer ask for greater inducements than these?

Notwithstanding the great number of ruptures treated in the three years past, many of them of immense size and of such a character that no other plan of treatment could possibly have succeeded, every case to which this perfected system of treatment has been thoroughly applied, has been perfectly cured. Only a few days residence at the Invalids' Hotel and Surgical institute is necessary.

Abundant references, by permission of those whom we have cured, will be furnished to any one wishing to call upon or write them.

An illustrated treatise on Rupture sent to any address upon receipt af ten cents.

DELICATE DISEASES.

Organic weakness, nervous debility, premature decline of the manly powers, involuntary vital losses, and kindred affections, are speedily, thoroughly and permanently cured.

To those acquainted with our institutions it is hardly necessary to say that the Invalids' Hotel and Surgical Institute, with the branch establishment located at No. 3 New Oxford Street, London, England, have, for many years, enjoyed the distinction of being the most largely patronized and widely celebrated institutions in the world for the treatment and cure of those affections which arise from youthful indiscretions and pernicious, solitary practices.

We, many years ago, established a special Department for the treatment of these diseases, under the management of some of the most skillful physicians and surgeons on our Staff, in order that all who apply to us might receive all the advantages of a full Council of the most experienced medical men.

WE OFFER NO APOLOGY, We offer no apology for devoting so much attention to this neglected class of diseases, believing no condition of humanity is too wretched to merit the sympathy and best services of the noble profession to which we belong. Many who suffer from these terrible diseases contract them innocently. Why any medical man intent on doing good, and alleviating suffering, should shun such cases, we cannot imagine. Why any one should consider it otherwise than most honorable to cure the worst cases of these diseases, we cannot understand; and yet of all the other maladies which afflict mankind there are probably none about which physicians in general practice know so little.

We fully agree with the celebrated Dr. Bartholow, who says, "I think it a reproach to our profession that this subject has been permitted, in a measure by our own indifference, to pass into the hands of unscrupulous pretenders. Because the subject is disagreeable, competent physicians are loath to be concerned with it. The same unnecessary fastidiousness causes the treatment of this malady to be avoided in private practice."

We shall, therefore, continue, as heretofore, to treat with our best consideration, sympathy, and skill, all applicants who are suffering from any of these delicate diseases.

Our Complete and Illustrated Treatise on these subjects is sent to any address on receipt of ten cents in stamps.

ALL CHRONIC DISEASES A SPECIALTY.—Although we have, in the preceding paragraphs, made mention of some of the special ailments to which particular attention is given by the specialists at the Invalids' Hotel and Surgical Institute, yet the institution abounds in skill, facilities, and apparatus for the successful treatment of every form of chronic ailment, whether requiring for its cure medical or surgical means.

All letters of inquiry or of consultation should be addressed to

WORLD'S DISPENSARY MEDICAL ASSOCIATION,
663 Main Street, BUFFALO, N. Y.

A Chinese Printing Office.

A visit to a Chinese printing establishment is productive of much that is interesting. Moveable types are in use in San Francisco Chinese newspaper offices. The manner of getting a Chinese newspaper on the press and printing is very primitive. The editor takes American newspapers to friends, from whom he gets a translation of the matter he needs, and after getting it written in Chinese in a manner satisfactory to him he carefully writes it upon paper chemically prepared. Upon the bed of the press which is of the style that went out of use with the last century, is a lithographic press. Upon this the paper is laid until the impression of the character is left there. A large roller is inked and passed over the stone after it has been dampened with a wet sponge, and nothing remains but to take the impression upon the newspaper to be. The Chinese pressman prints three papers every five minutes, five papers in the same time less than Benjamin Franklin had a record for. A Chinese printing office has never been struck by lightning.

The life of a Chinese journalist is a happy one. He is free from care and thought, and allows the work of the establishment to be done by the press man. The Chinese editor, like the rest of his countrymen, is imitative. He does not depend on his brain for editorials, but translates them from all the contemporaneous American newspapers he can get. There is no humorous department in the Chinese newspaper. The newspaper office has no exchanges scattered over the floor, and in nearly all other things it differs from the American institution. The editorial room is connected by a ladder with bunks on the loft above, where the managing editor sleeps, and next to it is, invariably, a room where an opium bunk and layout reside.

Evidences of domestic life are about the place, pots, kettles and dishes taking up about as much room as the press. In one instance on Washington street a barber shop is run in the same department with the editorial room, and, in all cases, no disposition is shown to elevate the position of the "printer" above his surroundings. If an editor finds that journalism does not pay, he gets a job of washing dishes or chopping wood, and he does not think he has descended far either.—*Exchange.*

A Modern Solomon.

A rich old citizen of Bergoma had lent to one of his countrymen at Florence four hundred crowns, which he advanced without any person being present, and without requiring a written acknowledgment.

When the stipulated time had elapsed, the creditor required his money; but the borrower, well apprised that no proof could be brought against him positively denied that he had ever received it. After many fruitless attempts to recover it, the lender was advised to resort to the Duke, who would find some method of doing him justice.

Alessandro accordingly ordered both parties before him, and after learning the assertions of the one, and the positive denial of the other, he turned to the creditor, saying, "Is it possible, then, friend, that you could have lent your money when no one was present?"

"There was no one indeed," replied the creditor, "I counted out the money on a post."

"Go, bring the post this instant," said the Duke, "and I will make it confess the truth."

The creditor, though astonished at receiving such an order, hastened to obey, having first received a secret caution from the Duke not to be very speedy in his return. In the meantime the Duke employed himself in transacting the affairs of his other suitors, till at length, turning towards the borrower, "this man," says he, "stays a long time with his post."

"It is so heavy sir," replied the other, "that he could not yet have brought it."

Again Alessandro left him, and returning some time afterward, carelessly exclaimed, "What kind of men are they that lend their money without evidence? Was there no one present but the post."

"No, indeed, sir," replied the knave.

"The post is a good witnes then," said the Duke, "and it shall make you pay the man his money."—*Bow Bells.*

An Enterprising, Reliable House.

W. D. Nydegger can always be relied upon, not only to carry in stock the best of everything, but to secure the Agency for such articles as have well-known merit, and are popular with people, thereby sustaining the reputation of being always enterprising, and ever reliable. Having secured the Agency for the celebrated Dr. King's New Discovery for Consumption, will sell it on a positive guarantee. It will surely cure any and every affection of Throat, Lungs, and Chest, and to show our confidence, we invite you to call and get a Trial Bottle Free.

A Change of Mind.

"There is a certain man in this town whom I'm going to lick until he won't be out of bed for six months after, and I want to know what it will cost me?"

So said a man who entered a Griswold street law office yesterday, and it was plain to be seen that his dander was way up.

"Let's see?" mused the lawyer. "I'll defend you for $10. If you lick him in a first-class manner your fine will be about $25. Then there will be a few dollars costs, say enough to make the whole thing foot up $40. I think that I can safely promise that it won't cost you over that."

"Forty dollars! Forty dollars for licking a man! Why, I can't go that!"

"Well, pull his nose, then. The last case I had of that sort the fine was only $15. That will reduce the gross sum to thirty."

"I want to tear him all to pieces, but I can't afford to pay like that for the fun. How much would it cost to spit on him?"

"Well, that's an assault, you know, but the fine might not be over ten dollars I guess $25 would see you through.

"Lands! how I do want to crush that man! Suppose I knock his hat off?"

"Well, about $20 would cover that."

"I can hardly hold myself, but $20 is pretty steep. Can't I call him a liar?"

"Oh, yes. I think $15 would cover that."

"Well, I'll see about it. I'm either going to call him a liar or else tell everybody that he is no gentleman, or else give him an awful pounding. I'll see you again."

"My fee is $5," observed the lawyer.

"What for?"

"For my advice."

The pulverizer glared at him for half a minute, and then laid down a "V," and started slowly out with the remark:

"I'm going straight to that man and beg his pardon, and tell him that I'm the biggest fool in Detroit! Thank Heaven that you didn't get but one claw on me!"—*Detroit Free Press.*

Immortality--Victor Hugo.

Victor Hugo shortly before his death, gave expression to his sense of immortality in the following words: "I feel in myself the future life. I am like a forest which has been more than once cut down. The new shoots are stronger and livelier than ever. I am rising, I know, toward the sky. The sunshine is on my head. The earth gives me its generous sap, but heaven lights me with the reflection of unknown worlds. You say the soul is nothing but the resultant of bodily powers. Why, then, is my soul the more luminous when my bodily powers begin to fail? Winter is on my head and eternal spring is in my heart. Then I breathe, at this hour, the fragrance of the lilacs, the violets and the roses as at twenty years. The nearer I approach the end, the plainer I hear around me the immortal symphonies of the world which invites me. It is marvelous, yet simple. It is a fairy tale, and it is history. For half a century I have been writing my thoughts in prose, history, philosophy, drama, romance, tradition, satire, ode, song—I have tried all. But I feel that I have not said the thousandth part of what is in me. When I go down to the grave I can say, like so many others, 'I have finished my day's work,' but I cannot say, 'I have finished my life.' My day's work will begin again the next morning. The tomb is not a blind ally; it is a thoroughfare. It closes in the twilight to open with the dawn. I improve every hour because I love this world as my fatherland. My work is only beginning. My monument is hardly above its foundation. I would be glad to see it mounting and mounting forever. The thirst for the infinite proves infinity."

Why Men Don't Marry.

The reluctance of young men to marry is rapidly taking the shape of one of the most perplexing social problems of our time. In sections where the women out-number the men by about ten per cent., the situation presents many difficulties. But the disinclination of young men to marry seems to be in the nature of a contagious epidemic. It is spreading all over the country except in agricultural regions, where people hold fast to old fashioned ways. The trouble is, too many of our young men are determined to marry rich women, or to accumulate wealth themselves before entering into the wedded state. This state of affairs is unhappy and demoralizing. It is difficult to point out a remedy for this growing evil.—*Atlanta Constitution.*

Everybody admires beautiful hair, and every one may possess it, by using Ayer's Hair Vigor.

NEW ADVERTISEMENTS.

From the Bloody Ground.

TOLLESBORO, KY.

DR. S. B. HARTMAN & Co., Columbus, Ohio.—I keep the largest stock of medicines of any store in Lewis county, with the exception of a drug store at Vanceburg, our county seat, and am selling a great deal of your PERUNA and MANALIN. It is giving the best satisfaction of any medicine that I ever handled. In one case the constable for the precinct, has been very sick and low spirited for a long time. For several years he has tried all the doctors here, and we have some good ones, and they did him no good. After much persuasion I sold him two bottles of PERUNA and MANALIN. He took half of the medicine. I could see a great change in him, and now he is as sound a man apparently as there is in this vicinity, and he says he is entirely well. He is a number one man and is highly respected. He is satisfied that your medicine saved his life, after all the doctors and all medicines had failed. Being unacquainted with you, I refer you to John Shillito & Co., Altor, Pinckard & Co., and other business houses of Cincinnati.

R. L. GILLESPIE, P. M.

Messrs. Adamson & Shipley, of Waynesburg, Pa., write: "Please send us some "Ills of Life" immediately. We are having a big run on your medicine, PERUNA. Instead of dying out, like most medicines, in course of time, it seems to be growing in favor. We sell lots of it. Please send the books soon."

Messrs. Wirthorn & Urban, of Allegheny City, Pa., write: "Having a large sale for your PERUNA and MANALIN, we have also many calls for your book, "Ills of Life." Please send us a supply of them, German and English, and oblige."

S. Wolf & Son, Wilmot, O., write: "Gentlemen: We handle your goods, and they give good satisfaction."

A. G. Sellards, Grenup, Ky., says: "Gentlemen: I am handling your medicines, and having a good trade on them."

J. C. Saunders, Martinsburg, W Va., writes: "Gentlemen: Your PERUNA sells fast and gives good satisfaction here. We sell more PERUNA than any other preparation we handle."

W. Bauer, St. Mary's, Pa., writes: "My son is still improving in health. Your PERUNA is just the thing for him."

H. L. Day & Co, New Vienna, Ohio, write: "S. B. HARTMAN & Co., Columbus, Ohio.—Gentlemen: Your PERUNA sells as well as any medicine with us. Quite a number have told us that PERUNA is the best thing they ever used."

Estate of Naaman L. Shank, dec'd.

THIS IS TO GIVE NOTICE—That the subscriber, of Garrett county, hath obtained from the Orphans' Court of Garrett county, in Maryland, Letters of Administration on the personal estate of

NAAMAN L. SHANK,

late of Garrett Co, Md., dec'd. All persons having claims against the deceased are hereby warned to exhibit the same, with the vouchers thereof legally authenticated, to the subscriber, on or before the 6th day of December next; they may otherwise by law be excluded from all benefit of said estate. Given under my hand this 3d day of June 1885.

SARAH E. SHANK,
6 6 3t Administratrix.

Having opened an office for the collection of notes, bills, &c., I will collect all bills placed in my hands with dispatch, and make prompt return of all moneys collected. Special inducements offered to parties having property to rent and the collection of rents. Can be found at Harne & Lawton's store. Reference given when required.

ANDREW J. HARNE.

Oakland, May 19th, 1885.—1 y.

NOTICE.

All persons are warned against cutting down any of the timber on my land on the Hooppole Road, adjoining the land of Bowie Johnson, about three miles from Deer Park and six miles from Oakland. The penalty for cutting down timber in Garrett county, Md., without permission of the owner of the land, is the same, under the Act of 1880, ch. 261, as for feloniously *stealing* goods or chattels to the value of the tree or trees" so cut down.

THEOS. B. HORWITZ.

ROAD PETITION.

This is to give notice that application will be made to the County Commissioners of Garrett county, after thirty days from the first publication of this notice, for the appointment of viewers to locate a public county road, beginning at or near the residence of Mrs. Seabold, and running by the most practicable point to the Oakland and Bayard Glade road at or near John A. Delawder's residence.

GEORGE D. WHITE,
R. REYNOLDS,
5 9 3t JAMES SEABOLD.

To Dyspeptics.

The most common signs of **Dyspepsia,** or **Indigestion,** are an oppression at the stomach, nausea, flatulency, water-brash, heart-burn, vomiting, loss of appetite, and constipation. Dyspeptic patients suffer untold miseries, bodily and mental. They should stimulate the digestion, and secure regular daily action of the bowels, by the use of moderate doses of

Ayer's Pills.

After the bowels are regulated, one of these Pills, taken each day after dinner, is usually all that is required to complete the cure.

AYER'S PILLS are sugar-coated and purely vegetable—a pleasant, entirely safe, and reliable medicine for the cure of **all disorders of the stomach and bowels.** They are the best of all purgatives for family use.

AYER'S Ague Cure

contains an antidote for all malarial disorders which, so far as known, is used in no other remedy. It contains no Quinine, nor any mineral nor deleterious substance whatever, and consequently produces no injurious effect upon the constitution, but leaves the system as healthy as it was before the attack.

WE WARRANT AYER'S AGUE CURE to cure every case of Fever and Ague, Intermittent or Chill Fever, Remittent Fever, Dumb Ague, Bilious Fever, and Liver Complaint caused by malaria. In case of failure, after due trial, dealers are authorized, by our circular dated July 1st, 1882, to refund the money.

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

NEW ADVERTISEMENTS.

HEADACHES

Are generally induced by **Indigestion, Foul Stomach, Costiveness, Deficient Circulation,** or some **Derangement of the Liver and Digestive System.** Sufferers will find relief by the use of

Ayer's Pills

to stimulate the stomach and produce a regular daily movement of the bowels. By their action on these organs, AYER'S PILLS divert the blood from the brain, and relieve and cure all forms of **Congestive** and **Nervous Headache, Bilious Headache,** and **Sick Headache;** and by keeping the bowels free, and preserving the system in a healthful condition, they insure immunity from future attacks. Try

Ayer's Pills.

DR. JOHN BULL'S

Smith's Tonic Syrup

FOR THE CURE OF

FEVER and ACUE

Or CHILLS and FEVER,

AND ALL MALARIAL DISEASES.

The proprietor of this celebrated medicine justly claims for it a superiority over all remedies ever offered to the public for the SAFE, CERTAIN, SPEEDY and PERMANENT cure of Ague and Fever, or Chills and Fever, whether of short or long standing. He refers to the entire Western and Southern country to bear him testimony to the truth of the assertion that in no case whatever will it fail to cure if the directions are strictly followed and carried out. In a great many cases a single dose has been sufficient for a cure, and whole families have been cured by a single bottle, with a perfect restoration of the general health. It is, however, prudent, and in every case more certain to cure, if its use is continued in smaller doses for a week or two after the disease has been checked, more especially in difficult and long-standing cases. Usually this medicine will not require any aid to keep the bowels in good order. Should the patient, however, require a cathartic medicine, after having taken three or four doses of the Tonic, a single dose of BULL'S VEGETABLE FAMILY PILLS will be sufficient.

BULL'S SARSAPARILLA is the old and reliable remedy for impurities of the blood and Scrofulous affections.

WHITE MAGIC AND ARAB ROBBERS.

"Now, professor, your baggage is all in the boat, and whenever you're ready I am."

So spoke the captain of the Austrian Lloyd steamer (which had just anchored before the Syrian port of Jaffa) to a big, light-haired, yellow-bearded man in enormous green spectacles, from behind which a pair of large blue eyes looked out very kindly and pleasantly.

Both the captain and his passengers seemed to treat the spectacled man with great respect, as well they might, for he was no less a personage than the famous German professor, Herr Julius Altenstein, who had just come out to the Holy Land for the first time, in order to dig up a few more "antiques" for the Berlin Museum.

As every Eastern traveller knows, it is no joke to get ashore at Jaffa, which is merely an open roadstead, with a dangerous reef right across its upon which the waves break so furiously that it is often impossible to land at all. Hence the captain thought it best to take the professor ashore in his own boat.

But just as Herr Altenstein was stepping toward the gangway, a gaunt, ragged, wild-looking figure started up right in his path, crying, in a queer jumble of Italian, French, and German:

"Signor! signer! Fine music box! You buy him, me sell very sheap."

The professor, annoyed at being stopped, was going to push past; but the poor Italian's hungry, woe-begone face touched his warm German heart, and he felt in his pocket for some small change, though without any idea of buying the musical-box.

"Fine box, signor," repeated the Italian, seeing that he had made some impression. "Play German song fine. *Ecco lo!* (see).

He touched the spring as spoke, and instantly the musical-box struck up "Die Wacht am Rhein."

This was too much for the patriotic professor, who hastily dropped a handful of silver into the Italian's extended palm, and, thrusting the box into his pocket, plumped into the boat like a scared elephant.

Herr Altenstein was half way to land before he had done examining his new purchase, which was a queer-looking affair enough. The spring being quite hidden, and the box itself completely coated with "grits" (like the rough side of a match-box), it looked at first like a lump of sandstone. But its tone was so clear and sweet that the professor thought he had made a very good bargain; and so, indeed, he had, though in a way of which he little dreamed just then.

That very night our hero and his dragoman rode across the Plain of Sharon (the ripe corn upon which came up to his saddlebow) and through the hills of Abu-Gosh, up to Jerusalem.

Here he stayed just long enough to get the necessary "papers" from the Turkish pacha (governor), and then trotted off again along the steep, narrow path that winds through the tremendous precipices between Jersualem and the Plain of Jericho.

Within two days of his landing our energetic professor had got over the Jordan, and was right in among the blue hills of Moab, where his work lay.

It is easy enough to get workmen in Palestine when you have a pacha's order in your pocket, and easier still when you pay your men well, instead of making them work for nothing, like the pacha himself. Herr Altenstein did not take long to muster a gang of tough, wiry, bare-limbed Arabs, able and willing to labor from sunrise till sunset on the hottest day in summer, provided they got enough *piastres* (five-cent pieces) to make it worth their while.

The Arabs, however, although quite satisfied with the wages paid for their work, were sorely puzzled by the work itself. When they first saw Altenstein begin digging and grubbing among the stones and dirt, they naturally thought that the Feringhi Hakim (European doctor), as they called him, must be on the track of some of those "buried treasures" about which the Syrian Arabs tell so many strange tales. But when no treasure appeared, and they found the professor raking together broken bits of stone and rusty scraps of old iron, they settled in their own minds that he was an enchanter, who needed these seemingly worthless things in order to frame a magic spell by which the buried money was to be discovered. From that day he became a very mysterious and wonderful person in their eyes, and his strange doings—which grew stranger still every time they were told—were the talk of the whole country round.

But it unluckily happened that among the many who heard and wondered at these stories were a gang of Arab robbers, who haunted the neighboring mountains; and it struck these gentlemen that it would be no bad plan to get hold of this wonder-working European, force him to unearth some of the hidden money for them, and so make themselves rich for life.

One hot afternoon the professor had wandered to a considerable distance from the camp in search of a new spot to dig for relics. He was sitting in the shade of a bowlder, thinking over all he had done, and all that he meant to do, when suddenly there came gliding out from between two great rocks right in front of him six or seven tall, wild-eyed, fierce-looking Arabs in soiled white turbans and ragged blue frocks, every man with a gun on his shoulder and a huge knife in his tattered crimson sash.

Herr Altenstein knew at the first glance who these grim-looking fellows were, and what they wanted. But he had not lived for years in the East without knowing how to deal with Arabs. He never stirred from his place, but only turned his head slowly round, and looked full at them through his great green spectacles, without uttering a word.

Now, a story had got abroad about these spectacles, as about everything else belonging to the "enchanter." It was said that he had killed a tiger, and put on its eyes over his own, by which means he could find his way in the dark, and see things which were to be seen by no one else. So when the superstitious robbers saw the glare of these terrible "double eyes" turned full upon them, they began to lose heart at once, to hang back as if the professor had been a loaded cannon.

Then Altenstein rose slowly to his full height, and cried in Arabic:

"Who are ye who dare to disturb me on my own ground?"

The robbers looked scared, for an Eastern brigand is always inclined to be afraid of any man who does not seem afraid of him. But their chief thought of the buried money, and plucked up courage.

"Art thou the Western enchanter?" asked he.

"I am," said the professor, sternly, "and I know well why ye are come. You wish to seize me, and make me bring gold out of the earth for you; but I fear you not."

The brigands eyed each other in dismay. Who was this man, who could read their thoughts, and who thus defied them all, single-handed? But scared though they were, they would not give up their hopes of plunder so easily.

"Feringhi," said the chief, "the Wise Man hath said, 'Words are but dried leaves, deeds are fruit.' What proof can'st thou give us that thou art an enchanter?"

"Can the sons of the Arabs call forth music out of the stone?" asked Altenstein.

"No, nor can'st thou, either," answered the robber.

"I *can*," replied the professor, solemnly, "and thou thyself shalt see it. Behold!"

So saying, he wound up his musical box under cover of the skirt of his loose robe, and then, feigning to pick up a stone, he placed the box (whose gritty surface made it look exactly like one) on the bowlder beside him, and called out to it:

"Give forth music!"

The first notes of "Die Wacht am Rhein" had scarcely floated on the air when they were drowned by a howl of dismay from the robbers, who turned and fled as if a lion were chasing them. One let fall his gun; another broke his head against a rock; a third fell sprawling into a ditch; a fourth upset one of his comrades and tumbled over him. Never was there a more complete "stampede," and so long as Professor Altenstein remained in that part of the country, no one ventured to molest him any more.

A well-know preacher makes the recommendation of Ayer's Pills a matter of religious duty. When people are bilious and dyspeptic, what they need is the Gospel of Health. In such cases, the best creed to swallow consists of the thirty sugar-coated articles in a pill-box.

Time once passed never returns; the moment which is lost is lost forever.

Pomeroy's Proverbs.

"Brick" Pomeroy's U. S. Democrat.

Every grown person who is afraid to die is unfit to live.

A majority of our greatest blessings come from disappointments.

The young woman who cannot willingly help her mother will never be a help to her husband.

The reason why there are so few original men is that they are afraid to let their brains have a play-spell.

The only way for a wife to reform a drunken, loaferish husband is to let the worms make him over into soil.

Many a man on his death bed wishes he had never hitched his mule to the load he has dragged along to the door of eternity.

Not one man in ten dare to express his honest opinion of the man he talks to. Not one in five tells the truth of him he is talking of.

When some christians reach the judgment seat they will wish they had run their religion through a fanning mill before they left home.

God don't care a clover leaf about what your neighbor thinks of you. The only testimony admitted in His court is what you really think of yourself.

A Healthy Profession.

"Journalism must be a healthy profession," said old Mrs. Squaggs as she laid the paper on her knee and rubbed her eyeglasses with her apron.

"What makes you think so?" said old Mr. Squaggs.

"Because I see that the writers who used to have pieces in the papers when I was a girl are still living and writing away the same as ever; they must be very old."

"Who are they?" asked Mr. Squaggs.

"Well, there is 'Veritas' for one, and 'Anon,' and 'One who Knows,' and 'Vox Populi,' and 'Justice,' and 'Pro Bono Publico,' and 'X Y Z,' and 'Taxpayer" and many others. I see some of their names ever day, and I do declare if the sight of 'em don't bring back the old school days."

Then the old lady gazed meditatively into the fire and old Mr. Squaggs went out on to the back stoop to indulge in a quiet laugh to himself.

Measures of Capacity.

The following table will be found convenient, taking inside dimensions:

A box 24 in. x 24 in. x 14. 7 in. will contain a barrel of 31½ gallons.

A box 15 in. x 14 in. x 11 in. will contain 10 gallons.

A box 8¾ in. x 7 in. x 4 in. will contain a gallon.

A box 4 in. x 4 in. x 3.6 in. will contain a quart.

A box 24 in. x 28 in. x 16 in. will contain 5 bushels.

A box 16 in. x 12 in. x 11.2 in. will contain a bushel.

A box 12 in. x 11.2 in. x 8 in. will contain a half bushel.

A box 7 in. x 6.4 in. x 12 in. will contain a peck.

A box 8.4 in. x 8 in. x 4 in. will contain a half peck, or 4 dry quarts.

A box 6 in. x 5 3-5 in., and 4 in. deep will contain a half gallon.

A good story is told of a certain prominent railway director, who is equally renowned for his ability to take or make a joke. A railway employee, whose home is in the country, applied to him for a pass to visit his family. "You are in the employ of the company?" inquired the gentleman alluded to. "Yes." "You receive your pay regularly?" "Yes." "Well, now, suppose you were working for a farmer, instead of the company, would you expect your employer to take out his horses every Saturday night and carry you home?" This seemed a poser, but it wasn't. "No," said the man promptly. "I would not expect that; but if the farmer had his horses out and was going my way, I should call him a very mean fellow if he would not let me ride." The employee came out three minute after with a pass good for twelve months.

Githooly hired a pony the other day to take a little exercise on. He got all the exercise he wanted; and, as he limped to the edge of the sidewalk to rest himself after taking so much exercise, a kind friend asked him: "What did you come down so quick for?" "What did I come down so quick for? Did you see anything up in the air for me to hold on to?"

The Republican.

OAKLAND, GARRETT CO., MD.

THEN AND NOW.

We laughed to see the whirling snow
And hear the raging tempest blow;
We recked not of the icy blast,
Nor how the storm came wild and fast—
Our hearts had sunny weather;
Nor snow, nor hail, nor wild winds' moan,
Could chill the glow around them thrown,
For then we were together.
O, sweetest word—together!

I tread, in golden summer hours,
A pathway through a land of flowers,
Beneath the blue of peaceful skies,
With weary feet and tear-dimmed eyes;
I care no longer whether
The days be bright or dark, nor how
The lonely time goes by, for now
We walk no more together,
Ah, nevermore together.
—*Anna E. Bowser, in Current.*

CLIMBING A VOLCANO.

One of the Five Active Craters in Costa Rica.

A Graphic Description of a Perilous Adventure—A Crater Never Examined by Scientists—Incidents and Accidents.

There are five active volcanoes in Costa Rica, according to the geography; Irazu, which is 11,500 feet high; Turrialba, which is 10,350; Poas, DeBarba, and Mirravalees, which have not been measured, and several smaller ones whose craters have shown evidence of former activity, but have emitted nothing since the memory of man. To be considered active a volcano does not have to keep belching out fire and smoke all the time, for they must have vacations like the rest of us; but an extinct one is that whose crater has been permitted to fill up with debris and never shows signs of life.

Not having had the advantage of volcanic acquaintance, and being ambitious to look into the crater's mouth, I determined to explore Irazu, and in company with Mr. H. Remsen Whitehouse, Secretary of the United States Legation in Central America, I made the ascent.

It was an experience which will never be forgotten, but which one would not care to repeat. You can not go to the summit of Irazu in a railway car like Vesuvius, and no one has ever taken the trouble to build a carriage road, therefore the journey is not recommended to ladies, invalids, or timid men; and one such trip will do the most nerveful for a lifetime.

We followed up a cart road, thick with dust for a few miles, then entered the cornfields and rode through them for several hours, stopping at the cabin of a native to get corn for our horses and a cup of coffee for ourselves. This was the last house on the mountain, and leaving it we went through a pasture and struck into a forest as dense as a forest can be. There was a good moon and it lit up the tree tops with a weird and fantastic light, while the great festoons of moss which hung from the branches and almost obscured our way were almost livid where the rays of moonlight struck them. The trunks and limbs of the trees were covered with thick, yellow lichens, which were as fine as hair, and hung like the beard of a patriarch. The trees, too, were loaded with orchids, that rare plant so much prized by botanists, and sought here by collectors from all over the world. Dead trunks covered with moss that seemed almost phosphorescent arose like phantoms in our way. Huge, thorny cacti, like the candelabra of giants, were on every side, while the dense growth of underbrush made it almost impossible for the horses to push through.

Through this we kept climbing until the horses were exhausted and the moon went down. For some inscrutable reason, but really for no reason whatever, it is considered best to make the climb in the night, but we couldn't go any further, so a fire was built, the animals were unsaddled and given their supper; we swung our hammocks in the trees and wrapping ourselves in blankets lay down to pleasant dreams.

The blazing fire frightened the animals of the forest, and all around us we could hear the protests of the tiger, whose cry is like that of a child. Now and then the deeper tones of the mountain lion could be distinguished, but they were more frightened than we, for the fire was a terror to them, as it was a comfort to us, the altitude being something more than 9,000 feet and the temperature forty Farenheit. The birds chattered and gossiped, being awakened by the unusual light and disturbance in their solitude. There was little sleep for any of us, as the situation was so weird, and the noises our advent awakened so strange to our ears. At 3:30 we were to be called and continue the ascent so as to reach the top of the mountain by sunrise. We were all awake long before the time, and leaving the hammocks hanging, and stripping ourselves of every possible encumberance except overcoat and food, we were in the saddle promptly and followed the guide as he plunged into a darkness that could be cut with a knife. There is darkness and darkness, but that we encountered in that tropical forest was double-dyed. We might as well have been blindfolded in a coffin at the bottom of a grave. There was a path, a trail among the trees, but the guide couldn't follow it on horseback, so he dismounted and felt for it with his feet. They failed and he crept along on his hands and knees, and that method of locomotion being rather unsatisfactory, he lit a candle he had in his pocket and plodded along.

The path went zigzag up the mountain side, like the trail of a goat. It ran a few hundred feet on the bias at a grade of about forty-five degrees, and then reversing ran up about the same grade and distance in the other direction, presenting a series of acute angles like an enormous rail-fence. Just as Mr. Whitehouse was turning one of these corners, where the slope of the mountain side was almost perpendicular, his horse stepped upon a rotten log, which concluded to roll down the precipice, and he and his horse went too. Nobody saw this decidedly novel acrobatic adventure. It was too dark to see your hand before your face; we were creeping along, feeling our way step by step, with arms outstretched to prevent contact between the trees and our heads.

After making what may be called a cursory examination of the surroundings, Mr. Whitehouse clambered up the bank, where a council of war was held, and it was determined to postpone further operations on that line until daylight. So we sat down around a fire and discussed things until the light began to filter through the forest. Then the climb was resumed and we got out of the woods just in time to see the sun rise out of what looked like a world full of soapsuds. The mountain rose like an island in a shoreless sea of clouds, great banks of foamy vapor rolling and plunging in the wind that always rises with the dawn, as the surf does on the shoals. It was a picture one does not often see, and there are no words in my vocabulary that will convey an adequate idea of its appearance. If one could fill the world with foam like that which hovers over the foot of Niagara Falls it would look something like it.

The wind was bitter cold, and it swept over the volcano with a fierceness that penetrated our very bones, but the sun's rays were hot and piercing, and soon burned out the clouds, in which the wind assisted, and the picture turned into a scenic panorama which has few equals in the world. Below us was spread out all Costa Rica, and the surf-fringed shore of two oceans. Sky, sea and lands were one vast rainbow, mingling tints of blue and green, and and the most unpoetic eyes could not behold it without awe and wonder. Mountains seemed to hang in the air as the clouds surrounded them, long lines of unbroken forests stretched away into a mirage which seemed to show the earth inverted, the fields of sugar-cane, a brilliant, livid green, looked like strings of gigantic emeralds on the earth's bosom, while the yellow fields of corn, half harvested, resembled sand hills, rolling and weltering under the tropic sun. Here and there were clusters of houses, with white churches rising in their midst, and streams linking them together like silver bands.

Far off on the horizon, which surrounded the picture like a circular frame, it was difficult to tell where the sky and the ocean met, their colors blending imperceptibly. We would not have known the two seas were there had not the expectation of a view of both the Atlantic and the Pacific from the same point been one of the objects of the climb, this being the only spot in the world from which both oceans are visible. The guide said he could distinguish the sky from the water, but I could not, and only knew that the seas were there because the lines where the dark green forests ended and the blue began were broken and irregular.

Following the crest of a ridge of pumice stone and ashes, which had been thrown out in ages past, and were as regularly piled as if the hands of men had dumped them there, we looked down on one side into a gorge three thousand feet deep, to the foot of which a stone would roll without meeting an impediment; and on the other into a basin formed by the mountain side, and the heaps of ashes that lay in a regular winrow around it—a basin about five hundred feet deep and quarter of a mile across from the top of one bank to the top of the other. The bottom was honey-combed with craters, where it looked as if the earth had broken through in irregular circles. There were seven or eight of these craters, some of them centuries old, the last and largest having opened within the memory of living men. The older ones were black and half filled with ashes cast from those of later origin, while "the new one" as it is called—perhaps a quarter of a century old—was bottomless as far as we could see, and its walls were yellow with sulphur and white with half-burned limestone. It was dangerous to go near the edge for the banks are concave, and thin crusts of earth reach over them; but we cast huge stones over and heard them strike the sides of the crater as they went down into an abyss which man has never measured. How long they were in reaching the bottom and what they found when they got there would be interesting to know, but this volcano has never been scientifically examined, and very few people have ever been to the crater's edge.

We were glad we went while we were down there, but were sorry when we tried to go back, for the walls at the basin are loose ashes, light and flinty, and our feet sunk into them almost to the knees. It was fun coming down, sliding and leaping into the soft substance, but going up it was a task that at times seemed to be beyond endurance. The ashes were fresh and crisp, and there was no sign of vegetation for a distance of a thousand feet or more down the outside bank, against which the wind was constantly blowing, and where one would think it would lodge dust and seeds from the forests so near and so numerous. The wall of ashes arose at least 500, and in some places 600 feet, around the crater. We noticed a very marked odor of sulphur in the crater while we were there, and our guide, who crawled close to the edge, reported vapor coming from the bottom, but the rest of us could not perceive it. There were many evidences of recent discharges, however, one of the most pronounced being the presence of flakes of sulphur on the ground, which must have been deposited there since the last rainfall.

It is the prevailing theory among local amateur scientists that the five active volcanoes of Costa Rica are connected by underground passages, and are all chimneys of the same terrestrial furnace; that more than one is seldom active, but that at least one is always in a state of eruption, as an escape for gas and vapors from the subterranean fires, that it is universally the rule for earthquakes of great force to follow a suppression of activity in all of them, and a sense of relief always prevails when the discharges are heavy and frequent. But while the interruption of activity is immediately succeeded by upheavals elsewhere, earthquakes are frequently felt, though not in such force, while the volcanoes are active. This is accounted for by the fact that gas is not emitted as fast as it accumulates, and that when it gathers in quantities sufficient to reach the sparks from the subterranean fires; it explodes in the caverns and causes an oscillation of the earth above. These explanations are very plausible and generally accepted as true, although, as I have said, the phenomenon has never been studied by men of scientific reputation, who might find here an interesting and prolific field for research.—*Curtis, in Chicago Inter Ocean.*

VALUABLE INFORMATION.

Missent Letters Can be Remailed Without Additional Expense.

Two men stood near a letter-box in Broadway disputing about a sealed letter which one of them held in his hand. The letter had been posted at an office in Virginia and a carrier had delivered it at an up-town address. In the meantime the person to whom the letter was addressed had left the city. The original address had been erased and one in a distant town had been written below it.

"You will have to put another stamp on it," said the stouter of the two men to the one who held the letter.

"That's possible, but my wife told me I only needed to drop it into a box. She ought to know about such things, because she re-mails lots of letters that come to the house."

"Why didn't she look after this one then?"

"Because she wanted it sent from down town so that it would get out quicker."

"Well, if you post it without another stamp it will not go at all. Women don't know about such things."

A letter-carrier approached the box at that moment and an appeal was made to him. He glanced at the envelope and said: "That needs another stamp because it is not a city letter. If it were going to another part of the city the old stamp would carry it."

"Do you mean to say that this letter would be detained at the office for postage?"

"Well, perhaps they would send it and charge the extra postage at the other end of the line. You had better see the station agent about it."

"There," said the stout man after the carrier had walked away, "you see how much your wife knew about it."

"Come on to the station and if she is wrong I will pay for two cigars."

They went to Station A and the letter was shown to the agent there. "That's all right," was his curt comment.

"But a carrier has told me it would need another stamp because it was going out of the city again."

"The law used to be that way," the agent said, "but it has been changed, and every carrier ought to know it. Now a letter can be remailed as often as necessary within the United States to get it to the owner without extra postage. The only limit is the number of changes that can be made in addresses on the face of the envelope."—*N. Y. Tribune.*

CUPPING.

An Old Art in a Modern Barber Shop—Seldom Resorted to in This Country.

A novel sight was presented in a bathroom at Phil. Balzer's yesterday afternoon, and was exhibited to a number of interested customers of the shop. An old German barber who keeps a chair in the south end was "cupping" a patient. The process had, of course, been often heard of, but never seen by any present. The man upon whom the art was being practiced was sitting in a bathtub, and attached to his skin were no less than twenty-eight small glass cups, which had been applied to all parts of his body by the doctor barber. The skin had been cut or scarified under each, and the blood was slowly oozing out into the cups. The applications were made by expelling the air from the cups by means of heat, and quickly pressing them upon the man's person. The flesh was drawn up into the cup by the pressure of the air, and the blood extracted by a sort of suction.

"Cupping" was formerly part of the profession of every barber in Germany, and from it came the sign of the red, blue and white pole, the colors being supposed to represent arterial and veinous blood, and pure health, respectively. It was approved by reputable physicians, though not when done to such an extent as in the case of yesterday. It was used mostly for local troubles, and not for wholesale blood-letting. It is now seldom done in this country, though English doctors sometimes prescribe it.—*Columbus (O.) State Journal.*

The Invention of Paper.

How, when, or by whom paper was first invented will never be known. According to Hallam, documents on paper are found as early as the tenth century, and it came into use not long after this era, and completely supplanted all other materials which were formerly employed for the purposes for which it is now used. It will be observed that the invention of paper of some kind was an absolute necessity before there could be printing, as parchment was far to expensive to use for the purpose, even were it otherwise perfectly adapted to this use. The use of paper in Western Europe dates from the time mentioned, but it was known to the Chinese long before the Christian era, and it is believed that they used the bark of various trees, the soft part of the bamboo stems, cotton and several other kinds of vegetable fibers. From the Chinese it is supposed to have spread to India, thence to Arabia, and the manufacture was introduced into Europe by the Moors of Spain, but about this there is no certainty. The rice paper of the Chinese is made in the same general way as the papyrus of the ancient Egyptians, by placing in proper order layers of fibers and cementing them with sizing or glue. The first patent for paper making was taken out in England in 1665, but it was "for making blue paper, such as is used by bakers." The next, for making writing papers, was in 1675, and covered writing and printing papers.—*St. Louis Globe-Democrat.*

—Three-fourths of the children born in Calaveras County, Col., in the past two years are girls.

HAVANA CIGARS.

How the Favorite Weeds Are Manufactured—Some Interesting Items of Information.

Mr. F. H. Meyer, formerly a cigar-maker in Havana, gives considerable interesting information concerning Havana cigars and how they are made. Mobile, although so near to Havana, is very different in her cigar-making methods, and Mr. Meyer's statements will doubtless be read with interest.

"Any person may become a manufacturer in Havana after obtaining a license from the Government. Each manufacturer has a trade mark, or as many trade-marks as he wishes, but he alone is entitled to use them. Small manufacturers have no brand or trade-mark, but work for the other manufacturers. When a brand is placed upon the market it usually goes for a very small price, but as it increases in popular favor the price rises rapidly. Immense profits are made by the owners of well-known brands. If a manufacturer of a well-known brand desires to retire he can dispose of the brand at a considerable price. Sometimes, however, he prefers to furnish a poor class of cigars at high prices until the brand falls into disrepute and no one wants the cigars.

"The manufacture is chiefly carried on in Havana, and the manufacturers are Spaniards or Creoles. The cigar-makers are of all classes, Creoles, Spaniards, colored people, and negroes. Many of the latter are slaves, but there is not much profit in their labor, as a good slave cigar-maker costs from $700 to $1,000, and he must be fed and clothed. Sometimes he is ill, of course, and at other times he runs away and his master never sees him again. As a class, the cigar-makers form the roughest and most miserable of the whole population. Their behavior is regulated by the good or the poor yield of the tobacco crop. If the yield is good and abundant, there is hardly a way to manage the men properly, as a great want of workmen is felt. If, on the other hand, the crop is poor, there are plenty of hands, and with the reduction of wages they become tractable. In flush time, the manufacturer who offers the largest advance of wages obtains the greatest number of hands. The system of making advances is also of great damage to the manufacturer, as he loses large sums in that way. The cigar-makers who can not or will not repay are thrown into prison. Sometimes so many men are thus locked up that the scarcity of hands is severely felt by the manufacturers. Another nuisance consists in having to pay off the hands three times a day, at breakfast, dinner, and night.

"The most renowned manufacturers chiefly make their cigars smaller than the standard sizes. The cigar-maker, when at work, has before him the wooden model of the cigar he is expected to make. He has also a flat piece of wood with a hole in it, through which the cigar can be drawn. In making a cigar the workman takes two or three pieces of leaf and places them flat in his left hand; he then takes as many smaller pieces as may be required, rolls them all together in the hand, and finally applies the wrapper. His chief aim is to cover the veins or place them all on one side. By success in achieving this the good operator can be recognized. The heads of the cigars are not fastened with gum or any other similar sticky substance, but simply by wheat bread. This bread the workman carries with him. The taste can hardly be noticed in the cigars. The most skillful hands use nothing at all to fasten the ends, but secure them by many twistings that wind into each other. This requires more time, however, and is chiefly practiced with fine cigars.

"The smoker would hardly enjoy his cigar if he were to see it in process of manufacture. Should you see the dirty negro working amid the uncleanliness of many of the factories, where much tobacco is lying on the ground and frequently coming in contact with the spittle and naked feet of the workmen, you would feel a strong desire to let the cigar alone.

"All persons employed in a factory smoke as much as they want. In the evening the workman takes at least six cigars home with him, and these so taken are not the worst, as you may imagine. None of them consider it stealing to take cigars or tobacco with them. Although large thefts often occur, the police do not interfere. If the proprietor makes complaint, he must not forget to mention that he does not expect to have any of the stolen goods returned, but only desires the discovery of the thief. In case he should wish to recover the goods the expense would amount to two or three times the value of them. The working hours are twelve hours a day, winter and summer. Every fifty cigars made by a workman are bound together, the finest cigars being placed on the outside, with the veins on the inside. The number of bundles depends upon how many cigars a man can make in a day. The average is 200 to 250."—*Mobile Register.*

Punishment for Crime.

Several French papers have expressed their surprise at the increase in the number of murders during the last few years, but the criminal statistics for 1884, which have just been published, afford an ample explanation of this, for they tell us that, though twenty-five persons were condemned to death, only three were executed. When it is considered that, in addition to those condemned to death, at least twice as many were found guilty of wilful murder but with "extenuating circumstances" (which makes it impossible for the Court to pass the capital sentence), it is apparent that only three out of seventy or eighty murderers were sent to the scaffold. It is a bad sign, too, that French juries are acquitting a larger proportion of prisoners; and out of 3,299 cases tried by jury last year more than 800 resulted in a verdict of acquittal. This is equivalent to a proportion of twenty-four per cent., whereas ten years ago the proportion was about seventeen per cent., and half of the total number tried at the assizes had one, or more than one, previous conviction recorded against them.—*St. James' Gazette.*

EARTHQUAKES.

A Distinguished Scientist's Opinion of the Cause of Subterranean Activities.

It has been asked of late whether the hurricanes which followed the Spanish earthquakes were not followed by those subterranean disturbances, and all-explaining electricity has been called upon to explain how earth-throes might have caused atmospheric disturbances. I know of no way in which such consequences could have followed from a displacement of the earth's crust. To me it seems far more natural to conclude that the hurricanes and earthquakes were alike produced (the hurricanes chiefly, the earthquakes partially) by the atmosperic compression which preceded the subterranean disturbances. This compression indicated a heaping of air over the disturbed region; the earth's crust yielded under this increase of pressure, combined with the action of other forces, and earthquakes followed; the compressed air swept away to regions of less pressure, and the rarefaction following led in the usual way to the indraught which precedes a cyclonic disturbance in the air.

But while the action of atmospheric pressure in helping to excite subterranean activities must not be overlooked, the varying pressure exerted by seas and oceans is a more potent disturbing factor. Atmospheric pressure is distributed in such a way that though the weight of air on any given area is continually changing, there are no sharply defined lines, at any time, which separate regions of less pressure from regions of greater pressure. It is otherwise with the sea along a shore line. Here we have the sea acting with constantly varying intensity, as its level changes, on the seaward side of the shore line, while on the landward side there are no such variations of pressure. Let us consider what this means. Take a tolerably straight shore line 500 miles in length, and suppose that along this shore line a region of ocean 100 miles broad rises through a height of three feet under the combined action of sun and moon raising a tidal wave, and favoring strong winds urging the water shoreward. Then we have 50,000 square miles of sea-water, three feet deep, added as so much dead-weight to that part of the earth's crust which underlies the seas along that shore. Each square mile contains in round numbers 3,000,000 square yards, or 27,000,000 square feet. The additional weight corresponds, then (as the added layer is three feet deep,) to 50,000 times 81,000,000 cubic feet of water, each weighing 64½ pounds, or to 116,000,000,000 tons. It is clear that the addition of so enormous a weight as this to the submerged part of the earth's crust, outside the shore line, may well produce strains too great to be resisted. It must be remembered that the very existence of a precipitous shore line (as distinguished from one where the land above water and the parts submerged form one great slope) indicates the comparative weakness of the crust along that coast. It has yielded on one side to pressure thrusting it upward above the sea-level, and on the other side to the pressure of the water forcing it down. It is true, the actual line of yielding may not coincide with the existent shore line. For the action of the sea waves may (and generally must) have altered the position of the coast from that which it occupied when first formed. But it may be taken for granted that not far from every precipitous shore line lies a line of weakness, where the crust has given way in the past, and may give way again. In this consideration undoubtedly we find a part of the explanation of the observed fact that almost all the great regions of subterranean activity on the earth lie near the sea-shore.

But while the changes of atmospheric and oceanic pressure are potent factors in the production of earthquakes, and are probably in the great number of cases their direct occasion, it is, of course, to the subterranean regions themselves that we must look for the forces at work in upheaving the crust of the earth. The forces acting from the outside are, as the pull on the trigger; the imprisoned gases and vapors generated by internal heat are as the powder by whose explosion the missile is ejected.

Yet even in considering the earth's subterranean activities we still have to look outside for a part at least of the causes of disturbance. The air perhaps may in this respect be neglected, but the water is all-important. It has been said, indeed, and probably with a nearer approach to truth than usual in the case of generalizations of the sort, "Without water there can be no volcano," and a similar rule (not quite so general) applies to earthquakes. Few probably occur, possibly none, save through the action of water in some way or other. All active volcanoes except one (in mid-Asia) are by the sea shore. Nearly all the great earthquakes recorded by history have taken place, and have apparently had their center of disturbance, near the sea.

There can be very little doubt, indeed, that the direct cause of every great subterranean disturbance is water in the form of steam—steam superheated, under great pressure, and therefore possessing much greater expansive power than steam at ordinary temperatures.—*Richard A. Proctor, in Harper's Magazine.*

Great Improvement.

Captain Jasman, who owed a bill in a neighboring town, was drawn on through the bank.

"What's this?" he asked of the collector.

"It's a draft for fifty dollars."

"The first one I ever saw. Now, they get 'em up in good shape, don't they? Well, sir, there has been a big improvement in such things since I could first remember. When I was a boy, circus bills were mere daubs of red ink, but now look at 'em."

"Are you going to pay this draft?"

"O, I don't want it. Tell that feller that I am much obliged for the kind attention he has shown me, but that I can not afford to pay so large a price for such a small piece or paper. Good-day."—*Arkansaw Traveler.*

—The throne of Louis XIV. was sold by public auction in Paris a few days ago for 6,500 francs.

MISCELLANEOUS.

—A New York man advertises troches for dogs which are guaranteed to make the breath of poodles and pugs as sweet as Desdemonia's.

—Disease itself may be a blessing, for it appears that in Philadelphia "interesting cases" hire themselves out to clinical lecturers at from twenty-five cents to two dollars, according to the "instructiveness of his malady."—*Philadelphia Press.*

—Germany has contributed to the world artificial cheese made of one part oleomargarine and two parts skimmed milk, mixed to the consistency of cream and subjected to the usual process of manufacturing the genuine article. The Yankee manufacturer of spurious products is not alone bad.

—A Spartansburg (S. C.) young lady advertises in the local paper for a husband. She describes herself "young and pretty, charming and witty, petite and piquante." Either there are no young men in Spartansburg or the damsel has overrated her charms.—*Chicago Times.*

—Two negroes of Wheeling, W. Va., had an affair of honor the other night and engaged in a butting duel. After fourteen rounds, in each of which their heads crashed together like rocks, they were satisfied, both being covered with blood and severely wounded.—*Chicago Inter Ocean.*

—Mr. Jacob Trungenwalt, of Philadelphia, has discovered that catfish skins may be tanned into elegant and serviceable leather. His first experiment was on a skin of a fish weighing about 160 pounds. He has now been engaged in the business for several years, and finds it very profitable.—*Philadelphia Times.*

—An old actor who has been interviewed on the subject gives it as his opinion that nobody without a good long nose ever played tragedy acceptably. However that may be, there is no question that a good long nose and a disposition to poke it into other people's business has led to a great deal of real tragedy.—*Chicago Tribune.*

—The best quality of charcoal is made from oak, maple, beach and chestnut. Wood will furnish, when properly charred, about twenty per cent. of charcoal. A bushel of charcoal from pine weighs about twenty-nine pounds; one from hard wood weighs thirty pounds; one hundred parts of oak make nearly twenty-three of charcoal, red pine about twenty-two, white pine twenty-three.—*Chicago Herald.*

—Professor E. C. Marshall says the French have more suspension bridges than any nation on the globe. Their engineers are putting up suspension bridges everywhere, and at least one of the structures approximates to the size of the Brooklyn bridge. So numerous are such bridges in France that it is impossible to secure an accurate list of them on this side of the water.

—A large black granite block, highly polished, was landed at Castle Garden recently. It was sent to Washington to be placed at the base of the monument. It is a gift of citizens of Wales, and was quarried at Mount Aurari. In gold letters on the face, in Welsh, is the following: "My language, my country, my people. Wales forever."—*N. Y. Times.*

—A Bath boatman saved an Italian organ-grinder from drowning Thursday. There was nothing objectionable in that, but when a long-suffering public reads the additional statement that the boatman rescued the hand-organ, too, from a watery grave, there will be no disposition in the public mind to award the boatman a medal. Bath boatmen evidently lack discrimination.—*Lewiston (Me.) Journal.*

—"Some like it hot, some like it cold, some like it in the pot nine days old." Thus runs the song about peas porridge, which is not often found on a modern bill of fare. Our porridge, the much abused oatmeal, is improved, according to a scientific writer, by keeping in closed jars several days before using. It is sweetened by the formation of sugar, while the fibrous material is softened.—*Detroit Post.*

—A kiss is said to be sweet not because it contains saccharine matter, but because a man doesn't know what else to call it when he feels the effect traveling through his system on a lightning express with no stop-over check. It is safe to assume that a man who attempts to describe a kiss never had one; men who have had kisses (not smacks) don't want to talk; they just want to think and dream, and die with their boots on. So we have been told.—*Texas Paper.*

—Japanese parents are noted for their kindness to their offspring. Swearing is wholly unknown in Japan. The worst word a Japanese ever applies to a man whom he dislikes is "beast." There is, in fact, less disturbance among them than among any other people known to Americans. Their homes, no matter how poor, are neat, and in cleanliness they set a notable example to the whole world. Law and order are as much desired and enforced there as elsewhere.—*Chicago Journal.*

—Right here in the Hub, under the shadow of Bunker Hill monument, where stands the Cradle of Liberty, the Old South Church, and the spire of that other church on which hung aloft the beacon light of Paul Revere, where the first overt act of the Revolution was committed by dumping the tea into the ocean, could it be believed that our custom tailors can not dispose of a piece of American goods, although superior in every particular, unless he says it is English? This seems to be incredible, but is nevertheless true, literally and absolutely true.—*Boston Sentinel.*

—The rare sight of an ostrich with a wooden leg might have been seen on a California ostrich farm some time ago. The ostriches first hatched were deficient in bone structure, a deficiency which has now been supplied, it is supposed, by a certain element in the food of the parent bird. The bones in the legs of these young chicks were very soft and breakable. As an experiment, the broken leg of one of the birds was amputated and a wooden one strapped on. Those who have seen the ungainly and mincing gait of the ostrich when equipped with natural legs can imagine what a peculiar step one of them would have with an artificial limb. Unfortunately the bird thus singularly equipped broke his other leg above the knee and died.—*San Francisco Chronicle.*

MATRIMONIAL.

Why the Decline of the Estate Is So Marked at the Present Time.

The present extravagant way of living probably has much to do with the present falling off in the matrimonial field. Girls brought up to every luxury, men with no idea of honest work, but only of pampering their own luxurious tastes, are not the people to join hands for the tremendous responsibilities of wedlock and the vicissitudes of life. What in the name of all that's reasonable could the modern dude do to support a family in comfortable circumstances, or more, to keep the wolf from the door? But he has no thought of matrimony; he puts all his small brain upon the fit of his clothes and the insipidity of his drinks. He enjoys the society of ladies; oh, yes! he affects the girls very much, but into his small heart there never creeps more than a milk-warm liking for them. And the girls! Let them be ever so idly brought up, let their minds be carefully weeded of all germs of common sense as they grow, yet there is an innate love of the noble in every girl's heart that would forever prevent her from falling in love with a dude; but if she did happen to, there is not one dude in a thousand would have the courage to find it out. And again, the higher education of women makes them more independent, more capable of a choice. With it their happiness is more in their own hands, and thus it is found that most divorces are among the class of people who still hold to the custom of an idle life for women. In olden times, to marry was considered almost as sure a fate as to die. The farmer's rosy daughter spun the flax or patted the butter into shape with a sweet smile playing about her pretty lips, for soon she knew she would in her own home pat her own butter and spin her own flax. In the city, the belle lounged through the day among flowers and perfumed notes from many adorers, unable to decide which should be her choice, yet positively certain of choosing one. But in "ye olden time" it was considered a point of extreme honor to be true to one's sweetheart. If one were false to every one else, one must be true to one's lover. In these days honor is almost a lost art. To be able to deceive is considered an evidence of greatest excellence. To believe what one is told, to trust the honor of a given word, is considered as almost imbecile innocence and simplicity. To-day there is no consideration but advantage. Will it be a step further on in a worldly way, is the question which presents itself. Sometimes the answer is positively in the negative, if I may be allowed the term, and very often it is doubtful. The love-after-marriage literature of the day is a fair sign of the times. To marry for advantage or convenience, and afterward to love "for love's sake only," is the most accepted plot of the more recent works. And this reacts upon society with a subtlety equal to that of the flower pollen which has been discovered by Dr. Mackenzie to be the cause of hay-fever. One can not see its action, yet the result is there. The want of trust and sanctity in the marriage tie, the free opening to women of other ... sources of happiness, and her increasing ability to stand alone, are some of the causes which are filling our land with single, but capable and useful women.—*Margaret Madden.*

MONKEYS.

The Family Life of Our Simian Progenitors.

Among other mammals the female element wields the scepter in family life, but in the realm of apes the male is invested with the sovereign power, not by general suffrage, but by the right of force. The oldest and strongest male of a troop proclaims himself chief and leader, after having vanquished all his competitors. The longest teeth and the strongest arms decide in the question of supremacy. All those who show reluctance to submit are chastised till they come to reason. To the strongest belongs the crown; in his sharp teeth resides his wisdom. This ferocious tyrant understands his duty as a leader, and performs the same with dignity. His subordinates flatter and fondle him in every way. As a genuine Pasha, he accepts this respect with a kind of languid acquiescence. In return he watches carefully over his vassals, and shows a continual anxiety for their welfare and security. He orders and directs minute details in daily life. The female monkey gives birth to one young one, very seldom to twins. The new-born monkey is a little ugly creature, bare of hairs, with spindling limbs and a repulsive, senile face. But the mother is passionately fond of her monster, and caresses and nurses it with remarkable devotion. She does not leave it for a single moment, she, presses it to her heart, rocks it to and fro, and takes the utmost care to keep it absolutely clean. In the first period of life the baby is apathetic and almost insensible, but begins gradually to play with urchins of its age. The mother is a patient observer of the first steps of her beloved, and watches carefully that no harm may befall it. In the meantime she trains it, and the first virtue inculcated in the mind of the youngster is obedience, obedience in the strictest sense of the word. Men have ridiculed the maternal affection of the brute, and speak of "apish love." In our eyes the tenderness exhibited by the monkey may have a ridiculous side, but where is the man who could, without deep emotion, witness the anxiety of a mother-ape nursing her sick child. I must confess that, to my eye, in such cases she is at least the equal of the human mother. If the young ape dies, the spectacle is a piteous one. The mother cannot be separated from the dead body, refuses all food, and frequently perishes from grief. In such crises the ape proves certainly his congeniality with the human race, and in his moral affections could stand as an example to many men.—*Nature.*

—At Stratford, Conn., a courtship that has been carried on for a period of thirty-one years is still pursuing its rosy way without any more signs of a matrimonial termination than there was over a quarter a century ago.—*Hartford Post.*

WOUNDS IN ANIMALS.

How They May Be Repaired—The Two Methods in Use.

There are two principal methods by which wounds are repaired. The first of these, and the more favorable of the two, is the method termed by surgeons healing by the first intention. Under favorable circumstances this takes place in an incised wound when the cut surfaces are brought carefully together and maintained in close contact after bleeding has ceased. The two surfaces then become cemented together by the formation of a thin intermediate layer of new tissue. The other principal mode of repair is healing by the second intention. That is what takes place in large incised wounds when the cut surfaces can not be brought and maintained in apposition, and it is the invariable method of repair in punctured and lacerated wounds. Here the gap in the texture becomes filled up by the growth of new material taking place from the bottom of the wound, while a new skin grows inwards from the edge of the wound. This skin, however, is not exactly similar to the natural healthy skin from which it extends, being thinner, more delicate, and without any hair. A third and much rarer process of healing in wounds is what is termed immediate union. In this, it is said, the divided surfaces being brought into accurate contact unite without the intermediate growth of any new texture. It is questionable if such is really the case, but it is certain that sometimes in small wounds the cut surfaces when placed together unite so speedily and exactly that no scar is left. In an incised wound treatment in the first instance should be directed toward favoring union by the first intention. The essentials for this are—a sound constitution on the part of the animal, accurate and close contact with the divided surface, and the absence of inflammation in the wound. Without man's interference this process would seldom or never ensue in the lower animals, for in all wounds except the smallest the cut surfaces gape apart unless some means be adopted to keep them together. The means commonly adopted by surgeons for this purpose are the application of strips of plaster across the surface of the wound, or the passing of sutures through its edge. In adopting the former plan, a few strips, according to the length of the wound, should be applied at intervals; but the entire surface should never be entirely covered by the plaster. The surfaces, moreover, should not be brought together until bleeding has been arrested, for should a clot of blood be effused into the wound it would prevent healing by this method. Sutures are simply stitches used to tie or sew the edges or surface of a wound together. They are used of various materials, such as thread, horse-hair, cat-gut and wire. Nothing further need be said about the application of these, since their insertion into a wound should always be left to a veterinary surgeon. In a punctured or a contused or lacerated wound, where the surface can not be maintained together, or where inflammation ensues in such a wound, then the treatment must be that favorable to healing by the second intention. Inflammation, shown by redness, swelling and great tenderness of the edges of the wound, should be combatted by assiduous bathing with hot water. In a contused and lacerated wound, such as "broken knees," particles of sand and other foreign matter must be carefully and lightly sponged from the surface; in punctured wounds, or stabs, it must be made certain that nothing remains in the bottom of the wound; and in all classes of wounds healing in this way provision must be made to allow the discharge from the wound a ready escape.

With the last object it is often necessary, in a punctured wound, to enlarge the opening, or to make what is called a "counter-opening"—that is, one running from the surface upward to the deepest part of the wound. The necessity for a free escape from a punctured wound is seen in the case of "pricks" of the feet. These are generally simple in their effects if the track of the nail be carefully followed and enlarged; but if not, the nail-hole is apt to become obstructed, and prove insufficient for the escape of the discharge from the wound. In that case the discharge accumulates within the hoof, and gradually forces its way toward the surface, in the direction of least resistance, and hence ceases to burst out at the top of the hoof. In all wounds union is promoted by putting the part at rest. In the case of such large animals as the horse this is always extremely difficult, and sometimes it may be necessary to put the animal in slings.

Healthy wounds are seldom much benefited by the application of lotions or ointments. When the wound is of small size it is best to leave it uncovered; and if it be in summer it may be smeared with zinc ointment, or with forty parts of olive oil to one of carbolic acid. In large wounds the surface should be lightly covered with a cloth kept wet with a solution of carbolic acid in forty parts of water. When a wound shows what is called "proud flesh" it should be rubbed over at its most prominent part with sulphate of copper (bluestone), or washed with a solution containing two ounces of sugar to a pint-bottle of water.—*English Veterinary Surgeon, in Chicago Times.*

The Object of a Ditch.

A New Yorker who was in New Jersey last fall found a number of men digging a ditch between two small lakes in a park.

"I don't see the object," he observed, after surveying the work for a while.

"No," dryly answered the boss.

"The lakes are too shallow to be navigated."

"Well?"

"And the ditch can't be of any use except to the fish."

"Mebbe not."

"Say!" called the nettled New Yorker, "what is the object of your infernal old ditch, anyhow?"

"To issue $100,000 worth of bonds on," was the calm reply.—*Wall Street Daily News.*

—California papers state that John W. Mackay has given $100,000 to Bishop Monogue for the erection of a church at Sacramento.

LOST TREASURES.

How They Are Found in the Early Morning Hours by "Dago" Searchers.

It has lately been made a matter of regret that the picturesquely dirty chiffonnier or rag-picker of Paris threatens to become an extinct species in consequence of the operation of stringent municipal laws. If it should ever happen that he should share the fate of the dodo and disappear from the face of the Continent of Europe, the enthusiasist will most probably be still able to see him plying his particular vocation on the streets of Chicago in the early morning.

In a great city like this there are hundreds of men whose vocations compel them to go home about the time when other citizens are preparing to start out upon their daily labors. No reference is here intended to those loafers and sharks who reel out from gambling saloons and surreptitious drinking dens when dawn is breaking, and are prepared to do anything that may rake them in the flying dollar—anything at all, from playing the slick confidence game to sandbagging some befogged simpleton who has freely placed the enemy within his mouth to steal away his brains. On the contrary, the reference is to those toilers of the night whose business is legitimate; to the reporters and printers who work for the public chiefly by the midnight lamp; to the scores upon scores of respectable men in other professions who, one way or another, have to find their bread by night and not by day. One of these nocturnal laborers lately happened to be a *Tribune* reporter, and just about daybreak he could not help noticing the singular demeanor of certain men who walked slowly along the principal shopping thoroughfares with their eyes bent steadfastly upon the ground. The majority carried small, coarse bags, and stopped wherever they saw a dust heap, which they diligently searched. These pickers-up of unconsidered trifles were evidently Italians for the most part. They worked the streets in sections, as no two ever came within a block of each other. A policeman happened to be sauntering along State Street, in the vicinity of the Palmer House, and the reporter asked him for an explanation of the mysterious movements of the men, who looked like desperate members of a conspirators' chorus.

"Them fellers?" said the officer, waving his hand in the direction of a pair of Italian searchers; "why, them is dagos, and they are looking for articles that folks may have happened to drop over night. They generally work State, Madison, and Dearborn streets, because there the most of the women do their shopping, and as they are out the first thing in the morning the chances are that they may pick up something that will keep them in comfort for a couple of months. A little goes a long way with them dagos. Why, I don't believe they spend as much in a week as you or I or any other Christian would spend for one square meal. Do they ever get a good find? Well, yes; once in a while they do. They may catch on to a ring, or a locket, or a pair of ear-rings, and it is not long ago since I heard of one fellow that picked up a purse containing over a hundred dollars. It was lying just under the curbstone, half-way in the gutter. When he saw he was observed he thought it wisest to take it over to the police-station, but it was never claimed, and he got the dollars. You would be astonished to know how many things women-folks contriv to lose—maybe owing to the excitement of buying fancy things, and maybe because in the crowd they get kind of rattled and careless. The daisy time for the dago-searcher for lost articles is in the early spring when the snow begins to melt, and then things that have been lost and buried for months come to light and are liable to be picked up by those who make it their special business to look for them. They are not at all particular about what they catch on to. See that fellow there? Well, he's just picked up an old pair of boots and stuck them in his bag. He'll get some kind of a market for them somewhere, and that just shows you how some of the poor of this city have to live. Neither you nor I would look at these boots, but there are hundreds who would be glad to buy them for a few cents. All these dago men know where to find a market for almost anything that is put out on the streets. There goes another who has picked up what looks like an old cotton rag—probably a handkerchief that has been all trampled over in the mud—but it is good enough for him, as all's fish that comes to his net."

"Are these men worked under the padrone system?"

"I don't know what that is," replied the officer, and the reporter explained the system which prevails in New York, where a small Italian capitalist called the padrone hires and feeds so many of his wretched fellow-countrymen and vigorously exacts the lion's share of their earnings.

The officer said he did not know whether the Chicago treasure-trove seekers were governed by padrones, but thought they might be, because he'd often noticed men going up and speaking to them as if they were watching them closely.

A few yards further on the reporter met one of the young searchers, and ventured to ask whether he had a padrone.

"Non, signor," he replied, as he grinned broadly; "me no have padrone. Me my own boss—no use for padrone. Non, mucha of zee business I not do—too mucha povero and no dollar." So saying he scuffled off on his search.—*Chicago Tribune.*

—Captain John Ayers, of Santa Fe, New Mexico, who went to New Mexico with the California volunteers in early days, and for a time was in command of Fort Marcy, publishes a two-column article review, stating he has discovered the original warm and mineral springs which the Aztecs filled up and hid at the time of the Spanish invasion. The spring is about four miles east of Santa Fe.—*Chicago Times.*

—Russia and the United States are said to be the only countries in the world that have a sufficient number of horses for army purposes in case of war.

HE PARDONED HIM.

How President Hayes Was Led to Extend Executive Clemency to an Offender.

Tim —— kept a restaurant in Washington. He was a well-known son of Erin, happy as the day is long, with a good-natured, portly wife and five children that looked like a step-ladder when you stood them up in a row, and were as healthy as little pigs. The eldest of the children was about twelve years of age. One Decoration Day Tim took it into his head to increase the exchequer of his family by selling some "hard stuff" to the dust-begrimed and thirsty hosts who always visit Arlington on that occasion, so he erected a frame booth on the road to the cemetery, stocked it with the "rale ole stuff" and began business as his own bar-tender. He forgot the important essential of taking out a license, was nabbed by a constable, marched down to Alexandria, landed in jail, tried, convicted and sentenced to two years for selling liquor without a license and fined a hundred dollars. When Tim's wife and family heard of what had befallen their natural protector they nearly went crazy. One day I received a visit from his wife and the rest of the family. They lived in the neighborhood of my office. I listened to the story which she disconnectedly narrated to me through her tears and sobs, and a thought struck me that perhaps I could be of some service to her in securing the release of her husband. I enjoined her to follow my advice strictly and I thought she could get Tim restored to the bosom of his family. "Go up to the White House and see President Hayes; take all the children with you; force your way in and do not allow the doorkeepers to bluff you or prevent you from getting in to see him. When you arrive in his presence tell your story to him, and say that you will all have to starve or go to the poor-house unless he is released. Cry and sob right lively while you are repeating your request, and have your oldest daughter to burst out crying at the same time. I know that all the other children will follow suit if they see the oldest one crying. Mr. Hayes is a tender-hearted man and will release your husband, I'm sure."

She obeyed my instructions to the letter. She "togged out" the little ones in clean attire, went to the Executive Mansion and got inside the main entrance before Dinsmore, the good-looking door-keeper, could prevent it. The latter then ordered them out, but the family began the music according to programme, and while crying at the top of their voices enlisted the sympathy of many of the visitors who were passing in and out. A charitable-looking lady and gentleman, with whom the President was acquainted, ascertained between her sobs and tears what Tim's wife was after and arranged an interview with Mr. Hayes. Up stairs trooped the mother and children. The former pathetically told her story to the Chief Magistrate of the Nation. The crying and sobbing of the whole party was "immense," said a looker-on. "Calm yourself, calm yourself, my good woman," said Mr. Hayes. "O, my poor husband! my poor husband!" ejaculated the mother, and then the chorus of the children would almost reach high C. "I will release your husband," said Mr. Hayes, at last. "Come to-morrow and see me, but do not bring your children."

The next day she was promptly on hand. The President accompanied her to the Department of Justice, looked over the papers in the trivial case and not only pardoned Tim but wrote a letter to the State authorities requesting them to remit the fine, which was done. Tim was received with open arms by the happy family and has, since that time, kept within the pale of the law. Coyle says the family overwhelmed him unanimously.—*Washington Capital.*

THE HERO WAS SLAIN.

How the Old Farmer Went for the Boy Whose Wits Were Wool-Gathering.

One of the farmers who succeeded in backing his wagon into place at City Hall Market yesterday morning had several errands to do around the neighborhood, and he left his son of fourteen on the vehicle to make a sale of five or six bags of potatoes. The old man had scarcely disappeared when a bill-distributor came along and threw into the wagon the first chapters of a sensational serial. The boy grabbed for the "fly" and began to devour the literature in chunks and hunks, and of the half-dozen people who came along and asked the price of his potatoes he answered only one, and him so absent-mindedly that no sale was made. In about half an hour the old man returned. He halted at the back end of the wagon and took in the situation, and then asked:

"George, what you got?"

"Story."

"What about?"

"Injuns."

"Do they kill anybody?"

"They are after a feller and I guess they git him."

"He's the hero, I s'pose?"

"Yes."

"Don't sell any 'taters, does he?"

"No."

"I thought not, but I reckon I'll soon know the reason why!"

With that he leisurely climbed over the tail-board, reached for the boy, and the shaking up that youth received will make him dream of earthquakes for many nights to come.

"You don't want any more of that," said the old man as he finished business and dropped the "fly" overboard. "The Injuns not only overtook the hero but they slew him in the most fatal manner, and don't you forget it! Now you git up'n gallop and sell these 'taters!"—*Detroit Free Press.*

—A writer in the London *Spectator* the other day asked a young writer who was at work at novelettes how much he could earn. "At the rate of eighteenpence an hour." "This," the *Spectator* adds, "may be taken as about a minimum. The maximum may perhaps be put at £800 per annum. This excludes the great prizes of editorships of leading journals and the price which a man gets for his name."

—The ship State of Maine recently made the distance across the Pacific in twenty days, the fastest time on record.—*San Francisco Chronicle.*

TEMPERANCE READING.

FOR THE BOYS.

A few words of advice, my lively young friend,
(Perhaps they are needed by you):
Down a terrible path your footsteps now tend,
For whisky will beat the best fellow, depend,
And the dream of to-day life's to-morrow may end;
Believe me, 'tis fearfully true, my young friend,
Believe me, 'tis fearfully true.

I know how the tempter assails you, dear boy,
Alas, none knows better than I!
But the gold of the wine cup turns soon to alloy,
And woe follows quick in the footprints of joy,
For the pain of to-morrow will rack and annoy;
The tempter's best vow is a lie, my dear boy,
Believe me, each vow is a lie.

I know that the boys whom you meet, my dear lad,
Are hale, good companions, each one,
With many an impulse that's not of the bad,
And they join in the mirth with an ecstasy mad,
But the bright sun of hope (O 'tis terribly sad!)
Often sets ere the day is begun, my dear lad,
Often sets ere the day is begun.

I have known several "boys" in my time, dear young man,
And royal good fellows were they,
With brains which God meant, in His infinite plan,
For the noblest of deeds; but they fell as they ran,
And the hopes which we cherished, no longer we can;
But fond hearts will mourn as they may, dear young man,
Fond hearts are breaking to-day.

Ah! then, for the sake of the mother, dear boy,
Who loves you as mothers will do,
Forswear, while you may, the wine cup's alloy;
Do naught that fond heart to disturb and annoy;
Encircle her face with the halo of joy,
And life will be fairer for you, my dear boy,
And life will be fairer for you.

—*A. J. Waterhouse, in Toledo Blade.*

AN OLD SCHOOL FRIEND.

The Sad Condition to Which He Was Brought by the Demon Drink—His First Pledge.

It was a cold, sour eve with nothing suggestive of spring or flowers, save the boys and girls in merry glee hanging their May baskets sparse of flowers—jerking the bells with such gusto that some were seriously maimed—their rushing "te-he-ing" under the covert of post or tree to watch the recipient open the door and obtain the gift.

Jack and I had waited upon the door by turns all the evening with fair success. But alas! when the basket gave out, the bell kept ringing, and Jack's temper began to get frayed and give out also.

"Oh, it is not worth losing your temper over," I said, soothingly, after he had made two unsuccessful trips to the door, only to receive a volley of laughter from the boys and girls hid behind a lilac bush. "We will pay no further attention to the door, and the fun will cease."

So it proved.

We retired at a seasonable hour, leaving a light in the sitting-room. Presently we were awakened from a sound sleep by another ring of the bell, just as the clock was striking ten.

"Those rascals!" cried Jack.

"I don't believe it is the boys," I said. "It didn't sound like them—it was too faint and timid. There! don't you see!" as there followed another ring.

"Yes, I see! but they can't fool me again with such a trick!" was the obstinate reply as he turned over for a nap.

The remainder of the night, however, was undisturbed save as I was occasionally awakened by the continual tramp, tramp, back and forth in front of our house; but supposing it the boys we soon ceased to be annoyed by it.

In the cold gray of the following morning I was awakened by hearing my husband in earnest conversation with a strange voice in the kitchen—I could not make it out, neither the subject that engrossed them. Presently Jack stepped to the bedroom door, saying:

"I have started the fire, Aurelia, and will be back soon!"

And he was gone before I could ask a question to satisfy my curiosity, which was at its height when a moment later I saw my husband going down the walk in close conversation with a tall, well-built stranger wearing a silk hat. These were all the points I had time to note before they turned the corner and were out of sight.

In the course of two hours Jack returned, but alone.

"Who was your mysterious morning caller?" I asked, with ill-concealed curiosity, as we sat down to the savory breakfast.

"An old school friend!" was the somewhat short reply.

Noticing his desire to conceal something, I was, of course, bristling with interrogation points.

"It's no use, I see," said Jack, breaking into a sunny laugh at my many questions, "and perhaps I ought to tell you, though the poor fellow begged I would not mention it to you.

"His name is Burt Latimer—we were schoolmates at Hilton Academy twenty years ago. He was a bright, generous fellow—his father was wealthy, and Burt always had lots of money. It seems that he is married and living in New York, and travels for a large wholesale firm there—has for a number of years. He confesses he has drank moderately for some time and occasionally had a 'spree.'

"It seems that while waiting here an hour for the train, a fellow bummer invited him to one of our first-class hotels to pass the time. They got to drinking, and after the fellow had helped Burt spend a generous sum of money he left him here in a strange place, penniless and dead drunk.

"That was two weeks ago, and ever since he has been on a terrible spree. He pawned and re-pawned his clothes until he was almost naked, and had absolutely nothing with which to purchase liquor or lodgings, and for a week he has walked the streets nights, and gradually got sober enough to realize what has happened."

"Out-doors in these drenching night rains?" I cried, the tears filling my eyes.

"Yes; and he has scarcely tasted food in all this time. He began his debauch at the stylish bar of Hotel De Levier, but went from grade to grade, until he took his last drink at the lowest groggery in Thieves' Alley."

"Oh! isn't it terrible! But how did he happen to find us?"

"Well, as he came to himself he tried to think how he could get some decent clothes and get home. George! 'twas a dark outlook! Finally, he said, he recalled the fact that I lived here when at school—that my father was wealthy, and that I was a good, generous fellow, to use his words. So he got a directory and found us; and he is the fellow who rung the bell at ten o'clock last night—"

"There, what did I tell you!"

"And patrolled the street until morning, watching to catch me when I first got up. I tell you the poor fellow was blue with cold and drenched with rain, and glad enough to see a fire!"

"But why didn't you ask him to stay to breakfast?"

"I did, of course, but I couldn't persuade him, he is so used up over looking so."

"But what can we do for him?" I asked, seriously realizing that we now belonged to that class "who had seen better days."

"Not much, I fear, but he says if he can get to L—— he has a cousin there who can help him to clothes and money. I think I can get some of the boys to pass him as far as L——. He will be around soon and I am going with him to see."

Presently Mr. Latimer turned down our street and I don't think I ever beheld a more singular or pitiable sight. As I have said, Mr. L. was tall and well proportioned—his features were fine and almost classical—and he would have been observed in any crowd and pronounced a gentleman. But to see such a person as this clad in the thin, scanty, shabby habiliments of a drunkard was pitiable in the extreme!

My husband met him at the gate, but before they could get away I slipped out under pretense of an errand and rendered an introduction necessary, though Mr. L. tried hard to prevent such a catastrophe.

Oh, how gracefully he touched the once fine silk hat, now so roughened by the night rains! and how his face flushed and paled as he made a wretched attempt to lengthen his coat and hide his coarse shoes.

Though I addressed him as a gentleman and a former friend of my husband, he of course saw through my attempt to ignore his misfortune and was covered with humiliation. I was deeply distressed for him, and said with all the warmth of my being (and this was my real errand); "I shall expect you back to dinner with my husband, Mr. Latimer!"

"Thank you, Mrs. Carl," was the graceful, gentlemanly reply, "but I have been unfortunate and am in no condition to accept your kind hospitality." But I persisted and he agreed to return.

That evening (for we induced him to remain until the train left for L——, which was the following day,) he and Jack got to talking about old times at the Academy. He would smile and even laugh; but the laugh seemed to choke him and the smile turned into a shadow as he realized his uncouth appearance and the unfortunate cause.

And what wonder!

Fond and proud of his toilette, he now found himself in the presence of old friends clad in an old colored shirt with collar of the same, faded coat two sizes too small, thin pants two sizes too large, coarse cowhide shoes minus stockings—no vest and no undercloth-ing—nothing but the silk hat, which had miraculously escaped, was left of his former handsome and complete wardrobe!

In the course of conversation, and Mr. L—— could be very entertaining, we saw, he spoke of marrying his wife at M——.

"Indeed, what was her name? That was my home eighteen years ago," I said.

"Edith Daily."

"Edith Daily!" I said, with a strange mixture of surprise and sorrow, "I knew her! at that time we were very intimate. She was one of the sweetest girls I ever met!"

"And you would find her just the same now!" he replied, warmly, though his features quivered with pain at some recollection.

Before I left I was alone with him a little while. He seemed very anxious to unburden his heart to me and talked freely of his past life.

"This is my worst and last debauch, Mrs. Carl," he said, solemnly and earnestly.

"I hope so, Mr. Latimer, for dear Edith's sake—it must crush her."

At the mention of her name the tears ran down his face like rain, and he cried out in pitiful agony of despair:

"Oh, Mrs. Carl, help me! for God's sake, help me!"

"I wish I might," I said, earnestly, handing him a handkerchief to dry his tears, "but what can I do?"

"Won't you write a pledge? I never signed one because I thought I could look out for myself—but it may help me!"

Most cheerfully I drew up a simple pledge and he signed it in a clear business-like hand.

When he left us, my husband not being able to get him "passed," I handed him two dollars for his fare to L——. This was all the money we had and we really needed it. I told him this that he might not squander it in further debauch. I confess I felt a little uneasy until we received a letter returning it and telling of his safe arrival home.

This event, that impressed me so deeply, took place four years ago. I hope the pledge has been sacredly kept and our friend saved, but I do not know. But of this I am certain: could you have seen him as I did that May Day, stripped by the Demon Drink of almost every vestige of manliness and crying for help, we would all put more heart and purpose into the Temperance Cause.—*Estelle Mendelle, in Christian at Work.*

A LITTLE story has just come to hand illustrative of the fact that children drink in the truths presented to them concerning temperance. A little boy six years old, while playing Sunday-school with his sister, offered this prayer: "Dear God we thank Thee for all our nice things and our beautiful times and ask Thee to keep us not to drink beer or wine or any such things, but may we drink water and eat healthy food. Amen."—*Union Signal.*

THE REPUBLICAN.

OAKLAND, MARYLAND.

JAS. A. HAYDEN,
Editor and Proprietor.

TERMS OF SUBSCRIPTION.

e copy, one year..... $1 50
six months..... 75
INVARIABLY IN ADVANCE.

TERMS OF ADVERTISING.

First insertion, $1 per square of 10 lines 0 cents per square for each additional inser ion. Special contracts for advertising longer han three months

Correspondents must enclose full name and address, not necessarily for publication, but as a private guarantee of good faith. Rejected communications will not be returned.

SATURDAY, JUNE 27, 1885.

After the 1st July, 1885, all domestic first-class matter sent through the mails, including drop letters at letter carrier offices, must be charged with postage at the rate of two cents per ounce or fraction thereof, instead of two cents per half ounce or fraction thereof. Drop letters at other than letter carrier offices to be charged at the rate of one cent per ounce or fraction thereof. This change in the standard of weight will also apply to first-class matter addressed to Canada, but not to matter addressed to other foreign countries. She same bill also reduces the rate of postage from two cents per pound to one cent per pound on all publications of the second class, newspapers and periodicals when sent by the publisher thereof, and from the office of publication, including sample copies, or when sent from a news agency to actual subscribers thereto, or to other news agents. This provision only refers to publishers and news agents. Private individuals mailing such matter pay at the rate of one cent for four ounces. The new law makes *taking* of a newspaper and the *refusal to pay* for the same *theft;* and any person guilty of such action is liable to criminal proceedings, the same as if guilty of stealing goods to the amount of his subscription. The postmaster can testify in all such cases.

A Week on the Mountain.

MT. MCGREGOR, N. Y., June 23.—One week ago to-day Gen. Grant was brought here. Speaking of their trip, Dr. Newman remarks that only one man ever went upon a mountain to die. That was Moses, but Dr. Newman don't believe this mountain trip will result that way. He holds to the hope that Gen. Grant may recover. Having been here a week, in which time the good results of the change might fairly be expected. Dr. Douglas was this morning asked to make a comparison of the general's condition now and the day he started from New York. "Gen. Grant could not have lived in New York until this time with weather such as when he left," said the doctor. "He was sinking very rapidly there, and that was why we had to hasten the time of leaving, which was originally fixed for to-day. In making a comparison of the general's condition a week ago and now there is a central fact that must always be considered, a fact that pains me deeply,and all the time, and that is that we must stand by and watch the course of his illness with the consciousness of being unable to stay it. As to the local conditions, the area of exterior swelling is certainly less than when he reached here last Tuesday, and the afflicted parts inside are no worse, I cannot say that his spirits or courage are less than a week ago. In short, the general has benefited as much as could have been expected by any change, and to-day he is stronger than when he came here."

Hon. Richard T. Merrick Dead.

WASHINGTON, June 23.—Richard T. Merrick died this morning shortly after ten o'clock at his home on F street, near 13th, in the 59th year of his age. He had not been conscious for several days up to the time of his death. None of the members of his immediate family were present at his death-bed except his eldest daughter. Mrs. Taylor and others of Mrs. Merrick's relative were, however, present. Mrs. Merrick, who is very ill, was not aware of the critical nature of Mr. Merrick's illness, as her physicians deemed it inadvisable to inform her. Last night there were such hopeful signs in Mr. Merrick's condition that the physicians and watchers were encouraged to believe that his condition would improve. So this morning when he began to sink, and his fine physique succumbed to the long struggle with disease, the shock was keenly felt among his friends.

Sam Rondall thinks the "offensive partizan" dodge a flimsy pretense. He thinks Republicans should be removed because they are Republicans. "I wouldn't give a nickle for a man who isn't an offensive partisan in the sense now applied to the term, actively in the interest of the party to which he belongs. I am an offensive partisan myself."

The Union Dead.

From the N. Y. Sun.

Twenty years have passed since the close of the civil war and now, at last, a careful official record of the number of deaths that occured in the Union army has been made. A little more than twelve months ago, on the 24 of June, 1884, General Drum directed Mr. J. W. Kirkley, an experienced statistician of the Adjutant General's office, to begin the compilation of all attainable official documents has now produced a table of statistics which far surpasses in completeness anything on the subject hitherto existing.

To state the grand result at the outset, the table shows a total of 9,853 deaths of commissioned officers and 349,913 deaths of enlisted men, making an aggregate of 359,496 deaths among the Union forces. The period included in the record is, for the regular troops, the interval between April 15, 1861, and August 1, 1865; for a portion of the volunreers it is prolonged begond the latter date until the master out of each organization, It will be remembered that the troubles in Mexico and other causes occasioned the retention of some volunteers in the service after the downfall of the Confederancy. Indeed, as Mr. Kirkley notes, the last white volunteer organization was disbanded November 18, 1867, and the last colored regiment December 20, 1877, while the last officer of the volunteer general staff was not mustered out until July 1, 1869.

Yet, careful as the examination of the records has been, one lack renders it still far from complete. The death registers of some of the largest prisons at the South used for the confinement of Union soldiers are missing. For the prisons at Americus, Atlanta, Augusta, Charleston, Lynchburg, Macon, Marietta, Mobile, Montgomery, Savannah, Shreveport and Tyler the registers have not been secured at all, and the importance of these prisons is well known. Only partial records were had from the prisons at Cahawba, Columbia, Florence, S. C., Millen and Salisbury. There have been ways, it is true, of partly working up these deficiencies; but on the other hand, as Quartermaster General Meigs, cited by Mr. Kirkley, has shown, in many Southern prisons three or four corpses of Union prisoners were sometimes huried in the same trench and the number of graves only imperfectly indicates the number of dead. Even in this most imperfect record the number of Union soldiers known to have died in captivity were close upon thirty thousand—in exact figures, 29,498. The late investigation we may add, has increased by about one sixth the records of death among Union prisoners.

Taking Mr. Kirkley's tables, we derive from them the following general results:

	Officers.	*Men.*	*Aggre.*
Killed or died of wounds	6,365	103,673	110,038
Died of disease	1,705	221,791	221,586
Drowned	106	4,838	4,944
Other accidental deaths	142	3 972	4,114
Murdered	37	487	5 4
Killed after capture	14	86	100
Committed suicide	26	365	391
Executed	...	267	267
Executed by enemy	4	60	64
Died from sunstroke	5	308	313
Other known causes	52	1,092	2,034
Causes not stated	28	12,093	12,121
Totals	9,584	349,912	359,496

The official tables, as published from a manuscript copy in the *Army and Navy Journal*, further distributes all these classes of deaths among the Union troops by states, it being explained that the phrase "other known causes" includes deaths resulting from quarrels not amounting to murder, from being shot by sentries or by the provost guard and miscellaneous causes. This aggregate of nearly 360,000 deaths of Union soldiers must be supplemented by a like record of Confederate soldiers, in order to find the real number of victims to the war in both armies. Then the naval deaths must also be ascertained and added. Many a soldier and sailor met a fate more dreaded than death in being crippled for life or made the prey of some lingering disease contracted in the service.

State of Trade.

NEW YORK, June 20.—*Bradstreet's Journal*, in its commercial summary says: "Special telegrams to *Bradstreet's* from the larger cities throughout the United States continue the record of almost uniform mid-summer dullness. At a few of the smaller cities there has been an improved demand for loans, notably at Detroit. At the larger trade centers the reverse is true, with the sole exception of Cincinnati, where the demand for money is mainly to move the new clip of wool. The volume of produce and general merchandise moving throughout the country is light, probably smaller than at a like period last year. In the Northwestern, or wheat country, this is undoubtedly the case. The surplus bank reserves at the Eastern financial circles, as well as at Chicago, continne substancially as heavy as heretofore, and call loans unprecedently low.

The iron and steel industries show no signs of improvement and prices are unchanged.

The anthracite coal trade is duller than previously, and side tracks along the lines of the coal roads are filling up with loaded coal cars. The bituminous trade is quite demoralizing so far as prices are concerned in consequence of the competition from newly developed fields.

Dry goods have been in moderate request, and the production of cotton fabrics in the East promises to be restricted.

BOSTON, June 20.—The *Advertiser* in its weekly review of the wool market says:

The week has been a broken one, owing to the Bunker Hill holiday, which in part accounts for the small sales, but the inquiry has been less than a week ago, and while prices are not quotably higher for any descriptions, medium wools can only be quoted firm at quotations. Certainly better terms can be made in fine woo's, and manufacturers are more indifferent. Private London cablegrams received to-day from different sources report a decline there of ½d in merino wools and the market depressed. On the other hand, we have seen a cablegram declining a price for good wools which had been previously accepted, and those who have filed orders have not yet secured all the wool they want. The reported decline probably represents in part the inferior condition of the wool now being offered, for it must be remembered that much of the last Australian clip was unsatisfactory, and the drop may be also made to attract American orders still unfilled.

Conkling not out of Politics.

WASHINGTON, June 21.—Mr. Conkling has gone abroad. When he returns in the fall his friends will banquet him. How and when to emerge from his isolation politically has for some time been discussed by Mr. Conkling's friends. Presumably the question has not at all times been absent from his own thoughts. The idea of not returning to political life has not dwelt with him. Returning at no distant day has been a settled purpose. The opportunity and the way has been looked for. Mr. Conkling knows as well as anybody what are the chances of a game wherein victory depends on the mountain going to Mohammed, The mountain has as yet shown no disposition to move, and so he has begun to think about doing it. Pursured too long, the game of being out of politics gets out of mind. That does not at all accord with Mr. Conkling's purpose. It is the very last thing that would afford him the slightest pleasure. It is certainly to his nature, totally. Of late he has not been able to keep from himself that it is, however, precisely what must happen as the result of longer posing out of politics. Nor has it appeared to him probable that after scuttling the ship to spite the mate he will be called to command a new one by the survivors. To revenge himself on Mr. Blaine he or his friends for him claim that he beat the Republican party. If he did no one has offered to crown him as a patriot for doing so. On the contrary, Mr. Conkling has been drifting out of sight of late, and his friends here deliberated how to bring him back into office. They will do it in the fall when he returns from his vacation abroad.

Next fall's election in New York will include State Senators, who will participate in the election of a U. S. Senator two years from next winter. Mr. Conkling is reported to have said that a seat in the Senate is to be preferred to the Presidency—that is that it suits him better. When he returns from abroad the banquet which his friends intend to give him will afford him an opportunity to get one leg at least over the fence, as the beginning of the operation of getting back into politics. The New York Republicans are engaged in healing their dissensions and bringing back the wanderers. The ex-Senator's friends have made up their minds that it is profitless and unnatural for them to longer remain "outside of politics," and he himself is said to recognize the reasonableness of the suggestion. As they cannot be Democrats, there is no place for them or him but in the Republican ranks, and thither will they before long go, They have started already. Mr. Conkling's route lies by way of Europe,

Where a stipulation was made to pay a firm of real estate brokers a certain compensation in case a sale of certain property should be effected "in any wise through their influence or instrumentality" within the period of sixty days, the St. Louis Court of Appeals held that where, before the expiration of such period, they brought the property to the attention of a purchaser, and made such representations to him as induced him to commence negatiations with the owner for the purchase of it, they were entitled to their commissions, although the sale was in fact consummated between the purchaser and the owner after the expiration of the sixty days. Goffe vs. Gibson, decided May 19.

The State tax is fixed by law at 18¾ cents on each $100 assessable property, which, added to the $1.12½ for county purposes, makes the sum of $1.31¼ on each $100 of assessable property in Garrett county for the year 1885.

Basis for State tax	$3,754,991 00
At 18¾	$ 7,040 60

G. W. MERRILL,
Clerk to Commissioners.

LOCAL NEWS.

LODGE MEETINGS.

OAKLAND LODGE, I. O. G. T., meets in Sturgiss' Hall every Tuesday night.

LOCAL BRANCH, No. 85, of the Iron Hall, meets in same Hall 1st and 3d Saturday nights of each month.

ALTA LODGE, No. 574, K. of H., meets in same Hall 2d and 4th Thursday nights of each month.

SHEALTIEL LODGE, No. 122, I. O. O. F., meets in Legge's Hall every Monday night.

PATMOS COUNCIL, No. 386, A. L. of H., meets in same Hall 2d and 4th Friday ntghts of each month.

—Fine cigars at Sturgiss'.

—Fine cutlery at Slurgiss',

—Eishing tackle at Sturgiss'.

—Go to Newman's for fire crackers and torpedoes.

—Mr. Will C. Davis is at home for the summer vacation.

—Soaps, in endless variety at Sturgiss'.

—The Oakland and Deer Park Hotels were opened Monday. But few guests have yet arrived.

—Paper and envelopes in great variety, at Sturgiss'.

—For fine pictures and photographs, go to Brooke's Gallery, North end Second street.

—A large stock of spectacles and eye-glasses at Sturgiss' Drug store.

—Mrs. Isabella Welch, who spent the winter with friends near Morgantown, W. Va., is now visiting relatives and friends in Oakland.

—Bring in your buggies andwagons and have them repainted. Shop over Naylor & Richardson's wagon shop, Z. F. MALONE,
66 4t. Carriage Painter.

—Gold and silver watches and jewelry, chains, charms, pins, &c., at Sturgiss'.

—Mr. Wm. Newman desires to inform the public that he will have a full stock of fire works on hand for the Fourth. He also has a full stock of confections and notions, fruits and nuts.

—Perfumes, from a sixty drop vial to a four gallon demijon, at Sturgiss' Drug store.

—The uniforms of the Oakland Athletic Association, which were bought and furnished to them by the ladies of Oakland, will be used for the first time on the Fourth of July. Our boys expect to cross bats with the Terra Alta club, and a good game is expected.

—The celebrated Blair writing tablets, all qualities of paper, at Sturgiss'.

—We have often read of curiously formed chickens, but none like that lately from Aaron Duckworth brought to our office last Monday. It had four wings and four legs, each member being of natural and uniform size. It lived but a short time after being hatched.—*Lonaconing Review.*

—Sturgiss has added two new show cases in order to display his large stock of toilet articles, brushes, combs, soaps, &c., &c.

—Frank Graney, brakeman on the Baltimore and Ohio Railroad, fell off his train just east of Altamont, Md., Monday morning, and was instantly killed. Six or seven cars passed over the body, mangling it in a terrible manner. Brakeman Graney was about forty-eight years old, and leaves a family of a wife and seven children, the oldest being a boy of seventeen years. The deceased was a general favorite with the railroad men, and was much respected.

—Mr. S. H. Ryland, of Garrett county, Md., was here last week visiting the Messrs. Slicer, his relatives. He was accompanied by his brother, Mr. G. W. Ryland, of Lancaster county, Wis., who is a banker in that State. Mr. Ryland left here for the west thirty-three years ago to seek his fortune. On the night of his arrival he had a thief interview his exchequer and when he arose in the morning the last dollar he had in the world had disappeared. But with the energy born of youth, health and determination he went to work and fought his way through to prosperity. Ten years ago he re-visited the scenes of his youth and now again visits his old time friends and relatives.—*Meyersdale Commercial.*

Church Services--Sunday.

M. E. Church—Preaching at 8 P. M. by Rev. C. H. Lakin, P. E.

Presbyterian Church—Preaching at 8 P. M. by Rev. John S. Foulk.

MRS. E. A. KILBOURN,
4 11 Oakland, Md.

Death of an Old Citizen.

Died, at his residence near Oakland, Saturday, June 20th, 1885, William Lower, aged 80 years, 3 months and 15 days. Deceased had been a member of the M. E. Church for thirty-four years, and was a man highly respected in the neighborhood in which he lived. The funeral services were conducted on Sunday, by Revs. J. M. Davis and William Junkins.

Sewing Machines!

The people of Garrett county would do well to call at the Singer M'f'g Co's office, in Oakland, and examine the high arm and oscilating Sewing Machines, before purchasing any other kind. We have now as the manager of our Oakland office, Mr. Nimrod Paris, who will take great pleasure in showing the working of these machines.

Fourth of July on the B. & O.

In order to allow its patrons to visit their friends, the B. & O. R. R. will sell round trip tickets from all points on its Main Line and Branches, including the Pittsburgh Division, except between Baltimore and Washington, on July 3d and 4th, good to return until July 6th inclusive, at greatly reduced rates. These tickets will be recognized upon all regular trains in either direction that make the stops.

Baltimore Store, Oakland, Md.
June 27th, 1885.

GRANTSVILLE, MD. June 23, 1885.

EDITOR REPUBLICAN:—Permit me to call attention of the public, and of the school teachers of the county especially, to the meeting of the State Teachers' Association which will be held at Deer Park, on Tuesday, Wednesday and Thursday, July 7th, 8th and 9th. The meeting of this Association within the county will afford our teachers an opportunity of seeing and hearing the leading educators of Maeyland and other states. The programme contains papers from prominent educators on vital school topics, which perhaps none of us will again have the opportunity of hearing. The information to be gained at this meeting and the inspiration to be derived, therefore, is greatly needed in our county. It is sincerely hoped that very many of our teachers will be present and receive such an impetus as will tell on the teaching fraternity of Garrett county. The address of welcome will be made by Judge Hoffman, of Cumberland, of whose oratorical qualities nothing need be said to our people. Any information relating to the above will be furnished on application to the county Examiner.

C. B. LUDWIG.

Bucklen's Arnica Salve.

The best Salve in the world for Cuts, Bruises, Sores, Ulcers, Salt Rheum, Fever Sores, Tetter, Chapped Hands, Chilblains Corns, and all Skin Eruptions, and positively cures Piles, or no pay required. It is guaranteed to give perfect satisfaction, or money refunded. Price 25 cents per box. For sale by W. D. Nydegger, Druggist, Oakland, Md.

[Written for The Republican.]

The 14th at the Forks.

One of the best and happiest days in the history of the Forks church, was Sunday, June 14th. The day itself was a very gem of June, and no devout worshipper in the house of the Lord could be otherwise than happy, Rev. J. J. Young, of Richmond, Ind., former pastor, was with us, and preached a splendid sermon; and to such a throng of people as had never before been gathered in that church. The communion was solemn, edifying and largely attended. All seemed pleased with the improvments in and around the building. These consist of a neat and substantial fence, with hitching posts and horse-block. The exterior of the house is thoroughly repainted, in lilac, with dark trimmings; and on the inside the windows have been furnished with heavy roller blinds. Altogether the house takes on a new appearance, and the congregation has reason to feel glad and even a little proud of the improvements made.

The outlay amounts to about $100.

PASTOR.

Deer Park.

The Hotel opened regularly on Monday, the 22nd. Prof. Jungnickel with his band of fourteen musicians arrived Sunday evening, and will remain here this week, after which part of the band will go to the Oakland Hotel for the season. The exercises of the Convention of Civil Engineers commenced Tuesday. A special train from Baltimore brought about two hundred passengers. Quite a number of ladies were with the party.

Mayor Latrobe's family, of Baltimore, occupy the same cottage as last year.

Capt. A. H. Bugher and family, of Cincinnati, arrived last Thursday at the cottage where Gen. Beale and family resided last summer.

Misses Sallie and Lizzie Elkins came home from school a few days ago.

Mrs. U. B. McCandlish and her sister, Miss Annie Landstreet, of Piedmont, are visiting Mrs. W. R. Davis.

Miss Maggie Tower, of Oakland, is visiting Miss Mona Tillson.

The festival at the M. E. Church Tuesday night, was a decided success. The tables were abundantly filled with eatables and the church very tastefully trimmed with evergreens, and the strawberries, ice cream, &c., fully appreciated. Quite a number of our Oakland friends were present. Prof. Hillenhagen was ever ready to comply with requests for music. The festival concluded on Wednesday evening.

The next meeting of the Band of Hope will be held on Monday, July 6th, as the regular time for its session falls on the 4th of July.

Miss Tillie Droege returned from school in Baltimore on Monday, accompanied by her grand mother, Mrs. Reinhardt, and her aunt, Miss Bertha Reinhardt.

Miss May Davis leaves shortly to visit friends at Cambridge, Md.

Four hundred Maryland school teachers will convene in Deer Park on the second week in July.

Mr. Geo. Pierce, of Piedmont, and Mr. Jas. Fredlock, of Cross, W. Va., called on friends here recently.

Registered at Wing-and-Wing:

Baltimore, Md.—A. Stevens, J. H. Van Pelt and wife.

Chicago, Ill.—M. B. Plank and wife.

Wheeling, W. Va.—John F. Klett and wife, Chas. Chadduck.

Washington, D. C.—Mrs. B. L. Walker, child and nurse.

Fort Pendleton—Jas. A. Bayard.

Tyrone, Pa.—W. H. Culp.

Barnesville, O.—M. C. Starbuck.

Swanton Md.—Jos. Foster, ***

Mountain Lake Park.

The new dining hall is completed and Mr. Hagans is ready for guests.

Mr. Shirer's building is under roof, is about closed in and will soon be ready for use.

Mr. Lafetra's cottage will be ready for him by the first of July. Mr. Howe's cottage will also soon be closed in.

Miss Jennie Smith is now furnishing the large addition to her cottage.

Mrs. E kles, daughter of H. C. Duckworth of this place, died last Wednesday evening. She had been afflicted with inflammatory rheumatism for a long time, which finally turned to dropsy and soon resulted fatally.

Four young ladies from St. Louis, Mo., are occupying the Mulford cottage.

Mrs. Hitchcock, of Cumberland, Md., is now occupying the Hamill cottage.

Mr. A. B. Crane, of Baltimore, is now in one of the cottages in the Casey Row.

A number of sheep branded O or C have been intruding a little too long here, as the dogs have been after them and one was found dead Monday under the boat house. Parties owning them would do well to look after them.

A quarterly meeting will begin here next Saturday at 2:30 P. M. Meeting also at night and Sunday morning.

The W. C. T. U. Inter-State Conference, will begin here next Wednesday, July 1. This is the first of the regular programme for the season, and will likely be largely attended. Just after this, July 8th, begins the Inter-State Convention of the Grand Division of the Sons' of Temperance. A committee of arrangement from Baltimore and Washington met here last week. They expect about 150 delegates from the different States and Provinces to celebrate their 41st anniversary. The meeting at night will be open to the public. Able speakers are expected. The body has generally met in large cities or such places as Ocean Grove or Saratoga.

Just Opened at J. A. Grant's

Scrim net for curtains 42 inches wide.

Fine dress ginghams, fast colors.

Bed spreads, $1.00 to $1.50.

"Linen Finish," dress goods French patterns 8cts, per yard.

All wool jerseys only $1.00. Big bargain.

Davis City, W. Va.

Messrs. M. C. Feather and Wm. Roth, of Ezbon, S. C. Shaffer, of Terra Alta, and W. T. Shaffer, of Aurora, were in town last week on a fishing excursion. They caught 636 trout in one day's fishing.

Hons. H. G. Davis, S. B. Elkins and Col. T. B. Davis made a business trip to our city last week.

Six cottages are under way, being built by Messrs. H. G. Davis & Bro.

From twenty to one hundred fishermen arrive here every day, Sunday not excepted.

The depot building is completed and is a fine structure.

Any of your Oakland boys wishing to have sport and enjoy themselves would do well to come up here and try the trout in Blackwater.

Parties desiring information about fishing or hunting in this section should address the "Davis Correspondent," through THE REPUBLICAN.

A passenger train leaves Davis City every morning, except Sunday, at 9:30, and arrives on return at 6:30.

There is ice now on the Blackwater falls 18 to 20 inches thick. X X.

Still in the Ring.

WASHINGTON, D. C., June 22.—In an interview to-day with an Associated Press reporter, Representative Morrison, of Illinois, said that he proposed to introduce another tariff bill at the first session of the next Congress.

"At what time during the session?" was asked.

"As soon as I can after Congress convenes," he replied.

"Will the bill provide for a horizontal reduction as did the measure you introduced last Congress?"

"They say they do not want a horizontal reduction. The truth is they do not want a reduction of any kind. I will provide in the bill for about such a reduction in amount as I provided for in my last bill. It is probable that a number of bills for reducing the tariff will be introduced, but personally I know of no one who contemplates presenting such a measure for consideration."

Violent Storms in the West.

INDEPENDENCE, MO., June 22.—A cyclone visited the northeastern portions of this county Saturday night. As yet only a vague idea can be formed as to the extent of the damage. At the town of Sibley, on the river, a number of houses were destroyed. Among them being the large merchandise store of C. S. McMillen, scarcely a vestige of which remains. No lives were lost, though the track of the storm was through the residence portion of the town. Throughout the county the forests suffered from loss of large trees, and grain is more or less damaged. Much of the latter was almost ready for the sickle. The new business house of T. W. Herson, in this city, was blown out of shape. The wind blew a gale and a driving rain was general throughout the county. The path of the cyclone was from the sothwestern portion of the county to the northeastern.

LEAVENWORTH, KAN., June 22.—A tornado accompanied by rain, hail and electricity passed over this city late Saturday night, and it is now learned that, although in the city the only damage was to trees, fences, and gardens, in the country it was more severe. The large stock farm belonging to Capt. W. T. Tough, four miles south, was badly wrecked. The large barn was blown to atoms and nine horses buried in the debris. Three were killed outright and all the others severely injured. The second story was blown from the home of George Richardson, but although the family was in the house, no one was injured. The residence of John Huckins, about twelve miles from the city was blown to atoms. The family, consisting of five persons, was scattered about the yard in all directions by the gale, but none were killed. All, however, were injured more or less. The timbers of the house were blown more than a mile.

Building up a Hay-Stack.

The great point to be secured in stacking hay is, to keep the center the highest. If this is done, water can not penetrate into the stack, but will find its way to the outside under the most unfavorable circumstances. If on the other hand, the center is hollow, the water must drain into the center, and so ruin the stack. An excellent way to build a stack is to set a tall sapling firmly in the ground, with a foundation of rails around it; then begin at the center, and place the hay about the pole, gradually spreading, until the edge of the base is reached. Continue building up the stack, the highest in the center around the pole, the builder standing in the center so as to tread the hay firmly there. As the stack settles, the outside sinks more than the center, and helps to make the stack better. The top of the stack is nnished by fastening a covering of hay to the pole, with hay bands wound firmly around it. A stack so made will not leak, and even clover hay may be safely stacked in this manner, because the water must make its way to the outside by the force of gravity, and escape there by dropping to the ground clear of the stack. —*American Agriculturist for July.*

In no other blood medicine have the results of scientific inquiry been so steadily utilized as in Ayer's Sarsaparilla.

Baltimore Live Stock Market.

[From Baltimore American.]

MONDAY, June 22, 1885.

PRICES OF BEEF CATTLE AT THE MARKET TO-DAY.

Very best on sale to-day 5¾@6c. that generally rated first quality 4¾@5¼ cts; medium or good fair quality 4¼@4¾ cts; ordinary thin steers, oxen and cows 3½@4¼ cts; extreme range of prices 3¾@6 cts; most of the sales were from 4¾@5¾.

REMARKS ON BEEF CATTLE.

The arrivals of Cattle during the week amounted to 1,289 head, against 801 last week and 1,928 head the corresponding week of last year, and the sales were 685 head, against 613 last week, and 806 head the corresponding week of last year.

The offerings on the market were in excess of the usual demand and trade was slow. The quality will average something better than it did last week, there being somewhat fatter tops and more medium and good grades of butcher cattle, and fewer common cattle than there were in last week's offerings. The shipments to Liverpool numbered nearly 600 head, chiefly from Chicago. Prices ranged from 3½ to 6c. with few at either extreme; most sales 4¾@5¼, dealers generally reporting a shade decline in prices, in view of the rather improved quality of the offerings.

THE SWINE MARKET.

There is a material decrease in the receipts this week, as compared with the number of the offerings last Monday, but they constitute a supply which is fully equal to a moderate demand, which prevails in nearly all the yards. There is but little difference in the quality, as compared with that of last week's offerings. Prices for rough sows and stags 5@5½c., and the better grades 5¾@6c., with most sales at the latter figures. Same time last year hogs sold at 6½@7¼c. net; most sales 7@7¾c., at that time.

THE SHEEP MARKET.

The supply is very full this week—much more than enough for a very inactive demand—and there will be a considerable number left over unsold. These, it is likely, will be either bought by Eastern dealers or re-shipped East at owners' risk. The quality will not average up to that of last week's offerings. We quote common sheep 2@3c., and the better grades 3½@4c.; lambs are quoted at 4@6, with few at the latter figure. Same time last year sheep sold at 3½@5½c., and lambs at 5@7¼.

NEW ADVERTISEMENTS.

COMMISSIONERS' MEETING.

OFFICE OF THE
GARRETT COUNTY COMMISSIORENS,
OAKLAND, MD., June 22d, 1885.

The County Commissioners of Garrett county will meet in their office at Oakland, on

Tuesday, July 7th, 1885,

for the purpose of appointing Judges of Election, and the transaction of such other business as may come before them.

By order

G. W. MERRILL,
6 27 2t Clerk.

NOTICE TO TAX-PAYERS.

In order to give the tax payers in the various Districts an opportunity to save the discount on tax bills, I will be at the following places on the days mentioned, viz:

Deer Park, Monday, July 6th.
Swanton, Tuesday, July 7th.
Kitzmillersville, Wednesday, July 8th.
Bloomington, Thursday, July 9th.
Greggs' Mill, Saturday, July 11th.
Grantsville, Thuraday, July 16th.
Sang Run, Monday, July, 6th.
Friendsville, Wednesday, July 8th.
Guards' Store, Thursday, July 9th.
Accident, Saturday, July 11th.
Johnson's, Tuesday, July 13th.
Red House, Monday, July 20th.
Elkins, Wednesday, July 22d.

R. T. BROWNING,
6 27 2t. Collector.

TRUSTEE'S SALE

—OF VALUABLE—

REAL ESTATE.

Under and by virtue of a decree of the Circuit Court for Garrett county, as a court o Equity, passed in a cause wherein Jonas E. Gnagey, et. al. are complainants, and Mary Otto and others are defendants, the undersigned trustee will sell at Public Auction to the highest bidder

ON MONDAY,
THE 13TH DAY OF JULY, 1885,

at the hour of 2 o'clock P. M. of said day, in the town of Grantsville, Garrett county, in front of the Hotel now kept by Jos. Bloecher.

1st. All that part of a tract of land called

"SPRING FIELD,"

containing 46¾ acres of land, which is more particularly described in a deed from John Warnick and wife to John Swauger, dated 12th August, 1865, and recorded in Liber H. R. No. 23, folio 308, &c., Allegany county records. This piece of land is improved by a Grist and Saw Mill, a large Dwelling House and other outbuildings, and is commonly known as the

"SWAUGER MILL PPOPERTY,"

and situated about seven miles south of Grantsville, and is one of the most valuable "Mill Seats" in the county.

2d. All that part of a tract of land called "SWANTON," containing 39¾ acres, which is more particularly described in a deed from Jos. R. Anderson and wife to John Swauger, dated the 3d September, 1873, and duly recorded in Liber W. H. T. No. 1, folio 181, &c., one of the land records of Garrett county.

3rd. Also all that other certain tract of land adjoining the aforesaid parcels of land, containing the quantity of 21½ acres of land more or less, and being the same land which is more particularly described in a deed from Jos. R. Anderson and wife to John Swauger dated the 3rd day of July, 1876, and duly recorded in Liber W. H. T. No. 2, folio 779, &c., one of the land records of Garrett county.

Said two last mentioned tracts are well timbered and partly improved.

All of said different parcels of land will be sold separately, or together, whichever will realize the most money.

TERMS OF SALE, as prescribed by the decree: One-third of the purchase money to be paid in cash on the day of sale, or the ratification thereof by the court, and the balance to be paid in two equal annual installments, in one and two years from the day of sale; said deferred payments to bear interest from the day of sale, and to be secured by the bonds of the purchaser, with security to be approved by the trustee, or all the purchase money may be paid on the day of sale at the option of the purchaser.

JONAS E. GNAGEY,
6 20 4t. Trustee.

The Republican.

OAKLAND, GARRETT CO., MD.

GRANDMOTHER'S WOOING.

PART I.

(Musing by the fire.)

"Ah, well! this life is almost done,
And I am glad 'tis so," she said;
"I've worked so hard, from sun to sun,
To earn the clothes and daily bread
For all the children God has given
That I begin to long for heaven.

"Each one brought care and work and love;
I murmured at my helpless brood;
But when their father went above
I thanked the Lord, and called it good
That these should mind me of the dead,
And, struggling, I was comforted.

"I spun and wove and knit and sewed
For all the ladies of the town,
And saw my children neatly clothed,
Though I had scarce a shilling gown.
I never cared how coarse my food,
So they had what was plain but good.

"And so the years went swiftly on;
The baby was too frail to raise;
And then death took my eldest son,
The boy I hoped would cheer my days.
Till all my work below was done;
But, then, we can not judge God's ways.

"And five are left; John went away
And now is rich, I hear them tell;
And Harry married young; they say
A stylish wife becomes him well;
I wonder would she smile on me,
Who have been bred in poverty.

"And Wilbur, I am proud he's mine;
He preaches from the blessed word;
I love to hear those truths divine
From lips I offered to the Lord.
And Chloe, she is my sowing seed
Beside all waters, so to feed
All hearts that of the Christ have need.

"And Jane, she has a noble soul,
And does for me what none have done;
But yet she does not seek the goal
Her father sought, and early won.
Her little ones are very dear,
But oftentimes their noisy cheer
Makes me desire another sphere.

"They've built me rooms beside their home,
And made them cheerful as they could;
And yet I feel as though, alone,
In more than widowhood I stood.
They live the present, I the past,
And both the future, at the last."

PART II.

(She has a lover.)

The grandmother smoothed her thin gray hair;
"These rooms grow prettier," she said,
"And the fire in the grate has a cheerful air;
I'm younger in heart and head.

"Perhaps I am foolish, and childish, too,
To let him come at an age like mine,
With his hair so white, and his years but few
Before we shall cross the line.

"He's buried the wife of his youth so long;
His sons have left him; alone he stands;
We are weights in our weakness, while they are strong;
We could stay each other's hands.

"Last night he told me his love for me:
Perhaps it was not with the fire of youth,
But these wrinkled cheeks, in my ecstacy,
Grew flushed at his words of truth.

"The wants of the heart are undimmed by age;
We pine for lack of a constant friend,
For a human love is God's heritage,
And we need it to the end.

"And Jane—I wonder what she will say
To mother loving so late in life?
And his children, too, will they scorn the day
When he brings him home a wife?

"I would be a mother, as best I might—
They have no need for a mother's care—
Already my life seems wondrous bright,
I forget its wear and tear;
Perchance he will come to-night!"

The grandmother smoothed her thin gray hair:
"These rooms grow prettier, far," she said;
"And the fire in the grate has a cheerful air,
Am I too old to wed?"

PART III.

(Again musing by the fire.)

"Only a dream, as when a soul awaketh
From the bright visions of a blessed sleep
And finds the same old sea of sorrow breaketh
Athwart its hopes, with a resistless sweep.

"Only an ignis-fatuus o'er the meadows,
Luring one on to an endless tread:
Only a gleam of sunshine with the shadows,
Which makes them darker when the light has fled.

"We thought to be so happy with each other,
But Jane and all her brothers scorned it so;
They might have been more tender to their mother,
Had death robbed them, like her, so long ago.

"His children, having all that this world offers
Of wealth and goodly home and fertile mead,
Forbade the marriage, lest their well-filled coffers
Be lowered any for another's need.

"Strange that age finds us still our children serving:
We bear them, labor for them, do their will;
Through their deserving and their undeserving,
Gray-haired and wrinkled, we are parents still.

"They may be weary with our long delaying,
And wonder death does not come on apace:
He will not tarry; we are waiting—praying—
Perchance the old, in Heaven, will have a place."

—*Sarah K. Bolton, in Chicago Inter Ocean.*

COUSIN JAMES.

The Good Mission Performed by a Graceless Vagabond.

It has been observed by Mr. Spencer and others that the march of the passing years has a tendency to calm the ardor of youth and moderate the passions of man, and yet there are notable exceptions to this rule, and old age is noticeably querulous about trifles. Here is a case in point.

Mr. Theophilus Brown was in a tremendous rage simply because he could not find his spectacles. It was as fine a May morning—it was nearly ten by the clock—as you ever saw in New York City. The sun was shining very brightly without, and the air was fresh and vernal. Within Mr. Brown's library the air was not quite so fresh, but it was very cozy and comfortable, not to mention luxurious, and Mr. Brown sat in a velvet-covered chair that might have soothed a man of war; and yet he turned and twisted in his chair, pulled out each successive desk drawer with a jerk and closed it with a bang, tumbled over the papers with reckless disregard of heaven's first law, and then began to look into all sorts of impossible places—out of the window, on top of the book-case, behind the pictures, and up at the ceiling—as old gentlemen will do in such cases, and finally gave up the search in despair. He was looking for his spectacles.

Upon the desk in front of Mr. Brown lay a square note, which Mr. Brown wanted to read. He could have read it without his spectacles with some difficulty, but his temper having been thoroughly aroused, he scorned to give in; and so he sank back into his chair with a red face, and stared at the note vindictively and probably would have remained thus until he brought on a fit had he not chanced to pass his fingers frantically through the scanty fringe of hair on the top of his head, and there, of course, he found his spectacles.

You can imagine in what a frame of mind he opened the square note. As he did so the door-bell rang—a vigorous, determined ring it was—but Mr. Brown heard it not, as he was buried in the note.

"THEOPHILUS BROWN, Esq.—I have the honor to ask you for the hand of your daughter Isabel. We have known and loved each other since children, and you can not be unaware of our attachment, which I hope you regard with favor. You are acquainted with my position in life, and I need not waste words in assuring you that her future is safe in my hands. I will call to-morrow for an answer. Your affectionate nephew,

"WALTER HAYMAN."

You remember that the door-bell rang. The ringer stood upon the upper step, and whistled while he waited. When the servant came to the door he was handed a very limp and soiled card, embellished with two ink spots and some bread-crumbs, on which was written in beautiful script:

James Brown Bartlum.

The servant looked at the card and then at the giver, and was plainly astonished.

A young man of twenty-eight, perhaps, most decidedly handsome, and most undeniably seedy; hair glossy black, and in need of the shears; a jaunty mustache and a three days' beard on his face; large, bright, and bold black eyes, and a straight, slim figure, rather tall. This handsome young man wore upon his glossy head a sun-burned straw hat with a chewed edge, on his back a very tight and shiny Prince Albert coat, whereof every button was missing, their place being supplied with various-sized pins; his legs were covered with very baggy and wrinkled trousers of snuff-colored cassimere, while his feet were incased in a pair of Congress gaiters that were so patched and tied with strings, and so run down and over, and burst in so many places, that it seemed a miracle that they did not fall to pieces upon being looked at.

The young man bore the scrutiny of the servitor with easy good-nature, fingering his mustache the while, and seemed so self-possessed that John Thomas, who at first had but one mind, and that to shut the door in his face, began to have his doubts.

"You wish to see——" he began, hesitatingly.

"Mr. Theophilus Brown," said Mr. James Brown Bartlum, suavely. "Yes. Take him that card, my good man, and I will wait an answer. Stay! On second thoughts, lead on, and I will follow."

The man was too bewildered to protest; besides, he was new to the house, and although he felt that his situation was trembling in the balance, he meekly moved toward the library, followed by the presumptuous stranger.

Mr. Brown had just finished reading his nephew's note for the third time as the servant entered and laid the card on the desk, and he had just time to glance at it, when the young man with the miraculous shoes seized his hand.

"The same old man!" he cried, joyfully; "not changed a bit! Age can not stale nor time wither an ounce of Theoph! Bless your heart, sir, how glad I am to see you? How do you do?"

Mr. Brown shot up from his chair like a rocket, impurpled with rage, and absolutely glared at the intruder.

"Who—what—what does this mean?" he roared, while John Thomas fled for his life. "Who are you, sir? and what do you want?"

"Who am I?" repeated the other, in apparently great wonder. "Well, upon my word, this is humiliating indeed! Not remember me! Are we, then, indeed, so soon forgotten when we are gone? Why, sir, I remember you like a book."

"Very likely," said Mr. Brown, fiercely; "you havn't answered my question. Who are you, sir?"

"I, sir," replied the intruder, making a hasty but ineffectual search for a handkerchief, "am James Brown Bartlum—my card lies before you. In short, sir, I am your nephew."

"Indeed!" said Mr. Brown, looking from the card to the owner, and eying both with considerable disfavor. "So you are James?"

"Yes, sir," said James taking a chair, and composing himself therein with great care. "I am the unfortunate young man of whom you have no doubt heard a great many tales——"

"And nothing good," said Mr. Brown, sharply, sitting down with a bump.

"I am sorry to hear it," rejoined Mr. Bartlum, with an air of great concern. "The breath of slander might have passed *me* by; but no matter. To change the subject: it has been five years since I last saw you."

"Yes."

"You have not changed a particle while I—well, I've seen the world, uncle."

"Indeed, sir!"

"I have traveled from Heart's Content to San Diego, and been all things to all men. I have surprised myself by working at carpentry, driving a stage and editing a paper, all inside of six months. I dined at the Palace Hotel in Frisco with the Corean Embassy one day, and exactly thirty days from that date I was in Virginia City, sawing wood for my dinner. You never sawed wood, uncle?"

"Never!"

"You wouldn't like it; neither did I; but a man must eat, uncle."

"There is no danger," said Mr. Brown, dogmatically, "of any man starving if he will work."

"Humbug, my dear sir!" cried Mr. Bartlum, cheerfully. "Don't you believe it. I have tried it, and I know. Besides, a man needs clothes and a roof over his head in addition to his daily bread. The world is very big, uncle, but it seems to be all preempted by some one else. I have knocked all around the American part of it, and here I am back where I started, returning to my native city, and spending the first night in the station-house."

"In the station-house!"

"As a lodger, sir. Don't be alarmed, sir; your nephew is poor, but strictly honest. Through many trials he has never done anything worse than sawing wood. Your spoons are perfectly safe, sir."

"Then, sir," said Mr. Brown, sternly, "perhaps you will condescend to tell me just what you want."

Mr. James Bartlum arose and stood before his uncle like a statue. Mr. Brown looked at him from head to foot, and noted in detail every article of his raiment, until his eyes became riveted on the Congress gaiters, and these proved too much for him.

"It is very humorous," said Mr. Bartlum, smiling easily at his uncle's unbounded mirth, "and I have often enjoyed them myself. I am quite a cartoon, I know, and if I were wearing these clothes for fun, I don't know but that I should see the funny side more frequently."

Mr. Brown suddenly checked himself and became grave. "Sit down," he said. "I beg your pardon. You are in need of—of clothes?"

"Everything—clothes, money, a place to sleep, friends."

"Why did you come to me?"

"Why does the drowning man seize a straw?"

"What claim have you on me?"

"None—only that we are of one blood. Understand me, sir. I know you are not bound to support me. Let us forget our relationship for a moment. Consider simply that I am merely a starving man, ready and willing to do anything for a living, with not a chance in ten thousand to get a situation. Consider that you are rich, never know what it is to go hungry to bed, and can count up ten thousand friends. Consider——"

"Silence!" thundered Mr. Brown, in a great rage. "Do you suppose I am going to turn you out-of-doors? Nothing of the sort. This house is yours, sir, as long as you behave yourself. You have been a vagabond, sir—you *are* a vagabond, sir, and I have no pity for your misfortunes. John will show you to my son's room. You remember George? You can make yourself presentable, I dare say."

"Uncle, you overpower me! I expected nothing more than a dollar—and a kick."

"Go, sir! No more of your shameful levity. You shall pay me for this, sir, never fear. Throw away those shameful clothes, sir; and burn your shoes, sir—burn them!"

Mr. Bartlum was a rapid dresser, but when he returned, inside of thirty minutes, bathed, shaven, and attired in George Brown's best suit of black, his uncle had vanished; so he planted himself in his vacant chair, possessed himself of a book, and made himself comfortable. Hardly had he done so when the door flew open and a very dark young man and a very fair young woman rushed in and almost fell upon him.

"O, sir!" cried the young man and the young woman in a breath; and then they paused and looked at each other in evident trepidation, while Mr. Bartlum regarded them in mild surprise.

At length the girl said, in a disappointed tone: "We thought you were older than you are. Didn't we, Walter?"

"Much older," assented Walter, decisively.

"I regret to say," said James, gravely, "that I am not older than I am. But let that pass. What is the matter, my children?"

"Well, sir— You tell him, Walter."

"Well, sir, we wish to tell you the truth of this affair."

"Stay!" interposed James. "Is this a secret? Because, if it is, you had better keep it. I am a stranger to you both."

"We know it," cried Walter eagerly; "but that makes no difference. I insist upon your hearing it."

"O, very well!" said Mr. Bartlum, resignedly; "since you insist, fire away!"

Walter took his companion's hand in his, and began in a very manly tone:

"Sir, we have known each other since we were six years old."

"Six years old," said Mr. Bartlum, with a judicial air. "Very good!"

"That is, I was six, and Isabel was three. We have never been separated for more than a year, and have grown to love each other—I may say ardently. Within the last month or two Uncle Brown has noticed our intimacy and questioned Isabel about it. She confessed all. He then flew into a violent rage—he is very violent at times——"

"Yes, I know he is."

"—and actually swore at her, and forbade me the house. To-day I wrote him a note, making a formal offer for Isabel's hand, and I was to come to-morrow for an answer, but Isabel heard you were coming——"

"Indeed!"

"—and we determined to make an appeal to you. In the first place let me ask you if I have acted wrongly in any way?"

"No!" said Mr. Bartlum, looking at Isabel with considerable admiration; "you have acted quite right. You couldn't help it."

"Then, sir," exclaimed Walter, "we appeal to you. Make an effort to soften Uncle Brown. It's only a crotchety whim of his, and you have such influence over him: you are his adviser——"

"Hold hard!" cried James. "I suspected all along you were in the wrong box, but you would come in. Permitme, before this goes any further. Who do you think I am?"

"Ferguson, of Ferguson & Board, lawyers," cried Walter and Isabel, in a breath.

"You're mistaken; my name is James Bartlum, your cousin from—well, say California. Just arrived this morning.

"O, Walter!" cried Isabel, with a gasp, "what have we done?"

"We are ruined," said Walter, tragically.

"Wait a bit," said Mr. Bartlum, soothingly. "Don't break down all at once. I am getting interested in this affair. I am always on the side of youth and love, old as I am. Now that I know all, perhaps I can help you more than Ferguson. Don't say anything to Ferguson; don't appeal to him. A man with that kind of name is apt to be flinty-hearted. Trust to your cousin James.

"O, Cousin James!" cried Isabel, convinced at once, "bless you! You have made us feel so happy!"

"Bless you, sir!" echoed Walter, also very much affected.

"All right," rejoined Cousin James, dryly. "A brilliant, and, let us hope, feasible plan has occurred to me, which for the present I shall keep in the inner recesses of my bosom. Will you trust implicitly to me?"

"Implicitly," cried Walter.

"Very well. Then—you travel out of the house."

"What!"

"Go! and when you come back to-morrow for an answer to your note, and Uncle Brown says 'No,' which he undoubtedly will, submit quietly."

"Give up Isabel? Never!"

"For a time, young man—for a time! Be a diplomate and trust to me."

"Yes, do, Walter," pleaded Isabel. "I am sure you can trust him."

"Now, then," said cousin James, when the ardent lover had torn himself away, "you are very young, and you are a female, but you look sensible. Can you keep a secret?"

"Yes."

"I'll try you. Please sit down."

When Mr. Theophilus Brown returned from his search for the recreant Ferguson, he opened his blue eyes very wide on seeing his daughter and the ex-tramp enjoying a very lively *tete-a-tete*.

"Cousin Isabel and I," said James, with a smile, "are excellent friends already. I confess I did not remember her when she came in. Everybody has changed in five years except Uncle Theoph."

"Humph," growled Mr. Brown, not altogether admiring this familiarity, but yet compelled to admit that his nephew was evidently presentable.

Within a week Mr. James Bartlum had taken the Brown mansion by storm. Mr. Brown was a widower, and since George had gone away the dinners had been rather lonesome, but cousin James changed all that. An interminable talker, with a knowledge of men and manners gained in a school to which Mr. Brown and his guests were entire strangers, and a perfect mint of anecdotes and chitchat, the young man entertained his uncle's guests in a most surprising manner. Mr. Brown was vastly amused when he pictured the consternation of his guests did they but know his nephew's antecedents, which he wisely decided to keep to himself, and then he told himself that his nephew *was* an educated gentleman, notwithstanding his scampish adventures.

Isabel was completely captivated, to the intense and growing wrath of Walter. He had religiously kept his promise, and after being refused Isabel's hand as anticipated, had been kindly allowed to make an occasional call, on each and every occasion only to find Isabel "not at home."

To the opera with Mr. Bartlum; out riding with Mr. Bartlum; here, there, everywhere with Mr. Bartlum, until Walter was reduced to skin and bone, and began to suspect that he was being duped. Once or twice at dinner he had essayed to communicate with his beloved, but the attempts were always failures. Either Mr. Brown had his eye on him, or Isabel had not her eye on him, or, as most frequently happened, Cousin James engaged him in spirited conversation until the opportunity had gone by.

After this sort of thing had been going on two entire months, the young lover had worked himself into such a fever that he made up his mind to have an explanation, or—well, anything!

The opportunity came the very next week at a ball. After some little maneuvering he ran the faithless couple to earth in a bay-window.

"Isabel," said he, trying very hard to be calm, "I have a right, and I *do* demand an explanation."

"An explanation, Walter?" said Isabel, in the innocent, inquiring tone very effectually calculated to madden the average man.

"Gracious heavens!" exclaimed Walter, very effectually maddened, "is it possible you affect ignorance? Do you think I am blind? Faithless Isabel, had I not seen with my own eyes——"

"Don't talk so loud," interposed the faithless James, soothingly.

"Don't *you* talk to me," exclaimed Walter passionately. "I'll have a settlement with you at another time and place."

"One moment," said Cousin James, coolly. "Permit me to remove the lady from the scene of strife."

Before Walter could interpose they were gone, and before he could leave the window his faithless friend had returned and taken him by the arm like a school-boy.

"Young man," he said, with a patronising air, "you are making a donkey of yourself. After making all possible allowances for your youth and inexperience, I can not close my eyes to the fact that that you are something of an idiot."

"I won't be talked to in this way," said Walter, savagely.

"O yes, you will. It is for your own good, my dear boy. Everything is going along very nicely, and if you will only keep quiet——"

"But I will not. I have been shamefully deceived, and unless Isabel explains everything to my satisfaction I'll do something."

"What will you do?"

"I don't know" (gloomily).

"Don't do anything rash."

"Yes, I will. I'll expose you."

"To whom?"

"To everybody. To—to Uncle Brown!" Mr. Bartlum was panic-stricken at this announcement.

"Wretched youth! you wouldn't dare."

"Wouldn't I?" said Walter with a dark frown. "You'll see. I am not to be trampled on with impunity. If I *am* a worm, I can turn."

With this dark and significant threat he burst away, in spite of the other's efforts to restrain him, and was seen in the supper-room shortly afterward eating oysters with a determined air.

The next day, about four in the afternoon, as James and Isabel were leaving the house for a drive, John Thomas accosted them with a message from Mr. Brown, who would be pleased to see them in the library.

"Cousin James!" cried Isabel, in great trepidation, "all is discovered."

"So it would appear," said Cousin James tranquilly; "and there is nothing else to do than to face the music like little men. Come along, cousin."

Mr. Brown was seated in his chair of state, and at a little distance sat Master Walter, looking very pale and rather sheepish.

When the couple entered, Mr. Brown laid his hand upon a dictionary, as if he had half determined to knock somebody down, but changed his mind and said, with an assumption of irony that became him very ill: "What a charming pair! Ha! ha! Yes; quite beautiful!"

"Anything wrong, sir?" inquired James, with exasperating mildness. "You know you are *not* careful in your diet."

"Diet!" roared Mr. Brown, coming out strong as the old original Brown—"diet, sir! Confound your impudence, sir! Do you mean to trifle to humbug me? Do you mean to attempt to deceive me? Don't trifle with me—I know all."

"Tell us, then."

"You—you are a villain, sir."

"I deny it."

"You are—an ungrateful villain. I have warmed a serpent in my bosom."

"Meaning me, sir?"

"Yes, you. O, I shall not spare you! You have basely gained the affections of my daughter—wretched girl!"

"O, papa!"

"Go away. I have been blind, but now I see."

"I suppose," scornfully, "that Mr. Hayman assisted your eyesight?"

"He did—and quite properly, too."

"Mr. Hayman is an interested party, I believe. He has aspirations——"

"Never you mind, sir, what he has. I am talking about you now. You are engaged, I suppose?"

"Not quite."

"Indeed! I wonder at that! But the affair has gone far enough, at any rate, and I tell you plainly, sir, that it must stop—and now."

"Mr. Brown——"

"I won't listen to a word."

"But you must, you unreasonable old man. Let me sum up the situation. You have a young and lovely daughter with whom a worthy young man is deeply in love."

"Worthy young man!" cried Walter, fiercely. "Do you hear that, uncle?"

"I was referring to Mr. Walter Hayman," said Mr. Bartlum, with a bland look at the speaker, "who is in every way exemplary. You refuse this worthy young man your daughter's hand, and why? Because he is worthy? Evidently. Well, here am I, a most unworthy young man, and you entertain an equally strong objection to me. How inconsistent! If this worthy young man is eligible, I am out of the question; but if he is out of the question, why not take me? You surely do not intend to make a nun of Isabel."

Mr. Theophilus Brown was evidently staggered by this remarkable piece of reasoning, and looked alternately at the worthy and unworthy rivals, and finally at the fair Isabel.

"O, papa!" pleaded the bone of contention, "choose for me, please. You do not know how distracted I am."

"She loves them both," murmured her father, helplessly.

"Isabel!" exclaimed Walter, imploringly.

"Respected sir," said James, placidly, "the decision rests with you. You are the judge and jury, and the evidence is all in."

"Walter," cried Mr. Brown, with great vehemence—"a thousand times Walter!"

The worthy young man and his betrothed were locked in a fervent embrace, while Mr. Brown smiled beneficently upon them.

"May a cousin's blessing rest upon you!" said James.

Mr. Brown looked at him savagely, then keenly, and then, as he met his calm and unflinching gaze, said, sharply: "You take it coolly, sir."

By way of answer the handsome vagabond closed his left eye very slowly and looked at Mr. Brown in silence. An unmistakable wink.

In an instant the old gentleman saw through the trick, but before he could open his mouth the arch-schemer laid his hand on his arm, and pointing with his thumb to the absorbed young lovers in the corner, said, in a low tone:

"Permit a graceless vagabond, sir, to treasure in his mind the thought that he has brought two loving souls together, and taught a fine old gentleman to know his own mind. You will never regret it, sir, and just reflect what might have been had your girl really thrown away her affections. Do you see the point?"

Mr. Brown, after a moment's hesitation, grasped the other's hand fervidly, and acknowledged that he did.—*Harper's Weekly.*

Spies Among the Boys.

It is difficult for a stranger to realize the extent to which espionage is carried in Russian gymnasiums. The pedagogues who ought to enjoy the respect of their pupils and imbue the rising generation with sentiments of honor are transformed into agents of the Third Section. The boys are under continual supervision. They are not left in peace even in the houses of their kinsfolk. By a special law tutors are ordered to visit the pupils at their own homes or wherever they may be living. The Minister is not ashamed from time to time to issue circulars, as on July 27, 1884, cynically offering rewards and promotion to Professors who show the greatest zeal in supervising the "moral dispositions" (read "political tendencies") of their pupils, and threatening that in the event of any anti-governmental propagandism being discovered in their classes they will be held equally responsible with the Directors and Inspectors (*Rousskia Vedomorti*, July 28)—which means money and advancement for those who play the part of spies, dismissal for those who refuse to bow the knee to Baal.—*Russia under the Czars.*

—A Troy collar cutter recently cut on a special order a dozen ladies' collars twenty-three inches long. We have seen many young women on the streets for whom one of these collars would answer for a belt.—*Troy Press.*

SCHOOL AND CHURCH.

—The last three Lord Chancellors of England have all been Sunday-school teachers.

—Harry A. Garfield, son of the late President, has accepted a position as teacher in St. Paul's School, Concord, N. H.

—Rev. Dr. J. P. Newman has been readmitted with great unanimity and cordiality to the New York Methodist Episcopal Conference.—*Christian Union.*

—President Gilman, of Johns Hopkins University, has made a plea to the various colleges to consider a plan by which an inter-collegiate system of granting degrees may be adopted.—*N. Y. Post.*

—Mark Twain told the Vassar College students that his usual price for a reading was $500, but that there he was quite satisfied to take fifty cents and get the other $499.50 in looking at the girls.—*Troy Times.*

—In the University of Virginia the chaplain is appointed for two years, and the office is held in rotation by ministers of different denominations. The corner-stone of a new chapel has been laid. The attendance of students at chapel service is purely voluntary; but such services are maintained with deepest interest, while the religious tone of the institution is declared to be that of a strictly theological school.—*N. Y. Independent.*

—Judge Stewart charged the Grand Jury recently at Baltimore very plainly about gambling at church fairs, saying: "The vice will probably continue until the people are educated up to the point that raffles at fairs will be considered an evil to be frowned upon, and chances in holiday presents as a thing to be avoided. The grosser forms of this vice are liable to punishment, and when the business of gambling is carried on in violation of law, the duty to society requires that the offence should not be lightly passed over, but should be prosecuted."—*N. Y. Tribune.*

—In Bosnia and Herzegovina there are 42 inter-confessional and 94 confessional public schools. Of these 136 schools, 56 are under the control of the Orthodox Greek Church, 36 under Roman Catholic, one under Mohammedan and one under Jewish. The teachers number 186, the pupils 8,114—namely, 6,240 boys and 1,874 girls. In comparison with previous years, there has been a great advance in educational affairs in these countries; especially do the Mohammedan inhabitants seem to appreciate the benefit of a school training for their children.

PUNGENT PARAGRAPHS.

—Is "silence golden" when a wife asks her husband for money to buy necessary articles?

—He—Won't you go riding with me this evening? She—Have you a gentle horse? He—Yes, indeed. I can drive him with one hand. She—I'll go.—*Chicago Tribune.*

—What is the difference between a flood and an angry brakeman? One breaks the dams and the other swears with considerable vigor.—*Merchant Traveler.*

—Some men who imagine that they have been made of better clay than others should take a hint from the Chicago man who says that some men who are looking for a coat of arms today probably wore a coat without any arms twenty years ago.—*American Crockery Journal.*

—A romantic scribe thus describes the first kiss of a newly-wedded couple: "Up the perfume-swept avenue of love and under the roseate archway of Hymen, they had passed into the joy-lit realms of that higher and holier existence where soul meets soul on limpid waves of ecstatic feeling, and hearts touch hearts through the blended channel of lips in rapture linked."—*N. Y. Graphic.*

—"Yes," said Mrs. Catchem, "those are my daughters over there on the sofa; they have half a million between them." It was not until after they were married to those daughters, that the two young men who overheard the above remark found out that Mrs. Catchem referred to the rich old codger who sat on the sofa between the girls. Mrs. Catchem couldn't tell a fib, but she knew how to speak the truth advantageously.—*Norristown Herald.*

—Mrs. Sniverly is the wife of the Captain of a New York militia company. She attended a review not long since at which her husband was the commanding officer. Mrs. Sniverly laughed all the way home, and when, after she got home, she was asked what was the cause of her merriment, she replied: "It was the funniest thing in the world to see my husband, who never dares open his mouth at home, ordering all those men about, and they doing just what he told them to do."—*N. Y. Sun.*

Bovine Life in Holland.

At one o'clock we leave for Amsterdam, by way of the Haarlemer Meer, which, unlike seas of modern times, is provided with good macadam roads. Here we find the typical Dutch houses, and everywhere canals instead of fences. On stopping at a fine, large farm-house or a glass of milk, we are requested to take off our shoes before entering. In our desire to ascertain the truth of the stories as to the bovine life in Holland we accede to this demand, and find that the pomp and luxury have not been exaggerated. The cows do have their switches tied up with silk ribbons, possess easy chairs to sit in, and also feather beds, all reports to the contrary being slanders. Further than this I can not go; can not corroborate the statement that they are read to when weary, or that those which are near-sighted wear gold-rimmed spectacles.—*George W. Fiske, in Outing.*

FOUR ACTS PLAYED!

Sad Report About Ex-President Arthur—Will the Fifth and Final Act Be a Tragedy.

[Rochester Democrat and Chronicle.]

"Dr. Lincoln, who was at the funeral of" "ex-Secretary Frelinghuysen, says ex-" "President Arthur looked very unwell." "He is suffering from Bright's disease." "During the past year it has assumed a" "very aggravated form."

That telegram is Act IV. of a drama written by ex-President Arthur's physicians. In Act I. he was made to appear in "Malaria," of which all the country was told when he went to Florida.

In Act II. he represented a tired man, worn down, walking the sands at Old Point Comfort and looking eastward over the Atlantic toward Europe for a longer rest.

The curtain rolls up for Act III. upon the distinguished actor affected with melancholy from bright's disease, while Act IV. discovers him with the disease "in an aggravated form, suffering intensely, (which is unusual) and about to take a sea voyage."

Just such as this is the plot of many dramas by play-wrights of the medical profession. They write the first two or three acts with no conception of what their character will develop in the final one.

They have not the discernment for tracing in the early what the latter impersonations will be. Not one physician in a hundred has the adequate microscopic and chemical appliances for discovering bright's disease in its early stages, and when many do finally comprehend that their patients are dying with it, when death occurs, they will, to cover up their ignorance of it, pronounce the fatality to have been caused by ordinary ailments, whereas these ailments are really results of bright's disease of which they are unconscious victims.

Beyond any doubt, 80 per cent. of all deaths except from epidemics and accidents, result from diseased kidneys or livers. If the dying be distinguished and his friends too intelligent to be easily deceived, his physicians perhaps pronounce the complaint to be pericarditis, pyæmia, septicæmia, bronchitis, pleuritis, valvular lesions of the heart, pneumonia, etc. If the deceased be less noted, "malaria" is now the fashionable assignment of the cause of death.

But all the same, named right or named wrong, this fearful scourge gathers them in! While it prevails among persons of sedentary habits,—lawyers, clergymen, congressmen,—it also plays great havoc among farmers, day laborers and mechanics, though they do not suspect it, because their physicians keep it from them, if indeed they are able to detect it.

It sweeps thousands of women and children into untimely graves every year. The health gives way gradually, the strength is variable, the appetite fickle, the vigor gets less and less. This isn't malaria—it is the beginning of kidney disease and will end—who does not know how?

No, nature has not been remiss. Independent research has given an infallible remedy for this common disorder; but of course the bigoted physician will not use Warner's safe cure, because it is a private affair and cuts up their practice by restoring the health of those who have been invalids for years.

The new saying of "how common bright's disease is becoming among prominent men!" is getting old, and as the Englishman would say, sounds "stupid"—especially "stupid" since this disease is readily detected by the more learned men and specialists of this disease. But the common run of physicians, not detecting it, give the patient Epsom salts or other drugs prescribed by the old code of treatment under which their grandfathers and great-grandfathers practiced!

Anon, we hear that the patient is "comfortable." But ere long, maybe, they tap him and take some water from him and again the "comfortable" story is told. Torture him rather than allow him to use Warner's safe cure! With such variations the doctors play upon the unfortunate until his shroud is made, when we learn that he died from heart disease, pyæmia, septicæmia or some other deceptive though "dignified cause."

Ex-President Arthur's case is not singular—it is typical of every such case. "He is suffering intensely." This is not usual. Generally there is almost no suffering. He may recover, if he will act independently of his physicians. The agency named has cured thousands of persons even in the extreme stages—is to-day the mainstay of the health of hundreds of thousands. It is an unfortunate fact that physicians will not admit there is any virtue outside of their own sphere, but as each school denies virtue to all others, the people act on their own judgment and accept things by the record of merit they make.

The facts are cause for alarm, but there is abundant hope in prompt and independent action.

—An adjustable mirror has been patented by an inhabitant of Charlestown, Mass. This invention covers the use of a specially contrived frame for holding the mirror, and in which the mirror can be readily adjusted and held in any desired position, for use of either tall or short people, or for children sitting on the floor, so that mirrors of medium size may be made more useful than large mirrors as ordinarily hung.—*Boston Journal.*

FOR OUR YOUNG FOLKS.

ALWAYS SURE.

"What a pity nothing ever
Has a beauty that will stay!"
Said our thoughtful little Nellie,
Stopping briefly in her play.
"All these velvet pansies withered—
And I picked them just to-day!"

"And there's nothing very certain,"
Answered Bess, with face demure;
"When it rains we can't go driving—
I wish promises were truer!
I could rest, if I were certain
Of a single thing that's sure!"

Grandma smiled from out her corner,
Smoothing back a soft gray tress;
"Sixty seconds make a minute;
Did you know it, little Bess?—
Sixty minutes make an hour,
Never more, and never less.

"For the seconds in a minute,
Whether full of work or fun,
Or the minutes in an hour,
Never numbered sixty-one!
That is one thing that is certain
Ever since the world begun.

"Though the rose may lose its crim
And the buttercup its gold,
There is something, through all changes,
You may always surely hold:
Truth can never lose its beauty,
Nor its strength, by growing old."
—*Mrs. Julia P. Ballard, in Our Little Ones.*

THE OSTRICH.

The Largest and One of the Queerest of All Birds—Its Habits, Etc.

Of all the birds that show the wonderful resources of infinite wisdom in their construction perhaps the ostrich is the queerest, as it certainly is the largest, being among the birds what the elephant is among animals—a full-sized male standing erect measuring eight feet and more. With its long head and neck it can overlook the tallest bushes and reeds in which it chooses to hide, and its legs are said to be the swiftest in the world.

Unlike other birds the wings are used for running instead of flying, and with them they can take at every step a stride of from twelve to fourteen feet, almost across a good-sized room.

The natives of Africa ride the ostrich, and Arabs have been known to cross the desert upon their backs, though they sometimes run at a frightful speed. When in motion the legs are invisible, like the spokes of a wheel, which gives the bird the appearance of flying at a little distance from the ground.

This strange bird seldom drinks, and its food is as often old iron and brass as anything else. The ostrich swallows iron and a great many hard things just as a hen swallows stones, and it is said by those who have watched their habits that they will not discriminate between cold and hot; even red-hot iron they have been known to swallow. The appetite of the ostrich is as insatiable as their capacity is great, and almost anything that comes in their way becomes their food—old rags, newspapers, bones, wood, stones and even glass!

As pebbles and stones are used to grind up the food of the hen, all these hard things answer to the same purpose to the ostrich.

Being a great thief it will make way in a moment with anything that comes within its reach, even to a gold watch and chain, which one of these birds once purloined from the pocket of a gentleman who at some exhibition approached it too closely. At a single mouthful it was gone out of sight.

The natural food of the ostrich is grass, grain, fruits, rats, mice, insects—in fact, anything of the sort that they can get, and they can go a long time without drink altogether if need be! Yet they really have something as a substitute which grows in the desert, a sort of wild melon that absorbs the moisture of the atmosphere in the cool nights—truly a water-melon to travelers as well, who often are astonished to find them in places where they would not believe a drop of water ever came.

The eggs of the ostrich are immense, a single egg being equal to two dozen hen's eggs! The mother bird hollows out a place in the sand and lays her eggs in it. By day she abandons them to the heat of the sun, which in those countries is very great, but always at night she or the male will cover them.

They are very social birds, often using the same nest in company until there are from sixty to seventy eggs in a nest of several feet in diameter. Several eggs are left outside, and are not meant to be hatched, as you will see.

When the ostrich begins to sit she is still laying, and as it takes nearly two months for an egg to hatch, they can not all come out together. Now see what a wise provision. As soon as the young ostrich appears, which is then the size of a good fat hen, the mother takes it to one of the scattered eggs, which she breaks for its food. In this way the little ostriches have someting to live upon until the whole family is hatched and the mother at liberty to look after them. Often the bird begins to lay before she has thought of a nest. Travelers finding them in the desert has probably given rise to the story that they are apt to forsake their eggs.

You ask if the eggs are good for food? The Hottentots and "Bushmen" think so. A lean Bushman will eat one of these huge eggs at a meal, cooked in their own peculiar way; and this is the way he hunts them. When he finds a nest he pulls off his pantaloons, made of skins rudely sewn together, and ties them at the ankles, making a sort of forked bag. This he fills with the eggs, setting it astride his shoulders if walking, and if on horseback over the horse, like a pair of saddle-bags. The shell is so very tough that it will bear a great deal of jolting.

This shell is put to various uses by the tribes inhabiting the countries where it is found—fashioned into bowls and ladles, and with an opening at one end and a glass-stopper at the other, makes a very good substitute for a bottle. This is really the only kind of water vessel some people have, and it is used in a very curious manner. Taking their ostrich shells and a couple of long, hollow reeds to the sandy marshes where water is sometimes found, they thrust them down into the wet sand with a bunch of grass at the end, used as a filter, by letting the water pass through it. Then the water is drawn through one tube by the mouth, and then through the other into a shell set upright in the ground. Thus each person is supplied with water in this primitive way.

The "Bushmen," those fierce little wild men of South Africa, make a strange use of these ostrich shell bottles. If about to surprise an enemy's village they bury all along the road a great many shells filled with water. In this way on their return home with their booty they find at every halting place drink for themselves and their stolen herds, while their pursuers are obliged to turn back and give up the chase for want of water.

The feathers of the ostrich! Who does not know of them the world over? As the elephant is hunted for his tusks, so is the ostrich for its feathers. The finest and very expensive are the long white plumes from the wings, bringing from one hundred and fifty to two hundred dollars a pound. It takes about eighty feathers to make a pound. The black and gray are much cheaper, and the smaller they are the less esteemed.

On the coasts of Africa, in European settlements, there are regular ostrich farms where the birds are raised expressly for their feathers. It requires only a low wall to keep them from getting out, as they can not fly high, the largest quill feathers of the wing being entirely wanting. Though very fine, the feathers of the domesticated birds are less beautiful than those of the wild ones.

You will wonder if the ostrich can outrun a horse; how hunters can ever catch them. They have to use a great deal of strategy. Sometimes they hide in a pit near the nest in the absence of the old birds, shooting them when they come back at night, or, which is most effective, dressing in the skin and feathers of the bird, their own legs answering very well for those of the ostrich. They manœuver the neck and head with one arm, while carrying a bow and poisoned arrows concealed. Disguised in this way, the hunters are sometimes able to get near a large flock and secure several of the finest birds before they are aware of their approach.

Nowadays horses are used in the hunting of the ostrich, racing with them for hours until the legs of the birds become so stiff that they can run no farther, and are obliged to succumb, running their heads into some bush, supposing themselves hidden, the head with them seeming to be the important part to get out of the way. As the ostrich never takes a straight course, but always runs in a sort of circle, the horseman has another advantage. In whatever way they are killed it is very important not to stain the feathers, for a large ostrich with its plumage in good condition is worth from eighty to ninety dollars.

Sometimes the ostrich gets exasperated and gives battle to the hunter, kicking his adversary violently, which kick is as dangerous as that of a horse, but afterward inflicting terrible wounds with a strong, sharp claw with which it is armed. It is said that the ostrich is able to defend itself against the most ferocious beasts of the desert, and that the only foe it really dreads is man. Thus in the absence of the wings with which to fly they have been given a powerful weapon with which to protect themselves on land. What a wonderful Creator!

The shea is the ostrich of South America. Though only half the size of its African cousin, still it is a very handsome bird and of fair size. The wings are small, but abundantly furnished with long, flexible, soft feathers which spread like a snowy sail as it runs. The sheas are very pretty and very funny birds. They have a very curious habit of drawing in their necks, shaking out their long wing feathers, and saluting each other as if they were overcome with joy, and then dashing about in a headlong frolic, and running blindly against a fence, or bush, much to their discomfiture.

The cassowary, found in the Malaccas, belongs to the ostrich family. They are easily tamed, and soon became very much attached to their owners. They are exceedingly mischievous, and, like all their species, great thieves—always feeling privileged to help themselves.

An English naturalist once owned a pair of these birds which were altogether too familiar upon his premises. He tells of them that no sooner would his cuffs be starched and hung out on the line than one of these birds would step up, and before any one could stop it swallow them instantly.

At another time he had a carpenter at work about the yard, who came rushing into his study in great alarm, exclaiming: "Doctor! oh, doctor! come quick, one of those birds of yourn has been and swallowed my oil stone. It'll kill the cretur sure if you don't give him something."

"Oh, it's just like him, Patrick," the doctor coolly replied. "He'll take your hammer and chisel next; look out."

The carpenter went back to his work, greatly disturbed, nor would he go on till the bird was placed in confinement; and then even he could not get over his solicitude for its welfare, to say nothing of the loss of his favorite stone.—*Mrs. G. Hall, in N. Y. Observer.*

—A novel wager was made in Middletown, N. Y., the other day between a young lawyer and a gentleman engaged in business in New York. Each is the father of a boy baby, of which he is very proud, and, the conversation happening to turn on the youngsters, each father was emphatic in his assertions that his child was larger and more promising than that of his friend. The outcome of the talk was an agreement that each should deposit one hundred dollars in the savings bank, there to remain, with principal and interest untouched until both the babies have attained the age of twenty-one years. On attaining their majority each of the babies is to be weighed, and the one tipping the scales at the greatest weight is to be entitled to the two hundred dollars and interest.—*Troy Times.*

—In a mine in Grass Valley, Cal., that had been for many years flooded, it was found upon renewing operations recently that a drill-hole in a vein of quartz had healed up around a small rod of iron, or "spoon," that had been left in it, and that several clusters of small crystals had shot out in a fractured portion of the vein. This is quoted to prove that metals grow, like wood and other products of the earth.

—There are unleavened bread bakeries in New Orleans, New York, Cincinnati and Chicago, but in no other cities in the Union. The bread is made of flour and water only into loaves about a foot square, which are called matzos.—*Philadelphia Press.*

FARM AND FIRESIDE.

—A wise observer says there is too much pig-pen and not enough pig-pasture. A truthful alliteration.—*Chicago Tribune.*

—To raise the crushed pile of velvet hold the wrong side over a bowl of boiling water, stretching it tight, and the pile of velvet will be gradually raised.—*N. Y. Mail.*

—Bitter-sweet will bear transplanting and looks charming climbing over a stump. Plant vines wherever you can make them grow. The hop vine grows rapidly and is very beautiful.

—Sour cream cookies are made of one cup of sour cream, one cup of sugar, two eggs, one teaspoonful (not heaping) of soda, a little salt and flour enough to make a soft dough; flavor with cinnamon.—*Toledo Blade.*

—President Barry, of the Western New York Horticultural Society, does not believe that fruit can be shaken from trees on canvas without injury thereto. His opinion is fully worthy of credit. The bruising of fruit from striking limbs and spurs in falling must necessarily cause rotting.

—A good bran mash is composed of two quarts of oat-meal, one of bran, and half a pint of flaxseed. The oat-meal is put in a bucket, over which is placed the linseed and boiling water added; then the bran is put in and the mixture covered with a cloth and allowed to stand five hours, when the whole is well stirred and fed.—*Chicago Tribune.*

—Hard boiled eggs taste good at any time, but never so well as when, like the four and twenty blackbirds, they are in a pie. Boil a dozen eggs hard, and, when cold, shell and slice them and put them in layers in a buttered pie dish, alternating with butter, breadcrumbs, pepper and salt, and covering them with this mixture. Add a cupful of cream and bake to a brown.—*Chicago Journal.*

—Fowls should be given the fullest possible range in summer to insure health. Birds naturally require a large amount of air, and are constantly alert and in motion. This is especially true of granivorous birds, to which class farmyard fowls belong. Therefore let the fowls roost out of doors in summer. Cleanse, fumigate and keep ventilated the winter quarters and they will again take kindly to them when the proper season arrives.—*N. Y. Tribune.*

—Delicious fritters may have stale bread for the foundation. If care is taken in removing any or all of the crust that is dark brown, the fritters will be light colored and very inviting in appearance. Eggs are a good addition in the proportion of four eggs to one quart of sweet milk; a saltspoonful of salt and four or five slices of bread are also required. The bread should lie soaking in the milk for two hours. It can be broken into small bits and then it will not be lumpy.—*Boston Budget.*

—Few farmers seem to understand the value of stanchions in feeding calves. They can be made very cheaply out of any old boards lying around the farm, and save a world of time. Give each calf twenty inches space. Put a trough in front, spaced off so that each calf gets his share and no more. They will soon learn to have their heads in position at feeding time and you can fasten and feed a dozen in a few minutes. After they are done with the milk, give a little ground feed or corn and turn the whole lot into a yard where you have some nice hay in a rack.—*Detroit Post.*

PEAR RAISING.

Instances Where the Culture of This Fruit Has Become Exceedingly Profitable.

An instance of profitable pear-raising is found in a report to the American Pomological Society in regard to the pear orchard of the Old Dominion Fruit Growing Company, located seventy-five miles below Richmond, Va., on the James River. The orchard contains 20,000 trees, 19,000 of which are Bartletts, and have nearly all been set since 1871. When the trees were planted they were one or two years old, and were cut back to within a foot of the ground. They were cut back low to make them low-headed. Twenty or thirty acres are planted annually with corn, as much more with peanuts and the rest sown with black peas, which are plowed under in the autumn. This green manuring, together with some mari, is all the fertilizing the land receives. The company paid $12,000 for the farm and used $8,000 in planting trees, and for other expenses. The first dividend was paid in 1880. The fruit brought $4,000, which, with the balance in the treasury from the previous year, gave a cash dividend of twenty per cent. on the $20,000 of capital stock. In 1881, 4,000 boxes of pears were sold, with net return of $13,684, out of which a fifty per cent. dividend was paid to the stockholders, besides ten per cent. set aside for current expenses. Most of the trees had been set within the last eight years, and were still quite small. These are results which show that there is money to be made in pear-raising when a suitable location is selected, and the trees are well cared for. Some times a few pear trees will afford quite a profitable return for the space which they occupy. Thirty Duchess d'Angouleme in New Jersey, commenced to bear when eight years old, and the first crop sold for $120; the second crop, $139.41; third, $156.17; fourth, $202.28; fifth, $267.49; sixth, $310.20; seventh, $705; making a total of $1,900.55. Many a man living in a village has space enough on his lot to set thirty or forty pear trees. Such trees, well cared for, would, in a few years, afford considerable aid to a mechanic or day laborer in meeting his current expenses.—*Chicago Times.*

—They were young and romantic, and, although the minute-hand was pointing to twelve o'clock, they stood upon the porch gazing at the stars. "That's Jupiter, dear, isn't it?" she murmured. "Yes, pet, and that's Sirius," he replied, pointing to another star. "Are you Sirious?" she cooed. He kissed her several times. Then he pointed upward and said: "That's Mars, dove." "And that's pa's," she whispered, as a footstep sounded inside, and if the young man hadn't scooted he would have seen more stars than he ever dreamed of. Her pa wears a 12½ with a brass toe.—*Detroit Post.*

JOHN H. CANTLIN, Chief Engineer Philadelphia Fire Department, writes: "I cheerfully endorse the efficacy of Red Star Cough Cure."

WHEN the heart is full the lips are silent; when the man is full it is different.—*Texas Siftings.*

Is There a Cure for Consumption?

We answer unreservedly, yes! If the patient commences in time the use of Dr. Pierce's "Golden Medical Discovery," and exercises proper care. If allowed to run its course too long all medicine is powerless to stay it. Dr. Pierce never deceives a patient by holding out a false hope for the sake of pecuniary gain. The "Golden Medical Discovery" has cured thousands of patients when nothing else seemed to avail. Your druggist has it. Send two stamps for Dr. Pierce's complete treatise on consumption with numerous testimonials. Address World's Dispensary Medical Association, Buffalo, N. Y.

WHAT sort of a flag does a man unfurl when he waves an examination?—*Pittsburgh Chronicle-Telegraph.*

A HAPPY combination of best Grape Brandy, Smart-Weed, Jamaica Ginger and Camphor Water, as found in Dr. Pierce's Compound Extract of Smart-Weed, cures cholera-morbus, diarrhœa, dysentery or bloody-flux, colic or cramps in stomach, and breaks up colds, fevers and inflammatory attacks.

NO MORE DANGER!
—USE—
"Mother's Friend."
This invaluable preparation is truly a triumph of scientific skill, and no more inestimable boon was ever bestowed upon the mothers of the world. It not only shortens the time of labor and lessens the intensity of pain, but, better than all, it greatly diminishes the danger to life of both mother and child.
I most earnestly entreat every female expecting to be confined to use Mother's Friend. Coupled with this entreaty I will add that during a long obstetrical practice (44 years) I have never known it to fail to produce a safe, quick delivery. H. J. HOLMES, M. D., Atlanta, Ga. Treatise on "Woman" mailed free. BRADFIELD REGULATOR CO., Atlanta.

WILHOFT'S FEVER AND AGUE TONIC
LOUISIANA
A warranted cure for all diseases caused by malarial poisoning of the blood, such as Chills and Fever, Fever and Ague, Sun Pains, Dumb Chills, Intermittent, Remittent, Bilious and all other Fevers caused by malaria. It is also the safest and best cure for enlarged Spleen (Fever Cake), General Debility and Periodic Neuralgia. For Sale by all Druggists.
CHAS. F. KEELER, Prop., Chicago, Ill.

R. R. R.
RADWAY'S READY RELIEF
THE CHEAPEST AND BEST MEDICINE FOR FAMILY USE IN THE WORLD.
In from one to twenty minutes, never fails to relieve PAIN with one thorough application. No matter how violent or excruciating the pain, the Rheumatic, Bedridden, Infirm, Crippled, Nervous, Neuralgic, or prostrated with disease may suffer, RADWAY'S READY RELIEF will afford instant ease.
THE TRUE RELIEF.
RADWAY'S READY RELIEF is the only remedial agent in vogue that will instantly stop pain. It instantly relieves and soon cures
RHEUMATISM, NEURALGIA, Sciatica, Headache, Toothache, Inflammation, Asthma, Influenza, Difficult Breathing.
BOWEL COMPLAINTS, DYSENTERY, DIARRHŒA, CHOLERA MORBUS.
It will in a few moments, when taken according to directions, cure Cramps, Spasms, Sour Stomach, Heartburn, Sick Headache, Summer Complaint, Diarrhœa, Dysentery, Colic, Wind in the Bowels, and all internal Pains.
Travelers should always carry a bottle of RADWAY'S READY RELIEF with them. A few drops in water will prevent sickness or pain from change of water. It is better than French Brandy or Bitters as a stimulant.
Malaria in its Various Forms.
There is not a remedial agent in the world that will cure Fever and Ague and all other Malarious, Bilious, Scarlet, Typhoid, Yellow and other fevers (aided by Radway's Pills) so quick as Radway's Ready Relief. Price 50 cents. Sold by druggists.
DR. RADWAY'S Sarsaparillian Resolvent.
The Great Blood Purifier.
For the cure of all Chronic Diseases, Chronic Rheumatism, Scrofula, Glandular Swelling, Hacking, Dry Cough, Cancerous Affections, Syphilitic Complaints, Bleeding of the Lungs, Dyspepsia, Water Brash, White Swellings, Tumors, Pimples, Blotches, Eruptions of the Face, Ulcers, Skin and Hip Diseases, Mercurial Diseases, Female Complaints, Gout, Dropsy, Rickets, Salt Rheum, Bronchitis, Consumption, Kidney, Bladder, Liver Complaints, etc.
Dr. Radway's Sarsaparillian Resolvent,
A remedy composed of ingredients of extraordinary medical properties, essential to purify, heal, repair and invigorate the broken-down and wasted body—Quick, Pleasant, Safe and Permanent in its treatment and cure.
SOLD BY DRUGGISTS. Price, $1.00 per bottle.
Dr. Radway's Regulating Pills
For the cure of all disorders of the Stomach, Liver, Bowels, Kidneys, Bladder, Nervous Diseases, Loss of Appetite, Headache, Constipation, Costiveness, Indigestion, Dyspepsia, Biliousness, Fever, Inflammation of the Bowels, Piles and all derangements of the Internal Viscera. Purely vegetable, containing no mercury, minerals, or deleterious drugs.
Price, 25c per box. Sold by all druggists.

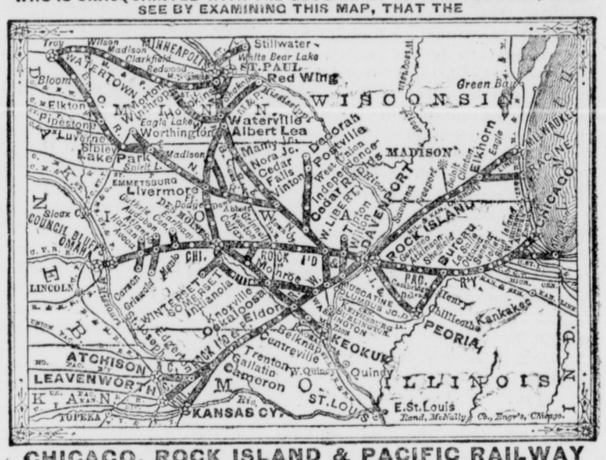
Lovely Complexion attained from Descriptive Pamphlet 2c. Palmetto! PALMETTO CO., 761 3rd Av., New York.

A NATURAL ANXIETY
Prompts many a man of family to seek his doctor's advice as to the best means of preventing disease and preserving health. In such cases the judicious physician will recommend the use of
Ayer's Sarsaparilla.
As a Spring Medicine and blood purifier it has no equal.
I consider Ayer's Sarsaparilla a safe, agreeable, and certain remedy for Scrofula and scrofulous diseases. As an alterative and spring medicine it stands without an equal. I have used it extensively, and always with the happiest results.—C. L. Shreve, M. D., Washington, D. C.
I have used Ayer's Sarsaparilla, from time to time, for a number of years, and have always been greatly benefited by it. It purifies, vitalizes, and invigorates the blood, restores the appetite, and imparts a wonderful feeling of strength and elasticity to the system. As a spring medicine, Ayer's Sarsaparilla is peculiarly effective.—M. F. Pillsier, Malden, Mass.
Copyrighted.
Ayer's Sarsaparilla,
Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists. Price $1; six bottles, $5.

A MAN
WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC RAILWAY
By reason of its central position and close relation to all principal lines East and West, at initial and terminal points, constitutes the most important mid-continental link in that system of through transportation which invites and facilitates travel and traffic between cities of the Atlantic and Pacific Coasts. It is also the favorite and best route to and from points East, Northeast and Southeast, and corresponding points West, Northwest and Southwest.
The Rock Island system includes in its main line and branches, Chicago, Joliet, Ottawa, La Salle, Peoria, Geneseo, Moline and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Watertown in Dakota, and hundreds of intermediate cities, towns, villages and stations.
THE GREAT ROCK ISLAND ROUTE
Guarantees its patrons that sense of personal security afforded by a solid, thoroughly ballasted road-bed; smooth tracks of continuous steel rail; substantially built culverts and bridges; rolling stock as near perfection as human skill can make it; the safety appliances of patent buffers, platforms and air-brakes; and that exacting discipline which governs the practical operation of all its trains. Other specialties of this route are Transfers at all connecting points in Union Depots, and the unsurpassed comforts and luxuries of its Passenger Equipment.
The Fast Express Trains between Chicago and the Missouri River are composed of well ventilated, finely upholstered Day Coaches, Magnificent Pullman Palace Sleepers of the latest design, and sumptuous Dining Cars, in which elaborately cooked meals are leisurely eaten, "good Digestion waiting on Appetite, and Health on both." Between Chicago and Kansas City and Atchison, are also run the Celebrated Reclining Chair Cars.
THE FAMOUS ALBERT LEA ROUTE
Is the direct and favorite line between Chicago and Minneapolis and St. Paul, where connections are made in Union Depots for all points in the Territories and British Provinces. Over this route, Fast Express Trains are run to the watering places, summer resorts, picturesque localities, and hunting and fishing grounds of Iowa and Minnesota. It is also the most desirable route to the rich wheat fields and pastoral lands of interior Dakota.
Still another DIRECT LINE, via Seneca and Kankakee, has been opened between Newport News, Richmond, Cincinnati, Indianapolis, and Lafayette and Council Bluffs, Kansas City, Minneapolis and St. Paul and intermediate points.
For detailed information see Maps and Folders, obtainable, as well as Tickets, at all principal Ticket Offices in the United States and Canada; or by addressing
R. R. CABLE, President and General Manager, Chicago.
E. ST. JOHN, General Ticket and Passenger Agent, Chicago.

PARSONS' PURGATIVE PILLS
MAKE NEW RICH BLOOD.
Positively cure SICK-HEADACHE, Biliousness, and all LIVER and BOWEL Complaints, MALARIA, BLOOD POISON, and Skin Diseases (ONE PILL A DOSE). For Female Complaints these Pills have no equal. "I find them a valuable Cathartic and Liver Pill.—Dr. T. M. Palmer, Monticello, Fla." "In my practice I use no other.—J. Dennison, M.D., DeWitt, Iowa." Sold everywhere, or sent by mail for 25 cts. in stamps. Valuable information FREE. J. S. JOHNSON & CO., BOSTON, MASS.

RIDGE'S FOOD
A sufferer from chronic diarrhœa writes: "I tried various preparations; but even the simplest gruel caused pain at night. Commencing with Ridge's Food, I found full satisfaction to the appetite and it was never attended with the slightest discomfort in digestion. To test its efficacy, the supper was changed a few times, but always with a return of distress in the night."

WHEN WRITING TO ADVERTISERS, please say you saw the Advertisement in this paper.

Comets Due in 1885.

Several periodical comets may be expected to return to perihelion during the present year. Encke's comet has already put in an appearance, having passed its perihelion on the 7th of March. It was detected in 1884, but as comets technically belong to the year in which they pass perihelion, Encke's comet finds place on the records of 1885. This comet is our oldest friend among the class to which it belongs, for it was first seen in 1776. though its periodicity was not discovered till 1819. Since that time it has not failed to make us a visit at intervals of about three and a half years.

Olbers' comet is another celestial guest whose return is looked for during the present year. It was discovered by Olbers in 1815, and was found by Bessel to have a period of about 75 years. It will therefore probably appear either this year or next. It will be as warmly welcomed, if it deign to make us a second visit, as the comet of 1812, or the Pons-Brooks comet, was last year, for it will rank as third on the list of comets of a long period that have made more than one recorded return. Halleys's comet, with a period of about 75 years, stands first on the list. It has been traced back to the year 1456, and since that time has made five recorded returns, the last being in 1835. It will be due in 1911. The comet of 1812, or the Pons-Brooks comet, made its first recorded return during the last year. If the comet of 1815, or Olbers' comet visit us during this year or the succeeding one, the solar system can rejoice in the possession of three comets of a long period, as they are called, to distinguish them from the larger family of comets of a short period.

Temple's comet of 1867 was expected to reach perihelion in April. It has a period of about 6 years, was first observed in 1867, was seen again in 1873 and 1879, and was due in April, but has not yet made its appearance. On the 13th of March, Dr. Gautier, of Geneva, discovered a suspicious celestial object, that was thought to be the expected visitor. Diligent search was made for it at the principal observations, but without success, for the object seen proved to be a far away nebula. Either some unforseen calamity has delayed its advent, or one of the giant planets has turned it into a new course by its resistless power of attraction.

Temple also discovered a second comet of a short period in 1869. It was re-discovered by Swift in 1880, when its periodicity was determined. It is consequently known as Swift's comet, and has a period of five and a half years. It is expected to return to perihelion at the end of the year. But it is likely to pass unseen at its present return, as it did in 1875, being, in like manner, in an unfavorably position for observation.

One more comet closes the list of members of the cometic family that are expected to return to perihelion in 1885. It is Tuttle's comet, and seems to occupy a position of its own, having a period of thirteen and a half years, and therefore ranking neither with comets of a long period nor with those of a short period. It was first discovered by Mechain in 1790, and re-discovered by Tuttle in 1858, when its periodicity was recognized, It was observed in 1871, passing its perihelion in November. It is therefore due in July of the present year.

A Manitoba Postmaster.

A Winnipeg letter says: The population around us chiefly consist of half-breeds and Indians, with a sprinkling of English settlers. They are most hospitable, but extremely rough, dirty and uncivilized. Our postoffice is four miles away, and we can send off and also fetch letters once a week. Let me describe the interior of this postoffice one day when I had occasion to call there. The postmaster is a very rough Canadian; his wife is a half-breed, a tall, handsome woman. When we drove up she was out of doors in the snow chopping fire-wood. Her lord and master was sitting in his only down-stairs room, with his feet on the stove and a pipe in his mouth. In the room, which was bare of carpet or curtain and contained the family bed, were three little children, a boy aged seven, swearing lustily; a girl about five, sucking her fingers, who began to howl as soon as I spoke, and a baby of two years, seated in a frying pan on the floor, engaged in carefully wrapping up his bare feet in a dish cloth. Their mother followed us into the house and, promptly seizing the handle of the pan, proceded to eject the baby and wipe out the pan with the aforesaid mentioned cloth. Next she broke about a dozen eggs into the pan, fried them and, having made tea and produced her solitary teaspoon, she invited my husband and myself to partake, or as she phrased it, to "sit in" with the family. It is needless to add that, after what I had just witnessed, I declined the hospitality as graciously as I knew how. This is my nearest female neighbor.

Strange Story of Restitution.

From Washington Despatch to Boston Herald.

The archives of the government contain many curious communications, but none probably possess a more romantic interest than the following, which your correspondent was permitted to read yesterday by a Treasury Department official. It was a letter which accompanied a large sum of money as a contribution to the conscience fund. The writer began by stating in the year 1866 he was a passenger on the steamship Henry Chauncey, New York to San Francisco. He was a telegraph operator and under engagement to the California State Telegraph Company. During the voyage he became acquainted with a gentleman who was known to his fellow-passengers as Charles Edmund Hastings. A fast friendship grew up between him and the writer. Upon their arrival in San Francisco they put up at the same hotel and occupied adjoining rooms. What followed is here given in the writer's own words: "The next day I reported for duty. Late in the afternoon I received, among a number of other telegrams, one from the chief inspector of the Postoffice Department at Washington, directing the authorities at San Francisco to keep a sharp lookout for one Charles Emmons, who had stolen money to the amount of $5,000 while an employee of the New York Postoffice. The description of Emmons tallied exactly with that of my friend Hastings, and in some indefinable manner I became convinced that he and the defaulter were one and the same person. Upon the impulse of the moment I slipped the message into my pocket. When I returned to the hotel I handed it to Hastings and asked him to read it. I then told him my suspicions. Without going too deeply into particulars, he confessed everything. It was the old story. He had sunk every dollar he possessed in Wall street, and in an evil moment had used the funds of the office until detection stared him in the face. He started for New Orleans, but, hearing that the police were on his track, conceived the daring plan of returning to New York and embarking from there for California. While search was being made for him in the South, he was rapidly steaming away to the Pacific slope. At the expiration of several weeks they had probably found a new clue, which had resulted in the sending of the telegram in question. Hastings begged me not to expose him, and promised that under a new name and in a new country he would begin life over and in a few years make good the government's loss. I promised silence, and he disappeared that night. I learned from a mutual friend some months later that Emmons had gone to Virginia City, Nev., and there died of an incurable disease. A few years ago, by the death of a relative, I came into possession of what to a man of my modest desires is an ample fortune. I desire, therefore, to make restitution to the government for the amount of Mr. Emmons' peculation, in which I have always considered myself an indirect accomplice. The sum enclosed is the principal and interest to date."

A Long and Curious Search.

"Why do you pick that up?" asked a reporter of a man who had just stooped down and taken a fugitive nine of clubs out of the mud. He was carefully cleaning the card with his pocket-handkerchief.

"It's a habit I have contracted," he said, laughing. "Long ago I noticed that a day rarely passed that I did not see a playing-card lying in the street. I wondered if it were possible to make a whole pack by picking up all I saw. I went to work to try it. At first it seemed easy enough, and I picked up plenty of cards of different kinds; but as my collection grew larger the task became more difficult, and I found cards of the same sort over and over again. It took me twelve years to find the last four cards I wanted—the five of diamonds, the eight of diamonds, the king of spades, and the four of hearts. Two of those years were spent in looking for the eight of diamonds, which was all I wanted to complete the pack. I found it three months ago in an ash barrel in Baxter street, and I have now the entire pack. I was just eleven years and two weeks collecting it, and I would not sell it for $1,000."—*New York Sun*

Almost Willing to Sacrifice Himself.

A negro and his family living on the Decatur division of the Louisville & Nashville railroad recently attempted one of the most sensational swindles of the day. There are ten children in the family, and the husband and wife find it hard work to feed so many mouths. At a family council it was finally decided that one of the children should sit down on the railroad track and be run over by a passenger train. The parents would then sue the company for damages, with which the remaining youngsters could be fed, clothed and educated. One of the boys was so much struck with the project that he volunteered to sacrifice himself for the good of the others. Shortly before the train was due he took his seat on the track and waited. The train came thundering along. The little darkey held the fort. He was true grit until the engine got within about ten feet of him, when he gave an unearthly yell, and with a bound into midair made tracks. The authorities investigated the matter, and the above facts all came out.—*Atlanta Constitution.*

NEW ADVERTISEMENTS.

America Ahead.—Peculiar Characteristics of Americans—The Evils and How Restored.

In this age of bustle and hurry, an age devoted to great projects and enterprises, the American people are taking the lead in the furtherance of noble works, and in the advancement of the sciences and arts. In these they deserve to take a high rank, and through the united works of millions, the American continent is fast being transformed from its untamed state and being placed on an equality with the older continents beyond the ocean. The American people are fast, under these influences developing into a nervous, energetic race, remarkable for its vim and business qualifications; yet there is danger that in the course of years these very elements may combine to the ruination of the physical character of the people, and leave them feeble and altogether different from their forefathers. General debility is now much more common than formerly, and seems to be on the increase among the masses. Many remedies have been extensively advertised for this wide-spread complaint, but none of these have been so successful or met with such general favor as the remedy manufactured by Dr. S. B. Hartman, and named by him PERUNA.

Mr. S S. Goudy, of Massillon, Stark county, Ohio, writes: That he has been troubled with general debility and dyspepsia for several years; that he was induced to try PERUNA for his complaints, and that after using three bottles of the medicine he was greatly relieved. It braced him right up and gave him energy, and restored him to his youthful vigor. He ascribes his cure to PERUNA, and says it is a wonderful remedy.

Adolph Bakhaus & Co., Springfield, O., writes: "We are having a good sale for PERUNA. It sells as well as any medicine we have, and gives the very best satisfaction."

Mrs. G. W. Needham, Newtonville, Clermont County, Ohio, says: "I have been a great sufferer for the last six or seven years, with general debility and change of life. I was very much reduced. I have taken four bottles of PERUNA, which has restored me to perfect health and strength. We think PERUNA a safe and grand medicine."

Estate of Naaman L. Shank, dec'd.

THIS IS TO GIVE NOTICE—That the subscriber, of Garrett county, hath obtained from the Orphans' Court of Garrett county, in Maryland, Letters of Administration on the personal estate of

NAAMAN L. SHANK,

late of Garrett Co. Md., dec'd. AYER'S Sarsaparilla

Is a highly concentrated extract of Sarsaparilla and other blood-purifying roots, combined with Iodide of Potassium and Iron, and is the safest, most reliable, and most economical blood-purifier that can be used. It invariably expels all blood poisons from the system, enriches and renews the blood, and restores its vitalizing power. It is the best known remedy for **Scrofula and all Scrofulous Complaints, Erysipelas, Eczema, Ringworm, Blotches, Sores, Boils, Tumors, and Eruptions of the Skin,** as also for all disorders caused by a thin and impoverished, or corrupted, condition of the blood, such as **Rheumatism, Neuralgia, Rheumatic Gout, General Debility, and Scrofulous Catarrh.**

Inflammatory Rheumatism Cured.

"AYER'S SARSAPARILLA has cured me of the Inflammatory Rheumatism, with which I have suffered for many years.

W. H. MOORE."

AYER'S Ague Cure

contains an **antidote for all malarial disorders** which, so far as known, is used in no other remedy. It contains no Quinine, nor any mineral nor deleterious substance whatever, and consequently produces no injurious effect upon the constitution, but leaves the system as healthy as it was before the attack.

WE WARRANT AYER'S AGUE CURE

to cure every case of Fever and Ague, Intermittent or Chill Fever, Remittent Fever, Dumb Ague, Bilious Fever, and Liver Complaint caused by malaria. In case of failure, after due trial, dealers are authorized, by our circular dated July 1st, 1882, to **refund the money.**

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

NEW ADVERTISEMENTR.

A HOME DRUGGIST TESTIFIES.

Popularity at home is not always the best test of merit, but we point proudly to the fact that no other medicine has won for itself such universal approbation in its own city, state, and country, and among all people, as

Ayer's Sarsaparilla.

The following letter from one of our best-known Massachusetts Druggists should be of interest to every sufferer:—

RHEUMATISM. "Eight years ago I had an attack of **Rheumatism**, so severe that I could not move from the bed, or dress, without help. I tried several remedies without much if any relief, until I took AYER'S SARSAPARILLA, by the use of two bottles of which I was completely cured. Have sold large quantities of your SARSAPARILLA, and it still retains its wonderful popularity. The many notable cures it has effected in this vicinity convince me that it is the best blood medicine ever offered to the public. E. F. HARRIS."
River St., Buckland, Mass., May 13, 1882.

SALT RHEUM. GEORGE ANDREWS, overseer in the Lowell Carpet Corporation, was for over twenty years before his removal to Lowell afflicted with **Salt Rheum** in its worst form. Its ulcerations actually covered more than half the surface of his body and limbs. He was entirely cured by AYER'S SARSAPARILLA. See certificate in Ayer's Almanac for 1883.

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists; $1, six bottles for $5.

DR. JOHN BULL'S Smith's Tonic Syrup

FOR THE CURE OF

FEVER and AGUE

Or CHILLS and FEVER,

AND ALL MALARIAL DISEASES.

The proprietor of this celebrated medicine justly claims for it a superiority over all remedies ever offered to the public for the SAFE, CERTAIN, SPEEDY and PERMANENT cure of Ague and Fever, or Chills and Fever, whether of short or long standing. He refers to the entire Western and Southern country to bear him testimony to the truth of the assertion that in no case whatever will it fail to cure if the directions are strictly followed and carried out. In a great many cases a single dose has been sufficient for a cure, and whole families have been cured by a single bottle, with a perfect restoration of the general health. It is, however, prudent, and in every case more certain to cure, if its use is continued in smaller doses for a week or two after the disease has been checked, more especially in difficult and long-standing cases. Usually this medicine will not require any aid to keep the bowels in good order. Should the patient, however, require a cathartic medicine, after having taken three or four doses of the Tonic, a single dose of BULL'S VEGETABLE FAMILY PILLS will be sufficient.

BULL'S SARSAPARILLA is the old and reliable remedy for impurities of the blood and Scrofulous affections.

Why Business Men Fail.

Cor. United States Economist.

Let me give your readers the benefit of the replies I have received from leading men of our country to the question, "What, in your observation, have been the chief causes of the numerous failures in life of business and professional men?"

Governor St. John answers: "Idleness, intemperance." Alexander H Stephens, answers: "Want of punctuality, honesty and truth." Hon. Darwin R. James, answers: "Incorrect views of the great end and aim of life. Men are not contented to lives of integrity and uprightness. They want to get ahead too fast, and are led into temptation." President Bartlett, of Dartmouth college, names as causes of failure: "Lack of principle, of fixed purpose, of perseverance." President Eliot, of Harvard, replies: "Stupidity, laziness, rashness, and dishonesty." Dr. H. M. Dexter, of *The Congretionalist*, answers: "1. Want of thoroughness of preparation. 2. Want of fixedness of purpose. 3. Want of faith in the inevitable triumph of right and truth."

Anthony Comstock's answers, are: "Unholy living and dishonest practices, lust and intemperance, living beyond one's means." Mr. H. E. Simmons, of the American Tract society, replies: "Fast living, mental, spiritual and bodily; lack of attention to the details of business." Gen. O. Howard answers in substance: "Breaking the divine laws of the body by vice; those of the mind by overwork and idleness, and those of the heart by making an idol of self." Professor Homer B. Sprague, of Boston, answers: "1. Ill health. 2. Mistakes in the choice of employment. 3. Lack of persistent and protracted effort. 4. A low ideal, making success to consist in personal aggrandizement, rather than in the training and developement of a true and noble character."

Dr. Lyman Abbott answers: "The combined spirit of laziness and self-conceit that makes a man unwilling to do anything unless he can chose just what he will do." Mr. A. W. Tenney, of Brooklyn, replies: "Outside of intemperance, failure to grasp hold, scattering too much, want of integrity and promptness, unwillingness to achieve success by earning it in the old-fashioned way." The attorney-general of a neighboring state, replies: "Giving beyond income, and speculating with borrowed funds; unwillingness to begin at the foot of the ladder and work up. Young men want to be masters at the start, and assume to know before they have learned." And another reason in the same line: "Desiring the success that another has, without being willing to work as that man does. Giving money-making a first place and right-doing a second place."

Among the causes of failure given by my correspondents many may be classified under the general fault of wavering, such as 'wavering purposes,' 'non-stick-to-it-ness,' 'failure to grasp ond hold,' 'scattering too much,' 'trying to do too many things, rather than stick to the one thing one knows most about.' A young man spends seven years in a grocery store, and when he has just learned the business he concludes to go into dry goods. By failing to choose that first he has thrown away seven years experience. Probably, after learning the dry goods business, he will conclude to become a watchmaker, and at last become a "jack-at-all-trades," good at none. A prominent merchant says: "Nearly all failures in legitimate business come from not serving an apprenticeship to it," that is, from leaving a business one knows for another which he does not understand.

Another cause of failure is the disposition to escape hard work, and get rich in haste—"desiring the success another man has, without being willing to work as that man does, and begin as he did, at the foot of the ladder." How many who were in haste to get rich, to reap without patient industry in sowing, have learned the truth of the old proverb: "The more haste, the worse speed."

One Kind of Boy.

I am always sorry to see a youth get irritated and pack up his clothes in the heat of debate and leave the home-nest. His future is a little doubtful, and it is hard to prognosticate whether he will fracture limestone for the streets of a great city or become President of the United States; but there is a beautiful and luminous life ahead of him in comparison with that of the boy who obstinately refuses to leave the home-nest.

The boy who cannot summon the moral courage some day to uncoil the tendrills of his heart from the clustering idols of the household to grapple with outrageous fortune ought to be taken by the ear and led away out in the great untried realm of space.

While the great world throbs on, he sighs and refuses to throb. While other young men put on their seal-brown overalls and wrench the laurel wreath and other vegetables from cruel fate, the youth who dangles near the old nest, and eats the hard-earned groceries of his father, shivers on the brink of life's great current and sheds the scalding tears.

He is the young-man-afraid-of-the-saw-buck, the human being with the unlaundried spinal column. The only vital question that may be said to agitate his pseudo brain is whether he shall marry and bring his wife to the home nest, or marry and tear loose from his parents to live with his father-in-law. Finally he settles it and compromises by living alternately with each.

How the old folks yearn to see him. How their aged eyes light up when he comes with his growing family to devour everything in sight and yawn through the space between meals. This is the hey-day of his life; the high noon of the boy who never ventured to ride the yearling colt, or to be yanked through the shimmering sunlight at the tail of a two year-old. He never dared to have any fun, because he might bump his nose and make it bleed on his clean clothes. He never surreptitiously cut the copper wire off the lightning rod to snare suckers with, and he never went in swimming, because the great, rude boys might duck him or paint him with mud. He shunned the green apples of boyhood, and did not slide down hill, because he would have to pull his sled back to the top again.

Now he borrows other people's newspapers, eats the provisions of others, and sits on the counter of the grocery till the proprietor calls him a counter irritant.

There can be nothing more un-American than this flabby polyp, this one-horse tad-pole that never becomes a frog. The average American would rather burst up in business six times in four years, and settle for nine cents on the dollar, than to lead such a life. He would rather be an active bankrupt than a weak and bilious barnacle on the calm shell of home.

The true American would rather work himself into luxury or the lunatic asylum than hang like a great wart upon the face of nature. This young man is not in accordance with the Yankee schedule, and yet I do not want to say that he belongs to any other nation. Foreign powers may have been wrong; trans-Atlantic nations may have erred, and the system of European government may have been erroneous, but I would not come out and charge them with this horrible responsibility. They never harmed me, and I will not tarnish their fair fame with this grave indictment.

He will breath a certain amount of atmosphere, and absorb a given amount of food for a few years, and then the full-grown biped will leave the home-nest at last. The undertaker will come and get him and take what there is left of him out to the cemetery. That will be all. There can be no deep abiding sorrow for him here; public buildings will not be draped in mourning, and you can get your mail at the usual hours when he dies. The band will not play a sadder strain because the fag end of human failure has tapered down to death, and the soft and shapeless features are still. You will have no trouble getting a draft cashed on that day, and the giddy throng will join the picnics as they had made arrangements to do.—*Detroit Free Press.*

Reviving a Dead Dog.

[From the Denver News.]

Mr. James L. Finch gives an account of some curious experiments which he and Dr. Armitage recently made secretly in resuscitating animals apparently dead. The first subject operated upon was a medium-sized terrier dog. It was securely tied and an incision made in an artery in its neck, by which the animal was bled to death. He certainly passed through all the symptoms of dying, and soon after the last blood issued from the wound his frame became fixed and rigid, and his eyes showed the senseless glare of death. The room was kept at a temperature of 70° Farenheit, while the dog lay for three hours dead. By this time he had become very stiff and cold. He was now placed in a warm-water bath that was constantly maintained at a temperature of 105°, and was continually and thoroughly rubbed, and as he became pliant his limbs were gently worked about and his whole body rendered supple. A half pint of hot water was now passed into his stomach through a hard-rubber tube which was forced down his œsophagus. When this was accomplished, the mouth of the rubber tube, attached to a bellows, was introduced into his wind pipe, and, as the bellows were provided with a double valve, by which the air could be withdrawn as well as inhaled, the dog's nose was securely fastened.

A large and powerful Newfoundland dog had been obtained for the purpose, had been tied near by, and was now bled, while the attending surgeon proceeded to adjust the transfusing apparatus, and began slowly to inject the live dog's blood into the dead dog. Simultaneously Mr. Armitage began slowly working the respiratory bellows, while I kept rubbing the animal and bending his limbs and body to facilitate circulation. We could not have been more anxious about the issue of our efforts if they had been made upon a human being instead of a dumb brute. When a pint of blood had been injected I could see some change about the eyes of the dog; but no one spoke. One thought was common to all—would life come back? In a few moments more there was certainly a convulsive tremor noticeable in the body. Mr. Armitage, in undisguised excitement said to the surgeon: "Press the blood." In a minute or two the dog gasped, and soon attempted to eject the respiratory tube, which was accordingly withdrawn. This was followed by gasps and a catching of the breath, while the eyes grew brighter and more natural. The rubbing and blood injecting were yet applied, and the dog was struggling as if in a fit. But his efforts soon became less violent, and he began a low whine. A compress was now placed on the artery, and in twenty-two minutes after the first blood was injected he sat up, after being dead three hours and twenty minutes. The dog then drank broth that had been prepared for him in case of his revival, and soon got up and walked about. A comfortable bed was provided near the stove, and from this time forward his recovery was so rapid that in two days he was turned out to run in the streets. He is now a rugged character, in good health, with seemingly no remembrance of his resurrection.

A Heartless Woman.

The meanest woman has been found at Atlanta, Ga. Eight years ago she was married at Utica, New York, to W. E. Harris, and lived happily with him until a child was born, when she deserted him, taking the babe with her. She soon married a man named Riley Ross, and they removed to Atlanta. Recently a strange man rapped at the door of Riley Ross, The rap was answered by Mrs. Ross, who threw her hand to her forehead and exclaimed "My God!" as her eyes beheld her former husband. "I want to see my child," he said. "No, no!" she exclaimed, "that cannot be; he thinks Mr. Ross is his father." "I have come a thousand miles to see him, and I will," persisted Harris. Just then a passing policeman came to the lady's aid and led the father away. The woman afterward offered the unhappy father the priyilege of seeing his child for ten minutes, provided he did not reveal his identity, and provided, further, that he gave $100 for the chance.—*Atlanta Constitution.*

Old John Brown's Rebuke.

Brown was greatly opposed to the use of profane language, and sternly forbade it among his men. At one time he captured a border ruffian in Kansas, and he could shame a Flanders regiment with his horrible oaths. Brown listened to him for some time, partook of his supper in silence, lighted his pipe from coals, in the ashes, then said to the border heathen: "I very much dislike to hear you using such language." Greatly surprised at the declaration, he asked Brown to state his objections. "I'll tell you, sir," he replied. "If there is no God it is exceedingly foolish, and if there is it desperately wicked." And Mr. Gill remarked that Old Brown said it in such a fatherly way that the fellow desisted, and never afterward swore in his presence.—*Chicago Tribune.*

The Republican.

JAS. A. HAYDEN, Publisher.

OAKLAND, GARRETT CO., MD.

A FOREST HYMN.

The glowing sun is riding high
Amid the arches of the sky,
Dreamy air lies still,
No sound disturbs the leafy glade
Save that by busy woodbill made
Upon some ancient trunk, decayed—
Calm broods o'er vale and hill.

In such an hour I love to stray
From haunts of toiling men away,
'Mid forest depths profound;
There, in a bliss of solitude,
Where no dull cares of earth intrude,
And Nature breathes sweet quietude—
The grand old trees around—

The heart by daily cares oppressed,
The wearied spirit findeth rest,
As, pillowed on the sod,
With nought above but leaf and sky,
And loving look of Heavenly Eye,
Perchance with angels hovering nigh,
I dream of Nature's God.

—*Edward N. Richards, in Current.*

"STAR-SPANGLED BANNER."

The Thrilling Event Which Inspired This Patriotic Song.

A piece of news was borne across the Atlantic Ocean in May, 1814, which chilled with apprehension every American heart: Napoleon Bonaparte had been overcome by the allied armies of Europe, and was safely imprisoned on the island of Elba! This intelligence notified the American people that the fleets and armies of Great Britain, which for twelve years had been waging war with France, were now disengaged, and would have little to do, and would be free to overwhelm and crush the Republic of the United States. We were then in the second year of that contest with Great Britain which we still call the War of 1812. It was a summer of alarm, and the whole coast was alive with the bustle of defensive preparation.

The invasion came. The enemy's ships entered Chesapeake Bay about the first of June, a fleet of frigates and lighter vessels. In August Admiral Cochrane entered the bay in a great ship of eighty guns, bringing with him a fleet and three or four thousand soldiers, which increased the British force in those waters to twenty-three men-of-war and an army of ten thousand troops and marines.

Every one knows what followed. The country was invaded, Washington was sacked and pillaged and its public buildings burned. The enemy retired with considerable loss, it is true, but triumphant and exulting. It was a dearly-bought victory, for it silenced opposition to the war, kindled the national feeling and enlisted every heart in the country's defense.

A few days after, the British forces made their second attempt upon that coast. Baltimore, then a city of forty thousand inhabitants, enriched by the prosperous commerce of the last quarter of a century, would have been a valuable prize; and would have given the foe a hold of the shores of the Chesapeake, from which they would have been dislodged with difficulty. Washington was but a straggling village, without military value. Baltimore was a commanding position, capable of being defended. Two miles below the city, on a point of land jutting into the water, stood then, and now stands, Fort McHenry, so named after one of the early statesmen of Maryland. Sturdy arms and willing hearts had been laboring there for many weeks to strengthen its fortifications and get additional guns into position, under the direction of Lieutenant Colonel George Armistead. The time had been well employed, and the gallant commander had a modest confidence in his ability to repel the imposing fleet of Cockburn, which now consisted of more than forty vessels, and carried seven thousand troops. The fate of Baltimore depended absolutely upon his holding this position.

The star-spangled banner which floated over the fort had been made by a lady of Balfimore, Mrs. Mary Pickersgill, aided by her daughter. These ladies, full of the patriotic feeling of the hour, made a flag worthy of the importance of the occasion. It contained four hundred yards of bunting. It was so large that the ladies were obliged to spread it out in the malt-house of a neighboring brewery.

When Mrs. Pickersgill's daughter was an old lady of seventy-six years, she used to describe the scene.

"I remember," she wrote, "seeing my mother down on the floor placing the stars. After the completion of the flag she superintended the topping of it, having it fastened in the most secure manner to prevent its being torn away by balls. The wisdom of her precaution was shown during the engagement, many shots piercing it, but it still remained firm to the staff.... My mother worked many nights until twelve o'clock to complete it in a given time."

The reader will see in a moment the significance of this statement. But for the firm and faithful stitching of these two patriotic ladies, we should probably have had no song of the Star-Spangled Banner.

September the 6th the great British fleet left its anchorage in Chesapeake Bay and sailed for Baltimore; and entered the Patapsco River, upon which the city stands, five days after. Twelve miles below Baltimore, they landed seven thousand men. Happily, the brave Marylanders and Pennsylvanians were ready for them. Three thousand militiamen, volunteers from Maryland and Pennsylvania, commanded by General John Stricker; well-posted and well-intrenched, withstood this great force, killed their commander, General Ross, and forced them finally to abandon the attack.

While these events were occurring, the great vessels in the British fleet moved up the river, anchored before Fort McHenry, and began to pour upon it that tempest of shot, shell and rockets, which the author of our song has commemorated. Every gun was heard in Baltimore. We can well imagine the feelings of its inhabitants during the twenty-four hours of its continuance.

The author of the song, Francis Scott Key, was not a combatant in the battle, although he witnessed it from beginning to end. During the first operations on that coast Admiral Cockburn and several officers of the British army occupied as their headquarters a house at Marlborough, belonging to an aged physician of the place, Dr. Beanes, whom they detained as a prisoner, lest he should send the news of their landing to Baltimore. He was a particular friend of Mr. Key and of his family. Hearing that the doctor was about to be carried off by the enemy, Key obtained permission from the commanding General of the American forces to go to the British fleet under a flag of truce, and make an attempt to procure the old gentleman's release. In a letter to his mother, written just as he was about to start upon this errand of friendship, he wrote:

"I hope to return in about eight or ten days, though it is uncertain, as I do not know where to find the fleet."

He set sail from Baltimore about the third of September, and found the British fleet at the mouth of the Patuxent bound for the attack on Fort McHenry. He went on board the vessel of Admiral Cochrane, to whom he stated his errand, and asked for the release of Dr. Beanes. The Admiral received him with the utmost civility, but informed him that he could not comply at present with his request, and was obliged even to detain Key himself and his vessel until the operation upon Fort McHenry was concluded.

The Admiral's vessel being overcrowded, he sent the American gentlemen on board of the frigate Surprise, commanded by his son, Sir Thomas Cochrane, where they spent the night, and thus moved on to the attack.

During the bombardment of the fort, Mr. Key and his friends, including Dr. Beanes, were sent on board their own little vessel under a guard of marines, and thus they were afforded an opportunity to witness the action.

Of all the thousands of human beings within hearing of that bombardment, there was probably not one so fitted by nature and education to be moved by it. Francis S. Key, then thirty-five years of age, a lawyer in good standing at the distinguished bar of his native State, was a son of John Ross Key, an officer in the army of the Revolution. He had been noted from his youth up for the ardor of his patriotism, and he had attempted more than once to celebrate in verse the gallant deeds of his countrymen. He had a habit of dashing down lines and stanzas that occurred to him on any old scrap of paper that came first to his hand, and several of his poems were gathered up by his friends from the litter of his office.

All day the bombardment continued without ceasing. During the whole night they remained on deck, following with their eyes the continuous arcs of fire from the enemy's ships to the fort. The anxiety of the poet, and the little company of Americans about him, grew only more intense when darkness covered the scene, and they could form no conception of the progress or the probable issue of the strife.

Suddenly, about three in the morning, the firing ceased. As they were anchored at some distance from the British vessels, they were utterly at a loss to interpret this mysterious silence.

Had the fort surrendered?

As they walked up and down the deck of their vessel in the darkness and silence of the night, they kept going to the binnacle to look at their watches to see how many minutes more must elapse before they could discern whether the flag over Fort McHeery was the star-spangled banner, or the union jack of England.

The daylight dawned at length. With a thrill of triumph and gratitude, they saw that "our flag was still there." They soon perceived from many other signs that the attack, both by land and sea, had failed, and that Baltimore was safe. They could see with their glasses the wounded troops carried on board the ships, and at last the whole British army re embarking.

A few minutes after the dawn of that glorious day, when the poet first felt sure of the issue of the battle, the impulse to express his feelings in verse rushed upon him. He found in his pocket a letter, and he wrote upon the back of it the first lines of the song. In the excitement of the hour he could not go on with his task, but he wrote some further brief notes and lines upon the letter. Some lines he retained in his memory without making any record of them. When his guard of marines left him free to hoist anchor, and sail for the city, he wrote out the song on the way, very nearly as it now reads, and on reaching his hotel in Baltimore he made a clean copy of it. The next morning he showed it to his brother-in-law, Judge Nicholson, Chief Justice of Maryland, who, Judge as he was, had commanded a company of volunteers in Fort McHenry during the bombardment.

We may be sure that *such* a Judge read the song with no critical eye. So delighted was he with it, that he sent it round to a printer, Benjamin Edes, who had also commanded a company of troops in the late operations. An apprentice, Samuel Sands, who was living in Baltimore in 1878, instantly set it in type, an in less than an hour it was distributed all over the city of Baltimore, received by every one with enthusiasm.

But what is a song without music? An old Baltimore soldier told in after years how the words came to be so happily wedded to the music to which it has ever since been sung. A group of volunteers lay scattered over one of the green hills near Baltimore a day or two after the bombardment.

"Have you heard Francis Key's poem?" said a member of the company, who had just come in from the town.

He took a copy of it from his pocket and read it aloud to them as they lay upon the grass. It was called for again. He read it a second time, and a third, more soldiers gathering about to hear it, until the whole regiment seemed to be present.

An actor, named Ferdinand Durang, who was also a soldier, sprang up, rushed into a tent, seized his brother's music book, used by both of them for their flutes, examined piece after piece, and at length cried out:

"Boys, I have hit it!"

He had selected the air of a favorite old English song, called "To Anacreon in Heaven," written by John Stafford Smith, about the year 1772. It was composed for a musical club which met at the Crown and Anchor Tavern in London, frequented by Dr. Johnson and Sir Joshua Reynolds. As soon as Ferdinand Durang had selected the music, he mounted a stool and sung it to his assembled comrades with all the fire and spirit of which he was capable. An eye-witness says:

"How the men shouted and clapped! for never was there a wedding of poetry to music made under such inspiring influences. Getting a brief furlough, the Brothers Durang sang it in public soon after. It was caught up in the camps, and sung around the bivouac fires, and whistled in the streets; and when peace was declared, and we scattered to our homes, it was carried to thousands of firesides as the most precious relic of the War of 1812."

The flag of Fort McHenry, which inspired the song of Francis Key, still exists in a tolerable state of preservation. Colonel Armistead caused it to be taken down from the staff after the battle, and its honorable wounds bound about by the very ladies who had made it. It was ever after carefully preserved. He left to his widow, who in turn bequeathed it to their youngest daughter, born under it in Fort McHenry after the bombardment; and she in turn left it to her son, Mr. Eben Appleton, of Yonkers, New York, who now possesses it. It was raised over Fort McHenry for the last time September 14, 1824, at the reception of General Lafayette.

The author of the song died at Baltimore in 1843, aged sixty-four years, and in 1857 a small volume of his poems was published in the city of New York. He has living descendants.—*James Parton, in Youth's Companion.*

BEFORE PENS.

The Instrument Used for Writing Before These Were Invented.

The chisel was employed for inscribing on stone, wood or metal. It was so sharpened as to suit the material operated upon, and was dexterously handled by all early artists. The style, a sharp-pointed instrument of metal, ivory, or bone, was used for writing on wax tablets. The style was unsuitable for holding a fluid, hence a species of reed was employed for writing on parchments. These styles and reeds were carefully kept in cases, and the writers had a sponge, knife, and pumice stone, compasses for measuring, scissors for cutting, a puncheon to point out the beginning and the end of each line, a rule to draw and divide the lines into columns, a glass containing sand, and another with writing-fluid. These were the chief implements used for centuries to register facts and events. Reeds continued to be used till the eighth century, though quills were known in the middle of the seventh. The earliest author who uses the word penna for a writing-pen is Isidorus, who lived in that century, and toward the end of it a Latin sonnet "To a Pen" was written by an Anglo-Saxon. But though quills were known at this period, they came into general use very slowly, for in 1443 a present of a bundle of quills was sent from Venice by a monk with a letter in which he says: "Show this bundle to Brother Nicholas, that he may choose a quill." The only other material to which we refer is ink, the composition and colors of which were various. The black was made of burnt ivory and liquor of the cuttle-fish. We are not prepared to say what other ingredients were used or how it was manufactured, but these ancient manuscripts prove that the ink was of a superior description. Red, purple, silver and gold inks were also used. The red was made from vermilion and carmine, the purple from murex, and the manufacture of these, especially with gold and silver varieties, was an extensive and lucrative business.—*Chambers' Journal.*

WOMEN AND THEIR FEET.

The Care They Use in Buying Shoes—Sizes of the Feminine Foot.

"There is little doubt in my mind," said a Superior Street shoe dealer yesterday, "that it is in the selection of footgear that people are most fastidious."

"Is much difficulty experienced in dealing with women?" was asked.

"Women have a strong natural desire, one that appears almost inborn, to have as small and shapely feet as possible, but except in a limited number of cases the desire is kept within bounds. It is not unusual for one to insist on crowding a No. 5 foot into a shoe two sizes smaller, but the majority while buying the footwear have in view mainly their personal comfort. There appears also to be a growing tendency in favor of comfortable shoes even at the expense of looks."

"Speaking of sizes, does the average differ in various parts of the country?" asked the reporter.

"I don't know just what foundation it has, or what investigations have been made into the subject," said the dealer, "but it is generally recognized that the ladies of the East wear the smallest shoes. It is said that the average size of the shoes worn there ranges from 1½ to 2½. In Cleveland it probably ranges from the latter figure to 3½, and many shoes a half size larger are also disposed of here. Shoes get larger as you progress to the West."

"How about the Chicago girls?"

"The belles of that city have, to some extent been slandered, but it is a fact that their pedal extremities are larger than the ordinary. The sizes probably run from Nos. 3 to 4, so you see that, although not as diminutive as they might be, the feet of the young ladies are not so large that they merit the wide-spread attention bestowed upon them. As between Chicago and St. Louis, I think nature in this respect distributed favors with an impartial hand. An exception to all that has been said, however, is the case of the Sandusky belle. While only seventeen years of age, she wears a number 24 shoe. Ohio thus does not take a position in the background, even in the case of feet."—*Cleveland Leader.*

—A Frenchman who loves his wife calls her his "darling cabbage" or his "little blue rabbit."

WAR.

The Intellectual Charm It Has for Cultivated Mankind.

It must, we fear, be admitted that, except with a very few men, war, as such, has for cultivated mankind a distinct intellectual charm. It attracts them as nothing else does, until in its presence they can not turn their eyes away, and every other object of thought becomes comparatively insipid, and this even if the war is not one in which they are personally concerned. Of course if they are their absorption is easily explained. The results of a war are so tremendous and far reaching, they affect all interests so deeply, and they may involve the future of a country so inextricably, that it is impossible for men who have any patriotic or political imagination at all not to study its progress, and even its minute details, with concentrated attention. One big blunder in war may prostrate a nation. Even when, as is rarely the case, invasion is out of the question, the incidents of a campaign, the conduct of the troops, the capacity or imbecility of the Generals, become matters of personal and vital interest—a victory seems a pleasure beyond all others, a defeat a cruel and individual catastrophe. Men's interests, their hopes, their virtues, their foibles, and their fears are so involved in a war in which the nation is engaged, that every turn of fortune is an event of personal moment, and the excitement becomes as intense as if the onlooker were himself engaged. Men have been known to go mad with joy after a great victory, and to sicken mortally of the grief produced by a great defeat, and this in cases when, as it turned out, neither victory nor defeat lingered long in the general memory. There is nothing to be explained in that kind of interest, but the intellectual charm of war extends much further than this. Wars which are not ours interest us nearly as much as wars which are. Scores of thousands of Englishmen followed the great American civil war with an attention which missed no detail, and the European world watched the duel between France and Germany with a gaze which was almost painful in its intensity of watchfulness. The journals, which always reflect the popular curiosity better than the popular thought, were full of nothing else, and the excitement was felt as keenly by men ordinarily devoted to study as by men who had been soldiers or—a curiously common case in a nation so devoted to civil pursuits—were soldiers by inner prepossession. It is usual to ascribe this attraction to unconscious self-interest, a desire that one or the other side should win; but we do not think that has very much to do with the matter. The onlookers in a war take sides, no doubt, often enthusiastically, and with a persistence which it is not easy to explain; but it is not because of their hopes or fears that they become so absorbed. They are hardly less attracted by the wars of history, which they ought to regard without passion; and these may be keen excitement, though they fail to decide which side they wish to win. The English people in the Franco-German war swerved distinctly from one side to the other; but they watched Gambetta and Chanzy with as much interest as they had watched Bismarck and Von Moltke. Moreover, invisible wars, though they may strongly affect the interests of men, do not exercise this attraction. The war waged by France in Tonquin has hardly been watched at all, while the two great Chinese wars of our day have hardly received anything beyond a casual mention, and never, even when in progress, excited the slightest possible attention. Yet the war in Tonquin was in many respects the most important colonial war of our time; and the two Chinese wars were, in the strangeness of their incidents and their awful consumption of human life, among the phenomenal occurrences of the century.—*Spectator.*

LIFEBOATS.

Parts of Louisiana Where They Are Clearly a Necessity.

There is a railroad not a thousand miles away from New Orleans which is covered with water nearly the entire year; in fact, whenever a stiff shower of rain falls the road goes under. The train-men have become so accustomed to sliding through about two feet of water at the rate of eight or nine miles an hour that they imagine they are leading a sailor's life, and when they walk they swagger and roll from one side to the other, and hitch up their trousers at regular intervals, and use nautical expressions when they converse with each other.

Not long ago a passenger boarded a train on the road, and when the porter came through the car he inquired how long it took to reach his destination, Bugleville, about sixty miles up the road.

"I can't say 'zactly, boss," replied the porter, "'cos it 'pends on how de weddor is. If de wind ain't in our eyes, and if de sea is smooth, we'se gwine to make a fast passage, and will land you at Bugleville inside 'er four days; but ain't certain, boss, as we heered dis mornin' dat dar was pow'ful deep water at Mud Bayou and er high sea runnin', and if dat's true we'll have to lay close to de shore at Brown's Point and 'jes wait for 'er to calm, and de Lord only knows when dat will be."

"Well, porter, you——"

"Not porter, boss. I'se de Captain's mate, sah."

"All right, then, mate," continued the passenger; "get me a lower berth in the forward sleeper, so that if I become seasick I can stick my head out of the scupper in a hurry."

"Yes, boss, I'll put you down a berth on de port side and in der middle 'er de sleeper, so dat when we strike de ground-swells of Gun Island you won't feel de pitchin', sah. On de last passage it was monstrous rough, and one gem'man de whole night was pow'ful sick and kep' workin' de lee-scupper for all he knew how; and one 'er de crew, while tying a red light jes' abaft de gang-way 'er de after sleeper fell over de railing and drowned 'fore we could round to, and since dat time we carries two lifeboats."—*N. O. Times Democrat.*

THE MORGUE.

A Description of One Metropolitan Institution—Its Sad Histories.

What is the morgue? No doubt many of our readers find this question suggested by the sad fate of Hattie Bedient, and hence a brief sketch may be acceptable. One of the most painful scenes ever witnessed at this abode of horrors was when poor old farmer Bedient beheld the corpse of his once beautiful daughter stretched out upon the marble slab, along with other "unknown dead." The principal charity hospital of New York is situated at the foot of Twenty-sixth Street on the East River, the place having been once known as "Bellevue." From the foot of this street the steamboat plies to and from Blackwell's Island, where the penitentiary is situate, the distance being two miles. As you enter the grounds you pass a small brick structure with a large window opening on the street, and here one often notices a crowd gazing with intense interest. No wonder, for inside of that window are the unknown dead, and there for two days lay the pallid form of the once lovely Hattie Bedient.

The floor is stone, with a drain, which keeps it dry. Its sole furniture is a pair of stone tables, each slanting so as to allow moisture to escape by dripping. On these tables the corpses are laid, stripped of their clothing, but covered by an india rubber cloth, which only permits the head to be seen. In hot weather a jet of cold water is often thrown upon them in order to prevent decomposition, for as soon as this begins they are sent to the potter's field for interment. The place is open from nine to five o'clock for the purpose of allowing any one to identify lost friends and in order to assist in this search an examination of the wardrobe is also permitted. This wardrobe, indeed, is one of the most striking features in the morgue, and what strange emotions are felt as one gazes on this varied array of garments, whose owners will, in most instances, never be known. Each one is numbered and accompanied by a few words of description. Here, for instance, are a pantaloons, shirt and vest, labeled: "Picked up in East river January 12, 1884—buried on the 18th." Another is a full suit, marked: "Picked up in the streets, stabbed." These garments are kept for a year, and sometimes even longer, in order to assist in identifying those who have gone to the trenches of potter's field. The latest and most important of these garments were labeled "Suicide at Grand Central Hotel," and hundreds examined that mark (H. B. Bedient) which saved poor Hattie's corpse from pauper burial.

While speaking of this unfortunate woman it may be added that her father, accompanied by a friend, reached the morgue at midnight. The building was closed, but in compliance with his earnest request the janitor opened it, and the gloomy morgue seemed still gloomier as it was illuminated by a lamp. As soon as the light fell on the face of the corpse the poor old man recognized his child. The scene was one beyond the power of art, and even the hardened attendants were moved by it. I speak of these men as "hardened," meaning merely that natural indifference which is the inevitable result of habit. The record of the morgue has reached more than 2,000 cases, most of which went to the potter's field. Among the number was a young man from the vicinity of Albany, whose parents were rich, and the family held high social position. His corpse was picked up in the Harlem River, and he had either fallen in while intoxicated or had closed a dissipated life by suicide. Some months after he had been buried in the pauper trench his name and family were discovered. Vice, indeed, brings many of its victims thither to finish their course, and even in the Hattie Bedient case there is a secret volume of misery which never will be opened.

Such was the curiosity awakened by the Bedient tragedy that more than five hundred persons called to view the corpse. Among this number were the friends of a half-dozen girls who had recently disappeared. These mysterious disappearances are among the strange features in a great city. On one occasion the corpse of a man, evidently of the better class, was brought to the morgue, and the fact being announced by the press, the place was visited by nearly a score of women whose husbands were missing. None of them claimed the dead man, but their application revealed the fact that so many husbands could be eliminated from society with no clew to discovery. There is such a rush of strangers to this city from all parts of the world, and such facilities exist for shuffling off this mortal coil, that the morgue never lacks for tenants, and the Bedient tragedy will no doubt soon be forgotten in subsequent scenes of tragic character.

The most painful scene that ever occurred at the morgue prior to the discovery of Hattie Bedient was the Mrs. Leroy suicide. This unfortunate woman was the wife of an extensive business man who became rich, and they lived in Fifth Avenue in the height of style. Then came the "shrinkage" in which so many sank to ruin, and among other victims was the house of Leroy & Co. The loss of her splendid home made her insane, and the result was her disappearance, until a corpse "found drowned" was brought into the morgue, where it was identified. The transition from the grandeur of the Fifth Avenue to the stone table of the morgue was certainly strange, but it is only one of those vicissitudes which so often mark high life.—*N. Y. Cor. Troy (N. Y.) Times.*

—A popular New York variety actress contrives to make an extra bit of money in her nightly vocation by singing songs in which the excellences of the wares of various business men are warbled forth. In an impersonation of a tipsy dude she vocalizes extravagant praise of a certain brand of wine. In another impersonation she extols the virtues of a certain cigarette. The managers of the various houses in which she has been engaged have remonstrated with her in vain. As she is a good "drawing card" she is allowed to have her own way.—*N. Y. Sun.*

SCHOOL AND CHURCH.

—Bishop Coxe, of Western New York, announces that the Diocesan Council has fixed $1,000 as the lowest salary which should be offered a minister.—*Buffalo Express.*

—Edward Everett Hale thinks that "in these days the church has something to do besides singing, reading and praying." Among the other things, he mentioned "hospitality, education and charity."

—The Rev. Dr. P. H. Mell, the venerable moderator of the Georgia Baptist Convention, was first elected in 1857, and has served continually since, with the exception of five years, from 1872 to 1876, during which he was in broken health.—*Baptist Weekly.*

—A witty deacon puts it thus: "Now brethren, let us get up a supper and eat ourselves rich. Buy your food; then give it to the church; then go and buy it back again; then eat it up and your church debt is paid."—*Toledo Blade.*

—The Methodists of Georgia are interested in the conversion of the Jews, and have a mission organized for that purpose. Rev. Jacob Freshman, evangelist to Hebrews in New York City, is preaching throughout Georgia and Florida in furtherance of this enterprise.—*Christian Union.*

—When Dr. Tucker preached the introductory sermon before the Baptist Convention at Columbus, Ga., recently, a lady in the congregation was wearing the same dress which she wore thirty years before on a similar occasion, at which time Dr. Tucker was also the preacher.—*N. Y. Examiner.*

—Bee teachers are employed by the Government in Germany to travel from place to place and give instructions in bee culture. It is said that the German rural schoolmaster is examined in bee culture before he is granted a diploma as a competent teacher.

—The Baptist Conference in Boston at its recent session discussed quite at length the subject of "mind cure." The decision arrived at was that the the theory and practice of this cure, as now professed and carried on, may perhaps constitute a science, but it can not claim the designation "Christian."—*Boston Journal.*

—The new historic name of Batoche is derived from a settler of the name of Francis Xavier Batoche, who is the principal citizen of the town and still living. The name is common among French Canadians, especially in the country parts, as an abbreviation or corruption of the word "Baptiste."—*Boston Traveller.*

—Preliminaries for summoning a general council of the Roman Catholic Church are under consideration. The chief questions to be proposed for consideration have reference to the "internal administration of the Church, which has been a matter of deep, grave and increasing concern to Pope Leo XIII." The council, it is added, will assemble next spring, with a programme formulated almost solely by the Pope himself.—*N. Y. Herald.*

—President Webb, of Mississippi College, was interviewed by a young man who wanted to go to school. "Well," said the President, "what do you know?" "Nothing," was the response. "Well, you are just four years ahead of some of the other pupils. It takes them four years to learn what you know to start with. Your prospects are fine, sir."—*N. Y. Post.*

PUNGENT PARAGRAPHS.

—A turnip closely resembling an elephant is on exhibition at Key West. A man closely resembling a beat can be seen almost anywhere.—*Chicago Times.*

—A Vermont husband got wind of the proposed elopement of his wife, and frustrated it by keeping guard over her silk dress. She wouldn't run away in a calico gown, and he knew it.—*Troy Times.*

—Perhaps a servant girl uses kerosene oil for kindling purposes because there is no dynamite in the house. The head of the family should think of this, and supply his domestics with all the modern appliances her work demands.—*Norristown Herald.*

—A bachelor who wanted a wife wrote a tender epistle to a nice young lady. He applied therein for her hand and heart, and wound up as follows: "Have the goodness to send me a reply as soon as possible, as I have another young person in my eye."—*Chicago Tribune.*

—There is said to have been "just discovered" a kind of tobacco which, if smoked or chewed, will make a man forget that he owes a dollar in the world. Just discovered! Why, that brand of tobacco has evidently been in use as far back as the memory of man runneth.—*Norristown Herald.*

—Every Mussulman who makes a pilgrimage to Mecca is honored during the remainder of his life by the title of Hadji. In the United States a muscleman never secures a higher title than professor, but he is sure of that, provided he opens a saloon.—*Boston Transcript.*

—"Did you attend the grand opera?" "No; I wasn't able to." "But I thought you said you were going?" "Yes, I did, but you see my wife concluded that she would rather go to the shore this summer, and so we did not go." "Well, I don't know but that you were wise. I should have liked to go out of town myself."—*Boston Post.*

—Firm mother to boy—"Didn't I tell you that I'd whip you if you played in that water again, say?" Boy—"Yessum." Firm mother—"Then why did you do it?" Boy—"Because I didn't believe you?" Firm mother—"Never mind; you shan't go down town with me when I go; see if you do?" Shortly afterwards the firm mother and the boy go down town together.—*N. Y. Graphic.*

—"Something wonderful is sure to happen on this earth before long," suddenly remarked a Harlem man, looking up from his newspaper. "Why, John, you don't mean it!" said his wife in a tone of astonishment. "Is the world coming to an end?" "I don't know, I'm sure; but it looks like it. This paper says there is a plumber in the Philadelphia Alms-house." "O, is that all?" said the little woman, with a sigh of relief. "I thought perhaps some hard-hearted husband had given his wife money without her asking him for it."—*N. Y. Journal.*

MISCELLANEOUS.

—A Pennsylvania court has decided that, as elections are not under the common law, bets thereon are not forfeit.—*Philadelphia Press.*

—Enough land in the United States is owned by foreign syndicates to furnish 250,000 families with eighty acres of land apiece.—*Troy Times.*

—The Odd Fellows of Maine have a membership of 14,656, and since their organization in the State, in 1843, have paid for individual relief $477,323.

—"How can I find out all about the young lady to whom I am engaged?" asks a prospective benedict. Has she a younger brother? If so, consult him.—*Boston Post.*

—Large quantities of timber are now creosoted at the West, in a special manner, for railroad purposes, the effect being to increase the tenacity of the wood for holding spikes, etc., as well as its density, and its ability to resist mechanical wear.—*Chicago Journal.*

—A gentleman who imagined that he recognized a lady friend, advanced cordially, and addressed her: "I beg pardon," he said, "but isn't this Miss Greenleaf?" "No, sir," replied the lady, "my name is Redpate." "Ah, excuse me, I must be color blind".—*N. Y. Sun.*

—The prose of war differs from the poetry to the extent that martial music, huzzas of victory and the gleaming of banners and the tramp of armed men, differ from the groans of the wounded and dying, the ghastly corpses, the blood-soaked fields, and the weeping and mourning of those whose loved ones have been laid in gory graves.—*N. Y. Observer.*

—From some experiments made at the University of Kansas it appears that the average person can taste the bitter of quinine when one part is dissolved in 452,000 of water. Salt was detected with one part in 640 of water, sugar in 288 of water, baking-soda in forty-eight of water. In nearly all cases females could detect a smaller quantity than males.

—During a very tedious ride on a railroad out of Memphis the passengers, tired, dirty and thirsty, all cussed the company with the exception of one single passenger. His fellow-passengers commented on this and asked him why he didn't cuss the road, too. "It would be hardly fair," he replied, "as I am traveling on a free pass; but if they don't do better pretty soon I'll go out and buy a ticket and join you."—*St. Louis Globe.*

—Dr. Backus, of Rochester, N. Y., stepped out one spring morning to survey his lawn, which he had neatly terraced and sodded the day before. A pair of swine had broken out of their pen during the night and rooted the fair surface until it looked like a battle-field where several nine-inch shells had just exploded. The doctor was too old to cry and too pious to swear, and he therefore observed with some emotion: "Well! you never *can* lay dirt to suit a hog!"—*Albany Journal.*

—A farmer living near Howe's Cave, N. Y., had a surprise recently. He was plowing a field about half a mile from the cave's mouth. He stopped for a few minutes to rest himself and his horse under the spreading branches of a tree. Moving on a little distance, he turned, and looking back was dumbfounded to see that the large tree was gone. He ran back and almost fell into a great chasm, which had swallowed the tree and a piece of land. It is believed that this will lead to the discovery of an outlet from the rear of Howe's Cave.—*N. Y. Tribune.*

GRINDSTONES.

More Used Now Than Formerly—Where They Come From and Their Prices.

"There are two mistaken ideas about grindstones in the public mind," said a dealer in those articles, whose place was visited by a reporter yesterday. "One is that they are going out of use, and the other that they explode. Instead of their going out of use, just the contrary is the fact, for more are used now than ever before. Why is this? Because of improved cutting machinery that requires the aid of grindstones to keep it in perfect condition. As for their exploding, as you read about every once in a while, that's all nonsense. They do not explode. But they do break, scattering themselves about some and hurting people. But this is due to their being mounted wrongly, not to anything of an explosive nature about them."

"Where do most of the grindstones come from?" was asked.

"From France and Germany chiefly. Some come from England and some from the western part of this country. They are found in Ohio, but not at all in the East. The Ohio stones are good for rough grinding, but the French and German ones are the best, because they can be used for finer work—for flat surface grinding and for cutlery. I send a great many of them to people in the far West, even to Nebraska and California. I also ship them to Central America. Canada, too, buys many in this city. The largest grindstone I ever sold was fifty-four inches in diameter and had an eight-inch face. The size most generally sold is twenty-four inch diameter with a three to four inch space."

"What do grindstones cost?"

"The smallest is a three-inch diameter, two inches thick. A single one of these costs thirty cents and $2.75 a dozen. One ten inches in diameter, two inches thick, costs ninety cents. One thirty inches in diameter four inches thick, costs $3.50. One thirty-seven inches in diameter, seven inches thick, costs $18.50. A grindstone forty-eight inches in diameter, eight inches thick, which is the largest in the regular lists, costs $40."

"What do other sharpening stones cost?"

"They are mostly sold by the pound. The Arkansas oil-stone, which is six to nine inches long, costs $3 a pound; the Lake Superior oil-stones from forty to sixty cents. Sandstones sell at five cents and the Hindoostan kitchen-stone at twenty cents. The white Wichita oil-stones bring from thirty-five cents to $1. We sell a great many of the Belgium oil razor hones. They cost from sixty cents to $10 each, according to their size.—*N. Y. Mail and Express.*

HORSES FOR WARFARE.

Russia and the United States the Only Two Countries with a Proper Supply.

The only two great nations which contain enough horses within their borders to meet all the exigencies of war or of peace are, unquestionably, Russia and the United States. In his "Summer Tour in Russia," published in 1882, Mr. Antonio Gallenga tells us that the unwieldy empire under the dominion of the Great White Czar "covers one-sixth of the habitable globe, while its population hardly exceeds that of Austria and Germany, its two nearest neighbors, combined." Mr. Gallenga adds that the Rev. Henry Lansdell, in a journey of five months from the Thames to the mouth of the Amoor, went over 2,600 miles by rail, 5,700 miles by steamboat and 3,000 miles by the aid of horses—or about 11,300 miles altogether in a straight line. This amazing empire, sparsely occupied by human beings, when its prodigious bulk is borne in mind, boasts possession of more horses than any other nation on the face of the globe.

General Sir Robert Wilson, who was British Commissioner at the headquarters of the Russian army during the Moscow campaign of 1812, tells us that no troops in the world are better mounted or can defend ground better than the Russian regulars. "Their artillery," he adds, "is so well horsed and so nimbly and handily worked that it bowls over all irregularities of surface with an ease, lightness and velocity which give it a great superiority. The vivacity and alertness of the cavalry and the unquailing steadiness of their infantry make it a pleasure to command them in extremest difficulties; for, as in the case with the British soldier, the most unbounded confidence may be reposed—to use a sailor's expression—in their answer to the helm, in every stress of situation and under the greatest trials." From the same source we learn that the First Napoleon had witnessed with admiration the unyielding valor of the Russian soldier under circumstances the most unpropitious for its display, and had recognized qualities and propensities which render Russian armies, when properly organized, pre-eminent in the field. "He had became acquainted with the no less resolute character of the Russian peasantry, and had found nothing wanting which art and discipline might not supply for the construction of a military force on the most extensive, efficient, and economical basis."

At that time the Russian soldier's pay was not more than twelve shillings per annum, and his only ration in time of peace was water and rye bread baked like biscuit. Behind the army an enormous territory, with a reserve of horses—a considerable portion of them, it is true, not more than ponies, numbering from thirteen to fourteen million head. There is no more fatal error than that which arises from underrating an enemy's strength—an error which the history of the past shows that, of all others, this country is the most apt to commit. Turning to the United States, we find that not less than eleven million head of excellent horses is contained within the broad limits of the Union—a stock upon which, in combination with the equine resources of the Dominion of Canada, it is probable the war department of this country will have to draw largely in the event of a protracted war with such a power as that wielded by Russia.—*London Telegraph.*

SO GLAD.

A Tramp's Greeting to a Member of the Profession.

A man about forty years of age was leaning against one of the walls of the Union Depot yesterday, when a chap sauntered past him several times and looked him over as if trying to establish his identity. Number one stood the scrutiny without any evidence of demoralization, and number two finally approached closer and observed:

"Cold day."

"Yes."

"Live here?"

"No."

"Going out on the cars?"

"No."

"Perhaps you are a respectable member of society?"

"O, no."

"You ain't! Shake! Say, perhaps you belong to the profesh?"

"I do. Just deadheaded in on a freight train."

"Well, I declare! I hoped you was a tramp, and yet I feared you might be one of these high-toned, respectable chaps."

"Anything up?"

"Anything! Well, I should smile! Come down into the freight sheds and I'll fix up as the man who was knocked to pieces by the premature discharge of a cannon, and we'll find this town a clover field! Lands alive! but how glad I am you didn't turn out to be a respectable member of the community!"—*Detroit Free Press.*

Vaccination.

The anti-vaccinators at Nelson, near Burnley, England, have just completed a house-to-house canvass of the ratepayers, who were asked to answer, in writing, the two questions: "Are you in favor of vaccination?" and "Are you opposed to compulsory vaccination?"—papers being left to be filed and subsequently called for. About 2,200 papers were distributed, of which about 2,000 were returned. Of these 360 were returned blank or otherwise informal, 1,534 rate-payers stated that they were opposed to compulsory vaccination, while only 81 declared for it. Of the 1,534 opposed to compulsory, 1,220 are also opposed to vaccination; 216 did not answer the first question, and 98 are in favor of vaccination; 34 answered the first question in the affirmative, but did not answer the second; 31 rate-payers certified to cases of death in their families from vaccination, and 36 to cases of injury.—*London News.*

—Street cars in New York, Albany and Washington are to be moved by compressed air. The air chambers are under the cars, which can be run at the rate of twenty-five miles an hour, and can be stopped at once.—*N. Y. Tribune.*

SCARECROWS.

Decadence of Devices to Protect Cornfields—Mr. Woodruff's Supposititious Cat.

Farmers complain that of late years the scarecrow has become entirely useless. There was a time when one scarecrow with a St. Patrick's hat and an Oshkosh frock coat would protect a corn-field from crows of average intelligence, but it is no longer efficacious. The crows have become familiar with the appearance of the tramps who infest all parts of the country, and it is well understood in crow circles that the tramp never carries a gun, and is therefore harmless. The scarecrow so closely resembles the tramp that crows fail to discriminate between them, and imagining that the scarecrow is merely a contemptible tramp, they steal corn under the very shadow of its hat.

It was always a mistake to suppose that crows could be for any length of time frightened by scarecrows. The scarecrow was an imitation man, and it ought to have been foreseen that the crows would some day find that a scarecrow incapable of firing a gun could do no harm. The farmers should have appealed to that fear of the supernatural which is inherent in all animals. Could they have employed a ghost to protect their corn-fields, not a single grain of corn would have been stolen. The success of Mr. Woodruff's efforts to rid his house of rats by means of a ghosty cat is alone sufficient to prove that if we really want to frighten animals we must appeal to their fear of the supernatural.

It is well known that rats and mice can not be successfully resisted with traps. Young rats may occasionally wander into a trap, but every experienced rat knows a trap when he sees it and simply laughs at it. In every house there are sure to be two or three leading and influential rats who are perfectly familiar with traps, and who warn their younger associates to beware of them. The old-fashioned spring trap is decidedly popular among rats, for the reason that they can readily spring it and afterward carry off the cheese at their leisure. As for those ingenious traps designed to catch mice alive, they are entirely worthless. A rat who sees a small box with a seductive piece of cheese displayed behind the iron bars of an attractive-looking compartment knows perfectly well that it is a trap, and he will refuse to enter the door of the box even when it is decorated with the legend in large plain letters: "Rats will please enter and turn to the left. The best of free cheese always on hand."

Mr. Woodruff having spent much money on traps, and having found that poison was in vain and real cats were lazy, decided to try the experiment of frightening rats by convincing them that the house was haunted. He prepared a large stuffed cat with green glass eyes and a ferocious and sarcastic smile, and placed in her interior an electric light. There was a large closet in his bedroom which contained half a dozen rat holes from which rats came forth every night on foraging expeditions. In the middle of this closet he placed the cat and connected her internal light with wires running to a battery near his beside. Having thus prepared his feline ghost Mr. Woodruff went to bed and waited for the rats. As soon as the house was quiet the rats came out, and when, judging from the noise, there were at least a dozen in the room, he turned on his electric light. Wild squeaks of horror greeted the awful appearance of the ghostly cat, with her glowing eyes and shining teeth, and there was the rush of many feet as the frightened rats fled to their holes. Mr. Woodruff, chuckling over the success of his experiment, arose and examined the closet. Two rats, who had tried to enter the same hole at the same time and had become securely jammed, were kicking fiercely, while three female rats lay on the floor in a dead swoon. These were soon seized and committed to the vasty bathtub, and the ghostly cat was left to stand guard over the rat holes till daylight.

What is still more remarkable, the rats left the house without an hour's delay. There had previously been, at a low estimate, fully 7,000 rats in that house, not to speak of swarms of subsidiary mice. From the hour when the stuffed cat's electric light began to glow not a rat or a mouse has been seen in Mr. Woodruff's house. The animals that had laughed at traps, mocked at real cats and grown fat on poison, were frightened off the premises by a single apparition of an apparently supernatural cat, and their stories have given the house such an uncanny reputation that it is safe to prophesy that rats and mice will avoid it for years to come.

The farmers should take a hint from Mr. Woodruff's success. If they could invent a scarecrow representing a tramp at work the crows would be vanquished. They would, of course, assume the working tramp to be a supernatural being, and the terror with which the sight would fill them would rid the whole region of crows for at least during the present season.—*N. Y. Times.*

—An Englishman has patented a process of manufacturing slippers, sandals and even common shoes out of paper. Paper-pulp or paper-mache, is employed for the upper, which is molded to the desired form and size, and a sole is provided made of paper or pasteboard, leather-board, or other suitable paper material, which is united to the upper by means of cement, glue, or other adhesive material. The upper is creased, embossed, or perforated at the instep and sides, which renders it somewhat pliable and prevents it cracking while in use.—*Chicago Tribune.*

—A curious phenomenon is reported from some of the vineyards in the province of Malaga. According to Spanish papers, plants attacked by the phylloxera and given up as practically dead have begun to show marked symptoms of vitality, due, it is believed in the localities, to the destruction of the insect by gases or electrical conditions consequent on the earthquakes in that district.

—A news item in an exchange is headed "A Man Drowned by a Drum." If it can be proved that the man beat the drum—which was probably the case—the instrument should be acquitted on the ground of self-defense—*Norristown Herald.*

FASHION NOTES.

Things Worth Wearing—Styles at Home and Abroad.

The overskirt is moribund.

Skirts grow plainer and fuller.

Coiffures grow higher and higher.

Dress bodices are cut to produce square shoulders.

Absinthe is a much admired French shade of green.

The popular craze in Washington is mandolin playing.

Stringless bonnets are worn by youthful women only.

The fine embroideries on fine bonnets are marvels of artistic work.

Corsage bouquets are very large, and worn in the centre of the bosom.

Sleeves with a sagging puff at or above the elbow are coming in vogue.

Full belted waists grow in favor for wash dresses, both white and colored.

Fans of large and unique forms are the only ones that should be used for wall decorations.

Large bows of wide ribbon or of piece goods, generally soft silk, adorn many summer frocks.

Chartreuse is a color that embraces many shades of green, from old bottle to pale cress green.

A guitar, mandolin, or banjo, to hang on walls, takes the place of the much-abused tambourine.

The latest version of the gable roof bonnet is the Judic poke, small, but pronounced and very chic.

Absinthe and pale choral is a French color combination much in favor on the other side at present.

Embroidery, flowers, feathers and tinsel are the combinations found in dressy summer bonnets.

Egyptian and Arabian fancies in furnishing and decorating rooms are the caprice of the moment.

Velvet bonnet strings are being laid aside for those of lace and gauzy stuffs, especially gauze ribbons.

Tennis, afternoon teas, trotting and private theatricals are the amusements of Washington this spring.

The Louis XV. capots of tulle or lace is the dressy bonnet of the women in Paris. It is almost conical to accommodate the high coiffure.

A cluster of water-green feathers looks well as the only trimming of a fine black straw bonnet, the lining and strings being of black velvet.

Dresses composed entirely of black lace, real Chantilly, Lima, yak or woolen lace, piece lace or laize and robe dresses are all the rage in Paris.

Much of the embroidery seen on the handsome laces, fabrics and millinery is wrought with threads of real gold, exquisitely fine, but exceedingly effective when raised, stitch upon stich, to represent the leaves or petals of flowers translated into gold.

Bonnets composed entirely of tulle and lace on a wire frame are in course of preparation for summer toilets of ceremony. The strings are of tulle exceedingly wide, and tied in a full bow under the chin; the frames are very high in the crown, and the only trimmings are bunches of fine flowers or many loops and ends of pale or white satin ribbon rising in a pyramid on the top of the conical crowns.—*N. Y. Sun.*

THE RETRIEVER.

A Dog Whose Services in the Field Are Considered Indispensable.

The term retriever is in itself sufficiently indicative of the duties which this breed of dog is called upon to carry out, and these duties can, it is universally admitted, be successfully performed by many varieties besides the one in question. In fact, the very creation of the retriever proper, as he now exists, is, comparatively speaking, of but recent date. Up to the time of the introduction of this class of dog, sportsmen were compelled by force of circumstances to rely upon the services of their other sporting dogs, and the majority of the pointers and setters and spaniels were broken to retrieve as well as to point the game. There are certainly many objections to this practice, as there is considerable difficulty in keeping pointers and setters who have been broken to retrieve their game steady in the field. The presence, therefore, of a well-broken retriever is considered indispensable to a shooting party under most circumstances, and invariably so when beaters are employed. In consequence, probably, of the recent introduction of the retriever as a distinct variety into the dog family, there are numbers of very indifferent and unworthy specimens, to use a mild expression, of the breed to be found in all directions. These may, we think, reasonably be considered to be the results of some of the many experiments that no doubt have been made from time to time in breeding this sort of dog, which experiments in many cases have turned out disastrously for those whose fertile brains conceived the cross. At any rate, the almost countless number of black dogs which are seen in all parts of the country, and which are invariably styled retrievers by those most interested in them, would cause it to be supposed that their owners, for the most part, are honestly under the belief that in doing so they are describing the animals correctly. It is not, however, only to sporting dogs alone that the art of retrieving game on land or in water is confined, for many breeds of dogs which are by no means identified with sports in popular estimation can be taught to do so easily by any one with patience enough to undertake their education. As a matter of fact, we have ourselves owned bull terriers which would do this retrieving business well enough; but still they always failed in one essential, mouth. The tenderness of a good retriever's mouth has more than a great deal to do with his value as a workman; it is simply essential that he is not hard-mouthed, and does not injure fur or feather in carrying it in his jaws. In this respect a vast number of what would otherwise be very good retrievers fail, and become worthless in the field, for a dog that mangles his game before he brings it in would be certain to gain but slender thanks for the assistance he lends a modern sportsman.—*Book of the Dog.*

—Over-done beef or mutton is, a family doctor writes, quite as indigestible as hard-boiled eggs: it should be well cooked to be healthful, but rather inclined to under-done

THE BARTHOLDI STATUE.

Mr. Nye Talks About the Bronze Goddess Whose Mission It Is to Enlighten the World.

When Patrick Henry put his old cast-iron spectacles back on the top of his head and whooped for liberty, he did not know that some day we would have more of it than we know what to do with. He little dreamed that the time would come when we would have more liberty than we could pay for. When Mr. Henry sawed the air and shouted for liberty or death, I do not believe that he knew that the time would one day come when Liberty would stand knee-deep in the mud of Bedloe's Island and yearn for a solid place to stand upon.

It seems to me that we have too much liberty in this country in some ways. We have more liberty than we have money. We guarantee that every man in America shall fill himself up full of liberty at our expense, and the less of an American he is the more liberty he can have. If he desires to enjoy himself, all he needs is a slight foreign accent and a willingness to mix up with politics as soon as he can get his baggage off the steamer. The more I study American institutions, the more I regret that I was not born a foreigner, so that I could have something to say about the management of our great land. If I could not be a foreigner, I believe I would prefer to be a Mormon or an Indian not taxed.

I am often led to ask, in the language of the poet, "Is the Caucasian played out?" Most everybody can have a good deal of fun in this country except the American. He seems to be so busy paying his taxes all the time that he has very little time to mingle in the giddy whirl with the alien. That is the reason that the alien who rides across the United States on the "Limited Mail" and writes a book about us before breakfast wonders why we are always in a hurry. That is the reason we have to throw our meals into ourselves with a dull thud, and hardly have time to maintain a warm personal friendship with our families.

We do not care much for wealth, but we must have freedom, and freedom costs money. We have advertised to furnish a bunch of freedom to every man, woman or child who comes to our shores, and we are going to deliver the goods, whether we have any left for ourselves or not. What would the great world beyond the seas say to us if some day the blue-eyed Mormon, with his heart full of love for our female seminaries and our old women's homes, should land upon our coasts and find that we were using all the liberty ourselves?

What do we want of liberty, anyhow? What could we do with it if we had it? It takes a man of leisure to enjoy liberty, and we have no leisure whatever. It is a good thing to keep in the house "for the use of guests only," but we don't need it for ourselves.

Therefore, I am in favor of a statue of Liberty Enlightening the World, because it will show that we keep it on tap winter and summer. We want the whole broad world to remember that when it gets tired of oppression it can come here to America and oppress us. We are used to it, and we rather like it. If we don't like it we can get on the steamer and go abroad, where we may visit the effete monarchies and have a high old time.

The sight of the Goddess of Liberty standing there in New York Harbor night and day, bathing her feet in the rippling sea, will be a good thing. It will be first-rate. It may also be productive of good in a direction that many have not thought of. As she stands there, day after day, bathing her feet in the broad Atlantic, perhaps some moss-grown Mormon moving toward the far West, a confirmed victim of the matrimonial habit, may fix the bright picture in his so-called mind, and remembering how, on his arrival in New York, he saw Liberty bathing her feet with impunity, he may be led in after years to try it on himself.—*Bill Nye, in Boston Weekly Globe.*

Friendly Consideration.

"Please, mister, gimme a dime to buy some bread," whined a tramp to a man in the street.

"What do you want with it?" was the gruff reply.

"I want to eat it."

"Why don't you go to work and earn it? It only costs a man ninety dollars a year to feed himself in this country, and you should surely be able to raise that much. I'm a friend of yours, and want to give you the best advice."

"How much did you say?"

"Only ninety dollars a year."

"Well, mister, s'pose you gimme a lift on that. Make it forty-five, an' I'll hustle around for the nex' six months an' try to raise the balance. I don't want to be too hard on a friend, you know, fer I've allers been willin' to do my share."

His suggestion was not adopted.—*Merchant Traveler.*

—The contract for the great bridge across Lake Champlain, from North Hero to Alburgh, Vt., has been awarded the R. F. Hawkins Iron Works, Springfield, Mass., for a little less than $50,000. This is to be the first iron bridge across Lake Champlain, and will be the finest bridge in the State of Vermont, and one of the finest in New England. For more than 200 years the people of Grand Isle County have been obliged to cross the lake by boats in summer and on the ice in winter. A bridge has been talked of for twenty years.—*Troy Times.*

TEMPERANCE.

'MY BOY! MY BOY!"

Another Terribly Sad Tragedy Caused by the Demon Drink.

One of the saddest tragedies that ever occurred in Cincinnati was recently witnessed at the elegant residence of Mrs. Nettie Champlin, shortly before two o'clock in the morning. The principal parties were Harry Champlin, a young man well known about town, and Dr. E. E. Loy, his brother-in-law, a well-known, practicing physician. The former received his death-wound from a thirty-two caliber revolver in the hands of Loy. The trouble was brought about by the conduct of Champlin, who was quick-tempered and easily offended when in liquor. It seems that after taking dinner Champlin sat on the front steps with his mother until about half-past nine o'clock. He then expressed a desire to go up-town. His mother tried to induce him not to go, but after kissing her and bidding her an affectionate good-night he started off.

"Don't drink anything, Harry," were his mother's parting words. Champlin walked up and down Vine street with some friends and visited a number of saloons, partaking freely of liquor. About one o'clock he started for home. All the members of the family had retired when he reached the house. Champlin's room adjoined his mother's on the second floor. On reaching his room the young man began to talk to his mother and in his drunken fury cursed her. The noise aroused Mrs. Glenn, a friend of the family, who was on a visit from Michigan. She hastened to Champlin's room and begged him to desist. Champlin resented this by hurling a chair at Mrs. Glenn. This roused Dr. and Mrs. Loy. By the time they reached the spot Champlin had entered his mother's room and begun to beat her, cursing and swearing like a madman.

As Dr. Loy entered the room Champlin turned on him and with an oath struck Loy a terrible blow on the forehead. The men then grappled, and after a desperate struggle the infuriated man was overpowered by the muscular doctor. All this time Champlin was uttering threats that he would kill both his mother and Loy. After a short time Loy let Champlin get up. The young man rushed for the back stairs, closely pursued by a colored servant. Champlin, on getting down stairs, grabbed a carving knife from the table in the kitchen, and started back up the stairs. The house was in darkness, except a dim light in Champlin's room. Dr. Loy and his wife had taken up a position in the front hall.

As Champlin came up the stairs the knife could be seen gleaming in his hand. On reaching the top of the stairway, Champlin, perceiving the doctor, uttered an oath and rushed upon him, making a slash at him with the knife. Loy stood in front of his wife. As the madman approached Loy fired, Champlin grasped the rail of the staircase, and the knife dropped from his hand.

"You have killed him!" screamed Mrs. Loy, as her brother fell. Loy answered her that Champlin had only been frightened, as he had shot at random. But when a light was hastily procured, there, with upturned, bleeding face, lay the young man, dying. He did not speak a word after Loy's shot was fired. The agonized mother rushed into the room, her face swollen from her boy's blows, and, throwing her arms around the dead youth, she wailed: "Oh, my boy! My boy! My baby boy!"

It required the united efforts of the members of the household to tear the agonized mother away. Dr. Loy gave himself up to the officers who soon afterwards appeared on the scene and was taken to the Central Station. After telling the story of the tragedy, a charge of homicide was entered against him by the Captain of the precinct and he was locked up.—*Irish World.*

INJURIOUS HABITS.

Easier to Break Them Off at Once Than to Do So Gradually.

It is easier to break off a bad habit suddenly than gradually. The gradual plan was tried at the inebriate asylums, but it was found that the best thing to do with an old toper was to cut off his supply of drink at once. For a day or two, or even three or four days, he suffered much; but the vital powers, after being relieved of the daily poison, quickly rallied, and the man improved in health every hour.

It is so with the tobacco slavery. An interesting anecdote in point is told of the late James Harper, one of the founders of the great publishing house of Harper and Brothers. When he was a young publisher in Cliff street, he tried hard to dissuade one of his neighbors from drinking. One day, when he had talked earnestly on the subject, his friend turned upon him thus:

"Neighbor Harper, you don't like the taste of liquor, but you are as much a slave to tobacco as I am to rum, and you couldn't break off that habit any more than I could break off drinking."

To this retort Mr. Harper made no reply at the time, but it sunk deep into his mind. He thought it over all day, and finally made up his mind that no habit of his should ever be a snare to another. Before he slept that night he put his tobacco, his pipes and all the apparatus of smoking away up out of sight on the top shelf of the kitchen. To the day of his death he never used tobacco again.

It cost him a severe effort to keep his resolution, but he made it cheerfully, and did not mention the matter until the victory was complete.

Many persons are still living who have heard him relate this incident of his early life.

Thurlow Weed did something similar. When he had been a pretty hard smoker for fifty years, his physician told him that his cigars were injuring him, and that he must stop smoking if he wished ever to have better health. Mr. Weed took his cigar from his mouth, threw it away, and never smoked again.—*Youth's Companion.*

"RUM is the great evil," says Commander McCalla, of the navy, in speaking of the troubles on the Isthmus of Panama. So it is all through Central America, and American capitalists find it their greatest f

SATURDAY, JULY 4, 1885.

It is said that the Maryland post-offices are to be shaken up this month. Who will get the Oakland prize?

Just exactly what we said. The Burgess and Commissioners selected the man for Bailiff whose bid was the highest of all those filed with the Board. No use trying to bolster up such official action. The people understand the matter thoroughly, and they will render their decision at the next corporation election, and don't you forget it.

The people of Oakland are still waiting for a statement of the receipts, disbursements and financial condition of the corporation, which the law makes it the imperative duty of the Burgess to make out and publish, They are also waiting to see the law enforced with regard to opening obstructed streets and alleys, How much longer must they wait.

The "offensive partisan" circular issued by Secretary Vilas is proving itself to be a two-edged sword. Whilst Republican officials who are being turned out may be offensive partisans in the eyes of Democrats, it is pretty certain that those who are being put in their places are offensive partisans in the eyes of everybody. The new appointees may be regarded as "offensive partisans" by the Senate when the appointments are submitted to that body for confirmation.

There is a great deal of talk in administration circles at Washington just now about the selection of a Democratic candidate for Governor of New York, to be voted for at the next State election. There are quite a number of aspirants for the honor of leading the Democratic hosts in the Empire State, prominent among whom is the present Executive, Gov. Hill. It seems, from all we can gather from Democratic sources, that President Cleveland is anxious that his administration shall be endorsed by the election of a Democratic Governor in his own State, (New York,) and therefore will have something to say as to who shall be the candidate for that office.

Gov. Hill was Lieutenant Governor when President Cleveland was Governor of New York, and the *Washington Post* tells us that the President is openly opposed to Gov. Hill for the nomination by the Democratic party. From the same authority we learn that two experts have been sent to Elmira, the home of Hill, for the purpose of looking into his record in all its details, and that the fact which is to be used to kill him off is that "Hill has year after year handled the money with which ballots were purchased in Elmira."

Our purpose in calling attention to the above statement is to bring to the attention of our readers what seems to be a wide-spread and growing evil. That all sorts of devices and improper influences are brought to bear upon voters for the purpose of carrying into effect the wishes of professional politicians, in order to defeat the will of the people, cannot be successfully denied. It has become a very common thing to purchase ballots. The handling of money year after year with which ballots are purchased is not only a common occurrence, but seems to be well known and recognized by men of prominence and by officials from the President down the long list. We have refered to the case of Governor Hill because its prominence gives it importance, and not because we believe the evil is confined to the Democratic party. The various systems of improperly influencing votes, whether by direct purchase or by some other means, ought to be broken up, if such a thing were possible. At any rate, all decent people ought to discountenance the whole business. If the press of the country would persistently oppose this monster evil, which has become so general and wide-spread until there is hardly an election district or voting precinct in the country exempt from its pernicious influence, much might be accomplished in the way of reform. The time has come when the acceptance of a nomination in one of our counties for Clerk, Register, House of Delegates, or in fact any elective office, involves the expenditure of a considerable amount of money, and there are many instances where men, well qualified to fill positions of honor and trust, cannot be induced to do so because of that fact. Under the existing state of affairs a fair election, a fair expression of the popular will, is almost if not quite impossible. Is it not high time to call a halt? Would it not be infinitely better to return to the primitive purity which characterized elections in the early days of the Republic? We believe these questions should be answered in the affirmative, and we trust the time will come, and come speedily, when no man will be allowed to handle money year after year for the purpose of purchasing ballots in any political party.

More Tariff Tinkering.

The business men of the country will see with regret the announcement of Mr. Morrison that it is his purpose to introduce a bill for the reduction of the tariff at the next meeting of Congress. One might imagine that the wretched failure of the "horizontal reduction" bill at the last session of Congress would have deterred him from a second attempt. It was demonstrated then that the Democratic party cannot be brought to the united support of a bill of this character, and that to press it will cause dissensions in that party, if not a permanent split. The flank of the party led by Mr. Randall is more widely separated from the flank led by Mr. Carlisle than if they belonged to separate parties. Moreover, the issue was distinctly made in the congressional elections last fall, and the popular verdict was against tinkering with the tariff. Mr. Frank Hurd, who was the free-trade leader in the last House, very popular in his district, a brilliant orator and a sincere man, made the issue of tariff reduction in his district and was defeated on it.

The country now is passing through a severe business depression. What it needs is rest from all disquieting influences. A tariff agitation is just the thing which it does not want. Even if it were conceded that a tariff reduction would be ultimately beneficial to the country, it is certain that its first effects would be very injurious. Many of our industries are simply hanging on at a loss, hoping for a turn of the tide. At times there come cheering indications that the worst is over and that a more buoyant state of affairs is ahead of us, but these indications have never fulfilled their promise. But while our industries may be able to bear these repeated disappointments, it is by no means certain that they will be able to bear another season of uncertainties as to values due to a prospective tinkering at the tariff. If there should be an increase in the number of business failures during the coming months of summer and autumn, public opinion may hold Mr. Morrison responsible.—*Baltimore American.*

The Memphis *Avalanche*, one of the leading Democratic papers of the Southwest, characterizes as "low business" the proposed plan to turn out Republican officials on charge of "offensive partisanship" without giving the accused a hearing, and further says:

"The 'offensive partisan' business begets an offensive, mean, low detective service by a mean, low set of instruments no party can afford to employ. The President has made a mistake in the use of the term and in permitting its use. Mr. Vilas has made a mistake in the application, and mistakes haye not been confined to his department. Upon strictly *ex parte* inquiry officials are turned out, when common fairness demands that charges shall also imply two-sided inquiry.

There are but two manly ways about this business. The first is the old way—You are not of the successful, go. The second is an honest, impartial investigation, with going or staying dependent upon the result. The other way is a secret, star-chamber investigation, with one side heard and turning an inevitable result. If this is to be the practice of one party, it will be the practice of the other. It is the sneak-thief way."

Tammany in a Rage.

NEW YORK, June 27.—The feeling here among the Tammany men on the President's custom-house appointments is decidedly bitter. Coroner Martin, one of the leaders of the organization, said, when asked how he liked them: "It is a crying shame. The President has made a gross blunder. This man Hedden has never done anything for the Democracy, and in appointing him the President has insulted true Democrats." They all feel about that way, though some pretend indifference, and say they never heard of Hedden, and don't know anything about him.

Of course, the County Democracy men are jubilant. Even Hubert O. Thompson seems to be very happy.

The Irving Hall men keep pretty quiet, but it is plain that they are all in the dark as to what these appointments mean. There are many Democrats who say that Mr. Burt's appointment is far beyond the carrying out of a necessitous obligation to the Independent Republicans, and this selection is, so far as can be learned to night, a stumbling block to the old Democrats of the country.

The Independent Republicans are very well content with the list of appointments, They say that the President has divided up the offices within his jurisdiction in an inoffensive and patriotic way. The Tammany men declare that the appointments will jeopardize the result of the fall elections.

No Fears for the Future.

BOSTON, Mass., June 29.—A large number of prominens gentlemen, representing the bar, bench, pulpit and platform, counting-room and council chamber, were in attendance at the reception given to-night by the Norfolk Club to General John A. Logan at the Parker House. As the guest of the evening appeared in the doorway, leaning upon the arm of the president of the club, Hon. Am French, he was greeted with cheers. Gen. Logan bowed gracefully to the party, when they responded with another round of applause. Then, in turn, each man came forward to grasp the hand of the visitor. Mrs. Logan then entered the room and was given a most cordial reception. After the formalities of the reception were ended the party proceeded to the barquet hall.

President French rapped to order and in appropriate words introduced Governor Robinson as the first speaker. Gen. Logan was then presented and was greeted with great applause. He referred to the debt which the West owes to Massachusetts and to the influence exerted by her. In nothing, however, was this influence more clearly and permanently imprinted upon the nation than in the matter of education. "In the present aspect of affairs," he said, "it is by education alone that the wisdom of our course in reference to the elevation of the colored race is to be fully vindicated in the minds of reasonable men." In speaking of reforms, Gen. Lagan said: "In my opinion a reform which will guarantee personal rights will be of more advantage to the country than the transferring of the funds of the government from the sub-treasuries of the United States to the banks."

Of civil service reform he said: "It is the child of the Republican party, but unfortunately has been put out to nurse with a stranger, and, if not dead now, looks sick unto death. The law is now being construed to the effect that a person who voted the Republican ticket at the last election committed a crime against 'the peace and dignity of the Democratic party,' a new offense, hitherto unknown to law or politics, to-wit: 'Offensive partisanship.' Mr. Chairman, the 'offensive partisan' is the Democrat. He is to be appointed as a reward for his political zeal. His appointment will not improve the public service, I fancy, but is made for partisan reasons only. The Democrats have been diligently searching for 'rascals' with a view of turning them out, as they should have been, had they been found. Every time they have scratched for a 'rascal' they have found only an 'offensive partisan,' and have instantly turned him out.

"The Republican party has had undisputed leadership for the past 24 years. The principles and politics announced and maintained in its record of splendid achievements have challenged the admiration of the foremost men of the entire world. Such a party must lead; it cannot follow. Such a party deserves and must again achieve success. I have no fears for the future of the Republican party. Its principles, knocking at the door of the conscience of the people, will regain admission."

Democrats Not Enthusiastic.

From a business point of view President Cleveland appears to have made a satisfactory choice of Collector of the Port. Politically, Mr. Hedden's appointment is of more doubtful expediency. No one in the party will recognize the services Collector Hedden rendered in winning the victory which gives the important office he is now to fill into Democratic hands. The new appointments will be received with entire satisfaction by the Mugwump supporters of President Cleveland. If they strengthen the Democracy in the State it will not be because of any enthusiasm they excite in the ranks of the party.—*New York World (Dem.)*

Within two years our political Prohibitionists have bestowed upon the Democratic party the high places of the State of Ohio and of the United States, and we are not aware that the cause of temperance has gained anything by the operation.—*Cin. Com. Gaz.*

Our Washington Letter.

From Our Regular Correspondent.

WASHINGTON, D. C., June 29, 1885.

A healthy contribution to the current literature of the day, is the letter written by ex-Secretary Chandler in defense of himself and the Advisory Board in the matter of the "Dolphin." Mr. Chandler proceeds to excoriate Mr. Whitney in a merciless manner, charging him with a refusal to accept the vessel for no other reason than to cast odium upon his predecessor in office. The fact that Roach had built a vessel in exact conformity to his contract, and out of materials which were admitted by everybody to be first-class in every respect, was of itself sufficient to clear Mr. Roach of any charge of jobbery, but to punish Roach for building a vessel under a Republican administration. Mr. Whitney has contended that the contract calls for a speed and strength of construction that are not mentioned in the contract at all. Upon the whole, the letter of ex-Secretary Chandler is a crusher, and the Democratic organ in Washington this morning announces Mr. Whitney's intention to make no response to it, which under the circumstances is very significant.

The peculiar ways of the administration as conducted by Mr. Cleveland, continue to be a conundrum with those who fail to get what they are asking for. Here was the case of Mr. Fleming, of Kentucky, who came endorsed by the best blood in the State, from the Governor down, for the Louisville District Attorneyship. Besides he had both Senators and all the Congressmen from Kentucky to intercede for him, but the President ignored them all and gave the appointment to Mr. Wickliffe who had neither backing nor party service to commend him. Of course Mr. Fleming and his friends were much hurt, and a new source of exasperation against the administration was thus built up in Kentucky for the time being. However, in a few days, when Mr. Fleming was on a visit to Washington, the President sent for him and frankly told him that from the inquiries he had made concerning his capacity, that he thought that Mr. Wickliffe would make the better District Attorney, and that Mr. Fleming would make an excellent Associate Judge of the Supreme Court of New Mexico, and his commission was made out instantly.

By the death of Hon. Richard T. Merrick the Democracy of the country loses one of its most shining lights, and the Bar one of its most brilliant members. As an orator either before a jury or before a promiscuous political audience, he has had but few equals. In the conducting of a law suit either before a criminal or a civil court, he was persistent to any degree that could insure success, and thinking that he was in the right in the famous Electoral Commission, he made a most powerful and convincing argument in favor of the claims of Mr. Tilden. Mr. Merrick also figured conspicuously in the Surratt case in 1866, acting as his counsel and securing his acquittal, and more recently as prosecuting counsel in the celebrated Star Route cases, in which the Government beat itself.

JUNIUS.

Senator Gorman on Office-Seekers.

A Chicago dispatch to the New York *World* quotes Senator Gorman, of Maryland, as saying in regard to office-seekers:

"The trouble with these fellows is that they want the earth and don't know how to get it. They get a lot of endorsements first and then fire them into a department. Then they come on themselves and start in to make an impression. If their documents are any good they spoil the effect by getting introduced to the President. Some of them find a Congressman to do it, and some of them pick out a solid business man on whom they may have a grip, and then the apparent contrast kills their chances. It isn't true that the President wants to see most of the applicants in person, so he can 'size 'em up.' He wants most of them to stay away. I've seen a man go off of a lunch route into the White House loaded with beer and cheese or bad whisky. They have had to put in fan ventilators, and it isn't any wonder the President has changed his mind about taking a summer vacation. I tell you he wants air; that's what ails him. If you could hear the remarks he makes about people when they leave, you could write a new joke-book. He asked me the other day if the new Chicago Directory was out, and if St. Louis hadn't distanced us this spring in population. A man has a better show if he has some personal friend of good standing to introduce his papers or himself. Everybody that gets left goes away saying this is a sheol of an administration, and I guess Cleveland is glad they're beginning to think so."

An inventory of the personal estate of Mr. John W. Garrett was filed at Towson, Tuesday, the total amount being $5,774,509.56.

Mrs. Yseult Dudley was acquitted Tuesday of the assault on O'Donovan Rossa, on the ground of insanity.

Howard Cooper, the negro ravisher is to be hung July 31st.

State of Trade.

NEW YORK, June 27.—From the leading business centers, reported to *Bradstreet's*, word comes that trade continues quiet and singularly free from speculative movements. Surplus funds at the banks at New York, Boston and Chicago shows no signs of growing smaller, and the demand for money at the interior has not yet equaled the expectations. The volume of general merchandise moving is made up of hand-to-mouth purchases. Since the labor trouble at Pittsburg has been settled the local trade situation has assumed a better aspect. At Philadelphia merchantsare inclined to a more confident and hopeful view of the near-by future, while at New York the reverse is true. There is an evident disposition on the part of a number in the wheat trade to hammer the market, and prices have been depressed in consequence. Crop reports continue to come in telling from 150,000,000 to 180,000,000 bushels shortage in wheat; yet, with quite moderate exports, a visible supply which refuses to decline matertally, and a potent bear crowd, wheat prices are held down. No. 1 red closed yesterday at $1.02½, against $1.01 a week ago. Flour is very dull, and when sold is lower. Hog products are moving off quietly in large quantities, but the market is without feature.

The tone of the wool market is without material change. Prices rule low, and there is no prospect of any advance while manufactured goods continue as cheap as they are now. Sales in the country have never made above the parity of current rates, owing to speculative operations but this has no bearing on legitimate transactions.

There is no material change to report in the leading lines of iron and steel manufacturing industries. In addition to the gradual starting up of the Pittsburg and other western iron mills, consequent on the dissolution of the labor troubles in that branch of the industry at the west, a number of blast furnaces in Eastern Pennsylvania will go into blast during the coming week. Half a dozen of them are mentioned by name. This may certainly be regarded as indicative of some gain in trade conditions affecting Eastern Pennsylvania production. The price of pig iron has not changed, and there is no reported improvement in the demand. At the West the general situation is outlined thus: "The rule in the market is to delay purchases until stock-taking, July 1. Very many buyers have purposely run their stocks down so close in anticipation of this event that they must do more or less replenishing early in July, whatever may be the tone of the market.

Sick of Civil Service.

WASHINGTON, June 29.—The *Post* to-day publishes an interview with Representative W. D. Hill, of Ohio, who is the first Democrat to come out squarely and denounce the Civil Service act. Mr. Hill says: "The Democrats are opposed to the system almost to a man. They regard it as a fraud on the public. The Democrats do not believe in the life tenure principle. They believe in the right of the people to change every officer in the Government at the time prescribed by the Constitution."

"Will there be an effort made to repeal the Civil Service law next winter, do you think?"

I do not know. If there is I will vote to repeal it the first opportunity I get. I have heard many Democrats say they would not vote a dollar to pay the expenses of the commission, and I feel a little that way myself."

The Wheat Crop.

CHICAGO, ILLS., June 29.—The following will appear in the *Farmer's Review* to-morrow as the result of a summary of their crop reports up to the close of the present month: A few reports have been made that the wheat crop would prove to be better than has been estimated, yet what has developed to make any changes in the former estimate as made by the *Review* on June 1, as to the yield of wheat—330,000,000 bushels—we confess we are at a loss to know. All reports for the last fourteen days have shown an increased developement of cheat, a steady running down of the general prospects and more or less damage from the Hessian fly.

Tennessee and Kentucky were the first States that early in the season gave us any idea of the damage to the crop. They are now the States that are harvesting, and if the reports from other winter wheat States are as bad as the reports which have been received from these States, as to the yield of winter wheat, it would look to-day as if the lowest estimate of the crop was a high one.

Wheat for fall seeding will absorb a very large proportion of what is now called the visible supply. In fact it is now a serious question where clean and pure wheat is to be obtained for seed. Inquiries are now being made for this article for seeding purposes from Tennessee, Kentucky, Kansas, Missouri and Southern Illinois.

The spring wheat situation, as the season advances, shows somewhat of a spotted character, but the conditions are fairly promising. The crop seems to be more or less weedy, and particularly in the northern areas, No more rain is needed to mature the crop.

Maryland Items.

General Richard Thomas entered the service of the Easton Bank in 1846, and has been cashier since August, 1849. Dr. I. L. Adkin has been president since 1869.

Thirty shares of Hagerstown Bank stock were sold at auction on Tuesday last of week for $35 50 per share, the par value being only $15. This is the highest price ever realized in the history of the bank.

The extensive pine forests in the lower end of Caroline county are to be converted into charcoal. Charles W. Sulivane has started the new enterprise, and has a steady market for the coal in Wilmington.

The Deer Creek Methodist Episcopal Church has been presented by Mr. Corbin Gragton with a building lot adjoining the present church property, and the congregation is receiving subscriptions for the erection of a new church.

The Baltimore and Ohio Railroad bridge across the Susquehanna is progressing rapidly. The Phœnixville Company put in place three hundred tons of iron in four days during last week on the span running east of Garrett Island.

The Easton *Ledger* calls an expression of the new editors of the Annapolis *Republican* in their salutatory article a "suspicious circumstance." The words used were, "We have lifted the veil that covers our modesty."

The wheat prospect in Frederick county is said to be very discouraging. Some farmers will not realize more than eight bushels to the acre, and the maximum will be about twenty bushels. The harvest will commence about the 1st of July.

Mr. James E. Stewart, who recently fell thirty feet while painting a house in Oxford Neck, is still alive, though fatally injured. The fall caused a fracture of the dorsal vertebra, and his body below the fracture is completely paralyzed.

Mr. John Lomax, who died a week ago at the residence of his son, Mr. Joseph Lomax, at Hanway's factory, in Harford county, was in the eighty-ninth year of his age. He was born in Manchester, England, and came to this country in 1859.

George Mengel, a stranger, was taken sick on Saturday while tramping near Middletown, and has since been cared for at the City Hotel. He is a wounded soldier in the late war, having served in the Fifth and Thirteenth New Jersey regiments, and a member of G. A. R. Post, No. 12, Dayton, O.

Master Addison M. Strouse, an enterprising youth of Silver Run, Carroll county, who in 1881, when only 12 years old, started a little weekly paper called the *News*, still continues the publication, and his establishment is quite complete and businesslike. All the editorial and mechanical work is performed by the young proprietor.

A gentleman of St. Michael's recently swung up a hammock in his back-yard, where he spent all his leisure time. He allowed his horse to graze in the yard, and on repairing to the hammock on Sunday morning found that the animal had followed his example, and was quietly resting in it. He had to cut down the hammock so as to get the horse out.

The wheat harvest commenced at Sunnyside farm, near Monrovia, Frederick county, on Tuesday last, It is fully ripe, and filled to perfection. The crop consists of 50 acres, and is estimated to average 25 bushels to the acre. The general harvest will begin toward the last of the week. The corn crop is looking well, and all vegetation seems to be thriving.

J. Fred Heisse, of Monkton, Md., a member of the junior class at Dickinson College, Carlisle, Pa., was awarded the silver medal for excellence in oratory. Among the speakers at the closing exercises, the following Marylanders distinguished themselves: Frank T. Baker, of Hagerstown; J. M. Cummings, of Baltimore; Filmore Leakin, of Baltimore; J. Tome Reynolds, of Port Deposit, and A. C. Strite, of Hagerstown.

The moulders' strike at Bibb & Co's iron foundry, at Port Deposit, which commenced in April, has come to an end, and the shop opened to union men. The company employed non-union men and apprentices to keep the works in operation, and the strikers having now agreed to comply with their rules, have been reinstated. They have lost their time and gained nothing by the strike, the object of which was to obtain a restoration of the ten per cent. reduction made in January.

LOCAL NEWS.

LODGE MEETINGS.

OAKLAND LODGE, I. O. G. T., meets in Sturgiss' Hall every Tuesday night.

LOCAL BRANCH, No. 85, of the Iron Hall, meets in same Hall 1st and 3d Saturday nights of each month.

ALTA LODGE, No. 574, K. of H., meets in same Hall 2d and 4th Thursday nights of each month.

SHEALTIEL LODGE, No. 122, I. O. O. F., meets in Legge's Hall every Monday night.

PATMOS COUNCIL, No. 386, A. L. of H., meets in same Hall 2d and 4th Friday ntghts of each month.

—Ice Cream a specialty, at Cropp's.

—16 lbs. pure sugar for $1.00, at Harne & Lawton's Grocery.

—Go to Newman's for fire crackers and torpedoes.

—Wedding and Birth Day Cakes made to order, at Cropp's.

—Read the advertisement of Mr. F. G. Hyde in another column.

—Canned cherries and blackberries, at Harne & Lawton's Grocery.

—For fine pictures and photographs, go to Brooke's Gallery, North end Second street.

—How to please your sister or some body else's sister. Buy your candies at Harne & Lawton's Grocery.

—Graham and Rye Bread baked to order, at Cropp's.

—We had considerable frost in this neighborhood Wednesday morning, but vegetation was only slightly damaged.

—Miss Mary Townshend, who has been attending the Parkersburg High School, arrived at her home in Oakland Wednesday.

—Mr. James D. Hamill, who has been attending St. John's College, Annapolis, Md., is at home for the summer vacation.

—Pickles, pickles. What kind of pickles? Sour pickles, of course, at Harne & Lawton's Grocery.

—Lieut. R. M. G. Brown, U. S. N., who has spent several weeks in Oakland with his sister, Mrs. W. P. Totten, left last Saturday for Kingwood to visit relatives and friends.

—Don't fail to read Harne & Lawton's advertisement, it wil benefit you and your pocket book, in another column.

—Mr. Wm. Newman desires to inform the public that he will have a full stock of fire works on hand for the Fourth. He also has a full stock of confections and notions, fruits and nuts.

—Go to Harne & Lawton's Grocery, and get a can of apples; only 5 cents a can.

—Mr. George H. Smouse, formerly a compositor in this office, but now of the Cumberland *News*, has been with his many friends in Oakland for several days.

—Soap, soap, soap. Frank Siddall's, Ivory, Lone Star and Cottage soaps, at Harne & Lawton's Grocery.

—A pic-nic for the benefit of St. Peter's Catholic Church, of Oakland, will be held in Carrigan's Summer Garden July 4th. A cordial invitation to the public in general is extended.

—Mr. W. A. Wortman left for Baltimore Monday to purchase a stock of goods for his jewelry store, which will be opened next week in the new Pritchard Building, on Third Street, between Oak and Alder streets. See his advertisement.

—The County Commissioners Tuesday last inspected the stone work for the new iron bridge across the Youghiogheny river near Oakland. They say the work has been done in a substantial manner by the contractor, Mr. Joseph Cogley. They also at the same time awarded to Mr. Cogley the contract for building the wing-walls and grading the approaches to the bridge. The iron for the bridge arrived last week and is now on the ground. The bridge will be completed and ready for travel in two weeks.

—A game of base ball between the "Deltas," of Rowlesburg, and "Terra Alta," was played on the grounds of the latter club last Monday, which resulted as follows by innings:

	1	2	3	4	5	6	7	8	9—Totals.
Terra Alta	3	0	1	0	0	0	1	0	0—5
Delta	3	0	6	6	3	0	2	3	x—23

The Rowlesburg club has been playing for a number of years, while this is the second season for the Terra Alta boys. Everything considered, the game was a good one and certainly does not reflect discredit upon Terra Alta. J. E. Kildow, of the Oakland team played with Terra Alta as catcher and captain. He says the Terra Alta boys will give us a good game to-day (Saturday), a report of which will be given in next week's REPUBLICAN.

Church Services--Sunday.

M. E. Church—Preaching at 8 P. M. by Rev. M. W. Rider.

Garrett Memorial (Pres.) Church—Preaching at 11 A. M. and 8 P. M. by Rev. John S. Foulk.

Preaching at the Deer Park Chapel at 4 P. M. by Rev. J. S. Foulk.

St. Peter's, Catholic—Preaching every Sunday at 10½ o'clock A. M., except the second Sunday of each month.

List of Letters.

List of letters remaining unclaimed in the Post Office at Oakland, Garrett county, Md., July 4th, 1885.

Alt, Wm. E.	Laney, Thomas
Bucklew, Rebecca V	Rioden, Pete
Campbel, James E.	Williams, John A. 4.
Dorsey, Anne	

Persons calling for them will please say they are advertised.

R. THAYER, P. M.

Water Wells.

Messrs. Starbuck & Bundy arrived in Oakland Monday last with their engine and drilling machinery, for the purpose of drilling wells in this neighborhood. They first go to Mr. Abraham Spiker's, near Oakland. All the wells put down by them last Summer in Oakland and Mountain Lake Park give entire satisfaction, and their acknowledged superiority as a class over that of any other wells in localities where ever they have been introduced and tested, justify us in recommending them to the public as the cheapest and most satisfactory, combining more merits and fewer faults in meeting the requisitions of a perfect well than any other class now in use.

Preston County Democrats.

The Democracy of Portland district held a meeting in Freeland's Hall, June 27. Amos Carroll, Esq., was chosen Chairman, and H. C. Worthington, Secretary. Dr. S. M. Scott and P. A. Fox were elected members of the County Executive Committee from that district, and the same gentlemen with John O. Whitock, Hiram Dodge and Dorsey Foreman were elected District Committeemen.

The following resolutions were passed:

WHEREAS, The Democratic party has unbounded faith and confidence in the ability and honesty of President Cleveland, and believe that the true spirit of reform controls him in the administration of the affairs of the Nation; and,

WHEREAS, The Democratic party of Preston county is largely in a minority, and no hope of reward for party services in the county.

Resolved, That we ask that there be a change in all the offices held by Republicans under the Government in this county, and these places filled with honest working Democrats, and that our Representatives in Congress use their influence for the removal of Republican officials in this county.

Sewing Machines.

The people of Garrett county would do well to call at the Singer Manufacturing Co's office in Oakland, and examine the high arm and oscilating Sewing Machines, before purchasing any other kind. We have now as the manager of our Oakland office, Mr. Mimrod Paris, who will take great pleasure in showing the working of these machines.

For Sale Cheap.

A second hand Smutt Machine in good running order, will clean from 15 to 20 bushels per hour. Call on, or address,

H. A. RASCHE.
Oakland, Md.

Chance for Investment.

For sale or rent, two cottages, furnished, with use of horses and carriages.

MRS. E. A. KILBOURN,
4 11 Oakland, Md.

Bargains in boys' hats.

M. L. SCOTT,
Baltimore Store, Oakland, Md.
June 27th, 1885.

A Wonderful Discovery.

Consumptives and all, who suffer from any affection of the throat and lungs, can find certain cure in Dr. King's New Discovery for Consumption. Thousands of permanent cures verify the truth of this statement. No medicine can show such a record of wonderful cures. Thousands of once hopeless sufferers now gratefully proclaim they owe their lives to this New Discovery. It will cost you nothing to give it a trial. Free trial bottles at Nydegger's Drug Store. Large size, 50c. and $1.

Notice!

All persons knowing themselves indebted to me will please call and settle by cash or note. All claims not settled by the 1st of June next will be given out for collection.

H. A. RASCHE.

Target Match on the Fourth.

The following order has been issued from Second Battalion headquarters:

HDQ'RS SECOND BATTALION INFANTRY,
MARYLAND NATIONAL GUARD,
CUMBERLAND, MD., June 26, 1885.

Special Order No. 9.

I. The following commissioned officers of the Battalion are hereby requested to report to me in person in full dress uniform on Saturday morning, July 4, at Oakland, Maryland, for the purpose of contesting in a rifle match, to take place on that date, against a team of picked men from the rank and file of the Battalion: Capt. R. H Gordon, Co. C; 1st Lt. and Adjutant D. W. Sloan; 1st Lt. and Paymaster S Johnson; 1st Lt. and Ins. of R. P. R. T. Browning; 1st Lt. and Surgeon E. H. Bartlett; 1st Lt. P. A. Chischolm, Co. B; 2d Lt. R. T. Jamison, Co. B; Brevet 2d Lt. Percey Veitch, Co. B.

II. The following non-commissioned officers and privates will form the team to contest against the commissioned officers, and will report at the same time and place, in full dress uniform and equipments;

Sergt. John F. White, Co. B; Sergt. Andrew Kolb, Co. A; Private Hammersmith, Co. C; Private Fogle, Co. C; Private Harry Richards, Co. A; Sergt. C. E. Boyer, Co. B; Corp. G. D. Browning, Co. B; Private S. Friend, Co. B; Corp. T. Sweeney, Co. B; Private M. L. Selby, Co. B; Corp. Jas. H. Painter, Co. B; Corp. W. R. Johnson, Co. A.

III. Col. J. W. Veitch, of the Governor's staff, Capt. W. O. Hoffman and Lieut. J. H. Holzhu, of Co. A, are requested to act as judges on the occasion, Sergt. E. Z. Tower as signal officer, and Corporals T. West and James Nydegger, of Co. B, as scorers.

IV. A magnificent prize will be given to the winning team,

V. Any officer, non-commissioned officer or soldier who is detailed as above, finding that he cannot be present, will at once notify the battalion commander by letter, so that his place can be filled.

By order of E. H. Wardwell, Brevet Lieutenant-Colonel Commanding.

DAVID W. SLOAN,
1st. Lt. and Adjt.

Accident.

Perfect weather.

Ill weeds grow apace.

Mrs. Salem Lee is very ill.

Dr. Ritter is busy as a Beaver.

The Brethren love feast was very largely attended.

Mr. John C. Dunham holds the fort at M. J. Miller's.

John Wilburn has purchased a fine young horse of Chambers DeWitt.

Mr. John McMillen and wife expect to visit Garrett soon.

Rev. Shoup and others still talk of going to Florida.

The glorious 4th will not be observed here, so far as heard from.

Mr. Christian Selders has refused $75 cash for a colt less than two months old.

The potato bug has resumed his accostomed vigor, "and his sisters his cousins and his aunts."

Grant Allen says one hearty aphide could be the progenitor of over five million plant lice during its lifetime.

Miss Butler, of Washington, D. C., will commence her music class Monday, July 6th. Pupils are requested to come in promptly at that time.

Many people in carriages, wagons, on horseback, &c., attended the dedication at Harden Chapel, near McHenry, on last Sabbath.

Thirty dollars will buy a three-year-old Jersey bull, of imported stock, full pedigree, worth more for beef. Inquire of Thos. Turney soon.

How full the world is of facts of interest and instruction, and yet the very simplest of insects and plants with which we come in daily contact are not understood.

Mr. Ephriam Lee is making preparations to go into the bee business on a somewhat extended scale. Mr. Lee is making a study of bees. His books and applances are of the most approved kind.

Mr. Samuel J. Miller and wife paid us a very short visit lately. Mr. Miller's mind is a store-house of useful knowledge, and we would feel it a privilege to associate with him daily. Mr. Miller goes through the world with his eyes open. Plants and animated nature is to him an open book.

Strawberries are simply immense. We thought we were ahead in that line, but Mrs. Jacob Mosser and Mrs. Gnagey, of Grantsville, beat us. Mrs. Mosser presented "ye local" with a nice plate of strawberries, one of which measured over five inches in circumference. When Mr. Camp, the nurseryman, comes around this fall order a few dozen Sharpless, Wilson or Crescent Seedling strawberries. Mr. Camp has a first-class nursery, keeps well posted in all new varieties and sells cheap, and his stock is reliable.

We expect our teachers to have a a knowledge of algebra, geometry, physiology, book-keeping, &c., things that, as far as their practical use is concerned, will never be needed by ninety out of every hundred of our scholars. Our county needs farmers, must have them, yet all our studies at school, at college and university, yea, even the agricultural school, tend to every other direction but honest agriculture. How many teachers can explain the simple but important matter of the fertilization of plants, the distribution of pollen, the cause of honey dew and the phenomena connected with bee culture.

Mountain Lake Park.

Our place has greatly changed within the last few days. Instead of the quiet that has prevailed so long, there is a general stir in almost every direction.

Dr. VanMeter, Mrs. Becham and Prof. Elliott, of Baltimore, have arrived, and Miss Mehollin, Mr. Stone, Mr. Conner and Hon. G. W. Atkinson, of Wheeling, are also in their cottages. Mr. J. M. Davis, of Oakland, is also with us for the summer. Rev. Dr. Watson, of Florida, is with us, and preached one of his grand sermons on last Sunday morning.

Mrs. Earlougher, of Cumberland, Md., is again occupying the Fallon Cottage. She has also rented the Leech Cottage to add to her accommodations for her many guests.

I am very glad to state that Rev. John Thompson, of Philadelphia, Pa., and his family, have returned again.

Mr. Horace Watters has just presented to Miss Jennie Smith a very handsome organ.

The Directors have purchased a fine large bell which will soon be placed in the tower on the new Hall.

The ladies of Oakland have joined us here, and have very handsomely decorated the Auditorium for the season.

The first meeting on the programme was called this (Wednesday) morning with a good attendance. A number of those who have been assisting in these grand meetings are here again with several new delegates.

The season is opening very favorably. Quite a number of guests are already at Grace Cottage, and a number at the hotels and boarding houses.

J. A. E.

Bucklen's Arnica Salve.

The best Salve in the world for Cuts, Bruises, Sores, Ulcers, Salt Rheum, Fever Sores, Tetter, Chapped Hands, Chilblains Corns, and all Skin Eruptions, and positively cures Piles, or no pay required. It is guaranteed to give perfect satisfaction, or money refunded. Price 25 cents per box. For sale by W. D. Nydegger, Druggist, Oakland, Md.

We are dazzled at first by new words and brilliancy of color, which occupy the fancy and deceive the judgment.

We judge ourselves by what we feel capable of doing, while others judge us by what we have already done.

Baltimore Live Stock Market.

[From Baltimore American.]

MONDAY, June 29, 1885.

PRICES OF BEEF CATTLE AT THE MARKET TO-DAY.

Very best on sale to-day 5⅛@6c. that generally rated first quality 4¼@5⅜ cts; medium or good fair quality 4⅛@4¾ cts; ordinary thin steers, oxen and cows 3@4 cts; extreme range of prices 3@6 cts; most of the sales were from 4¼@5¾.

REMARKS ON BEEF CATTLE.

The arrivals of Cattle during the week amounted to 1,414 head, against 1,289 last week and 1,372 head the corresponding week of last year, and the sales were 742 head, against 685 last week, and 957 head the corresponding week of last year.

All dealers report the market quite slow throughout, and prices for the tops about ½c., lower, and common cattle 1½ off. The quality of the offerings averaged not quite as good as last week—tops being less numerous and common cattle more plentiful than they were then. Prices ranged from 3 to 6c., though few sold at either extreme, most sales ranging from 4½ to 5¾.

THE SWINE MARKET.

Trade is reported in the yards generally as being fair to good, the run being slightly in excess of the moderately fair supply of last week. The quality is fully as good as it was then, the hogs being in some instances rather too fat, lard being too low, and fat bacon less salable than formerly. Prices range from 5 to 6c., rough sows and stags selling at 5 to 5½, and the better grades 5¾@6. with free sales at and near the latter figure, prices thus showing somewhat more strength than last Monday. Same time last year our quotations were 6½@7⅜c., and extra a shade higher.

THE SHEEP MARKET.

The receipts, which do not quite equal half the number of those of last week, were yet fully equal to the very limited demand, as butchers bought sparingly and there was no outside demand. The quality was not as good as it was last Monday. Common to fair sheep sold at 2½@3½c and the better grades 3½@4. Lambs sold at 3@6c.; few selling at either extreme. Same time last year sheep sold at 3@4¾c., and a few extra 5c. Lambs sold at 4@6½c. gross.

Mountain Lake Park.

In the heart of the "Great Glade Region" of the Alleghenies, where the B. & O. Railroad crosses these mountains, about 3000 feet above the level of the sea, lies the beautiful summer resort of Mountain Lake Park, consisting of about 1000 acres of rolling woodland, laid off in broad avenues and delightful drives, interspersed with handsome summer cottages, in the center of which is situated the Mountain Lake Park Hotel, which is managed by Mr. H. H. Van Meter, the owner and proprietor, who was formerly of the firm of H. H. Van Meter & Co., of Watkins Glen. Coming from the East or the West the tourist passes through the most picturesque of river and mountain scenery, from the historic beauties of the Potomac or the fertile valley of the Ohio, up the rocky crags that overhang the Savage or Cheat river regions, 'till the climax is reached on the mountain tops, and the train glides swiftly along the glade land and pauses for a moment at Mountain Lake Park Station, within view of the Hotel, half hidden amid the oaks that surround it. Three express trains each way daily direct from New York, Philadelphia, Baltimore and Washington on the East, Chicago, St. Louis and Cincinnati on the West, stop at the Park—excepting on Sunday. The natural surroundings are unsurpassed for beauty of scenery and healthfulness, mountain drives, rambles and streams a sounding in every direction, while the climate is cool, bracing and invigorating beyond the imagination of any one who has never spent a summer season in the Glades, and the social, intellectual and religious advantages are greater than at any other mountain resort in America, there being one constant succession of Conventions, Summer Schools and Assemblies during the entire season. These exercises, which are held in the Park Auditorium, but a short distance from the Hotel, are so arranged as to combine interest and instruction as pleasantly and profitable as possible.

The programme for the Season of 1885 begins on July 1st, with an Inter-State Convention of the Woman's Christian Temperance Union, which continues to "The Fourth" inclusive, and brings together a representative body of the Christian ladies of the land from every section of the Union, followed from July 5th to 10th inclusive by the National Division of The Sons of Temperance, both conventions commanding some of the ablest talent engaged in the cause. From July 11th to 20th, Dr. Dougan Clark, of Indiana, and David Updegraff, of Ohio, assisted by other able leaders, are to conduct a series of Evangelistic services, somewhat upon the plan of the Ocean Grove exercises; and immediately after that, an Inter-State Convention of the Y. M. C. Association is to be held from July 22d for one week, to be conducted by well known workers in this branch of Christian effort. The Mt. Lake Park Sunday School Assembly takes place from August 5th to 19th inclusive, and is conducted after the Chautauqua exercises, combining courses of lectures, instruction and entertainment, by able and attractive speakers from the various denominations, and affording such advantages as can seldom be secureat such reasonable rates, even in our largest commercial and literary centers. An Amature School of Photography, and a Summer School of Languages, are also upon the programme for the season. The Former convening July 20th, and continuing till August 5th.

Round trip excursion tickets from all points upon the line of the B. & O. R. R. are issued for the season at greatly reduced rates, and special tickets for the various conventions can be secured at about one half the regular rates of fare from nearly all the places upon the line, while the hotel charges are as low as is consistent with the keeping of a first-class Summer Resort of this character.

Deer Park, the famous resort of the Baltimore and Ohio Railroad Company, lies about four miles to the East of Mountain Lake Park and Oakland, the equally well known resort, only about one and a-half miles to the West, these three places being connected by quick trains and beautiful drives, and combining the most complete variety of entertainment for the visitor, with all the advantages of this lofty mountain altitude.

Fish and game are abundant along the head waters of the Potomac and Youghiogheny rivers and the "Black Water Region," all within easy reach, and unsurpassed for trout and bass, while to the East and West, along the line of the B. & O. Railroad and to the South, where the new West Virginia Central has penetrated the wilderness, the mountain scenery can scarcely be equaled for romantic beauty or rugged grandeur this side of "The Rockies."

NEW ADVERTISEMENTS.

NOTICE!

$25.00 REWARD will be paid for the arrest and conviction of any person or persons throwing stones at the tombstones and breaking the palings, or trespassing in any way, on the private graveyard of the late J. J. Frazee and family, on Frazee's Ridge.

TRUSTEE'S SALE

—OF VALUABLE—

REAL ESTATE.

Under and by virtue of a decree of the Circuit Court for Garrett county, as a court of Equity, passed in a cause wherein Jonas E. Gnagey, et. al. are complainants, and Mary Otto and others are defendants, the undersigned trustee will sell at Public Auction to the highest bidder

ON MONDAY, THE 13TH DAY OF JULY, 1885,

at the hour of 2 o'clock P. M. of said day, in the town of Grantsville, Garrett county, in front of the Hotel now kept by Jos. Blocher.

1st. All that part of a tract of land called

"SPRING FIELD,"

containing 46¾ acres of land, which is more particularly described in a deed from John Warnick and wife to John Swauger, dated 12th August, 1865, and recorded in Liber H. R. No. 23, folio 308, &c., Allegany county records. This piece of land is improved by a Grist and Saw Mill, a large Dwelling House and other outbuildings, and is commonly known as the

"SWAUGER MILL PPOPERTY,"

and situated about seven miles south of Grantsville, and is one of the most valuable "Mill Seats" in the county.

2d. All that part of a tract of land called "SWANTON," containing 38½ acres, which is more particularly described in a deed from Jos. R. Anderson and wife to John Swauger, dated the 3d September, 1873, and duly recorded in Liber W. H. T. No. 1, folio 184, &c., one of the land records of Garrett county.

3rd. Also all that other certain tract of land adjoining the aforesaid parcels of land, containing the quantity of 21½ acres of land more or less, and being the same land which is more particularly described in a deed from Jos. R. Anderson and wife to John Swauger dated the 3rd day of July, 1876, and duly recorded in Liber W. H. T. No. 2, folio 779, &c., one of the land records of Garrett county.

Said two last mentioned tracts are well timbered and partly improved.

All of said different parcels of land will be sold separately, or together, whichever will realize the most money.

TERMS OF SALE, as prescribed by the decree: One-third of the purchase money to be paid in cash on the day of sale, or the ratification thereof by the court, and the balance to be paid in two equal annual installments, in one and two years from the day of sale; said deferred payments to bear interest from the day of sale, and to be secured by the bonds of the purchaser, with security to be approved by the trustee, or all the purchase money may be paid on the day of sale at the option of the purchaser.

JONAS E. GNAGEY,
6 20 4t. Trustee.

The Republican.

OAKLAND, GARRETT CO., MD.

LILACS.

The same sweet blossoms year by year
Come back with gracious greeting:
This little purple cluster here
Sets all my pulses beating.
Not with the passion typified
By the red rose's splendor,
But with the memories that bide,
With Time, the true and tender.

With these dear blossoms in my hand,
Some miracle hath found me.
I walk in childhood's happy land,
With sunshine all around me.
The flowers bloom, the waters flow,
The singing birds are mated;
And over wide fields to and fro
The winds blow, fragrance freighted.

And while I look, the years glide on,
And I, a loving maiden,
Again beneath a summer moon
Stand in a lover's Aiden;
Upon the bosom of my gown
I wear the purple beauty;
While tender eyes in mine look down,
And love is one with duty.

When to his door, a happy bride,
I made my glad home-coming,
The little path on either side
Was fragrant with their blooming.
On every path my feet have traced
Their heartsome perfume lingers;
They were the first flower that I placed
Within my baby's fingers.

As all of life's delight they crowned
With odorous completeness,
So on the brow of death they bound
Their diadem of sweetness.
Above the still and faithful breast,
Where his own wishes bid them,
I placed the flowers that he loved best,
And left my heart amid them.

In all life's storm and stress and fret,
Its working and its waiting,
How light the touches are that set
Its sweetest chords vibrating.
O youth! O love! O childhood sweet!
O dearer days departed!
Within your magic bloom they meet,
O Lilacs, honey-hearted!

—*Carlotta Perry, in Chicago Advance.*

AN ANNOYING VISITOR.

A Recreant Bachelor Tormented by a Mischievous Ghost.

Mr. Penoyer Pevensey entered his bachelor apartments on ——th Street in a leisurely manner, carefully hung up his coat and hat in the hallway, and, setting aside his dripping umbrella, glanced about the luxuriously furnished room with visible satisfaction. Then, drawing before the cheerfully glowing grate an arm-chair, he seated himself with one of those sighs to which one gives vent when conscious of having gone through something disagreeable, and anticipating a quiet rest.

Mr. Pevensey had, indeed, gone through a very trying experience. On that very evening, at precisely half-past nine, he, a bachelor of eight-and-twenty, and not ill-looking (which fact added in no small degree to his self-complacency), had proposed to the charming Miss Emory, and was even now trying to regain his scattered ideas and explain to himself how it had all happened. One thing was certain—that from that time on he was fettered, and could no longer proudly boast of his freedom from the gilded chains of Hymen. Mr. Pevensey, as he thought of this, involuntarily heaved another and a deeper sigh, and slowly shook his head several times. It was plainly to be seen that he was not in that love-sick condition wherein young people are supposed to abjure food and shun sleep, and a superficial bachelor observer, merely knowing the fact of his engagement, would have sworn that he had been beguiled and entrapped by means of those subtle arts and devices known only to females. Be this as it may, the fact remains that Mr. Pevensey was in a rather irritable mood, and, after ruminating on his impending fate for half an hour, he lighted a cigar and opened the "Reveries of a Bachelor," with the desire to extract a few drops of consolation therefrom.

The rain beat dolefully against the window. The clock, to offset this, kept up a most pleasant ticking, and, at interyals, an equally pleasant and melodious chiming, all of which sounds fell upon Mr. Pevensey's ears unheeded, for he had gradually fallen into a dreamy state of half consciousness. The fire burned low, and the red-tinted globes overhead shaded and subdued the light, as it revealed the half-recumbent figure of the bachelor thus passing from revery to slumber.

Patter-patter, tick-tick, patter——

"Ahem!" said a voice at his side in a prefatory way.

Mr. Pevensey started up and looked about him. Close by, with his chair tilted back and his legs stretched out toward the blaze in a most comfortable and degage manner, was seated a ghost of the male persuasion—a transparent semblance of a man—a veritable spirit.

Mr. Pevensey gasped and each hair began to look about for its individual end on which to stand. The ghost noted these signs of trepidation at first with a smile and then with a wheezy chuckle. Finally he broke out in a hollow cackle.

"I say, Pen, old boy," said he, as soon as his risibilities had sufficiently subsided, "don't you know me? Pembroke, you know Pembroke died last week!"

This was said in a husky, rattling voice, but in the most cheerful manner imaginable. Mr. Pevensey gradually regained his composure; his hair subsided, and in five minutes from the time of the ghost's question was able to give an audible answer.

"Ah, yes; O, yes, ha, ha! I know you, Pembroke—yes, knew you all the time."

"No you didn't," said the ghost. "You were too confoundedly frightened." Here he stopped to chuckle again. "But I say, Pen, I won't hurt you, you know."

"O," said Mr. Pevensey, ironically, his courage by this time quite returned —"you won't?"

"No," said the ghost, reassuringly. "I won't. Now I'll tell you why I came." He stopped, took from a ghostly cigar-case a shadowy cigar, lit it with an invisible match, and began to send forth volumes of ghostly smoke. After the fifth puff he continued:

"You have forgotten it, but I haven't. Don't you remember one night, twelve years ago, when we made a vow over a skull?"

A glance of intelligence was now discernible in Mr. Pevensey's eyes. He was getting interested.

"That whichever one should die first must——"

"Appear to the other," finished the ghost, nodding and blowing smoke from his nostrils. "Ergo, here I am."

"I must say, Pembroke, that you chose the worst time you possibly could for the interview, to-night of all others; but, then," he continued, as if excusing Pembroke, "you didn't know."

"O, but I did," answered the ghost, with difficulty keeping down a refractory chuckle; "I happened to be there myself."

"And saw me make an awkward fool of myself?"

"Well, if you want to put it that way, I suppose I did; I was invisible then, you know, quite invisible."

Mr. Pevensey groaned aloud. To make an awkward fool of one's self is bad enough, but to have disembodied spirits acting as invisible spectators of one's folly is maddening.

"It's all right," continued the ghost; "I'm mum."

"Don't," said Mr. Pevensey, in a wheedling tone, "don't tell any one—I mean any other ghost; why, if they should get hold of it, I would be the laughing stock of——"

"Jupiter."

Mr. Pevensey stared. "You don't mean to say you live on the planet Jupiter?" he asked.

The ghost nodded. "Yes we do," said he, taking a long pull at his cigar.

Mr. Pevensey sank back again, merely remarking, "Well, I'm blowed."

"You see," explained the ghost, "it's this way: You die and go to Jupiter; then when your time comes you return to the earth and live over again; now, I was Ossian once, you know."

"Oss'an!" exclaimed Mr. Pevensey, astonished. "Then who have I been; who was I last?"

The ghost was evidently embarrassed by this question. He looked at Mr. Pevensey, then at the fire, and knocked the ashes off his cigar, but did not answer. His questioner became impatient.

"Of course, I don't expect I have been an Ossian; I was probably some humble citizen, or perhaps an honest artisan." This was said as an encouragement and a starting-point for his vis a-vis.

"You used to live where she does now—Miss Emory, you know."

Mr. Pevensey thought this a most remarkable piece of intelligence, but he also regarded it as an evasion of the question.

"No matter where I lived," he said; "are you going to tell me who I was?"

"If you must know, I'll tell you. You were a crook—a disreputable character, you know—used to live where the future Mrs. P. does now—got killed in a drunken brawl, and died in a hospital. There; you would have it, Pen; if you don't like it it's not my fault; I didn't intend to tell you."

Mr. Pevensey during this speech gradually assumed an expression that boded no good to his transparent guest. When the latter had finished he arose, and, taking a position directly before Pembroke, said in a deep bass: "You are a liar!"

The ghost leered at Mr. Pevensey in a manner most provoking to the latter's dignity, and then said calmly: "You used to treat your wife and daughter shamefully, Pen; you were a perfect brute. Your wife died in poverty, and your daughter took to the stage. You don't believe it? Well, I'll tell you what I'll do; just to convince you, I'll give you something that will cause you to see people and things as you used to do—put you back where you were about —let me see—thirty years ago."

Mr. Pevensey began to reflect that he was powerless to harm his visitor and retreated to his chair, where he meditated in silence for some minutes on this singular proposition. At length curiosity to learn of his former existence got the better of his scruples, and, looking up to the expectant ghost, he exclaimed, "I'll do it!"

"No sooner were the words spoken than Mr. Pevensey was alone, gazing about in wonderment and pinching himself to make sure that he was not dreaming or in a trance. After this proceeding he uttered divers exclamations expressive of his astonishment, and then relapsed into silence. The rain still continued, and the clock was as perverse as ever in its efforts to outdo its outside rival; in short, the same influences that had brought the semi-sleep on Mr. Pevensey before, were at work again, and ere long he was nodding, oppressed by a strange feeling of lethargy that made him utterly oblivious to his surroundings and to the flight of time. The fire burned lower and lower and the clock chimed twelve. The morning hours dragged on, and at last the sun shone forth on muddy streets and dripping eaves, sending a ray in at the window full on the slumberer's face. He opened his eyes slowly and gazed about him with an expression of astonishment. Slowly he rose from his chair and walked to the window.

"How did I come here?" he muttered. "Bill's dive—the fight—the knife—a white room with cots—well, blow me!"

This last exclamation was called forth by the discovery of his own gold watch and chain. "Ain't she a beauty?" he asked himself, taking it out and examining it closely. "The Hooker must come down handsome for that—handsome! Where did I get such fly togs, anyhow?" he continued, surveying himself with unbounded delight and admiration. "But, I say, I've been asleep, though—and, what's more, right here in this festive mansion. There's some mystery here—some dark and awful mystery."

This last was uttered in a hoarse whisper and accompanied by furtive glances around the room; nothing presenting itself in any way explaining his situation, he stole cautiously out into the hall, seized his hat, hurriedly unlocked the door, and passed out into the street. His bewilderment was now increased tenfold. He began to think he had been transported to another city.

"Them poles with wires—what are they for?" he asked of a passer-by.

The man regarded him with amazement, tapped his forehead significantly, and passed on without answering. Mr. Pevensey was dumfounded. Was he in the spirit world? Had that last brawl been the cause of his demise? It seemed likely; and yet no; there was the name of his street; he would seek his own house, and have an explanation of the affair. Yes, there it was at last. It had not changed, at least; the same steps, the same door were there that he remembered leaning against so often late at night, and observing the two whirling lamp-posts on the corner. He ascended the steps and tried the door. Not up yet. He must ring. At the summons a step was heard in the hallway, and a sleepy servant peered out from the half-opened door.

"O, it's you, is it, Mr. Pevensey?" said James.

"No," said Mr. Pevensey, "it ain't me, is it? Now, my fine feller, will you tell me wot yer adoin' in my house, hey?"

James was astonished. Mr. Pevensey, receiving no answer, thrust the man aside, marched past him and entered the parlor. He was past being astonished now, and simply regarded the furniture of the room with mild wonder.

"I'll just wait here till somebody comes; and then, may be, the deuce won't be to pay; O, no!"

He could hear footsteps and whisperings in another room. Evidently James had aroused the household. After some time the door was timidly opened, and Miss Emory peeped in. Seeing Mr. Pevensey, she rushed in and, flinging herself upon him, said, hysterically:

"O, Penny! what is it; what has happened? Explain this untimely visit. You are not drunk! O, tell me you are not drunk!"

Mr. Pevensey was utterly overcome. Disengaging himself as quickly as possible and somewhat rudely from his lovely burden, he stood gazing at Miss Emory in blank amazement, muttering to himself, "Well, I'm blowed!" and sundry other ejaculations expressive of his astonishment at this unprecedented and unlooked-for procedure on the part of one whom he regarded as a total stranger.

"Now, my fine woman, what's the meaning of all this? Whose house do you think this is, anyway? Where is my wife and daughter?"

Miss Emory shrank back and gazed at him in horror, exclaiming: "He's intoxicated! Penny's intoxicated! James, put him out!"

James made his appearance and eyed Mr. Pevensey furtively, but made no movement toward carrying out the order, evidently fearing that he would not be equal to the task.

"O, it's all right," said Mr. Pevensey. "I'll go, but I'll come back, and, what's more, with the arm of the law." Saying which, Mr. Pevensey, holding his own arm aloft to emphasize and illustrate his words, strode from the apartment.

It is plain to the reader by this time that the ghost had executed his strange purpose, and to Mr. Pevensey's extreme bewilderment.

A well-dressed young woman passed him at a corner where he stood gazing vacantly and furtively about him whom he recognized at once as his daughter. He started after her rapidly, at the same time calling to her to stop. She turned hurriedly and looked at him, then walked faster, and as he increased his pace and seemed determined to overtake her she gave a scream and in a moment Mr. Pevensey was roughly seized by a passing policeman and borne away in spite of his protestations that it was his daughter, and he merely wanted to speak with her a moment. His sullen manner was not softened as he was thrust into the somewhat narrow and uncomfortable room appointed for such characters at the station-house and informed that his trial would occur at nine o'clock in the morning.

* * * * * *

As on the previous morning, Mr. Pevensey was awakened by a sunbeam streaming on his face; but instead of sifting through the rich curtains of his own apartments as it did then, it slanted between the rusty bars of an ordinary cell. He surveyed the surroundings with even more wonder than he did before, and as he realized where he was and caught the offensive odor of stale beer which pervaded the atmosphere of the cell, he began to be indignant. Then the truth began to dawn on his mind and the episode with his old friend Pembroke recurred to him like a nightmare, while his confused recollections of seeing Miss Emory somewhere, and a dim idea that he had offended her, did not add to the pleasure of his thoughts. However, there was nothing to do but wait for the jailor to come to him. Nine o'clock came at last, and, humilitating as it was, he had to go through the regular form of examination; and when at last he was set at liberty—having paid his fine and listened impatiently to the sage counsel of the magistrate—he turned his steps toward his residence once more, ruminating on the way with frowning brows. He applied his key and entered as usual. The first thing that attracted his notice was a delicately tinted, perfumed note lying on the table. He flushed slightly, picked it up and read the following:

MR. PEVENSEY: After what occurred last night you can hardly expect me to regard you as I should my future husband; therefore I release you from all claims I may have had upon you, and wish you to regard me hereafter merely as your friend.

MAY EMORY.

He stared at it for a few moments, and happening to glance up, his eyes encountered the doubtful figure of his unearthly tormentor, Pembroke. Grabbing a book from the table he hurled it with all his might at Pembroke's head, but the missile merely passed through and beyond it as if there had been nothing there:

"Ha! ha!" cackled Pembroke. "There's no use in your trying that, Pen; I'm nothing but a spirit, you know!"

"Confound you for a knave of his Satanic Majesty's Tenth Legion," then replied Pevensey, in baffled rage.

"Come, come now, Pen, I didn't mean to. I didn't want to in fact, you know you made me do it. Be reasonable, Pen!"

"Reasonable!" he cried, fiercely; "be reasonable! Yes, that's good. I must say—kind of you to sit there, knowing I can't shoot you or kick you if I try, having deliberately ruined my name in town and caused a break between us. You know whom I mean."

"At least, then, hear me out, Pen, for I can't linger here much longer; I must be back at Jupiter at precisely noon, and it is eleven now, you see. Now, Pen, I'm sorry this has happened as it has, but if you will go to Miss Emory and explain the matter to her, lay all the blame on me—I can stand it, you know—she is too sensible a girl not to forgive you. Trust me, Pen, and try it."

With these words the thin visitor became thinner still, and soon was quite dissolved.

Mr. Pevensey gazed at the chair which he had lately occupied for some moments blankly, and then meditated: "I might as well after all do as he suggested. It can't be any worse than it is now." Accordingly, after making an elaborate toilet, he repaired to Miss Emory's house, from which, some hours later, he came forth, walking with an elastic step and smiling serenely, although it must be confessed his necktie and coat collar were rather disordered. And even to this day Mrs. Pevensey is not certain whether her husband was really under the influence of Pembroke —or whisky.—*R. E. Roe, in Chicago Tribune.*

DYING IN PERSIA.

The Correct Way of Shuffling Off Mortal Integuments in the Dominions of the Shah.

The sick man lies *in extremis* on a thin mattress upon the floor, covered by a quilted silken coverlet. Twenty or thirty persons are in the room where he is dying. The smoke of many hubble-bubbles clouds the air; whispered conversation is general. The doctors have declared their patient's condition hopeless, and, as a last resort, certain charms suggested by a wierd-looking dervish have been tried. But the crab broth, prepared from the tiny crustaceans that inhabit the streamlets round Shiraz, the patient has been unable to swallow; and the dervish points out to the relatives of the dying man that his panacea has only not proved infallible because it was tried too late. A veiled woman, the wife of the dying man, sits weeping at the side of her husband's pillow. She frequently holds to his face a moistened piece of mud torn from the wall (this wetted mud is supposed to have a very reviving influence, and is used by Persians as we use smelling salts).

Tea is handed round in small cups; the crowd in the room becomes greater; every window is shut, and, as the outside temperature is ninety degrees, some idea of the heat within can be formed. The crowd is not here from mere curiosity. A man is sick; then where should his friends be, they say, if not by his bedside? The samovars (Russian tea urns) steam and bubble; the room is filled with clouds of tobacco smoke and the steam from the urns. And now, just as two hundred years ago was done in England, a fowl is killed and placed warm and bleeding on the patient's feet. All is of no avail, however. The man has breathed his last.

The wife yields her place by the bedside. Moistened cotton-wool is placed in the mouth of the dead, in the orifices of the nostrils, and in the ears. A moollah begins to read aloud the prescribed portion of the Koran, commencing "O man, I swear by the instructive Koran that thou art one of the messengers of God sent to show the right way," etc. This portion of the Mussulman's sacred book was called by Mohammed himself "the heart of the Koran." And now all present witness aloud that the dead man was a good and pious Mohammedan. The limbs are composed, and a cup of water is placed at the head of the corpse. No sooner is this done than a moollah ascends to the flat roof of the house and begins to read in a shrill monotone certain verses from the holy book. This announces to the neighbors that the man is veritably dead; and at the same moment his relations shriek and wail: "Woe, woe! he is dead; he has passed away." These are the expressions of a real grief. But presently the professional mourners arrive and rend the air with their shrill screaming, which is like the "keening" of the Irish.

The house is soon filled with friends and neighbors, who add their cries to the screams of the mourners. The women of the family hasten to array themselves in "bitter" (*i. e.*, sombre) garments—not in actual black, but in sad colors; neither they nor the men wash or dress their hair until the funeral and the first days of mourning are over. The male relatives do not literally rend their garments, but give them the right appearance by opening certain seams of their coats and cloaks with a penknife; and instead of casting dust upon their heads they dab mud on their hats.

And now come the "washers of the dead." To each parish are attached a family of these people, who get a despised livelihood by performing the last offices for the dead. The corpse having been washed at an adjoining stream, the hands are placed across the chest, and it is wrapped in the shroud of cotton cloth that the deceased has probably had by him, as a sort of *memento mori*, for years. Camphor (real vegetable camphor) is placed beneath the shroud, and the body is laid in a rough coffin made of thin planks and brought back to the house. The coffin in Persia is of a thin and unsubtantial kind, and the burial always takes place within twenty-four hours of decease.—*St. James' Gazette.*

Wet Land.

The plowing of wet land does a mischief which remains for years. The owner of a stiff clay farm who turned over a field in too much of a hurry ten years ago has not since been able to get the soil into the same condition it was in before. When a plowshare becomes smeared with mud as it turns the furrow slice, and the earth is plastered, as mortar is when a trowel is drawn over it, clay land becomes hurt for many years. Even light land is spoiled by it, but the clay is toughened and dries in hard clods which are very difficult to reduce to a fine condition again. One may easily make haste too fast in plowing in the Spring. The test of fitness in the soil is that a spade may be put into it and withdrawn without any smearing, and the spade of soil when dropped will fall apart into a loose mass.—*N. Y. Times.*

—The favorite song of praise with the colored people of the South is "Sweet By and By."

AN EXPENSIVE LUXURY.

A $27,000 Bedchamber that Has Caused a Lawsuit in New York.

A remarkable lawsuit, in which John A. Morris, a millionaire of this city, and M. N. Cutter, local architect, have figured prominently, has been decided by Judge Donohue in favor of the former. The suit involves perhaps the most expensive bed-room ever constructed. Mr. Morris has a large country establishment at Throgg's Neck, Westchester County. In October, 1882, he decided to have a private bed-room built for his own use, and called in Mr. Cutter, who was to formulate plans. It was said at the trial that the reason the addition was made was because when Mr. Morris slept he snored so loudly that the noise disturbed the other sleepers in the house. Mr. Morris' specifications called for a total expenditure of $5,500. The bed-room was to be located over the carriageway, and access thereto had through a private bathroom which connected with Mrs. Morris' sleeping apartment. The room was to be twenty-four feet square, and, except that it should contain an English fireplace, was to be in keeping with the main house externally and internally.

After giving these directions Mr. Morris and family went south for the winter. Although the main house was built entirely of wood, the architect provided that the western side of the addition should be an arch of brown stone and brick supporting a chimney forty-five feet high, shaped like a champagne bottle perforated by a bull's eye window. On the eastern end he ordered an elliptical bay window, although that of the main house was semi-polygonal. Thus the exterior, as Mr. Morris claims, was made to represent a blast furnace or factory. It was in the interior, however, that the architect seems to have given full play to aestheticism. The English fireplace was to have behind it a concealed heating chamber resting upon a block of stone weighing seven thousand pounds. As this mass of rock rested on three slender floor pieces it naturally settled and pitched the fireplace forward, somewhat after the manner of the leaning tower of Pisa. The ceiling of the bedroom was to converge into a dome lighted with opalescent antique Venetian stained glass with brilliant glass jewels, the forms variously symbolizing months of the year, e. g., holly for December, mistletoe for January, and "Morning," "Night," "Music," "Architecture," etc. The room was to be finished in fancy cabinet style, with fine carvings, arabesque work, carved friezes, cornices, panels of leaves and flowers carved and cut through a ground of embossed and painted leather. The ceilings and dome were to be trimmed and hung with embossed leather and wood carvings. The gas-fixtures were to be of antique brass. Cyprus copper, oxidized silver and manufactured to order after the architect's special designs. In one corner of the room a plate of metal was to be sunk, upon which a brass bedstead should stand. Other concomitants specified by the architect to the carpenter were equally elaborate, imposing and expensive. By the pleadings in the suit it appears that the brick and brown stone masonry was to cost over $5,000, the carpentery, exclusive of the interior, over $3,000, the ironwork over $1,300, the interior finish over $12,000, furniture over $2,000, one pair of iron andirons $165, a grate fender $150, and a coal-hod, fire-set stand, brush and bellows, $111. The total for these and other luxuries, exclusive of furniture, was over $27,000, or $21,500 more than the contract with Mr. Morris called for. The only entrance to this palatial bedroom was through a private bath and closet.

The carpenter had expended some $9,000 when, becoming alarmed, he wired Mr. Morris, in Florida, that he had received an estimate for part of the interior finish of $5,971. Mr. Morris at once wrote Mr. Cutter that he had received a telegram from the carpenter that absolutely appalled him, and desired to know "what the whistle might cost if he went on." At the same time he wired the builder for full details, and asked what was meant by "interior finish." When he learned what was going on he wrote the following letter to Mr. Cutter:

"I gave you authority to draw designs for a room to cost no more than $5,000. You sent me a month since some designs which were perfectly absurd on account of the expense which they involved, and I wrote you a letter which it struck me any one would understand. Now you amuse yourself by forwarding another lot of designs for furniture for a room which will not be built with my consent. Can I say anything to you which will make you understand that I shall never do any of the extravagant things you propose, and in fact there is nothing you can propose in the future that there is any chance of my doing?"

At the same time the builder was directed to complete the addition, disregarding the architect's plans of the interior. Mr. Morris then sued Mr. Cutter for damages amounting to $16,775. The latter retaliated with a suit against Mrs. Morris, who owned the cottage, for $1,262.08, his commission as an architect in planning this addition to her premises. The former suit has not yet been tried. The latter was begun last Thursday before Judge Donohue and a jury in the Supreme Court. On Monday morning the complaint of Mr. Cutter was dismissed upon the merit, the plaintiff having failed to establish his case. There was a large attendance of architects and builders. In this celebrated case, which has been running some two years, the architect was represented by Mr. John Henry Hull and Mrs. Morris by Mr. Charles E. Coddington. Ex-Judges Fullerton and Cardoza were also counsel for defendant on the trial.—*N. Y. Graphic.*

—Colonel Matthew S. Quay, of Pennsylvania, is the owner of the site of old Fort McIntosh, the furthest American out-post among the Indians during the Revolutionary war, situated in a commanding position on the bank of the Ohio River at Beaver. The old picket beat whereon the sentry made his rounds is yet well defined, and along this Mr. Quay has planted forty shade trees.—*Chicago Inter Ocean.*

HEALTH AND WEALTH.

Two Conditions Which Have Many Points in Common.

Health and wealth have many points in common; first of all in their very names. To have health is to be well; to have wealth is also to be well—well off.

Wealth is for the most part got in three ways—by inheritance, by self-denial, by care, labor and attention; often by some combination of these three. Wealth is lost by extravagant expenditure or by carelessness and neglect.

Health may also be got in these three ways. A man may inherit it from his ancestors; he may gain or keep it by denying his appetites for luxurious food and drink, and for excesses of all kinds; he may besides have to work for it, by painstaking exercise, and a constant supervision over his habits. In brief, unless a man has inherited a large and vigorous stock of health, he must do as he has to do when he does not inherit wealth—earn it.

He may also lose his health by extravagant demands upon it, by reckless expenditure or by carelessness in nurturing and preserving it.

Moreover, the connection between health and wealth is so close that if he spends his wealth lavishly and recklessly on luxurious living and dissipation at the gaming table or other improper places far into the night, his health will go with his wealth. So again it often happens that he can not have both an excess of health and an excess of wealth at the same time. He often loses his health acquiring his wealth, and if he has to care anxiously for his health he is not likely to accumulate wealth.

Again, health is like wealth in that a man may accumulate health not only without wronging anybody, but in doing so actually benefits the world. A man who gathers health and vigor from the air and the water, from proper exercise and a correct life, does not take one particle of health from anybody. There still remain in the earth and atmosphere plenty of the elements of health for all the rest of the world. He, moreover, provides in himself and his offspring a certain number of persons who will not burden the community with sick and feeble members.

So, too, a man by his labor and his self-denial may, without injuring any person whatsoever, gather wealth from the soil, from the manufacturing forces of nature and art or from his capacity to organize business enterprises and so reduce the friction of commerce. The wealth thus created is besides a positive addition to the comfort and prosperity of mankind.

Man can not voluntarily be deprived of his health. He may sacrifice it himself, just as he may sacrifice his wealth, for the benefit of his fellow-men. But no one can take it from him. If there were any way of doing so there would be but one result. No man would deny himself or take any pains whatever to acquire or preserve his health, only for the sake of being obliged to give it up to some person, too luxurious or too lazy to acquire it for himself.

The same is true of wealth. No man would accumulate wealth if he knew it would be confiscated by the self-indulgent or the lazy the moment he had got enough of it to tempt them to take it from him. This is the fatal defect of all socialist and communist schemes. If put in practice, men would cease to acquire wealth, and the civilization would degenerate into savagery.

In some conditions men are forced to give up their wealth to other people. Slaves have to do it. Heavily-taxed people have to do it. What is the result? Slaves and the heavily-taxed cease to produce much more than enough to keep themselves alive, and the races or nation which long suffer such a state of things become impoverished and go to decay.

There is one particular, however, in which health seems to, but really does not, differ from wealth. If it were possible for a shrewd and cunning man to obtain health from other people, leaving them sick and feeble, he would then be like the speculator or gambler who obtains property from others without productive labor. But a man who should get health in this way would add nothing to the common stock of health. He would merely transfer from other people to himself. This, however, would be an unequal distribution, not an accumulation of health. So the gains of a gambler or speculator are not an accumulation of wealth but an unequal distribution of property.

Such transfers add no more to the general wealth of the country than transfers of health would add to its general health. But any man who by self-denial or labor accumulates either health or wealth is not only entitled to what he acquires, but his acquisition is a positive addition to both the health and the wealth of the world.—*Detroit Free Press.*

HAYDN.

Some Peculiarities of the Renowned Composer.

Haydn was a man who made the most of his gifts. He was never satisfied, and always strove to reach a higher ideal. He once said: "I have only just learned in my old age to use the wind instruments, and now that I do understand them I must leave the world." He composed so much that one would think he wrote quickly, but such was not the case. When an idea occurred to him he would note it down in a little book that he always carried with him, and afterward he would work it over with the greatest care. He felt his genius was a gift from God which he must use for the good of others. "God has given me talent," he said, "and I thank Him for it. I think I have done my duty and have been of use in my generation." In writing for the pianoforte, he paid great attention to the melody, which renders his works equally interesting to young and old. They are always fresh and cheerful, and are often founded on some little romance or incident. Haydn did so much for musical composition, especially the symphony, and was so genial and kind to his fellow-musicians, and so fond of children, that in his later years he was always called "Papa Haydn." The name is still frequently used in referring to him.—*Agatha Tunis, in St. Nicholas.*

FOR OUR YOUNG FOLKS.

THE TOAD.

Oh, a queer little chap is the honest old toad,
A funny old fellow is he;
Living under the stone by the side of the road,
'Neath the shade of the old willow tree.
He is dressed all in brown,
From his toe to his crown,
Save his vest, that is silvery white.
He takes a long nap in the heat of the day
And walks in the cool, dewy night.
"Yaup, yaup," says the frog,
From his home in the bog;
But the toad he says never a word.
He tries to be good,
Like the children who should
Be seen, but never be heard.

When winter draws near Mr. Toad goes to bed,
And sleeps just as sound as a top,
But when May-blossoms follow the soft April showers,
He comes out with a skip, jump and hop.
He changes his dress
Only once, I confess,
Every spring, and his old, worn-out coat,
With trowsers and waistcoat, he rolls in a ball,
And stuffs the whole thing down his throat.
"K-ruk, k-ruk," says the frog,
From his home in the bog;
But the toad, he says never a word.
He tries to be good,
Like the children who should
Be seen, but never be heard.

His legs they are long, and he leaps when he walks,
Outstepping us all at a bound;
He wears both his eyes on the top of his head.
Queer place for one's eyes to be found!
You may think him a fright,
And of course you are right;
But his ugliness I would defend,
For he dines on the bugs that destroy the sweet flowers,
He's the gardener's assistant and friend.
"Yaup, yaup," says the frog,
From his home in the bog;
But the toad, he says never a word.
He tries to be good,
Like the children who should
Be seen, but never be heard.

Nellie M. Gardbrant, in Our Little Ones.

LITTLE ANICE.

How She Learned that It Takes Something More Than Fine Feathers to Make One Happy.

The dearest thing on the face of the earth to John Dame was his little daughter Anice. His wife had died when Anice was a baby, and he had had to be both father and mother to the little girl. An old woman who lived next door came in every day to prepare the meals; but Anice was very proud of being called her father's "little housekeeper," and was anxious to grow tall and strong that she might do all the work herself, the better to deserve the name.

She was usually very happy and very well contented with her lot, but one day she came home from school with a cloud upon her face.

"What's the matter with my sunshine?" asked John Dame.

Anice was silent a moment, then she said slowly:

"A new girl came to school to-day, papa. She is the daughter of Dr. Pond, who has moved into the big house on the hill, and she won't get acquainted with me because you are only a cobbler. And she wears such lovely clothes, papa. I wish *I* had a silk dress."

"Has she a lovely disposition?" asked the cobbler.

"No; Jennie Wright, who has known her ever so long, says she has a dreadful temper and does very rude things; but all the girls think her clothes are lovely, and I'm 'most ashamed to have to wear this old gingham dress before her. And I do wish *we* lived in a big house, papa."

"There are more rooms in this one than we can use, Anice," said the cobbler, "and a good disposition is worth more than costly clothes. 'Fine feathers do not make fine birds,' you know. Be unselfish, kind-hearted and sweet-tempered and you will win love even though you wear nothing better than gingham."

Anice listened attentively to what her father said, but she could not forget little Sybil Pond's silk dress, blue sash, bronze boots and dainty embroidered handkerchief, and she began to look upon herself as very ill-used because she had no pretty clothes, and her father was only a poor cobbler.

The feeling grew stronger with every day, for the doctor's little daughter continued to excite the envy and admiration of her school-mates by appearing in pretty, costly dresses, and wearing a different sash with every costume. And she utterly refused to recognize Anice as her equal. She was a very silly little girl, and had been very much spoiled, or she would certainly not have been so rude and unkind.

"I wish you would let me stay home all the time, papa," said Anice. "I don't like to go to school, now."

But her father would not consent to this.

"Now is the time to learn," he said. "It would be very foolish for you to stay at home because the doctor's daughter dresses better than you can."

Then Anice began to feel more ill-used than ever, and to think that her father did not love her any more.

She was standing at the little garden gate one afternoon, thinking about it, when she saw a lady and gentleman coming down the street. The lady was very handsomely dressed, but had a weary, peevish look, as if she was discontented with life.

"Perhaps this child can tell us the way to the Glen County Orphan Asylum," said the gentleman. "We can't have much further to go, I'm sure."

"What a lovely little thing she is!" said his companion. "Albert, did you ever before see such beautiful golden hair, and such big blue eyes. They are like pansies. She looks like a wax doll. Now, why wouldn't it be better to take this child than to go to the asylum after one? I am sure we would not find one prettier than this."

The gentleman laughed. "You speak of taking this child as if you could pick her up without asking," he said. "She probably has parents, who would not consent to part with her."

"Wouldn't you like to come and live with me, my dear?" asked the lady, taking in a close clasp one of Anice's dimpled little hands. "I would give you everything you wanted. You should have plenty of candy and cake, and all sorts of dolls and pretty toys."

Anice was very much pleased at being thought so pretty. She had never before been so openly admired, and thought the lady must be very kind and good to speak so pleasantly to her.

"Would I have silk dresses and bronze boots?" she asked, "and would I live in a big house like Dr. Pond's over there on the hill?"

"You should have a silk dress and different boots for every day in the week," answered the lady, whose name was Mrs. Gaylord, "and live in a house much finer than that on the hill."

"Then I'll go," said Anice, "I'll run into the shop and tell papa."

She came out a moment later, leading her father by the hand.

"Why, it is Mr. Gaylord," said the cobbler, recognizing the gentleman as the head of a wealthy leather firm in the city, with whom he always dealt.

"Yes," said Mr. Gaylord, "and my wife wants to take away your little girl. She has fallen in love with the child's blue eyes and golden curls."

"Would you really leave me, Anice?" asked the cobbler.

"Yes, I want to go," answered Anice, in a low voice. "I am tired of living in this little old cottage, and wearing these horrid gingham dresses."

"I will do well by her if you will let me have her," said Mrs. Gaylord, addressing Mr. Dame. "I lost my only child a few years ago, and have made up my mind to adopt one. I can give your little girl advantages she would never have here."

The cobbler hesitated a little while; then he drew Mrs. Gaylord aside, so that he could speak to her without being overheard by Anice.

"I will let you take my child on one condition," he said, "if she wants to come home within a month you must let her come; and if I find that I can not do without her, and send for her at any time, you must let me have her."

"Very well," said Mrs. Gaylord. "I agree to the condition, and am ready to take her away at once."

Anice did not cry as she kissed her father good-bye, for her mind was too full of the fine things she was to have in her new home to allow her to feel any sorrow at leaving the old.

The cobbler stood at the gate and watched his little daughter out of sight.

"She is young to have so hard a lesson," he said, meditatively, "but perhaps it is as well for her to have it now as later, and I must do without my sunshine for a little while."

That evening Anice was dressed as well as ever Sybil Pond had been, and felt like a little peacock in her dainty muslin frock, pale blue sash, bronze slippers, open-worked stockings and ruffled, embroidered petticoats.

She was given a little room all to herself, and was delighted with the rich carpet, costly furniture and beautiful bric-a-brac scattered around. But when the nurse had put her to bed and gone down stairs she began to feel a little lonely, and to wish she might see her father, if only long enough to kiss him good-night. He had always sat with her at bed-time, and told her wonderful stories of fairies and strange countries, and it seemed hard to have to go to sleep all alone.

For the first few days she was pleased with the novelty of her new life, and the pretty things Mrs. Gaylord gave her; but she soon saw that she was looked upon more as a toy to amuse Mrs. Gaylord's idle hours, than as a creature to be loved and carefully trained. She was alternately caressed and scolded, praised and rebuked, and in every way the new life was different from the old.

The dolls, toys and pretty dresses lost their charm, and the poor little girl cried herself to sleep every night, so much did she long to see her kind father.

"Papa loved me because he'd had me all his life," she would sob. "Mrs. Gaylord has me here only because I'm pretty, and she likes to dress me up."

She thought she would never see her father again, for she had an idea that he had made her a present to Mrs. Gaylord, and she felt sure that lady would never give her back to him, no matter how willing he might be to take her.

She grew so pale and thin, and looked so sad, that at length Mr. Gaylord noticed it.

"That child will be sick, Lucy," he said to his wife. "She is evidently fretting after her father. I fear your experiment is not a success."

"She can go home if she wants to," said Mrs. Gaylord. "I see very plainly that she never can take my poor little Jessie's place in my heart. She is pretty, but I don't love her, and she is a great care."

"She is not your own, and that is the reason you don't love her," said Mr. Gaylord. "I am glad we did not take her from the asylum, for in that case you could not have gotten rid of your burden so easily. I will send for the child and see what she says about going home."

He rang the bell, and directed the servant who answered it to send Anice to him at once.

"It seems to me you are not happy here, dear," he said to the little girl, as she came into the parlor and advanced to his side. "Would you like to go back to your old home?"

For answer, Anice threw herself into his arms and burst into tears.

"Oh, will you really let me go back?" she sobbed. "Can I really go home to my own dear papa. Oh, papa, papa!"

"You shall go to-morrow," said Mr. Gaylord, trying to dry her tears with his handkerchief. "So don't cry any more, my darling."

He took her back to her old home himself by an early train the next morning and left her at the door of the little shop.

She went in very softly, and found her father sitting at his bench, his awl in his hand. But he was not working, and looked very sad and lonely.

You ought to have seen how his face brightened when his little daughter rushed into his arms, and, oh, how he kissed and hugged her!

"So you found out that it takes something more than fine feathers to make us happy, little daughter," he said, "and you've concluded that you'd rather have your papa's love than silk dresses and bronze boots."

And Anice cried and laughed by turns; and when she had gone up-stairs to her little room under the roof, and put on one of her plain gingham dresses, and was sitting at the little round table, pouring out her father's tea, she felt that she had never been so happy before.—*Florence Hallowell, in Chicago Standard.*

—Crushed strawberry, so fashionable last summer, gives way this season to kicked yellow dog.—*Estelline (Dak.) Bell.*

FARM AND FIRESIDE.

—Pears, peaches and quinces will not thrive in the shade of larger trees.—*Chicago Journal.*

—A writer in the *Country Gentleman* says that good syrup can be made from the sap of the soft maple tree.

—Indian meal will remove spots of grease or oil from carpets. Rub it on the place to be cleansed until the meal is discolored; brush it off and repeat the process with more meal until the spot has disappeared. — *Philadelphia Press.*

—Indian Bread: Two cups of Indian meal, one-half cupful each of rye and wheat flour, two-thirds of a cupful of molasses, one pint of sour or buttermilk, one teaspoonful of saleratus or cooking soda, one teaspoonful of salt.—*The Household.*

—Who has not observed that the soil is always loose and moist beneath a stone heap? The *American Cultivator* tells of some pear trees that were mulched with stones, and which made three times the growth of any other, though all did well.

—Oil cloth may be kept bright when almost worn out, if, after washing it, you take a flannel cloth and dip a corner of it in kerosene, and rub the oil cloth with it. Of course, a very little oil goes a great ways, and care must be taken not to use too much.—*Toledo Blade.*

—In melting maple sugar to make syrup, put in only a little water at first. After the sugar is melted and comes to a boil, add sufficient water to give the desired thinness. Syrup so made will be found much more satisfactory than when the water is all put in at once.—*N. Y. Examiner.*

—Corn that is thoroughly ripened on the stalks in the field, well dried in the sun, traced up and placed in a room, possesses remarkable vitality. Some seed corn was disposed of at an auction sale in Vermont in the spring of 1883 said to be thirty years old, but it sprouted readily and produced a large crop.—*Chicago Times.*

—To fatten a horse, mix a bushel of flax seed, one of barley, one of oats and one of corn, and grind the mixture together. Feed two or three quarts of the mixture three times a day, mingled with a peck of cut hay and straw. If the horse eats readily, let the quantity be gradually increased until he will eat four or six quarts at every feeding three times a day.—*Rural New Yorker.*

—A writer draws attention to the necessity of treating stock with mildness, as having great influence on their health, fattening, their yield of milk and their working powers. The animals treated with gentleness are quick, lively and docile; they work at their ease, employ their strength in a regular manner and without effort. The attachment of the Arab horse for its master is due to the extreme care bestowed on it, and where it is reared under the tent of the tribe.—*Chicago Tribune.*

—The *American Cultivator* says: During the long summer days, when cows fresh in milk have plenty of grass, they can not carry with ease the burden of milk produced between early morning and the usual time for milking at night. Milking at noon is a good plan in such cases, as it nearly equalizes the intervening times. While the milk is in the bag some of its fat is being constantly absorbed by the cow. Hence frequent milking produces a larger product of butter, but the cow needs all the heavier feeding to stand such a demand on her milk-producing capacity.

FACTS AND FIGURES.

Elements That Enter Very Largely Into Agricultural Calculations.

A traveler on agricultural business—especially, if we rightly remember, with live stock in view—having occasion to visit a pastoral district of Britain, after staying a while at a farm-house, remarked that the whole of the conversation during dinner was "sheep, sheep, sheep," and for the rest of the day, over the evening cup of tea, or "night cap" of hot whisky and water, "all dog, dog, dog." The story illustrates the animating principle of the breeder's business. It is not, immediately, gain, although the profits of his calling are of course his ultimate reward and his means of living, but much nearer his heart than the hope of profit is the thorough love of his business for its own sake. This is doubtless one great secret of the marvelous advances in the improvement of all varieties of domesticated animals; but there is another side to the question. The practical man wants to know more than an owner, partial to the fruits of his own industry, is likly to tell him. Rose-colored statements about the beauty of this particular cow, the magnificence of that particular steer, altogether "off book," may fascinate the group of sympathetic listeners, but glowing words will not fill pot or pan. We must come to weights and measures, the cheese press, and the smell of the shambles, and, waiving the ornamental, examine the strictly utilitarian side of the question. Enthusiasm, one of the most powerful of the forces which propel the work of improvement, is a cause of misleading exaggeration in the tales told when breeder joins breeder in recalling the pleasures and the successes of a pursuit in which both are so deeply interested. For historical purposes, and for lasting standards whereby we may measure the achievements of successive periods by the achievements at the outset of any breed, we want full, accurate statistics, tables of increase from birth to butcher, tables of the quantities and variations of dairy produce, and a hundred other particulars for precise data, so that the degree of usefulness, for any special purpose, of a breed, a tribe, or family, or a single animal, may be accurately estimated, and the stock owner may know always whether the stock he sees are such animals as will exactly suit his purpose. The exhibition of dressed carcasses, in connection with the shows of fat stock, brought into competition alive, and afterwards dead, is a great step in advance of old ways, and the scientific tests of dairy cows are also improvements in the right direction, and should be loyally supported. The more widely such trials of merit and their results are made known, the broader is the foundation of general and useful knowledge within the reach of those to whom it is essentially requisite.—*Live Stock Journal.*

A SINGULAR BOOK.

Scintillating With Sarcasm and Brilliant With Truth.

[New York Correspondence American Rural Home.]

Chap. I. "Has Malaria;" goes to Florida.
Chap. II. "Overworked;" goes to Europe.
Chap. III. "Has Rheumatism;" goes to Ems.
Chap. IV. Has a row with his Doctor!

The above chapters, Mr. Editor, I find in a book recently published by an anonymous author. I have read a deal of sarcasm in my day, but I never read anything equal to the sarcasm herein contained. I suspect the experience portrayed is a personal one; in short, the author intimates as much on page 31. Let me give you a synopsis:

"Malaria," as it states, is the cloak with which superficial physicians cover up a multitude of ill feelings which they do not understand, and do not much care to investigate. It is also a cover for such diseases as they cannot cure. When they advise their patient to travel or that he has overworked and needs rest and is probably suffering from malaria, it is a confession of ignorance or of inability. The patient goes abroad. The change is a tonic and for a time he feels better. Comes home. Fickle appetite, frequent headaches, severe colds, cramps, sleeplessness, irritability, tired feelings, and general unfitness for business are succeeded in due time by alarming attacks of rheumatism which flit about his body regardless of all human feeling.

It is muscular,—in his back. Articular,—in his joints. Inflammatory, my! how he fears it will fly to his heart! Now off he goes to the springs. The doctor sends him there, of course, to get well; at the same time he does not really want him to die on his hands!

That would hurt his business!

Better for a few days. Returns. After a while neuralgia transfixes him. He bloats; can not breathe; has pneumonia; can not walk; can not sleep on his left side; is fretful; very nervous and irritable; is pale and flabby; has frequent chills and fevers; everything about him seems to go wrong; becomes suspicious; musters up strength and demands to know what is killing him!

"Great heaven!" he cries, "why have you kept me so long in ignorance?"

"Because," said the doctor, "I read your fate five years ago. I thought best to keep you comfortable and ignorant of the facts."

He dismisses the doctor, but too late! His fortune has all gone to fees.

But him, what becomes of him?

The other day a well-known Wall street banker said to me "it is really astonishing how general bright's disease is becoming. Two of my personal friends are now dying of it. But it is not incurable I am certain, for my nephew was recently cured when his physicians said recovery was impossible. The case seems to me to be a wonderful one." This gentleman formerly represented his government in a foreign country. He knows, appreciates and declares the value of that preparation, because his nephew, who is a son of Danish Vice-Consul Schmidt, was pronounced incurable when the remedy, Warner's safe cure, was begun. "Yes," said his father, "I was very skeptical, but since taking that remedy the boy is well."

I regret to note that ex-President Arthur is said to be a victim of this terrible disease. He ought to live, but the probabilities are that since authorized remedies can not cure him, his physicians will not advise him to save his life, as so many thousands have done, by the use of Warner's safe cure, which Gen. Christiansen, at Drexel, Morgan & Co.'s, told me he regarded "as a wonderful remedy."

Well, I suspect the hero of the book cured himself by the same means. The internal evidence points very strongly to this conclusion.

I can not close my notice of this book better than by quoting his advice to his readers:

"If, my friend, you have such an experience as I have portrayed, do not put your trust in physicians to the exclusion of other remedial agencies. They have no monopoly over disease and I personally know that many of them are so very 'conscientious' that they would far prefer that their patients should go to Heaven direct from their powerless hands than that they should be saved to earth by the use of any 'unauthorized' means."

And that the author's condemnation is too true, how many thousands duped, and yet rescued, as he was, can personally testify?

It has been discovered that the knots which a vessel makes at sea depends upon the tied.—*Troy Times.*

A Prize in the Lottery

of life which is usually unappreciated until it is lost, perhaps never to return, is health. What a priceless boon it is, and how we ought to cherish it, that life may not be a worthless blank to us. Many of the diseases that flesh is heir to, and which make life burdensome, such as consumption (scrofula of the lungs) and other scrofulous and blood diseases, find a complete cure in Dr. R. V. Pierce's "Golden Medical Discovery" when all other remedies have failed. Dr. Pierce's pamphlet on consumption mailed for two stamps. Address World's Dispensary Medical Association, Buffalo, N. Y.

A COUNTRY seat that always rents—The barbed wire fence.

"All Men Are Liars,"

said David of old. He was probably prompted to make the above remark after trying some unreliable catarrh remedy. Had he been permitted to live until the present day, and tried Dr. Sage's Remedy, he might have had a better opinion of mankind. We claim that no case of catarrh can withstand the magic effects of this wonderful medicine. One trial of it will convince you of its efficacy. By druggists; fifty cents.

A SENTENCE of forgiveness in five letters—I xqq u.—*Golden Days.*

* * * * Delicate diseases of either sex, however induced, speedily and permanently cured. Consultation free. Book three (3 c.) stamps. World's Dispensary Medical Association, Buffalo, N. Y.

A YOUNG lady who keeps an autograph album expressly for male signatures refers to it as her "him-book."

Young Men, Read This.

THE VOLTAIC BELT CO., of Marshall, Mich., offer to send their celebrated ELECTRO-VOLTAIC BELT and other ELECTRIC APPLIANCES on trial for 30 days, to men (young or old) afflicted with nervous debility, loss of vitality and all kindred troubles. Also for rheumatism, neuralgia, paralysis, and many other diseases. Complete restoration to health, vigor, and manhood guaranteed. No risk incurred, as 30 days' trial is allowed. Write them at once for illustrated pamphlet, free.

TO A FRIEND
who is suffering from
Boils and Carbuncles,
no better advice can be given than to try
Ayer's Sarsaparilla.

ORLANDO SNELL, *132 Ford st., Lowell, Mass.*, was terribly afflicted with Carbuncles on the back of his neck. Ayer's Sarsaparilla cured the Carbuncles, and has kept him free from them.

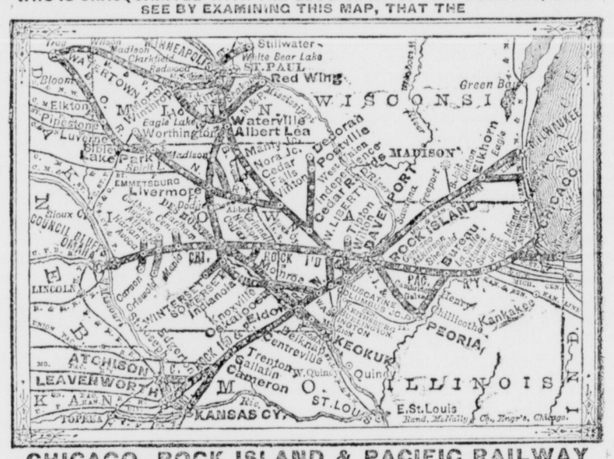
F. P. COGGESHALL, *Bookseller, Lowell*, says: I have been taking Ayer's Sarsaparilla for an impurity of the blood, which manifests itself in troublesome Boils and Eruptions, and can truly say that I have never found any medicine so prompt and certain in curative effect. It has done me great good.

LEANDER J. MCDONALD, *Soley St., Charlestown, Mass.*, testifies: One year ago I suffered greatly from Boils and Carbuncles, and for nearly two months was unable to work. A druggist advised me to take Ayer's Sarsaparilla, which I purchased. After taking two bottles of this medicine I was entirely cured, and have remained well ever since.

Copyrighted.

For all diseases originating in impure blood take
Ayer's Sarsaparilla,
Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists. Price $1; six bottles, $5.

A MAN
WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC RAILWAY

By reason of its central position and close relation to all principal lines East and West, at initial and terminal points, constitutes the most important mid-continental link in that system of through transportation which invites and facilitates travel and traffic between cities of the Atlantic and Pacific Coasts. It is also the favorite and best route to and from points East, Northeast and Southeast, and corresponding points West, Northwest and Southwest.

The Rock Island system includes in its main line and branches, Chicago, Joliet, Ottawa, La Salle, Peoria, Geneseo, Moline and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Watertown in Dakota, and hundreds of intermediate cities, towns, villages and stations.

THE GREAT ROCK ISLAND ROUTE

Guarantees its patrons that sense of personal security afforded by a solid, thoroughly ballasted road-bed; smooth tracks of continuous steel rail; substantially built culverts and bridges; rolling stock as near perfection as human skill can make it; the safety appliances of patent buffers, platforms and air-brakes; and that exacting discipline which governs the practical operation of all its trains. Other specialties of this route are Transfers at all connecting points in Union Depots, and the unsurpassed comforts and luxuries of its Passenger Equipment.

The Fast Express Trains between Chicago and the Missouri River are composed of well ventilated, finely upholstered Day Coaches, Magnificent Pullman Palace Sleepers of the latest design, and sumptuous Dining Cars, in which elaborately cooked meals are leisurely eaten, "good Digestion waiting on Appetite, and Health on both." Between Chicago and Kansas City and Atchison, are also run the Celebrated Reclining Chair Cars.

THE FAMOUS ALBERT LEA ROUTE

Is the direct and favorite line between Chicago and Minneapolis and St. Paul, where connections are made in Union Depots for all points in the Territories and British Provinces. Over this route, Fast Express Trains are run to the watering places, summer resorts, picturesque localities, and hunting and fishing grounds of Iowa and Minnesota. It is also the most desirable route to the rich wheat fields and pastoral lands of interior Dakota.

Still another DIRECT LINE, via Seneca and Kankakee, has been opened between Newport News, Richmond, Cincinnati, Indianapolis, and Lafayette and Council Bluffs, Kansas City, Minneapolis and St. Paul and intermediate points.

For detailed information see Maps and Folders, obtainable, as well as Tickets, at all principal Ticket Offices in the United States and Canada; or, by addressing

R. R. CABLE, President and General Manager, Chicago.

Sold everywhere, or sent by mail for 25 cts. in stamps. Valuable information FREE. J. S. JOHNSON & CO., BOSTON, MASS.

CANCER of the TONGUE.

A Case Resembling That of General Grant.

Some ten years ago I had a scrofulous sore on my right hand, and with the old-time treatment it healed up. In March, 1882, it broke out in my throat, and concentrated in cancer, eating through my cheek, to the top of my left cheek bone and up to the left eye. I subsisted on liquids, and my tongue was so far gone I could not talk. On October first, 1884, I commenced taking Swift's Specific. In a month the eating places stopped and healing commenced, and the fearful aperture in my cheek has been closed and firmly knitted together. A new under lip is progressing, and it seems that nature is supplying a new tongue. I can talk so that my friends can readily understand me, and can also eat solid food again. I would refer to Hon. John H. Traylor, State Senator, of this district, and to Dr. T. S. Bradfield, of LaGrange, Ga. MRS. MARY L. COMER.

LaGrange, Ga., May 14, 1885.

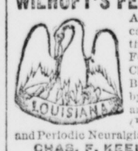
Treatise on Blood and Skin Diseases mailed free.

THE SWIFT SPECIFIC CO., Drawer 3, Atlanta, Ga. N. Y., 157 W. 23d St.

RIDGE'S FOOD

Especially in Cholera Infantum is the use of Ridge's Food invaluable. Many cases could be cited where everything else had failed, and Ridge's Food has been tried and retained. By the strength imparted and its neutral action on the bowels, the physician has been able to use such remedies as to effect perfect restoration of the patient to health.

WILHOFT'S FEVER AND AGUE TONIC



A warranted cure for all diseases caused by malarial poisoning of the blood, such as Chills and Fever, Fever and Ague, Sun Pains, Dumb Chills, Intermittent, Remittent, Bilious and all other Fevers caused by malaria. It is also the safest and best cure for enlarged Spleen (Fever Cake), General Debility and Periodic Neuralgia. For Sale by all Druggists.

The Awful Mistake.

A newly married couple were *en route* to Washington by the Baltimere & Ohio. There are many tunnels on this road the other side of the Ohio river. All through Ohio the face of the young man wore occasional looks of pain, despite his great joy. He seemed to want something. Apparently he yearned. Over in West Virginia the train entered a tunnel. Upon emerging into the light the young man's face was seen to wear a studious expression. He was thinking. At first he seemed perplexed, then interested, then triumphant. He had had a revelation. Then he smiled with a firm, manly continuous smile, and his eyes peered ahead for the first sign of a yawning cavern in the mountain side. The bride was happy and demure. Whish—shadows—rumbles—darkness. The veil is drawn. It is another tunnel. Light again, and the young man looks happier than ever. The bride's cheek disports a gentle blush—a modest inexperienced blush, discovered only to the initiated and envious. No perplexity, no anxiety, now. The revelation has been tested and found a success. There are many tunnels, but not enough. If the whole line were a tunnel the bride and groom would not care how slow the train proceeded. The man who has not lived to bless the builder of tunnels does not know what happiness is. He is but little above the brute, which never troubled the Creator for passing clouds over the moon on prayer-meeting night. But our bridegroom was not one of these parties. He appreciated all the blessings which man and nature had bestowed upon him. He did not miss a tunnel.

But all things must have an end. Daylight always comes to the newly married. Strawberries and cream must be paid for at the cashier's desk. Within the blissful cucumber hides a microbe. Our young husband goes for a drink of water. While on this errand his eager eye catches the signs of another tunnel. Of course he fears his birdie will be sore afraid if left alone in the darkness, and he hastens to her side. Quick are his feet, but faster moves the train. Darkness gathers while he is yet half a dozen seats away. But the brave man does not falter. He gropes along, he reaches the seat (or thinks he does) and slides into it. Deep are the shadows, and hums the train.

A scream—long and vigorous—a sound of scuffling—a thump or two—and the bright light of a May day breaks upon the scene. The young husband frantically endeavors to disengage himself from the grasp of an angry colored woman sitting in the seat just behind the bride. He at length succeeds and retires sullenly to his seat, wiping his mouth and occasionally spitting upon the floor as if he had bitten through a worm in a fig.

The tunnels come and go, but their shadows are scarcely deeper than those upon the face of the young honeymoon.

Wives of Great Men.

From Carp's Washington Letter.

Miss Cleveland is the baby of the Cleveland family. She looks to be thirty-five. She is a medium sized woman, inclined to be petite with square shoulders, a short neck, and a face sallow in its complexion but decidedly intelligent in its features. From a high forehead little brown curls stand upward, and going backward cover her whole head with innumerable ringlets. She dresses very plainly, but neatly, and wears very few ornaments. She is a good linguist, and can talk of other subjects besides the opera and decolette dresses. She is a Christian woman, and attends church regularly.

The Bayards are one of the most aristocratic families in Washington. Their blood is as blue as the sky, and the stream from a two-inch hose will run under any of their insteps without touching the skin. Tom Bayard claims to be descended from old Chevalier Bayard, the knight sans peur sans reproche, but if my remembrance is correct this old knight was a bachelor, and it so this must be a slight blot on the escutcheon of the Bayards. It is so far back, however, that it does not matter. There has been a good deal of talk about Mr. Bayard's poverty, but I am told he is worth a couple of hundred thousand dollars, and the income from this, in connection with his salary of $8,000 a year, ought to give him enough to entertain well considering the fact that he owns his own house and cooks his own terrapin.

Mrs. Hendricks, wife of the Vice-President, is one of the most accomplished women in public life, and it is a question if she does not merit more prominence than she has yet received from Washington society. Since 1845, when she first married Tom Hendricks, she has been connected with public men and social life. She is a tall, commanding woman as straight as a line. She has black eyes, a distingue air, and wears eye-glasses. She dresses richly, and is as ambitious for her husband as Mrs. John A. Logan. She is a thorough Democrat, and takes as much interest in politics as any statesman in the country. She is an Episcopalian, and both she and her husband attend church regularly.

Mrs. Lamar is dead, and Lamar, with all his dreaminess, shows no sign of marrying again. His wife became slightly demented before she died, I am told, but her husband took good care of her until she died about a year ago. Mrs. Lamar was quiet and retiring in her tastes. She was very domestic, and did not go out much while she was at Washington.

Mrs. Logan's house will be the center of the Republican society here during the coming four years. And it may be that it will be the wheel which will carry the Logan family into the White House. There is no better judge of human nature in the United States than Mrs. John A. Logan. She is a thorough politician, and the wires that she will manipulate from her house, on Iowa Circle, will ramify the land and probably reach every village within this country. She is a good wife, a good mother and has been the friend to scores of girls all over Washington. She is one of the few women of whom you hear nothing but praise, and John A. Logan may thank his wife for at least half of the succes he has had.

Mrs. Carlisle is a tall, well formed, light-haired blonde of perhaps forty. She has a rather queenly air, talks well, and during her reign here as Speaker's wife has made many friends and few enemies. The Riggs House, which is her home, will probably be one of the great places next winter.

Ill-Doings of Flies.

Dr. B. Grassi, of Royellasca, reports, in a recent number of the *Gazetta degli Ospitali*, some investigations he has been making on the above subject. He has convinced himself that the common house fly is a dreadful enemy of the human race, as of all living things in general. Whenever any infectious product is present—for instance, the sputa of phthisical patients, or dejecta from the intestinal tract—swarms of flies are to be seen, which soil themselves with the offensive material, and then crawl about over our food. The writer placed a plate containing a large mass of the ova of a human parasite (trichocephalus) upon a table in his laboratory, which was situated at the distance of about thirty feet from the kitchen. Sheets of white paper were placed in various parts of the kitchen, and in the course of a few hours the dejecta of flies were observable on the paper. Upon examination of these with a microscope, they were found to contain some of the ova of the parasite. Dr. Grassi then killed some of the flies, and found an enormous mass of fæces containing more of the ova. On another occasion he minced some segments of tape-worm that had been preserved in spirit, and put them into water, so that a mass of ova was suspended in it. In half an hour he succeeded in finding the ova of the parasite in the abdominal contents of the flies, and also in the spontaneously deposited dejecta. In like manner it could be proved that flies, that had alighted on mouldy cream, harbored the spores of *oidium lactis*. It is useless to comfort one's self with the thought that these germs die in the intestines of the flies. Even if the intestinal juice do act upon them, and it is not proved that it does in the case of bacteria, some would almost certainly escape destruction. In any case, moreover, the legs and proboscis would still serve as carriers of the infection. He proposes that attemps shall be made to introduce the same disease among them in the spring-time that already causes such devastation in the autumn.

It is very important to cover all articles of food with fine wire netting in "fly-time." During the hot season, when particles of organic matter are undergoing rapid putrefaction, flies do a useful scavenger-work; but they are not needed in a clean house. Shut them out with window-screens, for the sake of sanitary safety as well as comfort.—*Medical Age.*

Ayer's Ague Cure is warranted to cure all malarial disorders, when the directions are faithfully followed.

Wives of Peruvian Soldiers.

At Payta we took on a battalion of Peruvian soldiers with one bras-mounted officer to every seven men. The wives and families of the Peruvian army always travel with them like the squaws and papooses of the North American Indian. In camp the women do the cooking; on the march they carry on their backs and heads a great part of the camp equipage, and in the battle they nurse the wounded and rob the dead. They are poor, miserable, degraded creatures; just one degree above the dogs which follow at their heels. Their powers of endurance are extraordinary. Often it is the case that they will march twenty or thirty miles a day over dusty roads, carrying a child on their backs, without water or food.

The poor children have the hardest time, for they are always without rest or shelter and often without food. But it is the experience they are born into, and they know nothing of a better life. The officers tell me that the children often die on the march, when their mothers strip the clothing from them and throw the bodies into the sand or woods, without even a burial or a tear. On the contrary, the women seem to be glad to be relieved by death of an incumbrance.—*Cor. Inter-Ocean.*

Every idea from the moment of its emergency, begins to gather maternal force, and after a little while makes itself known.

The stateliest building man can raise is the ivy's food at last.

NEW ADVERTISEMENTS.

Diabetes Cured.

New Orleans Picayune, Jan. 20, 1884.

Mr. Mathias Doll, business place No. 23 North Peters street, residence 5 Bell street, between Jeanne and Bartholomew, New Orleans, has been a most intense sufferer from kidney trouble (diabetes) for the last six long and weary years. He said to us: "Even earlier than that I frequently suffered from pain in the back, and frequent making of water, but gave it no thought until about the time stated, when the almost constant desire to make water became unendurable. The pain in the back, and sometimes in the legs, made me so lame at times that I could scarcely walk. I consulted one of the best doctors in this city, and was under his constant treatment for one entire year without deriving the least benefit. I then consulted from time to time, during the last five or six years, six other physicians, each one standing in the front rank of the medical profession in New Orleans, and though I sometimes was a little relieved of some excruciating suffering, yet upon the whole I was not only no better, but in many respects much worse. My limbs became so swollen and sore that I could not cross my legs when sitting on a chair—all of which, they said, was caused by diabetes. I then tried some highly lauded patent medicine. But they all turned out to be humbugs. I had given up all hopes of ever getting relief, much less being cured, when I noticed in the papers some wonderful cures that PERUNA had made in this city, as prescribed by Dr. Hartman, giving the name and address of each person treated. I called to see him; he at once prescribed his PERUNA, which is not over three weeks ago. I am so much better that if I would not improve any more, I would not for any amount that I had not placed myself under his treatment. All my pain and lameness is gone. The swelling and stiffness in my legs has disappeared, and instead of making water every fifteen minutes, I now make it once in three hours during the day, and only twice in a whole night. I am, indeed, quite well again. Don't hesitate, don't say humbug, but get the PERUNA at once and take it as its printed label directs, or, if you think this is only an advertisement, and not strictly true, call and see me and see for yourself."

Mrs. Huldah Riple, Smethport, McKean county, Pa., writes: "DR. S. B. HARTMAN, & Co., Columbus, O. I have used your PERUNA and it has done me a great deal of good. Have recommended it to many of my friends, who have since expressed themselves as wonderfully pleased with its virtues."

HALL'S VEGETABLE SICILIAN Hair Renewer.

Seldom does a popular remedy win such a strong hold upon the public confidence as has HALL'S HAIR RENEWER. The cases in which it has accomplished a complete restoration of color to the hair, and vigorous health to the scalp, are innumerable.

Old people like it for its wonderful power to restore to their whitening locks their original color and beauty. Middle-aged people like it because it prevents them from getting bald, keeps dandruff away, and makes the hair grow thick and strong. Young ladies like it as a dressing because it gives the hair a beautiful glossy lustre, and enables them to dress it in whatever form they wish. Thus it is the favorite of all, and it has become so simply because it disappoints no one.

BUCKINGHAM'S DYE

FOR THE WHISKERS

Has become one of the most important popular toilet articles for gentlemen's use. When the beard is gray or naturally of an undesirable shade, BUCKINGHAM'S DYE is the remedy.

Schooley, Joseph Spiker, Ralph Browning, Jacob Sell, W. M. Rhodeheaver and others.

These lands will be sold CHEAP and on the MOST FAVORABLE TERMS: One fourth cash and the balance in three or four equal yearly payments, with interest and security to the satisfaction of the owner.

For further information apply to.

JAS. A. HAYDEN,
Republican Office, Oakland, Md.

BLACKSMITHING.

I am prepared to do all kinds of blacksmithing. Farmers' work a specialty. Prices as low as can be had for first class work. Shop near "Browning House."

tf 24 DAVID LITTLE.

AYER'S Ague Cure

contains an antidote for all malarial disorders which, so far as known, is used in no other remedy. It contains no Quinine, nor any mineral nor deleterious substance whatever, and consequently produces no injurious effect upon the constitution, but leaves the system as healthy as it was before the attack.

WE WARRANT AYER'S AGUE CURE to cure every case of Fever and Ague, Intermittent or Chill Fever, Remittent Fever, Dumb Ague, Bilious Fever, and Liver Complaint caused by malaria. In case of failure, after due trial, dealers are authorized, by our circular dated July 1st, 1882, to **refund the money.**

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

NEW ADVERTISEMENTR.

IT LEADS ALL.

No other blood-purifying medicine is made, or has ever been prepared, which so completely meets the wants of physicians and the general public as

Ayer's Sarsaparilla.

It leads the list as a truly scientific preparation for all blood diseases. If there is a lurking taint of Scrofula about you,

SCROFULA AYER'S SARSAPARILLA will dislodge it and expel it from your system.

For constitutional or scrofulous

CATARRH AYER'S SARSAPARILLA is the true remedy. It has cured numberless cases. It will stop the nauseous catarrhal discharges, and remove the sickening odor of the breath, which are indications of scrofulous origin.

"Hutto, Tex., Sept. 28, 1882.

ULCEROUS SORES "At the age of two years one of my children was terribly afflicted with ulcerous running sores on its face and neck. At the same time its eyes were swollen, much inflamed, and very sore.

SORE EYES Physicians told us that a powerful alterative medicine must be employed. They united in recommending AYER'S SARSAPARILLA. A few doses produced a perceptible improvement, which, by an adherence to your directions, was continued to a complete and permanent cure. No evidence has since appeared of the existence of any scrofulous tendencies; and no treatment of any disorder was ever attended by more prompt or effectual results.

Yours truly, B. F. JOHNSON."

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.

Sold by all Druggists; $1, six bottles for $5.

DR. JOHN BULL'S

Smith's Tonic Syrup

FOR THE CURE OF

FEVER and ACUE

Or CHILLS and FEVER,

AND ALL MALARIAL DISEASES.

The proprietor of this celebrated medicine justly claims for it a superiority over all remedies ever offered to the public for the SAFE, CERTAIN, SPEEDY and PERMANENT cure of Ague and Fever, or Chills and Fever, whether of short or long standing. He refers to the entire Western and Southern country to bear him testimony to the truth of the assertion that in no case whatever will it fail to cure if the directions are strictly followed and carried out. In a great many cases a single dose has been sufficient for a cure, and whole families have been cured by a single bottle, with a perfect restoration of the general health. It is, however, prudent, and in every case more certain to cure, if its use is continued in smaller doses for a week or two after the disease has been checked, more especially in difficult and long-standing cases. Usually this medicine will not require any aid to keep the bowels in good order. Should the patient, however, require a cathartic medicine, after having taken three or four doses of the Tonic, a single dose of BULL'S VEGETABLE FAMILY PILLS will be sufficient.

BULL'S SARSAPARILLA is the old and reliable remedy for impurities of the blood and Scrofulous affections.

Economy Among New England Farmers.

A Western man never knows the meaning of the word economy, in its highest sense, unless he has taken lessons on a farm in New England. Here a few acres is all the average farmer will attempt to cultivate, and the amount of labor and capital that annually must be expended on these is so great that every possible source of income must be made available, and strained to its utmost in order to keep the balance, at the close of the year, from falling on the wrong side of the account.

Nothing that has a penny in it is allowed to be wasted, even though it may take a full penny's worth of labor to get it out.

West of the Mississippi river I have seen hundreds of cords of rich manure piled off and dumped anywhere, so as to get it out of the way. Here this fertilizing substance is regarded as the very life and support of the farm. Barn cellars are constructed and sheds are built that it may be stored where it will not go to waste; and large tanks are made for holding and preserving the liquid drippings of the stable floors.

The droppings about the yard are gathered up daily and thrown on the pile under cover, and even house slops are thrown where they will help solve the all-important problem of keeping the farm from running down.

The owners of stables in the cities and villages find ready sales for all the manure they have at from $5 to $6 per cord, and the measuring is carefully attended to.

I am here reminded of a heated discussion I recently overheard between the buyer and seller of a pile of manure. It was to be measured in the cart, and the purchaser claimed the right to get on the load and tread it down with his feet twice while loading. The seller contended that it was customary to tread but once. They could not agree, and it had to be left to a third party, when it was finally settled that the treading process should be performed but once on each load.

The soap man passes through the county every week, buying wood ashes, for which he pays about twenty cents per bushel. After he has extracted the potash, through the process of leaching, he sells the ashes back to the farmer at the same price per bushel as he paid. He also buys all the bones that have been saved for him after having done faithful service in the line of soap making. After he gets through with these they pass on to the manufacture of fertilizers.

Little boxes save the scraps of old iron, pieces of old nails, screws, etc., for the foundry. Bits of rags and newspaper are saved for the tin peddler, with his Yankee notions. These dealers make their visits so often that they keep the country well cleaned of its rags, usually buying small amounts whose value is figured in pennies—but paid for in goods. As I pass a house with a tin peddler's cart in front, the woman has just sold six cents' worth of rags, and wants cash. After several minutes' talk the dealer, in view of the fact that she is an old customer, departs from his usual rules and pays her half cash in hand, while she takes the balance in trade.

All the corn fodder is cut before frost, if possible, and carefully cured and stored away for winter use.

The huge piles of straw that are burned in the West would be worth $6 to $8 per ton here to feed to stock. The poorest kind of hay, straw, leaves or anything that will do for bedding, finds ready sale. Even saw-dust brings one cent per bushel at the mills.

Thus the little economies are practiced on the farm and in the household. Children are reared amid its practices, are taught its necessity and shown its beauties. The child is the smartest who can see the penny that is buried deepest beneath the rubbish. He becomes proverbially sharp, and whatever he allows to slip through his fingers may be safely passed by as worthless.—*Cor. Western Plowman.*

An Ohio farmer claims that Paris green for destroying potato beetles is unnecessary, as he has completely cleared his field with a single application of five pounds each of lime and copperas dissolved in twenty gallons of water.

Its highly concentrated curative power, makes Ayer's Sarsaparilla the best and cheapest blood purifier known.

Rev. Sam Jones on Whisky.

Rev. Sam Jones is the name of a character whose sermons as reported have made a feature in some of the Southern papers. The following is taken from a report in the *Atlanta Constitution:*

"I believe liquor is a good thing in its place, and I believe its place is in hell. If I was in hell I might drink it, but so held me God I never will on this earth drink it again. Some fellows say don't mix politics and religion. When you hear a fellow talk that way you may know he hasn't got any religion to mix. I would mix religion with politics, but not politics with religion. A little religion will help politics. It will make it clean and decent. We want truth, justice and temperance mixed with politics in this State. I spoke to the Legislature of Tennessee on this subject the other day. They are talking about a constitutional amendment on the liquor question up there. We want this question cleared up beyond the reach of these little cross roads judges, who hop up every now and then and say something is unconstitutional. We want to do away with such judges and put decent men of brains and character in their places. You can't reform a State until you send good men to the Legislature. Some men come to every Legislature that meets in Georgia that ain't fit to go to the chain gang.

"If you refuse to help suppress the infamous wrongs that is being done by whisky, you are rotten yourself. Some of you don't know me. I speak plainly. I use words you can't understand. Now you can take the Latin word decayed and it won't faze a fellow. If you take the good old Anglo Saxon word rotten you can cut his head off. You see, I choose my words. Of course there are always some little spelling-book critics sitting around, who will go back on a fellow's grammar. I wouldn't mind being swallowed by a whale, but I would hate to be nibbled to death by minnows. Whisky is not good for one thing in this world for which there is not something else that is better. If the time ever comes when they say to me: "You'll die if you don't drink whisky," I will say, "Get my shroud ready." I mean to die sober. If a fellow gets so low that nothing but liquor will save him, I am ready to preach his funeral sermon. If there is in this vast audience one man or woman who never had a relative or loved one hurt or ruined by whisky, I want him to here stand up right now. You have all had a brother, or a father, or a son-in-law ruined by whisky. My goodness, these sons-in-law! I'd rather have a boa constructor around my neck than to have a drunken son-in-law. The devil can't do any worse than that. Some of you old hypocrites that are dilly-dallying with the whisky question are going to get caught just that way. The devil is going to slip up on you with a drunken son-in-law, and I'll bet he will make you a prohibitionist with a vengence. God despises a coward.

"I had rather die at the mouth of a cannon doing my duty than to run away from it because I was afraid. God intrusts all the noble causes on this earth to men who are game. I don't mean to talk here more than half an hour. If any of you fellows get tired you know the way home. We wouldn't have missed you if you hadn't come at all."

The Irrepressible Sparrow.

So the sparrow is doomed in America! Says Professor Ridgway. Our exasperated cousins are to rise in force and drive the impudent invader from their shores. All I can say is, let them try. Adverse resolutions in ornithological societies may kill professors, but the sparrows, now that they have got a footing, will go on adding to their number forever and ever. As for gunpowder, poison, cats and traps, they flourish on them. That other yagabond, the street Arab, never sees the poor sparrow without lifting a stone, yet the sparrows could eclipse the lights of London if they gathered in a covey. When the farmer fires his blunderbuss at one, the result is only to startle into life half a hundred more. A bogie in the potato-field may send the crows in alarm to new pastures, but the sparrow builds his nest out of it. Learned professors, with their theories of extermination, talk as it the Bohemian of birds were some darling of society, and had not had to thieve for an honest living since the days when professors were not.—*St. James' Gazette, London.*

The *Coleman Voice* repeats the aphorism: "If a man is curious enough to know how important his existence is to the world, let him stick his finger into the ocean, and drawing it out, look into the hole it made." Nevertheless, a good many people manage to make a noise before they drop into their holes, like prairie dogs. They will not miss being not missed after they are gone. A dead man does not enjoy himself any more under a big monument than in a grave without a stone to mark it.—*Galveston (Texas) News.*

The Seven Days' Fight.

From Gen. Longstreet's contribution to *The Century* War Series, in the July number, we quote the following:

"The Federals withdrew after the battle and the next day I moved on around by the route which it was proposed we should take the day before. I followed the enemy to Harrison's Landing, and Jackson went down by another route in advance of Lee. As soon as we reached the front of the Federal position we put out our shirmish lines, and I ordered an advance, intending to make another attack, but revoked it on Jackson urging me to wait until the arrival of Gen. Lee. Very soon Gen. Lee came, and after carefully considering the position of the enemy and their gunboats on the James, decided it would be better to forego any further operations. Our skirmish lines were withdrawn, we ordered our troops back to their old lines around Richmond, and a month later McClellan's army was withdrawn to the North.

"The seven days' fighting, although a decided Confederate victory, was a succession of mishaps. If Jackson had arrived on the 26th—the day of his own selection—the Federals would have been driven back from Mechanicsville withoutia battle. His delay there, caused by obstructions placed in his road by the enemy, was the first mishap. He was too late in entering the fight at Gaines's Mill, and the destruction of Grapevine bridge kept him from reaching Frayser's Farm until the day after that battle. If he had been there, we might have bestroyed or captured McClellan's army. Huger was in position for the battle of Frayser's Farm, and after his batteries had misled me into opening the fight he subsided. Holmes and Magruder, who were on the New Market road to attack Federals as they passed that way, failed to do so.

"Gen. McClellan's retreat was successfully managed; therefore we must give it credit for being well managed. He had 115,000 men, and insisted to the authorities at Washington that Lee had 200,000. In fact, Lee had only 90,000. Gen. McClellan's plan to take Richmond by a siege was wise enough, and it would have been a success if the Confederates had consented to such a program. In spite of McClellan's excellent plans, Gen. Lee, with a force inferior in numbers, completely routed him, and while suffering less than McClellan, captured over 10,000 of his men. Gen. Lee's plans in the seven days' fight were excellent, but were poorly executed. Gen. McClellan was a very accomplished soldier and a very able engineer, but hardly equal to the position as a military chieftain. He organized the Army of the Potomac cleverly, but did not handle it skillfully when in actual battle. Still I doubt if his retreat could have been better handled, though the rear of his army should have been more positively either in his own hands or in the hands of Summer. Heintzleman crossed the White Oak Swamp prematurely and left the rear of McClellan's army exposed, which would have been fatal had Jackson come up and taken part in Magruder's affair of the 29th near Savage's Station."

A Walking Skeleton.

Mr. E. Springer, of Mechanicsburg, Pa., writes: "I was afflicted with lung fever and abscess on lungs, and reduced to *a walking skeleton.* Got a free trial bottle of Dr. King's New Discovery for Consumption, which did me so much good that I bought a dollar bottle. After using three bottles, found myself once more a man, completely restored to health, with a hearty appetite, and a gain in flesh of 48 lbs." Call at Nydegger's Drug Store and get a free trial bottle of this certain cure for all Lung Diseases. Large bottles 50c and $1.00.

A Bradford, Pa., man recently sent to Boston for some furniture, and when it arrived he took great pleasure in showing it to his friends, not forgetting to tell them "it was all the way from Boston." One of his friends astonished him when he proved the furniture was manufactured in Bradford, and was part of a lot shipped to Boston to be sold. The Bradford man paid about double what the furniture would have cost him at home.

Every writer is a skater, and must go partly where he would and partly where the skates carry him.

We are awkward for want of thought, the inspiration is scanty, and does not arrive at the extremities.

OAKLAND, GARRETT CO., MD.

DOWN TO THE SEA.

I know not what its course may be
Down from the mountain to the sea;

The spring I know, alone and still,
Where bubbles forth a little rill.

The clear, brown streamlet well I know,
And how its hurrying waters flow.

At first the grasses turn to make
A softer runnel for its sake;

The careless buttercup looks down
And sends a petal to the town,

As, whisp'ring to the happy day,
The brook sets forth upon its way.

Farther, bright pebbles line its bed
And gleam and glance beneath its tread.

It rushes through the alder shade
Nor loiters for the open glade.

Down swift cascades it flies and sings—
Shakes the white spray in airy wings;

Then, plunging, with a deepened roar,
Through the cleft rock its waters pour.

The solid basin far below
Is hollowed wide beneath its flow.

Here for a space it stops, to gain
New volume for the open plain.

At length, full-swelling, broad and free,
It sets serenely toward the sea.

Beside the green, dark pool I wait,
Stayed by thy warning hand, O Fate!

I may not follow, though I hear
The siren's song within my ear;

Nor may, for me, the motion stay
That rolls the river on its way.

I only know its path must be
Down from the mountain to the sea.

The brook that lightly sped away
Lies weltering ocean-wide to-day.

The child, whose days were bound with mine,
Is tossed and torn on life's cold brine.

—*D. H. R. Goodale, in N. Y. Independent.*

RABIES.

Description of the Death of a Mad Dog's Victim.

The Venom Lying Dormant for About a Month—Horrible Paroxysms of Pain for Two Days—Peculiarities of the Disease.

John Toelle was an honest, industrious and respectable man of about thirty-five years of age, of fine habits and traits, living on a twenty-acre tract of property just east of Kansas City, from which he derived a support for himself, wife and children. For the pleasure of his children the father, some three years ago, procured a fine Newfoundland dog, the instrument of his death, then but a pup. The animal was always kind and affectionate, and seemed never prouder than when serving as a pony for his little masters.

A STRUGGLE WITH A MAD BRUTE.

It was May 6 that Mr. Toelle had the disastrous struggle with the pet of his children. For several days prior the dog had been missed from the house for quite a while at a time, and when he returned he was indifferent, cross and snappish. On one occasion he took the babe's entire hand in his mouth, merely leaving the print of his teeth, but causing no abrasion of the skin. Again he seized an elder child by the arm, but his teeth did not penetrate the skin. These freaks caused alarm, and the animal was secured and tied. But Mr. Toelle accounted for the sudden savageness of the dog on the theory that the animal had been killing sheep, and the fresh blood had affected him. The morning of the fatal day the dog freed himself, and was seen jogging slowly across the field. His victim ordered his employe to go after the dog, but that party, whose apprehensions had been aroused, refused, and Toelle himself deserted his work and went in pursuit of the rabid animal. I had from his own lips the details of his adventure. He passed down into a light piece of timber out of sight of the neighboring houses, and overtook the dog as the animal paused at the edge of a stream of flowing water. Toelle walked near to him, and his fears being now aroused, though not the least suspicious of rabies, he stepped behind a large tree, and for a short interval was impressed with the peculiar look and behavior of the dog. The latter turned from the stream and walked leisurely toward the tree behind which his master stood. Then Toelle spoke to the animal in a tone of command, and, not being noticed, took up a stick and advanced to where the dog had paused, when the powerful brute made for his throat. There was at once a tenacious closing of the dog's jaws over the left hand of the now terrified man, and the terrible struggle began. After wrenching and choking, the hand was extricated, lacerated and bleeding; but instantly the other hand was caught and most fearfully torn before the efforts to free it were successful. Toelle was a man of great strength, which by desperation must have been increased, and, obtaining a neck-hold on the dog, threw him to the ground. No one had yet appeared at the desperate fight. The man was now on top of the dog, violently endeavoring to keep him down. Seconds must have been as minutes, and I could not learn with any definiteness how long the battle lasted. But before the man was exhausted, and while he still was on the dog, by chance a neighbor came near, and, comprehending the situation at once, ran to his house, procured his gun, and, returning to the scene, shot the dog to death while Toelle continued to hold on.

FEARING HYDROPHOBIA.

Toelle was now apprehensive of rabies. He hurried to his house and gave orders for his horse. His workman, misunderstanding him, himself took the horse and rode rapidly to town for a physician. The wounded man went at once to a neighbor's and asked for a horse, recounting his adventure, and insisted that he wanted and must have medical aid at once. The neighbor made light of the man's fears of hydrophobia, and absolutely refused to loan his horse. Toelle was forced to remain at home and await the coming of the physician. When that gentleman came, after much delay, he simply cauterized the wounds of his patient, and, though being informed fully as to the changed nature of the dog, his strange freaks and actions, persistently assured Toelle and his family that there was no cause to fear hydrophobia.

A week passed away and the wounds were rapidly healing, and at the end of two weeks Toelle was as well as ever and pursuing his labors as usual. What was the condition of the man's mind now? I believe from the moment he had the terrible struggle with the dog he felt convinced that the animal was experiencing rabies. His friends argued with him at length, endeavoring to relieve him of the gnawing apprehension that possessed him. He asked me the evening of the 6th what I thought as to the dog being mad. I answered him encouragingly, but, having known the dog for a long time, I was convinced that there had been a metamorphosis of his nature and disposition, and my fears of rabies were very strong. I urged every remedy, every prevention, including the use of the mad-stone; for, if the story of superstition, if you choose to term it, should not be confirmed when the stone should be applied, there might, at least, come respite to the poor man's troubled mind. A medical work containing a chapter on hydrophobia was obtained and studiously read by him; and he constantly showed that he was in distressing despair, antedating the miseries that were to fall on him.

THE DISEASE COMES ON.

No premonitory symptoms were felt, however, until Thursday, May 28, when he complained of darting pains from his hands to his arms, and an itching and dull sensation about the places so fearfully lacerated. But these passed away. Monday, June 1, he rode to town with a neighbor and frequently caught and rubbed his hands and arms, complaining of darting pains that went from his hands up his arms and met between his shoulders. He also said he felt chilly and remarked that he believed that he was going to have a chill. Returning home he went up-stairs and lay down. Some time passed, and his wife, going to the foot of the stairs, called to him several times without a response. She ascended the stairs and entered the room. Toelle rose to a sitting posture and turned his back on her. She crossed the room and found him crying bitterly with his face buried in his hands. His only reply to her question was: "I feel that awful disease creeping over me. I know I am going mad and shall die." The day dragged on; the body was not in pain, but for the mind the gloom of night was come—a hopeless darkness had settled there. He retired with the others of his household.

The coming of Tuesday morning, June 2, ushered in the twenty-seventh day counting from the time of the fearful encounter with the dog. At three o'clock of that morning the deceased awoke in a struggle for breath and called for a drink. When his eyes fell on the water handed him he instantly threw up his hands with the exclamation, "For God's sake, take it away!" He became composed in a moment or so and rested fairly well until he arose. He complained considerably and vomited freely. The physician was sent for and came in the forenoon. He was puzzled. He said but little of anything, and nothing that was definite. He departed, but in several hours returned, accompanied by another member of his profession. They viewed the patient, said nothing, did nothing, and departed. The afternoon wore away, and the restlessness and changed appearance of the man became more perceptible.

FEARFUL PAROXYSMS.

And now we near the hour when the dreadful poison in his system broke loose with horrible violence. How can I describe the deep agony of that night, when every nerve of the poor fellow seemed pulled asunder, and the screams that accompanied each death-struggle were heartrending and distressing beyond the power of language. At five o'clock he sent for his nearest neighbor to come and prepare his will. He was entirely rational; dictated and signed the document disposing of his property. He gave directions about his matters with noticeable clearness and minuteness. At seven o'clock he was sitting in a chair in his yard, with his family and several neighbors around him. He complained of being cool. His wife took a small shawl and made the motion to lay it over his shoulders. Then came the first scream, and the torturing struggle that came at short intervals until two hours before his last breath. He sprang from the chair and jumped about violently, calling to those present to tie him. Ropes and straps were quickly procured, and after seating him he was securely fastened to a tree. Every three or five minutes came those terrible screams. He was heard three-quarters of a mile away. At the same time he would pant and struggle as though suffocating, spitting and coughing incessantly. He was entirely rational and conscious, calling those present by name, and describing his pains, except during paroxysms of torture. In an hour it was decided to take him into the house. A storm was brewing, and altogether the setting-in of that night was to the attendants of the dying man one the reader may never wish to experience. We cut the ropes that secured Toelle to the tree, but were careful to provide against any effort he might make to attack one of our number. Once in the room, to which he walked with some support, we laid him on the bed, and at once securely fastened him down, leaving him sufficiently free to sit up, use his hands, and change his position. The room was somewhat close, nothing being open but the door. He screamed as soon as he lay down, struggled for breath, and complained of suffocation. I took my hat, and, leaning over the bed, gently fanned him. O, but what a cry and what a scene! There were torture and agony in the extreme, and a scream of "For God's sake, don't!" The windows were thrown open at his request, but the first touch of the current of air threw him into a paroxysm of torture. He called for water, but as soon as he looked at it his muscles contracted, his teeth clinched, and he presented the picture of rigidity and terror. But water he must have; his throat is parched, slime and saliva are choking him, and the panting, the struggling, the wild cries of anguish, and the fearful tossing and twisting of his body are calling for relief. At the suggestion he closes his eyes and opens his mouth; a tablespoon of water is dashed in; but instantly he commences more violent struggling. More terrible convulsions follow, and receiving the water seems more agonizing than the want of it. At ten o'clock the physician comes again. At least an hour is consumed in the attempt to put the sufferer under the influence of chloroform. Saturated cloths are held as best possible in the struggling to his nose; large doses of morphine are administered hypodermically, but without the least effect. The physician says nothing, goes away without any instructions, and leaves two of us watch the night through.

THE VICTIM'S LAST HOURS.

The condition of the sufferer remains unchanged. He is all the time conscious and rational. The priest comes, the wife enters, and we, the watchers, step from the room. When the voice of the priest is raised in prayer the dying man becomes composed and peaceful. The violent struggling ceases, the paroxysms and convulsions come no more, and I involuntarily looked through the window, expecting to see that death had come. Full fifteen minutes pass, and when the prayer is ended the hydrophobic victim gently takes his wife's hand, draws her to him, kisses her, and says: "Good-bye." At once the agonizing struggle recommences, and the scenes already described are repeated from every three to five minutes. And thus the night and the greater part of the next day wore away.

At three o'clock in the afternoon the legs of the man seem as though paralyzed. He ceases to struggle. We are obliged to tie his hands from him, for he is inclined to bite them. His mouth opens and shuts firmly, as though he were snapping. He is now entirely unconscious. Little by little there issues from his mouth white froth like clean soap-suds. The face begins to turn upward. The respiration is seen to decrease. Life is ebbing away. A watch is opened and the beating of the heart is timed. The snapping of the mouth grows less violent; and at five o'clock John Toelle is in full possession of death.

I carefully noticed the cries and screaming of the man in all his death-struggles, and I failed to discover the least in them that was like the barking or the noise of any animal.—*W. A. Alderson, in Kansas City Times.*

A PARTICULAR WOMAN.

An Appetite that was Stronger than Her Conscience.

What curious people one meets on the trains. The gush of a down East woman in a buffet car on the Pennsylvania Railroad, the other day, was ludicrous.

"Waitah," she chirped, "what haav you foah lunch?"

"Almost anything, ma'am."

"Coffay?"

"Yes, ma'am."

"Let me have coffay."

"Bread and butter, ma'am?"

"Let me have—ah—hot muffins."

"No hot muffins."

"No hot muffins? How provokeeng. Let me have bread—and say, waitah, let me have—ah—oysters, and—ah—chicken salad, and—ah—some boned turkey, and, ah——"

She got them. She smacked her lips, but not for pleasure. She was mad.

"Waitah," she snarled viciously, as the startled porter answered her ring—"waitah! What do you mean by giving me such beastly coffay? It is nothing but grounds — nothing but grounds. And the oysters! Say, waitah, where did you get them oysters? Them ain't no fresh oysters. They are canned.

The porter shrugged his shoulders.

"I'll change them," said the porter, meekly.

He changed them, and she thanked him with a grimace.

Five minutes after the train had left Harrisburg the porter rushed through the car in a white sweat.

"She's gone," he gasped.

"Who?"

"The old woman with the heavy appetite," he groaned.

"What of it?"

"Nothing—only," he seemed to swear with an inward swear word—"only she left at Harrisburg without paying for her lunch."

The woman from down East was sharper than she looked.—*Pittsburgh Chronicle-Telegraph.*

SPANISH VENDETTAS.

A Striking Instance of the Intensity of Family Quarrels in Spain.

About a year ago a gipsy named Moralis was assassinated at Zerza, in the province of Caceres, by one of his comrades named Silra. The latter was in due course tried and condemned to death, but his execution did not satisfy the vengeance of the victim's family. There had been ill-feeling between the two families for three years, but there had been no open quarrel until the murder of Moralis. Soon after the execution of the murderer, which took place last month, the two families met on their return from a fair near the town of Caceres. They had their mules and cattle with them. There were about fifty on each side, including women and children. A regular pitched battle ensued, revolvers, knives, and sticks being freely used by the men, while the women employed their nails with considerable effect, and the children threw stones indiscriminately. The result of the struggle was that the heads of the two families were both killed, two of the women, and several of the children. There were ten or twelve wounded, and the bodies of the dead were horribly mutilated. If the mounted police had not interrupted the fight, there would have been many more lives lost. Several of the mules were killed, and the baggage of the two families was strewn about in such disorder that the road for nearly half a mile looked as if a large army had beaten a retreat along it.—*Madrid Letter.*

—What this great throbbing public is yearning for is a scientists who will discover a woman willing to acknowledge that any other woman's dress does not hang like a rag.—*Boston Post.*

THE ALMANAC COAT.

Wonderful Garment That Will Foretell the Weather and Keep Away the Cholera.

"Herman," said Hoffenstein, as he entered the store and hung his hat on a nail, "I haf shust had a big surbrise, you know."

"How vas dat, Misder Hoffenstein?" inquired Herman, noticing that the old man was in good humor.

"Vell, you see, I goes up mit de exbosition dis morning, und vat you dink, I meets Jake Loewenburg und Solomon Myers, vat vas old frents uf mine in Vicksburg twenty-five years ago. Loewenburgh vas at de exbosition as von uf dose Turks, und vas selling beads und oder leedle dings, und Myers told me dat he vas dere as an Egyptian, und vas making blenty uf money. Vell, ven I sees dose felllows it takes my breath right avay, because I dinks dey vas dead. Myers' broder Jake vas courting my vife Leah at de same time I vas, und ve vas great frents. Myers dells me dat Jake failed in pisness at Leedle Rock a short vile ago und vas doing vell, because he fails on von side uf his store und runs de oder."

Hoffenstein smiled pleasantly at the idea, and walked to the door and looked down the street, and as he did so a customer came in.

"Vat can I do for you, my frent?" he inquired.

"I want to get a good coat, but one that is cheap. I'm a farmer, and go in for comfort more than I do for style."

"You vos right about dot, my frent, and I dinks dot I can fit you mid a good article at an easy price. Now, here vos a coat for eight dollars, vich is de very ding you vant," and he pulled a coat out of a pile of rather tough-looking clothing.

The customer commenced to examine it, but suddenly lifted his nose and exclaimed: "Whew! by jingo! there is a last year's smell about this coat that is not pleasant. What have you been doing with it?"

"I knew you vos going to say dot," said Hoffenstein, in a nonchalant way. "All of my customers say dot ven dey look at de coat, pecause dey don't know dot it vas one uf dose almanac, disinfecting coats vich haf shust been put on de market not more as dree months ago. De coat vat you haf in your hand vas soaked in de vool factory vere it vas made mit a breparation exbressly for de purpose of keeping de cholera avay, und my brider vot lifs in Europe writes me last veek dot de Prussian Government vont let de people vear any oder kind, so dot if de cholera comes along dey vill keep helty, you know. Herman, look in my desk und get my bruder Ike's letter, vich ve shows de gentleman. No, nefer mind, I forget dot I leaves dot letter mit my vife dis morning. My frent, dot coat vas better for de cholera den all de doctors und de medicine vot you can haf, und de smell uf de breparation goes right away ven you goes out mit de air. Put on de coat, my frent, und ve sees how it fits, you know."

The customer did so, and surveyed first one side of himself and then the other by the aid of the dingy mirror in the rear end of the store.

"Why do you call it an almanac coat?" asked the customer, who was rather pleased with the cut of the coat.

"Because it vos made exbressly for gentlemen vot lifs on a farm, und it vill dell you how de vedah vill pe, und vot to do to save your crop. You see de changes in de vedder haf de same effect on dot coat as dey haf on so much quicksilver, und vos dwice so much more reliable. Ven you see de coat commence to turn red around de collar it vas a sign dat dere is a full moon and it vas time to blant vatermelons, und ven de tail of de coat shrinks und de buttons on it go half way up your back shust look out for bad, vet vedder, und don't pull fodder, you know. Ven de buttons drop den you know dat de vedder vill be fine und can act accordingly. You dake my advice und buy dot coat, und you vill find dot you makes better crops den any von vere you lifs."

The customer appeared to be satisfied, and after purchasing the coat and leaving the store, Hoffenstein said: "Herman, I vas shust dinking de oder day dat I vould gif dat old job lot avay to some orphan asylum, because it has been in de stock efer since de var, und it schmells de whole store up. I dink ve better keep it a vile longer, und vork it off mit the almanac scheme," and again he walked to the door in hope that another customer would come in.—*N. O. Times-Democrat.*

A CRANK.

Not Always Safe to Conclude a Man Is One Because He Wears His Hair Long.

There was a long-haired man in the smoking car and some of the younger passengers were making sport of him. They called him a crank.

"Tut, tut, boys," said an elderly passenger; don't call a man a crank simply because he has long hair. Let me tell you a story. I owned a farm many years ago down East. One day I noticed a long-haired man walking around my place in a very queer way. I asked him what he was doing and he said he was just looking around a little. But he was there again the next day and the next. Finally I insisted on his telling me what he wanted, and he said: 'Well, farmer, there's buried treasure under your farm, and I've been trying to locate the best place to dig for it. I've found the place, and now I'll make a bargain with you. You do the digging and we'll divide the treasure equally between us.' I agreed and went to digging where he told me to. I spent all the money I had on earth putting that hole down, notwithstanding that the neighbors laughed at me and called the man a long-haired crank."

"You were a bigger fool than I took you for," laughed one of the younger passengers.

"There you go again," said the old man. "You youngsters judge by appearances and think you know it all. You——"

"But you never found any buried treasure, did you?"

"Yes, I did; hundreds of thousands of dollars' worth."

"What kind?"

"Coal. The long-haired man was a geologist."—*Chicago Herald.*

TEMPERANCE READING.

OUT ON TRIAL.

What Mr. Flaxton Had to Say for Himself—"Yer Honor, It Wasn't All Alick's Drunk."

"They are alone together up-stairs, and perhaps they'll fix it up," said Justice S——, as I stopped, intending to go up into his office. This remark was addressed to Marshal M——, a burly German, in a blue suit, with a star on his breast.

"What's up?" said I. "O," said the Justice, "it's the old story. Kate Flaxton has brought a complaint against her husband for a beastly drunk, and I don't blame her. Still, if they can manage to pull along together, it may be better for the children. We'll wait till it is time to open the court and see how they come out."

So we waited a few minutes, discussing the political situation, but thinking all the while of the situation up-stairs.

A man who gets so low down that his wife will make a complaint against him is usually a dirty specimen. Alick Flaxton, however, was an exception. He was just out of jail, to be sure, but he was clean for all that. Both he and his wife spoke with a strong Scotch accent.

Mrs. Kate had a face that would have done no discredit to some of the humbler characters among the Scottish women of the Waverley novels.

"What shall we do with you, Mr. Flaxton?" said the Justice. "You have been drunk times without number, and your wife has borne enough from you to break her heart. But she has borne it bravely for the sake of the children. To fine you would be to take the bread they need. What can I do but send you up for ninety days?"

"Well, yer honor," said Alick, "it's pretty rough, I know. I didn't mean to get drunk, but somehow I'm easy tempted, and as soon as I get a taste of the liquor it's all day with me. Now if yer honor would only let me off on suspended sentence I'll consider it a high compliment, indeed I would, and promise you faithfully, yer honor, I swear I won't drink again for a twelve-month, sure."

"What do you say to that, Mrs. Flaxton? Would it do any good to try him again? or can you do better without him?" said the Justice. "Indeed I can," said she, "and I can't let him off any more."

I looked at this honest woman's face as she said this, and I knew she would let him off. I knew she would try him again, for her face gave the lie to her words. That is the old story of a woman's love. Alick knew it, too. He knew that she would give him one more trial. So, because her heart spoke in protest against her better judgment, Alick was let off on suspended sentence with a very forcible charge that his next appearance before the court would send him to the house of correction.

For several weeks after that I heard nothing more about the Flaxtons, though I drop in quite often to see what is going on in the Justice's court.

I had almost forgotten the whole matter, when one day I happened to meet Mrs. Kate, and she looked so bright and cheerful that I could not keep from asking her if suspended sentence had proved a success. She was in high spirits and said she has kept his word so far and I begin to think he does really mean to stick to it. If I can only keep him away from temptation Alick will do well enough."

Mrs. Flaxton could turn her hand to almost anything. Sometimes she took in washing and ironing. Sometimes she did house-cleaning, for she was a resolute worker. She also knew how to cook admirably, and whenever there was a fair or festival, or any public occasion, at which refreshments were served, she was invaluable, for she was quite pleasing in her manners and could wait on crowded tables nicely, and then she was a host in the art of putting things to rights after the guests were gone.

"There's to be a party to-night," said she, "at Mrs. Newman's, and I'm going there to help her. Alick will come round and walk home with me after it is all over, unless some vagabond gets hold of him and prevails on him to take a drink. I wish he could be at Mrs. Newman's with me and then I should feel perfectly safe about him. I shall earn a nice penny to-night, for Mrs. Newman hasn't a stingy hair in her head."

"It's a long road that never turns," said I, "and I'm glad that Alick has got into the right track. I hope he won't get off the track."

The day but one after this casual meeting I was in the Justice's court again, and there, as sure as you live, was Alick in the custody of an officer. This time he was just sober enough to be able to talk intelligibly, and to give a clear account of himself. But the traces of a recent debauch were unmistakable. Mrs. Kate was not alone with him this time, Mrs. Newman was with her.

"What do you know about the case, Mrs. Newman?" said his honor.

"Well," said Mrs. Newman, "I know more about it than I wish I did. It's too bad; Mrs. Flaxton was half disposed to keep away from here and let Alick keep on abusing her, just as he has done for years. But the fact is, she has been working for me lately and is too good a woman to be treated in that way, and so I insisted on her bringing the complaint."

"Do you know under what circumstances he came to do this thing after keeping sober so long?" said the Court. "No, I don't know," answered Mrs. Newman, "and what is more, I don't care. He has, as you say, kept sober a good while, and could have done so still longer, had he chosen to do so. I haven't a particle of charity for a man who will be as good as good can be for awhile, and then up and make a beast of himself. Mrs. Flaxton helped me at my party the other night and when Alick came round to go home with her, I served him myself with all the refreshments he could eat, and you ought to have seen him eat. Then when he was as full of refreshments as he ever was of whisky I loaded up a good-sized market basket with cake and sandwiches and boned turkey for him to take home. This morning I thought I would stop in a moment and see how the children had enjoyed what I sent, for I feel a good deal of interest in them. Alick was crazy drunk and was making a perfect hell upon earth of his home. Now for my part I think it is about time for that suspended sentence you hung up over him to drop down on him."

"What have you to say for yourself, Alick?" said his honor. "Well," said Alick, drawing a long breath. "I was drunk again; that's as true as you live, but, yer honor, how can a common drunkard keep sober when all his enemies outside and inside of him push him down as fast as he gets up, and even his best friends hurt him when they don't mean to. Now I'll tell yer honor the square truth, upon my word I will, and yer honor will see that I'm not altogether in the fault. I went round to Mrs. Newman's the other night, just as she had told ye, and I wouldn't go back on her for the world, but if it hadn't been for her I'd have been a sober man to-day. She gave me a big pile of ice cream and a piece of cake as big as her own foot, God bless her. But then she put a ladleful of jelly right alongside of the ice-cream, and, yer honor, it was rum-jelly, strong enough to bear up a small boy; and the moment it got into the mouth of me down it went as if it had feet to go down with; yer honor knows how it is yerself, and when Mrs. Newman came round again she said to me, won't you have another dish of ice-cream, Alick? And I said to her, indeed I will, if ye please, ma'am, and when I started for home every drop of blood in me was yelling for whisky, and I slipped away from the misses when we was about half way home, and I don't know how it all came about, yer honor, but I was drunk before breakfast. What can a weak man do, when a woman that looks just for all the world like an angel, and she a member of God's church, too, puts hell into him by the ladleful and thinks she's doin him a kindness? I tell ye, yer honor, it wasn't all Alick's drunk."

Probably Mrs. Newman was never more completely surprised in her life than when she heard Alick's account of himself. She belonged to a fashionable church, and the ladies of that church had brought together their well-tested recipes for all manner of choice things to eat and to drink, and had published them in the form of a handsome recipe book by the ladies of Dubonton church. Mrs. Newman had used the book in making preparations for her party. Rum, wine, sherry, whisky, brandy—these words were alarmingly frequent on the fair pages of this wonderful recipe book, the sale of which had helped to lift a very troublesome mortgage on the elegant new church.

Alick was allowed another trial at Mrs. Newman's urgent request, and is at liberty once more on suspended sentence, while she is beginning to consider whether society ladies are in any way responsible for the shortcomings of their neighbors who are weak. On the whole, she rather thinks they are responsible to some extent.—*Egbert L. Bangs, in Christian at Work.*

AN EDUCATIONAL PROBLEM.

What the Sunday-School Teacher Can Do for Temperance.

Rev. J. C. W. Coxe, in a thoughtful article in the *Sunday-School Times*, asking: "What can the teacher do for Temperance?" writes: "What can the Christian teacher do for Temperance? The few are in positions of wide influence; their words will be weighty; they can do much to promote any good work; but the many are in obscure localities, in humble life, in small schools, a majority of them without voice or vote in public affairs—what can these do to promote this great reform?

"First to be named among the means of influencing others is the vitally important one of a correct example. Teaching is not all, nor chiefly, by word. Life is more than logic. Character is more weighty than a catechism. Conduct, Matthew Arnold affirms, is three-fourths of life. It bears a larger proportion to moral teaching. Truth will have little vitality apart from the personality of the teacher. One must be, in order to do and teach. Knowledge and character are both essential in a spiritual guide. A consistent example is the most convincing of arguments. 'Come' inspires conviction, 'go' awakens doubt. The selfish are not likely to influence others to sacrifice. A wine-drinker can not be relied on to rebuke a whisky-sot. Home-brewed ale is no more virtuous than commercial XXX. The New Year's sideboard may not sit in judgment on the all-the-year bar. Any cherished habit of self-indulgence weakens one's moral influence. Not a few are handicapped in their advocacy of Temperance by the quid or cigar. 'Who can bring a clean thing out of an unclean?' 'Thou, therefore, which teachest another, teachest thou not thyself?'

"The teacher is more than example. A guide-post is good, but a guide is better. Precept is necessary in moral training; there must be 'line upon line' of positive instruction. The teaching hour furnishes priceless opportunity. Then God's word is to speak to the intellect and heart and conscience. All other voices should echo the divine message. 'If they speak not according to this word, it is because there is no light in them.' Upon all questions of duty there is no lack of instruction in the Christian text-book. In principles, if not in positive precept, it covers all the issues of life. For defection or omission there can be no possible excuse. Temperance is a part of the Gospel. It is taught in God's word. It should be taught in the Sunday-school. It is taught where the Scriptures are faithfully studied and applied. It is taught more frequently than once a quarter. The teaching does not depend on the recurrence of the word 'Temperance' in the lesson-text. Few portions of Scripture are selected which do not deal, directly or indirectly, with the underlying principles of this and every other great moral reform. There is no lack of opportunity for Temperance instruction. No violence will be done to either letter or spirit of the word, if such teaching is found in nearly every lesson."

THE Vermont Legislature last winter passed a bill requiring the compilation and printing and distributing of the laws relating to the illegal sale and use of intoxicating liquors.

MISCELLANEOUS.

—A young man in New Haven has a collection of 7,000 birds' eggs, embracing nearly 2,000 varieties.

—There are said to be twenty-five thousand lawn tennis players within a radius of ten miles of New York.

—Cabul is pronounced Kawble; Merv is Mahriv; Herat is Herrht; Kurrachee is K'rahchy; and the accent of Afghanistan is on the second syllable. In all of these words the "a" is pronounced as in "ah."—*Chicago Herald.*

—The tropical gooseberry, which is cultivated in Florida, grows on a handsome tree from ten to fifteen feet in height. The fruit is rather smaller than the Siberian crab apple, and the shape a flattened globe. It contains one hard seed. The fruit is only moderately valuable, but the tree is ornamental.—*N. Y. Tribune.*

—A certain father in Middletown attended one of the meetings Sunday with his little son. When it was announced that the collection would be taken the father gave the boy money for that purpose, but what was his astonishment when the box was passed to see the little fellow hold on to the money. Upon being asked the reason for so doing, he replied: "Saving it for the circus."—*Hartford (Conn.) Times.*

—Concerning the perfumery manufactories at Nice and Cannes it is reliably stated that these establishments annually crush and squeeze no less than 154,000 pounds of orange blossoms, 13,200 pounds of acacia blossoms, 154,000 pounds of rose leaves, 35,200 pounds of jasmine blossoms, 22,000 pounds of violets, 8,800 pounds of tube-roses and a relatively large amount of Spanish lilacs, rosemary, mint, lime and lemon blossoms, thyme and numbers of other plants and leaves and flowers.

—A letter describing the markets of New Orleans says that everything is sold by the eye, and there is no standard of measure. Nine-tenths of the hundreds who sell in the noted French market of the city do not know what a bushel or a peck is. They buy their vegetables by the lot, and place them on little piles on tables. These piles are of different sizes and prices. The buyer looks at the piles, and buys that which he thinks is biggest and best. Sometimes buckets and boxes are used to measure, but they are of all kinds and shapes.—*N. Y. Post.*

—An exchange thus classifies crimes of peculation: Taking $1,000,000 is called a case of genius. Taking $100,000 is called a case of shortage. Taking $50,000 is called a case of litigation. Taking $25,000 is called a case of insolvency. Taking $10,000 is called a case of irregularity. Taking $5,000 is called a case of defalcation. Taking $1,000 is called a case of corruption. Taking $500 is called a case of embezzlement. Taking $100 is called a case of dishonesty. Taking $50 is called a case of thievery. Taking $25 is called a case of total depravity. Taking one ham is called a case of war on society.

—For ingenuity and originality it takes a down-east Yankee to perfect plans to shuffle off this mortal coil. A Massachusetts man, having determined to die, set about his arrangements, determined that there should be nothing lacking to make it a perfectly original suicide, unique and complete. He procured a piece of brass pipe, and firmly fixed one end of it in the root of a tree. He then loaded this improvised cannon to the muzzle with powder and ball, applied a slow-match, and calmly lay down with his head in range. The whole arrangement was perfect, and he was dead as a door-nail, but somewhat disfigured, when found.—*Chicago Inter Ocean.*

AN EXCELLENT CHANCE.

Teaching a Young Man the Business and Giving Him a Start in Life.

"O, yes," said Mr. Jobber, in his most effusive manner; "oh, yes, we will do everything possible for your son, Mr. Believeitall; we will teach him the business, and give him a first-rate start in life."

"And the salary?" suggested Mr. Believeitall.

"O, yes, the salary!" said Mr. Jobber, as if he had thought of that little matter for the first time. "Well, yes, of course you understand that the salary is of no great consequence. Your son learns the business, which is better than salary, small or large. No, the salary is not large, but under the circumstances quite liberal. Fifty dollars the first year; but then, we raise it every year, every year, you understand."

"Then you do raise it regularly?" said Mr. Believeitall.

"Regularly," echoed Mr. Jobber.

"And the situation is permanent?"

"O, yes, we always try to keep our boys, always take an interest in them."

The boy enters the store, and proceeds to learn the business by running errands, sweeping floors and dusting goods. At the end of the third year Mr. Jobber takes so much interest in the youth that he gives him a first-rate opportunity to widen his field of experience by giving him permission to go elsewhere. It is true that the young man is now too old to begin at boys' wages, while the "business" he has learned can be done by any lad with muscle enough to wield a broom or trot over pavements; but that is no fault of Mr. Jobber. The boy can remain if he chooses—at the old wages.

"But you said his salary should be raised every year."

"Of course, but there must be a limit to everything. Supposing he should stay with us a hundred years. You couldn't expect us to keep on raising right along. Why, man, it would ruin us; yes, sir, ruin us."

"But how about the business he was going to learn?"

"My dear sir, haven't we given him every opportunity, every opportunity, sir? What more could we do? We can't make a boy learn. If it isn't in him, what can we do?"

"And you said the situation was to be permanent."

"Ah, but he leaves of his own accord. He thinks he can do better elsewhere, and it is not for us to stand in the way of a boy's interest; no, sir, you mistake me, sir, if you think I would stand in anybody's way. Good morning, sir, good morning—busy day, sir—very busy day, sir—good morning."—*Boston Transcript.*

A VEGETABLE FISHERMAN.

A Plant That Goes A-Fishing—An Enemy of the Fish Culturists.

"Anything new? Any twenty-pound trout or continental fish stories in the air?" asked a reporter of a fish culturist grown rotund in the Government employ.

"Yes, there is something new," replied the fish man. "Come in and look at these weeds."

The visitor took the seat indicated at a table covered with dishes containing a variety of plants, small fishes, magnifying glasses, and other material incidental to the fish culturist's profession, and looking through the glass handed him, saw what had apparently been a mass of weeds become clear and distinct and resolve itself into a delicate brush-like aquatic plant, covered over at the juncture of the various stems with a number of bladder-like objects of a rich green hue and seemingly made up of innumerable facets, so that they appeared like mimic vases of richly colored metals hammered into shape by some fairy worker in metal.

Clipping one of these little vessels from its delicate stem the fish culturist placed it upon the slide of a microscope, through which it appeared as large as a lima bean, and still more beautiful. It now gleamed with a pellucid light, owing, as was evident, to a bubble of air in the interior, that moved about in its prison like an opal. The cup was also seen to have a perfect lid, that opened in instead of out, and from the edge outward extended several long, hair-like processes, that gave the entire object the appearance of what a specialist of crabs would call an entomostracean crustacean (patent applied for).

"Now, then," said the fish man, "you have taken in the chief points of the object, and you see it is a regular pitcher, bowl, or jug—call it what you will—that is suspended on the plant by a delicate stem, and that it has a spring cover. Now watch the cover when I put this shot upon it."

The *Times* man again applied his eye to the glass; the shot was placed upon the delicate lid, quickly and mysteriously disappearing.

"Yes, it has gone in. In other words," continued the speaker, "the bladder is a trap and catches everything that pushes on the cover. By this you can see what harm may be done," and, shifting the slide, the speaker replaced it by one that contained another of the curious traps, though larger and having in its mouth or opening the body of a young fish. The tail of the little creature was completely absorbed by the plant, and the fish had long since given up the struggle.

"Yes, it is a veritable vegetable fisherman," said the specialist," and one of the latest discovered enemies of the fish culturist. It is a common weed enough, and known generally as the bladderwort. It is very popular in aquariums and fish runs, and there is little doubt but that large numbers of fishes are destroyed by them. The thing was first noticed in England, and that accidentally, and the discoverer immediately went to work making experiments. It was found that out of twenty-five fishes placed in the weed one-half of them were in the traps in less than six hours, and judging from the way in which they were caught, some people think that the plants are as much animals as the fishes. Some experiments made here have attracted considerable attention. In one case observed by myself one of the fishes was caught by the tail and another bladder had seized it by the head, and both plants were hard at work absorbing it."

"Do they eat the fish?" asked the visitor.

"Yes," was the reply. "The animal is taken into the bladder as far as it will go, and then some secretion is exuded that seems to assist its digesting the fish. At any rate, the latter becomes absorbed in the plant and evidently goes to help sustain it, which is also true of a large number of plants. In Sumatra a flower has been discovered that is ten feet across and weighs ten or fifteen pounds, the petals being so strong that a man can jump upon them without breaking through, so to speak. Right in the center of this flower there is a round, basin-like structure that holds about a quart of liquid or water, and into this thousands of insects and even small animals are enticed and drowned and absorbed by the plant; in other words, the oval basin is the flower's mouth, or one of them. So with many of the pitcher plants. They are all traps, baited with peculiar odors that attract their prey. This discovery about the bladderwort is an important one, but whether it justifies us in taking any steps toward its extermination has not yet been determined.—*Philadelphia Times.*

The Afghan Language.

"Ab," in the Afghan tongue, means water, as in Punjab (that is, the "five waters," referring to the five great rivers that traverse the northwestern province of Hindoostan,) or as in Hurrirab (the water of the "Hurris",) or as in Surkh-ab (the "red water,") and so on. "Koh" is a mountain, as in Safeydkoh (the "white mountain,") Koh-i-Baba (the mountains of Rabah or Babor,) or as in Hindoo Koosh (the Hindoostantee mountain.) "Abad" as a terminal (the "City of Allah,") Ahmedabad (the "City of Ahmed,") and so forth. "Safeyd" is white, "siah" black, "surkh" red, "nil" blue, etc. Then there are the numerals, such as "panj" or "punj" (five,) "char" or "chahar" (four,) etc., all of which are descriptive of certain characteristics of the places to the names of which they are attached. "Panjdeh" is an example, for as "deh" means a village and "panj" five, as already explained, the name of the place signifies a collection of five Turkoman villages. Wherever "kotul" occurs it signifies simply a pass over a mountain spur. For instance, the first victory General Roberts won in Afghanistan was at the Palwar Kotul, the pass of the Palwar, 9,000 feet high.—*London Times.*

—A bright Chicago youth got an autograph album filled with signatures, but as they lacked neatness and uniformity he bought a new book and copied all the names into it. Now he is happy.—*Philadelphia Press.*

RENOVATING CORKS.

The Pioneer of the Business Tells How It Is Done.

In a queer little room in a queer old house in Forsyth street, at the end of an old-fashioned brick-paved alleyway, a snowy-bearded man, bubbling over with good nature, sat at a low bench yesterday clipping corks with a carving knife as keen as a razor. A little wooden sign over the alleyway had the single word "Corks" painted on it. "Corks" was scrawled with chalk on the door of the room in which the busy man sat, and he himself was enthroned on an old stool among great mounds of corks of all kinds and sizes. They were scattered in heaps on the bench, stored in great paper bags at his feet, and piled high in wooden boxes behind him. He stropped the keen blade of the knife against the edge of the bench every little while, and clipped the corks before him with the regularity of machinery, while he chatted with a visitor about the odd industry of making new corks out of old ones. He was old Pop Mackin, the pioneer of the trade of renovating second-hand corks.

"There are more people at the business now," he said, "than anybody would dream of. They go around buying up all the second-hand corks they can get at $5 a barrel. A barrel will hold from twenty-seven to twenty-nine gross of corks. They get the old corks from retail liquor stores, and then sort them out according to size. Then they're dumped into a big tub of cold water and soaked till the dirt is all rinsed out. After that they're tossed into a boiler of hot water and steamed. The steaming is done by covering the boiler tightly with a piece of heavy carpet. It keeps the steam imprisoned and drives it through the cork. The corks are in all sorts of curious shapes when they are put in the steam bath, but no matter how they have been crushed in, by the neck of the bottle or by the wire and twine fastening—and some of them are tough-looking corks, too—they come out of the bath perfectly shaped again. After the bath the corks are allowed to dry, and then we trim them with a sharp knife, and they are just as good as new."

"But how," the visitor asked, "can you hide the damage where a corkscrew has been bored through a cork?"

"Easy enough," the old man responded with a laugh, as he picked out a perfect little cork; "that trick was done with a cutting machine. The fact is, that a corkscrew only damages, as a rule, the top and bottom of a cork. The damaged cork is sent through a cutting machine, and paired down until the damaged part is all cut away. Sometimes it has to go through the machine two or three times before it is perfect, but after that it is as good as any cork that was ever made. Corks cut that way are called "accommodation corks," and are sold in great quantities to distilleries where they want corks to ram tightly into all sorts of bottles."

"How many corks can a man prepare daily?"

"It depends upon the corks; but an industrious man can sort, wash, steam, and trim about fifty gross of corks. They are sold by the gross again. Sometimes the profit is only $1 a barrel, sometimes more."

"Can you make it pay at that?"

"I guess I'm satisfied," Pop Mackin said, decidedly. "I used to work in a soda-water factory way back in '53, when I first caught on to the idea from a fellow who came on from Philadelphia to buy up all the old corks he could get. In the soda-factory I got a dollar a day. I tried cork renovating, and I found that I could spend lots of time chatting with friends that I met in the daytime, and could make just as much, and often more, than when I worked steady at the soda-water business. I went to the war for three years. A man who hadn't $50 to his name when I left took hold of the business while I was away. When I got home again I found him living in a house of his own in Twelfth Street. He had made the cost of it by buying up old corks, and old bottles too, and renovating them. He sold them again at a handsome profit, because it was war times and business was booming. I never was as lucky as that, but there's many a man at a more ambitious business worse off, and much less contented than I am, my boy, and you can tell them so from me."—*N. Y. Sun.*

MEXICO.

Women's Rights in the Neighboring Republic.

If a Mexican lady is widowed and has no means, a family council is held, her male relatives or those of her deceased husband charge themselves with the education of her sons and provision is made for her and her daughters. Even if the widow and young ladies should be accomplished they are not expected to work for their bread, and the aid tendered them is calmly accepted as an hereditary right. On the contrary, if a widowed mother is wealthy she can not be independent. Custom exacts that the care of her property and the education of her sons shall be delegated to male relatives, and, unless she is really an old woman with adult children, she must either reside with her kindred or keep some staid, matronly person in her household by way of protection against criticism or scandal.

Mexican gentlemen are so thoroughly imbued with this idea of womanly helplessness that they do not seem to regard the charge of a bereaved family as an unnatural or unjust burden, but accept all the duties it involves as really sacred obligations. One strong proof of the chivalric nature of Mexican gentlemen is that the estates of widows and orphans are almost invariably honestly administered.

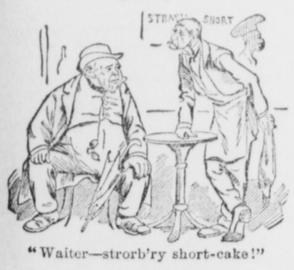
Matrimony is a serious affair here because, owing to the knightly courtesy of the men and the helplessness of the women, a man in order to obtain the hand of his lady-love, virtually contracts to befriend all her female kindred. Nevertheless—badinage apart—it is a beautiful custom.—*Cor. Detroit Free Press.*

—The Philadelphia *Times* says: "The man who expects to get through the world on the ashes of his ancestors is to be pitied more than praised.

SHORT-CAKE FOR ONE.

The Agony of the Rustic and the Missing Strawberry—Found at Last.

[Puck.]

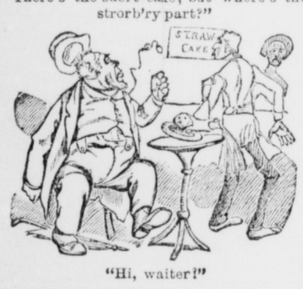


"Waiter—strorb'ry short-cake!"

"Yessir—here y'are, sir."

"What's he done with the strorb'ries?"

"There's the short-cake; but where's the strorb'ry part?"



"Hi, waiter!"

"Eureka, by Gosh!"

A SUPERIOR WOMAN.

How She Managed to Meet a Stock Assessment.

[San Francisco Chronicle.]

It is no use denying the superiority of woman. Whenever a man gets up a shrewd scheme and makes it a success all his fellow-men applaud him, shake hands with him, pat him on the back and stand him drinks. There is a modesty about female ingenuity that prevents publicity and all its attendant evils. There is a married lady in this town who would be a fortune either as an advance agent of a show, a partner in a banker a manipulator on Pine street. The Produce Exchange should make her an honorary member, and if she were in Chicago she would be a grain queen, or something like it. She was dabbling in stocks. For most men assessments are nightmares, but assessments have no terrors for your true woman. There came due a little matter of fifty dollars delinquent on a few shares she held. Her husband believed her pure and unspotted from the stock-market. Indeed he thought she knew nothing about business at all. She was busted, had not a cent, and she dare not ask him for the money. She did not want to let the stock go. As she sat demurely trimming a new hat one evening, with a most demure and purely domestic look of love in her pensive eyes, and her devoted husband sat in dressing-gown and slippers reading opposite, a bright idea struck her. She arose early next morning and went down to a friend of hers. Her husband had a dog of which he thought the world. He would not lose that dog for anything. She took that dog with her. After she had paid her call she said:

"I wish you'd let me leave this dog here."

"Certainly."

"I'll send for him to-day if I get home in time, but, if you don't mind, would you just tie him up in the yard."

"All right. With pleasure."

The dog was lost when the husband got home.

"My dog gone! Somebody stolen him! Great Scott! What shall I do?"

"I suppose the simplest way would be to advertise a reward of fifty dollars. That would fetch him," and the wife looked terribly distressed at her husband's anguish. Next morning's paper contained an advertisement: "Fifty dollars for dog lost." At eleven o'clock a messenger boy appeared with the dog, got the fifty dollars, and somehow or other the wife still owned the stock, assessment paid.

THE silent watches of the night—Those not wound up.—*Philadelphia Call.*

BARTHOLDI'S BIG GIRL.

The Prejudices Met By a Canvasser for the Pedestal Fund.

The Bartholdi pedestal fund is nearly complete. The statue has arrived and soon New York harbor will be graced by the most magnificent colossal statue the world has ever seen. "Liberty Enlightening the World!" What a priceless blessing personal liberty is. It is the shrine at which people, ground under the heel of tyranny in the older worlds, worship with a fervency that Americans can scarcely realize; it is a principle for which Nihilists willingly die the death of dogs; and fit and proper it is that at the very entrance of the Bay of New York this emblematic statue should flash a welcome to the world.

The press is entitled to the credit of this achievement. Mr. Philip Beers, who has been making a circuit of the country on behalf of the Pedestal fund, says that the fund will certainly be raised, as the *World* does not know the word *fail.*

Mr. Beers says that he has found the most pronounced generosity among those of foreign birth. They seem more appreciative of liberty than do our native born. Moreover, among some a strange prejudice seems to exist.

"Prejudice? In what particular?"

"I have ever found that however meritorious a thing may be, thousands of people will inevitably be prejudiced against it. I have spent most of my life on the road and I know the American people 'like a book.' In 1879 a personal misfortune illustrated this prevailing prejudice. I was very ill, had suffered for several years with headache, fickle appetite, dreadful back ache, cramps, hot head, cold hands and feet and a general break down of the system. I dragged myself back to New York, seeking the best professional treatment. It so happens that among my relatives is a distinguished physician who upbraided me roundly for preaching so much about my own case. Finally, with some spirit, I remarked to him:

"'Sir, you know that much of your professional wisdom is pretense. You are controlled by prejudice. You can not reach a case like mine and you know it, can you?'"

"I had him; and he finally conceded the point, for it was bright's disease of the kidneys which had prostrated me, and the schoolmen admit they can not cure it. Having cured myself, however, in 1879, and not having seen a sick day since, my relative finally admitted that Warner's safe cure, which accomplished this result, was really a wonderful preparation. Had President Rutter, of the Central Hudson, used it, I am certain that he would be alive to-day, for he could not have been in a worse condition than I was."

"I have found similar prejudices among all classes concerning even so laudable a scheme as this pedestal fund."

Mr. Beers's experience and the recent death of President Rutter, of the Central-Hudson railroad, of an extreme kidney disorder, proves that the physicians have no real power over such diseases, and indicates the only course one should pursue is, as the late Dr. Willard Parker says, headache, sickness of the stomach, dropsical swellings, back ache, dark and offensive fluids, prematurely impaired eyesight, loss of strength and energy occur, for they unmistakably indicate a fatal result, if not promptly arrested.

"Yes, sir-ee, every cent needed for the pedestal will be raised. Of course it will be a great triumph for the *World*, but would it not have been an eternal disgrace had our people failed to provide for this pedestal?"

A "Bad Man."

"Haw, haw," laughed Clarence Fitzgudgeon, going into the Queen City Loaferie, the other evening. "I've had such an experience on the street, don't you know."

"Ah, indeed," inquired Captain Johnson, lazily; "what was it?"

"Why, my deah fellow, just as I was coming in, four or five hoodlums suwwounded me and shouted 'dood,' 'dood,' in a real thweatening mannah, dont you know."

"Did you knock any of them down?"

"O, no."

"You didn't? Well, what did you do?"

"Why, my deah fellow, I wan up the steps weal wapidly, and when I weached the top, I shook my umbwella at them, ejaculated 'wats,' and slammed the doah in theiah faces with great vigah."—*Merchant Traveler.*

Every Woman Knows Them.

The human body is much like a good clock or watch in its movements; if one goes too slow or too fast, so follow all the others, and bad time results; if one organ or set of organs works imperfectly, perversion of functional effort of all the organs is sure to follow. Hence it is that the numerous ailments which make woman's life miserable are the direct issue of the abnormal action of the uterine system. For all that numerous class of symptoms—and every woman knows them—there is one unfailing remedy, Dr. Pierce's "Favorite Prescription," the favorite of the sex.

RADWAY'S READY RELIEF
THE CHEAPEST AND BEST MEDICINE FOR FAMILY USE IN THE WORLD.
In from one to twenty minutes, never fails to relieve PAIN with one thorough application. No matter how violent or excruciating the pain, the Rheumatic, Bedridden, Infirm, Crippled, Nervous, Neuralgic, or prostrated with disease may suffer, RADWAY'S READY RELIEF will afford instant ease.

THE TRUE RELIEF.
RADWAY'S READY RELIEF is the only remedial agent in vogue that will instantly stop pain. It instantly relieves and soon cures
RHEUMATISM, NEURALGIA, Sciatica, Headache, Toothache, Inflammation, Asthma, Influenza, Difficult Breathing.
BOWEL COMPLAINTS, DYSENTERY, DIARRHOEA, CHOLERA MORBUS.
It will in a few moments, when taken according to directions, cure Cramps, Spasms, Sour Stomach, Heartburn, Sick Headache, Summer Complaint, Diarrhœa, Dysentery, Colic, Wind in the Bowels, and all internal Pains.
Travelers should always carry a bottle of RADWAY'S READY RELIEF with them. A few drops in water will prevent sickness or pain from change of water. It is better than French Brandy or Bitters as a stimulant.
Malaria in its Various Forms.
There is not a remedial agent in the world that will cure Fever and Ague and all other Malarious, Bilious, Scarlet, Typhoid, Yellow and other fevers (aided by Radway's Pills) so quick as Radway's Ready Relief. Price 50 cents. Sold by druggists.
DR. RADWAY'S Sarsaparillian Resolvent.
The Great Blood Purifier.
For the cure of all Chronic Diseases, Chronic Rheumatism, Scrofula, Glandular Swelling, Hacking, Dry Cough, Cancerous Affections, Syphilitic Complaints, Bleeding of the Lungs, Dyspepsia, Water Brash, White Swellings, Tumors, Pimples, Blotches, Eruptions of the Face, Ulcers, Skin and Hip Diseases, Mercurial Diseases, Female Complaints, Gout, Dropsy, Rickets, Salt Rheum, Bronchitis, Consumption, Kidney, Bladder, Liver Complaints, etc.
Dr. Radway's Sarsaparillian Resolvent,
A remedy composed of ingredients of extraordinary medical properties, essential to purify, heal, repair and invigorate the broken-down and wasted body—Quick, Pleasant, Safe and Permanent in its treatment and cure.
SOLD BY DRUGGISTS. Price, $1.00 per bottle.
Dr. Radway's Regulating Pills
For the cure of all disorders of the Stomach, Liver, Bowels, Kidneys, Bladder, Nervous Diseases, Loss of Appetite, Headache, Constipation, Costiveness, Indigestion, Dyspepsia, Biliousness, Fever, Inflammation of the Bowels, Piles and all derangements of the Internal Viscera. Purely vegetable, containing no mercury, minerals, or deleterious drugs.
Price, 25c per box. Sold by all druggists.
Or send a letter stamp to DR. RADWAY & CO., No. 32 Warren Street, New York, for "False and True."

Correspondents must enclose full name and address, not necessarily for publication, but a a private guarantee of good faith. Rejected communications will not be returned.

SATURDAY, JULY 11, 1885.

Cholera is doing deadly work in Spain. Thirty thousand persons have fled from Murcia, a city numbering, with its suburbs, 100,000 souls. A correspondent says that the people drop off faster than they can be buried.

Senator Gorman was at the Treasury Department on the 23rd ulto., and held a lengthy interview with Secretary Manning. The Senator says he does not know when the President will determine who shall be collector of the port of Baltimore and collector of internal revenue. As there are no charges against the incumbents, they will probably be permitted to serve out their respective terms.

Hints to Farmers.

The profit from produce depends upon the manner in which it is sold. Even a poor quality of goods brings better prices when it is put up in attractive form, while the best suffers depreciation in this respect. An agricultural exchange speaking on this subject, throws out the following hints, which our agricultural readers and fruit growers should profit by: "The first thought of a producer of any article should be to secure the best quality, and the next is to be directed toward the best methods of sale. A small pamphlet by a well-known Ohio farmer upon the subject of growing potatoes gives a valuable hint in regard to the profitable disposal of his crop. His well grown potatoes were put up in bushel boxes, conveniently handled, and were thus so attractive to the city dealers that those who were used to take only a few bushels took several loads, because the boxes were so readily disposed of. On the other hand, another farmer going to the same city with a load of loose, unassorted potatoes without a box, bag, or basket to deliver them, was unable to sell a single bushel, and brought them home again. The finer products of the farm are especially subject to the influence of the packages. Fine butter in neat pales or boxes, small enough for the consumption of a family, fresh eggs in neat baskets, young and tender poultry in clean boxes, honey in clear glass jars, are all sold at considerably higher prices than the common goods. And, as a man has a right to secure for himself the advantages he gains by skill and enterprise in this direction, it is wise for him to put upon his packages neat labels with his name and address, so that he may acquire a property in the improved method which he has been sharp and careful enough to originate and make successful. In doing this the producer acquires a market, which is of equal importance to him as his excellent product."

The President and the Senate.

DETROIT, Mich., July 2.—An interesting and significant interview with Senator Conger, of Michigan, is published this evening. He has just arrived home from Washington, where he has been a close watcher of events since the 4th of March last. "It is hard to tell," said the Senator, "what the Senate will do in regard to appointments made by the President during the Senatorial recess."

"Have you talked with your Republican colleagues as to the course they will pursue in such appointments?"

"The newspapers say that we have caucused on that point. Now, without saying that we have or have not caucused, it may as well be understood that we have conferred with each other, exchanged views, and, to a certain extent, formulated plans for next winter when the nominations come in. You may put it down as pretty certain that the Republican Senators will concede to the President the absolute right to name men of his own choosing for any of two kinds of positions. The first is those where the terms of office have expired. In regard to them there will be no controversy whatever. The second is those positions which are in any way connected with the Administration. This is for precisely the same reason that the President should and does have the privilege of naming his own Cabinet. There is hardly a case on record where the Senate has in any way interfered with such an appointment. Any others that are in any way identified with the policy of the Administration will be conceded to the President without question,

"But," continued Mr. Conger, "the Senate has an undoubted constitutional right not only not to consent to the appointment of Government officials, but to advise in their selection. In pursuance of this right, in the cases of appointments to purely business offices where removals have been made during recess they will make careful inquiries into the causes of such removals. It is due to a man's friends and to himself that such a thing should be done. When a man has left his private business and has accepted an appointment under the government for a certain term or for an indefinite period he has a right to remain in possession of the office if he attends strictly to its affairs at least as long as Congress has repeatedly expressed its opinion what a term of office should be—that is, four years."

"Will not that, Senator, squarely raise the offensive partisanship question in the Senate?"

"It certainly will. The raising of that question is inevitable. It is bound to come. I cannot say authoritatively, but I have a pretty good idea that the questions will be something like this: What has the person removed done to make him an offensive partisan? Has he done more than to exercise rights as an American citizen? If these questions are answered by the statement that he has acted on Republican committees and has been largely instrumental in keeping the Republican party in power, then questions will be asked and investigations made concerning the man who has been appointed in his place. Has he acted as Chairman of Democratic committees, and has he been an offensive partisan on the Democratic side the same as the man removed has been on the Republican?"

"And if the Senate finds this state of things to exist, what, then, will they do?"

"They will probably refuse to confirm. There will be no antagonism, except in instances of this kind; but then there may be."

General Grant's Fourth.

MOUNT MCGREGOR, N. Y., July 4.—After a fair night's rest, General Grant awoke this morning in bright spirits, but very weak. Dr. H. B. Sands came up on the morning train, and, together with Dr. Douglas, examined the General's throat. The condition of the throat and neck was plainly stated to the General. Though there had been no change since the last consultation with Dr. Shrady, the point of importance was found to be the more noticeable and growing weakness of the patient, and he was again informed by both physicians what Dr. Douglas has during four months predicted—that exhaustion would doubtless be the final result of the disease. Doctors Sands and Douglas concurred in the statement that General Grant was passing the day comfortably. He attempted no writing beyond conversational notes with the doctors, the family and Senator Romero. Senators Chaffee and Arkell and Mr. Joseph W. Drexel were among the callers at the cottage. Rain fell heavily, in showers, most of the day until 2 P. M., when the clouds broke, and clear air and sunshine succeeded.

A cable message of inquiry was received this morning by the General from Cyrus W. Field, who stated that the American residents in London would to-day hold a meeting to express solicitude and sympathy for General Grant. This was the birthday of Mrs. Sartoris, and also of Colonel Fred Grant's little boy, Ulysses.

Toward the close of the afternoon General Grant wrote the following note, which he handed to Dr. Douglas:

"I have been getting along very well to-day."

The General's bulletin fairly epitomized the history of this anniversary day. He has volunteered no pointed reference to the fact that this was the anniversary of the surrender of Vicksburg, but it probably occurred to his mind early this morning. He had sat some time as though in deep thought, when he suddenly took up his pad, and, in writing, asked Dr. Douglas what day it was, to which the physician, responding, said: "Saturday, and the Fourth of July." Then, in the afternoon, while the family, the General and ex-Senator Chaffee were sitting in the cottage parlor, the latter spoke of the day being the anniversary of the surrender of Vicksburg. "Was it 1862 or 1863?" questioned Mrs. Grant. Doubt was expressed, and the General, picking up his pad, wrote, "Vicksburg fell July 4, 1863." When the General had taken leave of Dr. Sands before his departure this afternoon, he laid down upon his side, and at full length, upon a sofa in the cottage parlor. He rested nearly an hour; then, sitting in the parlor, he watched with some interest a game of diversion in which members of the family were taking part. There was some coughing, but no spasm during the afternoon.

New Postal Rates.

Postmaster Huidekoper, of Philadelphia, who has given great attention to the subject, has prepared the following condensation of the new postal laws, which went into effect July 1:

First—Rates of postage on second-class matter will be 1 cent per pound or fraction thereof, including newspapers for Canada, with the exceptions noted below.

Second—Publications of the second class, other than weekly papers published where there is a letter carrier office, must be paid in postage stamps affixed at the rate of 1 cent for each paper; or on each periodical not exceeding two ounces in weight; or 2 cents on each periodical if weighing over two ounces, if they are to be delivered by the carrier in the city of publication. If they are to be delivered through the lock-boxes or through the general delivery, they can be mailed at pound rates. Postage on sample copies of weekly papers for delivery by carriers in district where published must be paid by postage stamps attached.

Third—Each piece of second-class matter offered for mailing must be properly inclosed in a wrapper clearly addressed, or all pieces of mail matter for one postoffice may be securely inclosed in one wrapper, addressed to postmaster; provided each piece inclosed is properly addressed.

Fourth—Any article or item in any newspaper or other publication may be marked for observation, except by written or printed words, without increase of postage.

Fifth—Second-class matter can have no inclosure except in the form of a regular supplement, or bills, receipts and orders for subscription; provided that such bills, receipts and orders shall be in such form as to convey no other information than the name, location and subscription price of the publication or publications to which they refer,

Sixth—Second-class matter cannot be enclosed in envelopes, but must be wrapped exposed at both ends, so that the contents can be readily examined.

Seventh—On the wrapper of second class matter no printing will be allowed, beyond the name and address of the poblisher or news agent, and name of publication, except a request to the postmaster to notify in case the paper is not taken out or delivered, or request to return the same or to deliver the same to some other person, if not called for, or notice when subscription ends.

Eighth—Third-class and second-class matter must be put up and delivered at the posoffice in separate packages.

Ninth—Sample copy of second-class publication should be marked on wrapper "Sample Copy," to be delivered in city of publication, postage one cent on each newspaper, without regard to weight or frequency of issue. Postage on periodicals, other than newspapers, is one cent if not exceeding two ounces in weight. News agents cannot send sample copies at pound rates.

Tenth—As many persons refuse to take from the postoffice papers which are sent to them as sample copies, if not so marked, for fear of obligating themselves under laws of most States, to pay for a year's subscription, the great advantage to publishers in marking on the wrappers of all sample copies the words "Sample Copy" is apparent.

Eleventh—Second-class matter will be returned to publishers by request printed on the wrapper, or by special request, by pound rates. Each package will be rated separately 1 cent a pound or fraction thereof.

Twelfth—Second-class matter mailed by other persons than publishers becomes special matter, specially entitled to pass through the mails at 1 cent for each four ounces or fraction thereof. It is earnestly urged that publishers of second-class matter shall note on the publication: "Entered at Philadelphia postoffice as second-class matter," without which second-class matter will not have a certain standing as second-class matter at other postoffices than Philadelphia, and may in cases be rated when offered for mailing as original third-class matter, with postage 1 cent for two ounces.

Thirteenth—Letters, merchandise sealed against inspection, and other first-class matter will pass through the mail at 2 cents for each ounce or fraction thereof, without the package being limited to four pounds in weight, as in the case of third and fourth-class matter.

Fourteenth—Merchandise not sealed and otherwise mailable can pass through the mails at 1 cent for each ounce or fraction thereof.

Fifteenth—Manuscript by itself is first-class matter. Proofs and corrected proofs are third-class matter, and may be accompanied by the original written manuscript.

Wheat Crop Indications.

NEW YORK, July 6.—From a careful analysis of over thirty-five hundred special crop reports from its subscribers--practical farmers in every state and territory in the Union—the *Rural New Yorker* concludes that the winter wheat crop will aggregate 210,000,000 bushels and the spring wheat crop 155,000,000 bushels, making an aggregate crop of 365,000,000 bushels—a falling off of 147,000,000 bushels from last year's crop. Oats will be the largest crop ever harvested. Rye and barley, fair crops. The corn area is larger than ever before, and the outlook good for an average yield per acre. There will be an average crop of potatoes, and a considerable increase in the acreage of tobacco. The cotton prospects are highly promising, despite the injury from insects in Texas and other places. Of apples there will be a fair crop for an "off year." Many trees are dying, especially in the West. Peaches are a failure in northern latitudes, and there is but a poor outlook for pears. There will be fair crops in New Jersey, Delaware and Maryland.

"Gail Hamilton" discusses prohibition in the July number of the *North American Review*, in her own peculiar style, which it need not be said is vigorous and breezy. Take, for instance, what she says about the dangers to temperance from a "Prohibition party"—viz:

"In Georgia three-fourths of the counties enforce prohibition; in Georgia, of a total vote of 143,610 the Prohibition candidate received 195. But in the North, where the Democratic party is weak, it cherishes Prohibition like a nursing mother, and its caresses are returned with a collusive fondness. Straight as if winged from a Democratic bow the Prohibition arrow fled to the States where the Democratic party had the best show for victory. Torpid in all the States where it could harm the Democratic party and where it could not vitally harm the Republican party, it was active in those States where even its small power could turn the tide against Republicans. What has been done may be done again, but it will be better understood. Prohibitionists may continue to be Democratic allies, but they will not be so well disguised Democrats. "God and home and native land" will always have a suspicious twang, and even woman's instinct will need to show its credentials when it appears on the stump bearing the St. John sort of "home" in a charger.

Crimes of London.

LONDON, July 7.—The Pall Mall *Gazette* announced Saturday that as the criminal law amendment to the bill to raise the age of the protection of children seemed likely not to pass, they had determined to lay the cause for it before the public, and warned its readers wishing still to live in a false heaven of purity not to read the Pall Mall *Gazette* for three days.

This sensational statement was followed to-day by the publication of five pages of the most startling revelations of filthy, shameless practices among the wealthy Londoners, titled and untitled. Ingenious descriptions take the place of the names of the persons charged with these acts, and the indignation among the persons and classes attacked is boundless.

These publications are said to be the result of investigations covering several months, and calling for the expenditure of a considerable sum of money. The *Gazette* announces that it will continue these publications until it has given the public all the information it has acquired of the lewdness and bestial criminality of these persons.

The editor, it is reported, refuses to become an informer or prosecutor before the courts of law and poses as an investigator or reporter. He will go to prison before giving the names of those who have furnished him the information, thus showing the snap and courage of an American journalist. But he stands ready, under conditions which will keep him out of the courts as a witness, to give full details to the leaders of the English church, the Catholics, the Non-Conformists or the non-sectarian lovers of the human race, as the Archbishop of Canterbury, Cardinal Manning, or the Earl of Shaftsbury.

Elkins Wins.

NEW YORK, July 6.—Judge Lawrence, of the Supreme Court, rendered a decision in the suit of the Land Company of New Mexico, limited, against Stephen B. Elkins and others, denying the motion to continue an injunction which restrained Elkins from transferring to any other party any portion of the Mora tract of land in New Mexico.

This suit was brought by the Company to establish its title to a one-fifth interest in the land known as the Mora grant. It is alleged that Elkins, with E. N. Darling, Thomas B. Citron, Paul Butler and T. Rush Spencer, became interested in the Mora tract, comprising 827,000 acres. The title was taken in the name of Elkins to hold for all parties, neither of whom was to sell his individual share except by consent of the others.

The Company claims to have derived its title to one of the shares by advancing six thousand dollars to one Blackmore, of London, who had purchased the interest of one of the original five. The company charged that Elkins had by suits in New Mexico acquired title to more than two-thirds of the property and was seeking in the same way to absorb the remainder, and that while these suits were pending he had a railroad run through the lands, and had sold privileges for cutting timber to the extent of $200,000, and threatened to sell land at 70 cents an acre, which was far below its real value. Mr. Elkins claimed to have become rightfully possessed of the land and denied any wrong intent. The court held that a case was not made out for the granting of an injunction *pendente lite*.

A War Threatened.

LEAVENWORTH, KAS., July 6.—A brief interview has been obtained with Roman Nose, the renegade Sioux, who has cast his lot with the Cheyennes, and has apparently devoted all his energies to making trouble. He possesses a considerable following among the Cheyennes, and has led several raids on the cattle owned by the companies which have leased grazing lands from the Cheyennes and Arapahoes. His complaints are chiefly against the cattle companies, which, he asserts, have fenced in much of the best hunting land and forced the Indians to tramp over sterile plains in search of game. He claims that the payments made by the cattle companies to the Cheyennes and Arapahoes are not fairly divided and that the cattle turned over to the Indians and branded to denote their ownership, are "gobbled" by the bigger chiefs to the exclusion of the lesser ones. He believes that before long there will be a general Indian war and that the Indians might as well die fighting as to be driven about and hemmed in and starved by white men. "The war," said he, "will begin with the Cheyennes and Arapahoes, and then the Comanches, Apaches, Kiowas and other tribes will join them and fight even to extermination."

"Do the cowboys trouble you much?" he was asked.

"Yes," he answered, "they have rifles, and revolvers, and whisky and shoot Indians when they get drunk; but Agent Dyer tells us that the Great Father at Washington wants us to give up our guns and plow, and plant and raise cattle. When we do that the cowboys and other bad white men will kill us and take away our property, for we will have no way to defend ourselves and the soldiers will not help us."

The Worst Kind of Religion.

[From an After Dinner Speech by Mr. Lowell.]

"I fear that when we indulge ourselves in the amusement of going without a religion, we are not, perhaps, aware how much we are sustained at present by an enormous mass all about us of religious feeling and religious conviction; so that, whatever it may be safe for us to think, for us who have had great advantages, and have been brought up in such a way that a certain moral direction has been given to our character, I do not know what would become of the less favored classes of mankind if they undertook to play the same game. Whatever defects and imperfections may attach to a few points of the doctrinal system of Calvin—the bulk of which was simply what all Christians believe—it will be found that Calvinism, or any other ism which claims an open Bible and proclaims a crucified and risen Christ, is infinitely preferable to any form of polite and polished skepticism which gathers as its votaries the degenerate sons of heroic ancestors, who, having been trained in a society and educated in schools the foundations of which were laid by men of faith and piety, now turn and kick down the ladder by which they have climbed up, and persuade men to live without God, and leave them to die without hope.

"The worst kind of religion is no religion at all, and these men, living in ease and luxury, indulging themselves in the amusement of going without religion, may be thankful that they live in lands where the Gospel they neglect has tamed the beastliness and ferocity of the men who, but for Christianity, might long ago have eaten their carcasses like the South Sea Islanders, or cut off their heads and tanned their hides like the monsters of the French revolution. When the microscopic search of skepticism, which had hunted the heavens and sounded the seas to disprove the existence of a creator, has turned its attention to human society, and has found a place on this planet ten miles square where a decent man can live in decency, comfort and security, supporting and educating his children unspoiled and unpolluted—a place where age is reverenced, infancy, respected, manhood respected, womanhood honored, and human life held in due regard; when skeptics can find such a place ten miles square on this globe where the gospel of Christ has not gone and cleared the way, and laid the foundations, and made decency and security possible, it will then be in order for the skeptical litterati to move thither, and then ventilate their views. But so long as these very men are dependent upon the religion which they discard for every privilege they enjoy, they may well hesitate a little before they seek to rob the Christian of his hope, and humanity of its faith in that Saviour who alone has given to man that hope of life eternal which makes life tolerable, and society possible, and robs death of its terrors and the grave of its gloom."

Trying to Break a Will.

SPARTA, GA., July 6,—Great interest is shown in the will of the late David Dickson, the farmer millionaire, who died leaving all his property excepting a pittance to Amanda Eubanks, a negress. Dickson liberally feed several lawyers and the administrators to see that his will was enforced and the white heirs have retained eminent counsel to contest the document and attack the dead man's sanity. The will will be probated Tuesday, when the fight will open. An intimate friend of Dickson has just told the story of the will. Amada Eubanks, the beneficiary, is the result of an early indiscretion of Mr. Dickson with one of his slaves. It is asserted that ever since the birth of this child Dickson took to reading, and declared that it took a man of grit to take care of his offspring when faced by society and predjudice. Hence his will was intended to secure to his own child, negress though she was, all that money could accomplish. In the will the lawyers are also directed to see that the woman is protected in all of her rights wherever she may choose to live. It is believed that Dickson's recognition of the negress as his child will render futile any efforts to upset his will.

The Kellar Case.

WASHINGTON, July 7.—First Auditor Chenowith said to-day in speaking of the Kellar case, that the newspapers were wrong in blaming Appointment Clerk Higgins for the original rejection of Kellar after he had been regularly certified for appointment by the Civil Service Commission. All that Higgins had to do with the case was to introduce Kellar to him. The First Auditor said he wanted it understood that he alone was responsible for what had been done in the case.

Bill Nye on Bunker Hill.

From the Boston Globe.

At the time of the third attack by the British the Americans were out of ammunition, but they met the enemy with clubbed muskets, and it was found that one end of the rebel flint-lock was about as fatal as the other, if not more so Boston still meets the invader with its club. The mayor says to the citizens of Boston: "Wait till you can see the whites of the visitor's eyes and then go for him with your clubs." Then the visitor surrenders. I hope that many years may pass before it will again be necessary for us to soak this fair land in British blood. The boundaries of our land are now more extended, and so it would take more blood to soak it. Boston has just reason to be proud of Bunker Hill, and it was certainly a great stroke of enterprise to have the battle located there. Bunker Hill is dear to every American heart, and there are none of us who would not have cheerfully gone into the battle then if we had known about it in time.

To Break off Bad Habits.

Understand the reasons, and all the reason, why the habit is injurious. Study the subject until there is no lingering doubt in your mind. Avoid the places, the person and the thought that leads to the temptation. Frequent the places, associate with the persons, indulge in the thoughts that lead away from temptation. Keep busy; idleness is the strength of bad habits. Do not give up the struggle when you have broken the resolution once, twice, thrice—a thousand times. That only shows how much need there is for your resolution, just think the matter over and endeavor to understand why it is you failed, so that you may be on your guard against a recurrence of the circumstances. Do not think it an easy thing that you have undertaken, nor expect to break off a habit in a day which has been gathering long years.

LOCAL NEWS.

LODGE MEETINGS.

OAKLAND LODGE, I. O. G. T., meets in Sturgiss' Hall every Tuesday night.

LOCAL BRANCH, No. 85, of the Iron Hall, meets in same Hall 1st and 3d Saturday nights of each month.

ALTA LODGE, No. 574, K. of H., meets in same Hall 2d and 4th Thursday nights of each month.

SHEALTIEL LODGE, No. 122, I. O. O. F., meets in Legge's Hall every Monday night.

PATMOS COUNCIL, No. 386, A. L. of H., meets in same Hall 2d and 4th Friday ntghts of each month.

ANNOUNCEMENTS.

[Advertisements under this heading will be inserted at the following rates: For Members of the Legislature, Clerk of the Circuit Court and Sheriff, $4.00; Surveyor and County Commissioners, $3.00, and for Register of Wills, $2.00. Advertisements to run till the meeting of the Nominating Convention. The space allowed will be six lines or less, and 50 cents per line will be charged for each line in excess of that number. No name will be announced until the fee is paid.]

FOR SHERIFF.

At the solicitation of many friends I hereby announce myself as a candidate for Sheriff of Garrett county, subject to the action of the Republican County Convention.

JOHN H. RILEY.

July 7, 1885.

—The weather is hot and dry.

—Visitors are now coming in rapidly.

—7 lbs. Arbuckles Ariosa coffee for $1.00, at J. E. Gnagey's.

—The grass crop in this neighborhood will be short this season.

—Mr. W. A. Wortman is now ready for customers at his new store room in the Pritchard Building.

—Don't forget the Camp Meeting at Mountain Lake Park commencing July 11th and closing July 20th.

—The Summer Conference of the Young Men's Christian Association will be held at Mountain Lake Park on Thursday and Friday, July 23d and 24th.

—We regret to announce that Dr. D. T. E. Casteel is about to bid adieu to his native county and settle in Allen, Cumberland county, Pa., for the practice of his profession. The young doctor has a host of friends in this county who will be sorry to hear of his determination. We wish him abundant success in his new field, and feel assured that he will achieve it.

—In another column will be found the announcement of Mr. John H. Riley, as a Republican candidate for Sheriff. Mr. Riley is well qualified to perform the duties of that office. He has held the important position of superintendent of the steam saw mills of Messrs. H. G. Davis & Bro. for over twenty-two years. He is also quite popular, and if he should receive the nomination it will be equivalent to an election.

—In another column we publish that which purports to be a "report of the financial condition of the corporation of Oakland for the year ending May 5th, 1885." This socalled report is, it seems to us, very indefinite, vague and altogether unsatisfactory. It shows that the corporation is in debt, but as to how it became so or to whom it is indebted the people are as much in the dark to-day as ever. Whilst the statement is very vague in many particulars there is one fact which is stated with precision and clearness, and that is that the debt of the corporation is increasing and that it was increased during the past year. Under the charter The Burgess and Commissioners are restricted in their levy to the sum of twenty-five cents on the $100. This amount is wholly inadequate for the needs of the town and the clause in the charter will have to be amended or bonds issued by the corporation to pay off the indebtedness. This is an unpleasant state of affairs, but the people must face the music and either pay a debt which The Burgess and Commissioners had no authority whatever to contract or repudiate it altogether. We do do not suppose the idea of repudiation will be entertained, therefore we take it the debt must be paid. The Burgess and Commissioners have no power or authority to contract a debt beyond the income for the corporation fixed by law, and we suggest that it may be as well for the Board to adhere to the law in the future.

Church Services--Sunday.

M. E. Church—Preaching at 10½ A. M. and 8 P. M. by Rev. M. W. Rider.

Lutheran Church—Preaching at 10½ A. M. and 8 P. M. by Rev. C. W. Sechrist.

Preaching at Deer Park, by Rev. C. W. Sechrist, at 2½ P. M.

Garrett Memorial (Pres.) Church—Preaching at 8 P. M. by Rev. John S. Foulk.

Preaching at Terra Alta, by Rev. John S. Foulk, at 11 A. M.

St. Peter's, Catholic— Preaching every Sunday at 10½ o'clock A. M., except the second Sunday of each month.

For Sale Cheap.

A second hand Smutt Machine in good running order, will clean from 15 to 20 bushels per hour. Call on, or address,

H. A. RASCHE.
Oakland, Md,

Financial Report.

The following statement from Treasurer Offutt, shows the financial condition of the corporation of Oakland from May 5th, 1884, to May 5th, 1885:

RECEIPTS.

By amount of tax bills for 1884,	$1,014 72
By collections from delinquents,	26 90
By collection from Co. Commissioners	100 00
By collections from fines,	50 00
By collections from license,	18 50
By collections from scales,	69 41
By cols. from rent council chamber,	5 00
	$1,284 53
Deduct amount of uncollected tax bills, $236 14	
Deduct amount of old accts. paid with tax bills of 1884 244 69	480 83
Total,	$803 70

DISBURSEMENTS.

Amount paid Bailiff for lamp lighting	$ 180 00
Amount paid Bailiff for arrest	34 25
Extra work on platforms, &c.,	20 85
Serving platform notices,	12 25
For care of tramps,	10 90
Commission on collections,	80 55
Amount of bills of lumber for sidewalks,	126 76
Oil and chimneys,	72 45
Putting down sidewalks,	16 50
Paid for stone,	149 50
Working streets and breaking stone,	261 78
Railroad tickets for tramps and Allegany and Washington county fees,	48 39
Night watchman,	26 75
Judges and clerks of Election	10 00
Assessors and clerk for same,	34 00
Burgess and commissioners,	85 00
Clerk to board,	25 00
Total,	$1,194 94
Amount of indebtedness of corporation previous to 1884, yet unpaid,	$1,161 32
Amount of indebtedness contracted by present board,	391 24
Total,	$1,552 56

The Fourth in Oakland.

The Fourth was rather a quiet day in Oakland, though amusements were more varied than usual.

The target match of the second Battalion, M. N. G., claimed some attention early in the day. But two members of the Battalion from a distance were present (Capt. Gordon and private Golden, of Co. C,). The Fifth Regiment Prize was won by Lieut. Chisholm—score 23 out of a possible 25. Lieut. Chisholm also won the Harry Garrett Prize—score 48 out of a possible 50, 100 yards.

The 200 yard prize was carried off by Capt. Gordon, as was also the first visitors' prize. Private Golden won the second visitors' prize.

The Base Ball match between the Terra Alta and Oakland clubs began at 2 o'clock, and was witnessed by a large crowd. With a few exceptions the playing was poor. The home team won the game by a score of 31 to 20. The game lasted three hours.

The Catholic pic-nic, held at Carrigan's summer garden was largely attended and successful. All seemed to enjoy themselves.

The Lutheran Sunday School held a quiet pic-nic in Mrs. Kilbourn's grove, east end of town, which was well attended and much enjoyed by the participants.

July Term of Court.

The July Term (non jury) of our Court convened Monday, with Judge Hoffman on the Bench. The term lasted until Wednesday evening. The cases disposed of general interest were as follows:

M. B. Ross, vs. Abraham Freeland, executor of A. F. King. Judgement for defendant.

Mary L. Wheeler, by her next friend, D. H. Loar, vs. H. A. Rasche. Judgment for plaintiff for 1 cent damages and costs.

Amelia Walker vs. Thomas E. Screven. Judgment for amount of claim with interest.

On motion of Col. J. W. Veitch Mr. E. H. Singell was admitted to the Bar.

Whilst here Judge Hoffman drew the jury for September Term.

List of Jurors.

The following Jurors were drawn Wednesday by Judge Hoffman, for September Court;

District No. 1.—Henry Shank.

No. 2.—W. W. Frazee, Jacob Sisler, T. B. Welch.

No. 3.—T. B. Wiley, J. H. Fuller, Eli Stanton, Thos. J. Chaney, H. S. Boucher, Charles Warnick, S. J. Beachy, G. W. Slick, C. J. Otto.

No. 4.—W. A. Mullen, Henry Warnick, Pat. Grant, Hiram Duckworth, Josh. Fazenbaker, A. C. Duckworth.

No. 5.—Alex. Hanfling, Abraham Turney, Wm. Hinebaugh, Alex. Fresh, Adam Fox, Geo. Keller.

No. 6.—W. H. Hoye, John Kitzmiller, I. A. Enlow, S. P. Specht, N. C. Browning.

No. 7.—F. P. Arnold, Thomas Martin, Handy Gipson, (cold.) Clark Deberry, Moses Bowman, Norman Barnard, John Helbig, James O. Cleveland.

No. 8.—D. N. Murphy, John Blamble, B. F. Shaffer, I. I. Thompson, W. J. Wilson.

No. 9.—Michael Durst.

No. 10.—W. C. Jones, E. W. Kelso.

No. 11.—J. W. Broadwater, Robert Green.

Bucklen's Arnica Salve.

The best Salve in the world for Cuts, Bruises, Sores, Ulcers, Salt Rheum, Fever Sores, Tetter, Chapped Hands, Chilblains Corns, and all Skin Eruptions, and positively cures Piles, or no pay required. It is guaranteed to give perfect satisfaction, or money refunded. Price 25 cents per box. For sale by W. D. Nydegger, Druggist, Oakland, Md.

Local Papers.

A large proportion of the people do nothing to support their local papers, yet reap the benefit every day of the editor's work. A man will say, "Advertising does not pay in business; I have to keep men on the road, and get my customers by going after them." And yet the fact is that the town in which he does business would be unknown, the railroad over which he ships his goods would be unbuilt, and he himself would be unheard of if it were not for the newspaper, which he says does him no good.

The local paper is an advantage to every man in the community, and when a man refuses to contribute to the support of the paper on the ground that it "does him no good," he might just as well refuse to pay his taxes for the support of the courts and police officers on the ground that he never breaks the law and does not need any officers. There are men who believe themselves to be honest and pious, who are doing business in every community, and every day appropriating to their own use the fruits of other men's labors by reaping the benefit of the newspaper without contributing a cent to its support, and yet they would be terribly shocked if they should be charged with stealing wood from their neighbors. But the principle is just the same, the only difference being that in one case the law can reach them, and in the other it cannot; but, morally, it is just as dishonest to steal the fruits of your neighbor's enterprise as to steal his fuel or chickens. Too much credit cannot be given the weekly paper for the work it has done and is still doing for the benefit of this country.—*Exchange.*

Teachers' Association.

The State Teachers' Convention met at Deer Park Tuesday evening at eight o'clock, the president, Mr. J. W. Thompson, of Queen Anne's county, in the chair, and Mr. A. F. Wilkerson, secretary. The president, after a brief address, introduced Judge H. W. Hoffman, of Cumberland. The Judge congratulated the teachers on their selection of Deer Park, whose beauties he described in vivid and picturesque language. Said he: "There is no line or branch of this country's progression to which we can point with a greater complacency or more well-grounded exultation than to our progress in education. State and national education stand at this hour among the highest and grandest achievements of our government. The cultivated mind is the center and source of power. Our planet is a school-room, with man as the class-book. The common school instructor of to day is recognized as a potent factor in society and government." The speaker, after delivering a panegyric upon the life and services of John Adams, closed by extending a cordial welcome to the Association.

Mr. P. A. Witmer, school examiner for Washington county, in responding to this address extended thanks in behalf of the association for the kind words of welcome. "These teachers," said he, "have come from their work-houses not only to rest, but to deliberate upon educational subjects, without any bias which could prevent a just and accurate judgement. They are here to deliberate to the end that a system of mental and moral training may be provided the youth of this country as may be necessary to a proper discharge of their duties as citizens."

There were about two hundred teachers in attendance.

Mountain Lake Park.

As I have not space to give particulars of the W. C. T. U. Conference, I will state that there were nine or ten States represented by one or more delegates, and that the conference was one of the best ever held here. The zealous workers in this union cannot fail, as their firm trust is in Him who never lost a victory. They return again next year, and I hope they can then spend a longer time with us. Mrs. Nellie Bayley, of Chicago, Ill., was quite an addition to the programme with her grand chalk-talk. I can say the same of Mrs. Buell, of New York City, Mrs. Chapin and others.

Almost every room that can be had is being engaged to accommodate the Sons of Temperance. Their convention will be over on Friday evening and the Camp Meeting begins on Saturday following.

The Camp Meeting will be in charge of Dr. Dugan Clark and D. B. Updegraff, Ministers of the Society of Friends. Ministers and Evangelists of other denominations will participate in these services. The Association has no tents to rent. Any who wish to bring their own tents will have all needed ground assigned them free of charge. Mountain Hay for tents at moderate rates. As no arrangement has been made for putting up tents, bunks, flooring, etc., please write to Mr. John M. Jarboe or Mr. A. C. Brooke, Mountain Lake Park, Garrett county, Md., if such things are needed. Camp Meeting expenses must be paid, and no plan for raising the money has yet been suggested that will please everybody. To prevent taking up the time alloted to the religious services by begging operations, it has been thought best to issue tickets of admission to raise all necessary funds. This mode of raising money may not meet with the approval of those who do not wish to contribute to the expenses of the Camp Meeting, but no other plan has been suggested less liable to objection, and eventually we hope all will be pleased with this arrangement. Tickets good for all the services of one day 10 cents; tickets good during the Camp Meeting 50 cents. Admission free on Sabbath, but a basket collection may be taken to give any who may wish to contribute an opportunity.

J. A. E.

Sewing Machines.

The people of Garrett county would do well to call at the Singer Manufacturing Co's office in Oakland, and examine the high arm and oscilating Sewing Machines, before purchasing any other kind. We have now as the manager of our Oakland office, Mr. Nimrod Paris, who will take great pleasure in showing the working of these machines. Any remittances due will be promptly receipted for.

Chance for Investment.

For sale or rent, two cottages, furnished, with use of horses and carriages.

MRS. E. A. KILBOURN,
4 11 Oakland, Md.

Notice!

All persons knowing themselves indebted to me will please call and settle by cash or note. All claims not settled by the 1st of June next will be given out for collection.

H. A. RASCHE.

Letter From one of Lee's Veterans.

MT. MCGREGOR, N. Y., July 2.—Following is a copy of a letter received by General Grant to-day from Rockbridge Baths, Va.:

"GENERAL U. S. GRANT—Dear Sir: I hope you will allow me who, when a boy, laid down his arms at Appomattox and pledged allegiance to the Union, to express his warmest sympathy for you in your suffering. Dear General, I have watched your movements from the hour you gave me my horse and sword and told me to go home and assist in making a crop. I have been proud to see a nation do you honor and now, dear General, in the hour of your pain I weep that so brave, so magnanimous a soul must suffer as you do. My prayer to God daily is that you may be restored to perfect health, and be assured that I am not the only ex-Confederate who sends his prayers daily to the throne of grace for the restoration of the grandest, the noblest, the bravest soldier and the purest statesman who ever graced the annals of history. May God who overlooked you in battle and who has brought you thus far give you grace to meet whatever He has in store for you, and may He restore you to health, is the fervent prayer of one who at 15 years of age entered the lists against you and accepted the magnanimous terms you accorded us at Appomattox."

A Leipsic journal, which makes a specialty of matters relating to glass, gives a method which it asserts will prevent lamps from cracking. The treatment will not only render lamp chimneys, tumblers and like articles more durable, but may be applied with advantage to crockery, stoneware, porcelain, &c. The chimneys, tumblers, &c., are put into a pot filled with cold water, to which some table salt has been added. The water is well boiled over a fire and then allowed to cool slowly. When they are taken out and washed they will be found to resist afterwards any sudden change of temperature. The process is simply one of annealing, and the slower the cooling part of it is conducted the more effective will be the work.

"The car record department of the Pennsylvania Railroad is the most perfect piece of business machinery in the world," said an old railroader the other evening. Then he went on to explain. At the office in Philadelphia they know the whereabouts of every car owned by the company. If it is on the road, in the shops, on a siding, in a yard, being loaded or unloaded, they have it all in black and white. Twenty-four hours is allowed for the unloading of a car, and if the work is not done in that time along comes a telegram asking what is the matter, and if the car has been put on the move where it was sent to. They know the name of the engineer and conductor of the train to which the car was attached, and put pointed questions that invariably bring the information they are in search of. If a car is down in New Orleans, or out in Michigan or in Harrisburg or Philadelphia, they know it, and if they don't, they can trace it to where it was last heard from and find its whereabouts in a very short time. Every day this record is revised and the system is such that a mistake never occurs. It is a wonderful thing. If every business was run with the exactness of the Pennsylvania Railroad system, there would be few failures.

Kitchen Wrinkles.

Tomatoes are nice with cream and sugar.

Sugar loses part of its strength by boiling.

Never wash raisins; wipe them with a dry cloth.

Wet and flour well the inside of pudding bags.

Wrap fruit jars with paper to keep out the light.

Sugar should be browned in a dry pan for sauce.

Figs are good boiled five minutes and served hot.

Boil coffee in a salt sack; it is nicer than egg to settle it.

Keep preserves in a dry place; seal with flour paste.

Put soda in sour fruit for pies and they will require less sugar.

After paring fruit drop it in cold water to prevent it changing color.

A little sulphate of potassa added to preserves prevents fermentation.

When sauce boils from the side of the pan the flour or corn starch is done.

Glaze the bottom crust of fruit pies with white of egg and they will not be soggy.

Always put a little soda in milk that is to be boiled, as an acid is formed by boiling.

Do not boil vinegar for pickles. Boil the vegetables in salt and water, drain and pour the vinegar on.

Seal the juice left from canning fruits in small bottles and keep for making fruit pudding sauces.

For convenience in cleaning lamp chimneys, nothing is nicer than a small sponge attached to the end of a stick.—*Minneapolis Housekeeper.*

A farmer's wife, writing to the *Country Gentlemen*, tells how she keeps cabbage worms away from her plants. She always has nice cabbages. She keeps an old tin pan full of dry earth, and every time she goes into the garden sifts a spoonful or more of this dust over the cabbages, and the worms never molest them.

Money is close, observes an exchange. It may be, but for our part we would not object to its being a little closer, about close enough to get hold of, so to speak.

There is no choice of words for him who sees the truth; that provides him with the best word.

An awkward man is graceful when at sleep or when hard at work or agreeably amused.

Baltimore Live Stock Market.

[From Baltimore American.]

MONDAY, July 6, 1885.

PRICES OF BEEF CATTLE AT THE MARKET TO-DAY.

Very best on sale to-day 5¾@6c. that generally rated first quality 4½@5½ cts; medium or good fair quality 4@4¾ cts; ordinary thin steers, oxen and cows 2½@3½ cts; extreme range of prices 2¼@6 cts; most of the sales were from 4@5½.

REMARKS ON BEEF CATTLE.

The arrivals of Cattle during the week amounted to 1,847 head, against 1,414 last week and 2,104 head the corresponding week of last year, and the sales were — head, against 742 last week, and 1,349 head the corresponding week of last year.

The market on the Hill to-day has been greatly demoralized. The offerings were much in excess of the demand, and a number of the dealers could not dispose of all their offerings and will hold over or reship East their balances. The quality of the tops was rather superior to last week, but there was a much longer line of medium and common cattle. Dealers generally report tops as being off ½c., medium ¼c., and common in some cases, ½c', as compared with last week's rates. Prices 2¼@6c., most sales ranging from 4 to 5½c.

THE SHEEP MARKET.

The run, which is rather light, numbering more than 500 head less than the very moderate offerings of last week, has met a fair demand, with prices ¼c. higher than they were last Monday. The quality runs quite as good as was that of last week's offerings. Prices for rough sows and stags 5@5½c., and fair to good butcher hogs 5¼@6¼. Same time last year hogs sold at 6½@7¼c. as the extreme figures.

THE SWINE MARKET.

There has been a full supply of sheep and lambs on the market this week, but the bulk of the offerings has been of a common grade, good sheep and lambs being scarce and trade fair for them. Common stock, numerous as it has been, has been hard to sell at lowest quotations. Common to fair sheep sold at 2@3c., and fair to good 3¼@4c. Lambs 3@6c., few selling at either extreme. Same time last year sheep sold at 3@4¼c. gross, and lambs at 4@6½c., and a few extra a shade higher.

TRUSTEE'S SALE

—OF VALUABLE—

REAL ESTATE.

Under and by virtue of a decree of the Circuit Court for Garrett county, as a court of Equity, passed in a cause wherein Jonas E. Gnagey, et. al. are complainants, and Mary Otto and others are defendants, the undersigned trustee will sell at Public Auction to the highest bidder

ON MONDAY,
THE 13TH DAY OF JULY, 1885,

at the hour of 2 o'clock P. M. of said day, in the town of Grantsville, Garrett county, in front of the Hotel now kept by Jos. Blocher.

1st. All that part of a tract of land called

"SPRING FIELD,"

containing 46¾ acres of land, which is more particularly described in a deed from John Warnick and wife to John Swauger, dated 12th August, 1865, and recorded in Liber H. R. No. 2½, folio 308, &c., Allegany county records. This piece of land is improved by a Grist and Saw Mill, a large Dwelling House and other outbuildings, and is commonly known as the

"SWAUGER MILL PPOPERTY,"

and situated about seven miles south of Grantsville, and is one of the most valuable "Mill Seats" in the county.

2d. All that part of a tract of land called "SWANTON," containing 30¾ acres, which is more particularly described in a deed from Jos. R. Anderson and wife to John Swauger, dated the 3d September, 1873, and duly recorded in Liber W. H. T. No. 1, folio 184, &c., one of the land records of Garrett county.

3rd. Also all that other certain tract of land adjoining the aforesaid parcels of land, containing the quantity of 21½ acres of land more or less, and being the same land which is more particularly described in a deed from Jos. R. Anderson and wife to John Swauger dated the 3rd day of July, 1876, and duly recorded in Liber W. H. T. No. 2, folio 779, &c., one of the land records of Garrett county.

Said two last mentioned tracts are well timbered and partly improved.

All of said different parcels of land will be sold separately, or together, whichever will realize the most money.

TERMS OF SALE, as prescribed by the decree: One-third of the purchase money to be paid in cash on the day of sale, or the ratification thereof by the court, and the balance to be paid in two equal annual installments, in one and two years from the day of sale; said deferred payments to bear interest from the day of sale, and to be secured by the bonds of the purchaser, with security to be approved by the trustee, or all the purchase money may be paid on the day of sale at the option of the purchaser.

JONAS E. GNAGEY,
6 20 4t. Trustee.

The Republican.

JAS. A. HAYDEN, Publisher.

OAKLAND, GARRETT CO., MD.

IN THE ATTIC.

Lonely is this place, this darksome upper story,
With broken, leaking roof, and walls gray, black and hoary,
Shut from outer world, from sunlight's flowing glory,
Holding wonders still from ages past.

Doves, like spirits, moan for all the grandeur wasted,
Winds of winter sigh the splendor that was tasted,
Ere by Time's rude hand 'twas to this ruin hasted,
Why did not the ancient glory last?

In yonder corner's dusk, 'neath rafters rotten,
Stands the wooden wheel that spun the wool and cotton,
As the Wheel of Life spun worthy deeds forgotten,
Spiders' webs about it now are bound.

For liberty and freedom fought this musket rusty;
Fought this broken sword, to human right once trusty;
Sounded forth this bugle, like this bass drum dusty,
May it not have music still to sound?

Peaceful here they lie, as though with joy forsaken,
Never more the sound of battle to awaken,
For the arm that used them has by fate been taken,
By the sturdy hand that conquers all.

Hark! But not An answer comes unto my musing,
Far more happy thoughts into my mind infusing,
'Tis the village bell music's spell diffusing,
As it sadly questions, "Conquers all?"

There the ancient timepiece nigh the rafters reaching,
Slender hands extends, as though to mortals preaching;
Patience has it taught; endurance is it teaching;
But 'tis silent now, no more its measures fall.

—*Youths' Companion.*

JOE'S ATONEMENT.

The Cause of the Great Boom at Biggins' Bar.

The snow was twenty feet deep on the spot, and his prospects for living till morning were worth about three cents, the night Jim Biggins struck the valley. He stumbled and slid down the natural trail, and finally fell exhausted on the drift when his momentum no longer carried him ahead.

There he lay for a little while, trying to gain strength enough to make one more effort for shelter; for night was at hand, and to be there until his limbs stiffened meant death.

"It's no use," he muttered, as he swayed to and fro and looked around in a dazed sort of way. "I may just as well cock my toes up and pass in. I've done ther best I could. If looks goes fur anything, there ain't a white man within a hundred miles of hyer; and I'm clean done out, 'thout an idea 'thin a hundred miles o' whar I be."

He stared around him as he spoke, shivering, feeble, scarcely able to see a rod in any direction. Nevertheless, the pure grit that had pulled Jim Biggins through so many tight places did not desert him now, and once satisfied that there was no likelihood of any settlement being near, he blundered on in search of a more protected spot where he might pass the night.

Chance was good to him. Before he had gone half a dozen rods he stumbled among the branches of an overturned tree, and following the trunk up he found a hollow caused by the bulging roots that had been torn from the ground. On one side was a wall of snow, on the other the wall of matted roots and dirt, with just a little opening at the top, through which he wormed himself and sank down with a sigh upon a bed of leaves.

He heard the wind without howling as though at his escape, but it droned away into a gentle, lulling hum, and before long he ceased to hear it at all. He was sleeping the sleep of exhaustion.

When he awoke the sun was shining brightly, well up in the heavens, and he was feeling very much better than he had imagined would be possible. He had burrowed down among the leaves, and the close quarters kept the heat in fairly well, and though he was stiff enough from his tramp the day before, the principal trouble was the gnawing in his stomach, which demanded to be satisfied.

He lay quiet for a few moments to gather his wits fully about him, and then stuck his head out of the opening.

It is uncertain what the fur cap that surrounded his cranium most looked like, but at any rate the moment it emerged, "zip!" came an arrow that went through his cap and grazed his skull so sharply as to draw blood.

"Injuns, by hokey!" exclaimed Jim, in a tone of dismay as he tumbled back into his burrow and felt for his sole weapon, a navy revolver, belted over his hip. "It won't take long to finish this trip," he continued. "If I go out I'll get shot, and if I stay in I'll starve. Hit or miss, they've got me sure."

It never struck him that he might have been mistaken for an animal of some kind, until he heard light footsteps in the snow outside, and then a long pole was run in with the evident intention of stirring him out.

He fired promptly, and the shot was answered by a yell, whether of pain or dismay he could not tell, but immediately afterwards he heard a few hasty steps and then all was silent.

He kept silent, too. He was in a trap from which there was no exit without presenting a fair mark to an unseen enemy.

What was his surprise to hear a voice in good mining-camp English exclaiming:

"Say, you! who's in thar?"

"Jim Biggins! Ef you're a white man what'n thunder you mean pluggin' away at me? Ef you ain't white I'll give you just the liveliest shake up you ever heard tell of about the time I get my 'volver in runnin' order."

"Shake on that, pard. I'm white from the ground up. Come out an' let's size each other up. I didn't s'pose there war a white man 'thin fifty mile."

Prudently retaining his hold on his revolver, Biggins crawled out a good deal more rapidly than when he went in, and found himself in the presence of a tall, gaunt-looking man, who held a knife between his teeth, and a bow and arrow in his hands.

At sight of each other all suspicion seemed to be dispelled. They put away their weapons and had a handshake that was all the more cordial for the danger that each had put the other in a few moments before.

"Any grub?" was the query of Biggins, after this operation had been performed.

"Sich ez it is," was the answer. "I ain't much fur a lay-out, but I'll let yer in on ther ground floor. Yer see, I'm lost hyer, an' I've hed awful tough times; but ef you've got any forty-five cartridges things 'll begin ter bloom agin. I've a Winchester, but it ain't bin no good since I run outer ammunition, an' ef I hedn't fixed up Ingin fashion I'd a gone nigh ter starvin'."

"An' I'm clean starved a'ready, but I kin load yer up with blue pills an' perpulsive power. You bet I hung onter 'em when I found wher I war comin' out. Now whar's yer beefsteak an' inyuns?"

"This way pard. You warn't lookin' round very close er you'd smoked me, sure."

Without hesitation Biggins followed his newly-made friend and was rejoiced to find that they had not far to go, and that the way over the frozen crust was not at all difficult. The stranger had established his winter quarters under an overhanging rock, in front of which, and at each end a rude wall had been erected.

"Hyer yer are," he said, as he led the way in. "Ther fire ain't out yit, and I've got enough grub left over from ter start yer while I'm fixin' more. Link in. Ther's a ch'i'ce ov bar, goat an' deer, ef yer ken take 'em 'thout salt. Ef yer can't—good mornin', mister Biggins."

"I kin take 'em raw. Don't waste time yarnin'. I ain't hed er bite fur forty-eight hour, and then it war a singed rabbit ez big ez my fist. I could a eat six."

"Sail in, then. Hyer's yer solid diet, tough enuff ter stick to ther ribs, an' warranted not ter give dispepsy."

"Now yer shout," mumbled Biggins, with his mouth full. "But I say, pard, what's yer name?"

"I ain't sure I need one, but ef yer very anxious ye kin call me Early Joe. That's what I sailed under at Ground Hog City till they run me out."

Biggins gave a nod to indicate that he understood. As soon as he got his mouth half empty he growled:

"My case prezactly, fur hevin' five kings an' a par ov aces held out under my knee. What was yourn fur? Ov course thar war a galoot dropped jest afore they found them keards."

"Why, yer a man an' brother. That war jest what war the trouble at Ground Hog. Ther way things look now I ain't sure but what we'd done ez well ef we'd stood ther storm. Mighty cold time I've had on it, an' things don't look elegant, no way."

"Any show fur color hyer when snow breaks up? We're fust on ther ground, an' ef we make a strike we'd be even."

"That's the chance I am layin' fur. I'm here now, an' I've froze right on, ter stay till it breaks up. It looks mighty encouragin', and since I've got a pard it won't be so lonesum. We kin worry through ef you don't mind runnin' the chance ter lose a wheel."

Jim Biggins had run a good many such chances in his time, and he didn't mind taking a few more. The two struck hands on it, and settled themselves resolutely to their waiting game; and so, waiting, the days went by.

It took a good deal of exertion and much stolid endurance to keep alive; but the "signs" were good and they held to their location, partly because they had no place in view for which they dare strike, but more because they had hopes of finding rich diggings when the snow melted and they had a chance to prospect.

Early Joe was an expert with the bow, and they husbanded their ammunition for an emergency. In one way or another they made shift to get along. Some weeks passed; the snows began to melt, and still they were alone in the little valley which they had both reached by the veriest chance.

"I tell yer it's goin' ter be the strike ov a lifetime," said Biggins, as they sat together in the sunshine one afternoon. "In another week we kin git ter work, an' ef we don't find color the first try I can't read signs."

"Ef we had ther tools," interposed Joe, not half so enthusiastic. "I've knowed men ter throw up after diggin' a week; an' ther next galloot lit right on a pocket jest whar they'd left off. What kin we do?"

"We kin be diggin' out a bowl with our knives, an' ef it looked ez though there were pay dirt 'round I'd throw sand with my fingers. O, don't you git down in ther mouth. Ther's big money fur us hyer, sure."

"Fur somebody, mebbe; but luck never comes my way. Ef it can't do any wuss for me, it'll send Shade Miller along ter throw me cold. I feel it in my bones."

Biggins had noticed that his partner had been gloomy for a day or two, but he asked no questions, and he asked none now, only trying to make him take a more hopeful view of the outlook, which, indeed, looked bright enough to him.

"I hadn't orter blame him either," continued Joe, speaking aloud, but more to himself than to his partner. "Pugsey Miller war a good little man; a heap sight too good ter go outer ther wet in a squabble over the keards—an' he a family man, too."

"How war it, Joe? Mebbe it would do yer heart good ter tell ther story."

"Yer kin b'lieve me er not, Jim, but it war him ez started ther racket. He knowed i war goin' ter make ther pass on 'em, an' he palmed three aces right on top when he made ther cut. I didn't drop to it till I found what orter bin his keards in my hand, an' I'd straddled his blind, an' it war straight poker, an' I knowed he had aces full.

"Then I got howling mad, and he pulled an' I pulled; an' I war a little ther quicker, an' when ther boys saw ther cold meat they wanted ter jump me, an' I got. I tell yer, Jim, ef we do make a strike, I'm goin' ter send a powerful big nest egg ter Pugsey's widder, fur her an' ther kid. See ef I don't."

"That's right, Joe; an' I'll go another. We're working fur the widder an' orphun now, an' it orter bring us luck. Let's begin a bowl right away. We kin fix one up outer bark ter make ther try with.

Early Joe seemed to feel somewhat relieved after his confession, and by the time the early twilight came was in better spirits than he had been for a week, in spite of the fact that their larder, never too well furnished, was getting suspiciously low. Game had grown scarce and shy. Though they were not at all particular as to what came into their deadfalls, or fell to their arrows, it was growing harder to keep the mill of life grinding.

"To-morrow," said Joe, just before he closed his eyes for slumber. "I'll take a tramp down South. Ef we don't look sharp we'll be starved outer hyer yet; an' I don't wan't ter give ther spot away till we see what ther show are."

"All right. I'll stay an' watch ther claim."

In the morning with the Winchester slung over his back, and his bow in his hand, Early Joe set out on his hunting expedition; while Jim Biggins loafed about or in their rude retreat, whiling away the time as best he could.

It did not seem at all strange when evening came without his partner; but as one hour after another passed he began to grow uneasy.

"He ain't no kitten, Joe ain't," he said to himself, "an' I don't guess what might er happened, but anyhow it's queer, an' ef he don't git back afore mornin' I'll hev ter take up ther trail myself."

But when morning came there was still no Joseph, and, having partaken of his simple breakfast, Biggins was just about starting out in the direction taken by his pard, when he was startled at hearing footsteps.

Looking out he saw four men coming down the valley. At least he judged that they were all men from his hasty glance at their clothing, though when they came near it was easily seen that the smallest of the four was a woman.

Biggins was startled enough at the first. These people came steadily on, with the strength belonging to those who have lately rested. They did not look like prospectors either, but like men in search of a trail which, once found, they would follow to the very end.

As Jim Biggins was a hunted man the first possibility that suggested itself was that they were after him.

The second look convinced him that they were all strangers. Besides, his dealings with women had been few and fair. No occasion was there for any of the sex to take the trail.

But might they not be after Early Joe? The idea seemed ridiculous, for Walnut Bar lay a good hundred and fifty miles to the north, according to the most definite statement that Joe had given of his wanderings. Nevertheless Jim lay quiet on the *very* slim chance that they might go by, following the trail they had found on the other side of the valley. The retreat under the rock was fairly well concealed and could not well be seen until the party was directly opposite to it.

Suddenly the leader stopped short and held up his hand. They were not so far away now and Biggins heard a feminine voice.

"What is it, Shade?"

"There's some one hyer, a perspecter most likely. There's only ther one track; but there may be a gang ov 'em, an' ef they've struck anything they won't take it kindly ter see us. It looks ez though they hed a mighty good chance for a big thing."

As the man spoke he looked around with keen eye, and his gaze lit upon the little trail the two men could not help leaving as they went in and out.

Biggins was watching through a chink and saw that discovery was certain. Without waiting he stepped out, his hand upraised in token of amity, though he had loosened his heavy revolver and was ready to draw at a moment's notice.

"Hello, party, whar yer goin?" was his salutation. "Hain't got much ter offer, but can't yer turn in an' stop awhile. It does me good ter see a face agin'. I've been all-fired lonesome, an' ther's room enough for all."

The leader had dropped his carbine into the hollow of his arm, and now he advanced with quick steps, followed at a little distance by the rest.

"Who are you?" he asked sharply.

"Biggins are my name, an' I'm layin' off hyer till the snow goes. Then I'm goin' ter see how she pans out. What's your leetle game? You ain't huntin' ter strike pay gravel. What's yer name an' where yer from?"

"My name is Shade Miller, and I am from Walnut Bar. Yonder woman is my brother's wife 'an we're a huntin' ——"

A cry from the woman broke in upon his explanation, and Biggins gave a quick glance down the valley. Early Joe was approaching with slow, weary steps.

"Yonder is my pard," said Jim, briskly. "Him an' me pulls together. Drap it!"

He wound up with a stern command, and his revolver lay in line for Shade Miller's head, just as that individual's thumb forced back the hammer of his carbine.

There was an exclamation from one of the other men; a shrill cry from the woman, but Jim Biggins never turned his eye.

"You tech him," he shouted, "an' I'll scoop Shade Miller sure. You hear me? Let's talk it over."

Shade's life hung by a thread just then, for with another scream the woman sprang forward.

Biggins did not shoot. An instant later he saw the change in Shade Miller's face and knew that he was safe. He turned and looked southward, just in time to see Early Joe stumble and fall, dropping from his arms a little bundle that rolled over and over and then sprang up and showed itself to be a child.

"Mamma!" said the child, just as it was snatched up, and then there was a singular hurrah, and doubtless Early Joseph was in no immediate danger from that crowd.

Early Joseph was pretty hard hit; but it was not altogether the wound and loss of blood that made him grow white again to the lips as he looked up and saw the face of the man that was bending over him.

"Pugsey Miller!" he said at last.

"That's my name, old man. I didn't go out of the dannr, and I wasn't more than half hurt. The boys were a little too previous. And here you've saved my kid for me. Shake, pard! How did you do it?"

"I struck ther trail ov half-a-dozen copper skins that I knew hed been up ter some devilment, an' I follered on, an' wiped 'em out, an' got ther boy. Now, count my checks fur me. I'm startin' over ther range."

* * * * * * *

But Early Joe didn't go, after all. He revived again, grew strong, heard how the little squad of Indians had stolen Miller's child, probably through the influence of a half-breed who wanted revenge; how the little party had followed on and lost the trail the preceding day, and had almost given up hope, and how the boy was making much moan for him. And then Mrs. Miller kissed him before them all, and said he was the best man in the world, if he had tried to kill her husband, and that he should get well, or they would all die there, waiting for him.

So they stayed there for a while and the snow went off, and they found half-a-dozen colors in the first bank full of gravel they seriously tested, and after their claims were all staked off, part went back to carry the news, while Shade Miller stayed with Jim and Joe to hold the fort.

And the foregoing is the true story of the circumstances which led to the boom at Biggins' Bar; the diggins, after all, not being called after the original finder.—*N. Y. World.*

SHAM "LORDS" IN AMERICA.

Two Instances—"Lords Northbrook" and "Abercromby"—A Glance at the Peerage.

I was much amused the other day on reading in a San Francisco paper of the exploits there of a young Englishman calling himself "Cecil Northbrook," and claiming to be the son of England's First Lord of the Admiralty. What amused me was not the very bald and threadbare subterfuge of the young man, or the very commonplace way in which he played his game, but the almost idiotic cordiality of the people upon whom he imposed himself. If this were a new thing one wouldn't wonder so much, but it seems as if those Americans whose Anglomania leads them into taking kindly to every Englishman with a title would never get their fingers burnt enough. If such people would only invest annually the sum of seven or ten dollars in a Burke's or De Brett's "Peerage," they would never be taken in by fictitious titles or non-existing noblemen.

Not only will the name of every peer in the kingdom, with his immediate family, be found therein, but those of every man, woman and child related collaterally with the male line of the peer himself. When an Englishman with a suit of rough tweed, a red neck, a flannel shirt, a pair of gigantic boots, and an eye glass, comes to you and says: "I'm Lord So-and-so, or Viscount This-or-that, or the Honorable Plantagenet Emptyhead," all you will have to do is to take down your "Peerage" and look. If you can't find him there, make him show you.

And yet, day by day, one hears of Americans being duped by adventurers whose stories are as transparent as glass. Take this man "Cecil Northbrook," for example. A "Peerage" would have shown in a moment that Northbrook is but the name of the title, Baring being the family name. Had this young man been Lord Northbrook's son his name would have been Cecil Baring. But the "Peerage" would have further demonstrated that the Earl of Northbrook has but one son, and he is called Lord Baring, being the eldest. There was another son in the royal navy, but he was lost at sea in the Captain when she foundered in a gale in the Bay of Biscay in 1870.

A cursory investigation of the same sort would have exhibited the fraudulence of the youth who styled himself Lord Abercromby in New York a few months ago, but no one seemed to have a "Peerage" to spot him in, or to know how to use it if they had. But, mind you, an old "Peerage" won't do. It must always be this year's, or the impostors will say they have come into the title since it was published. But even then their names would be among the collateral branches. It, however, takes an adept to run these down, so that novices at the business must have the most recent edition they can get.

At best the study of England's peerage is a nauseating task. To begin with, few books of its size contain such a record of immorality and seduction; but it is the rank and honors showered upon nonentities which one contemplates with disgust. Altogether it is a book after whose perusal one feels a sense of shame. One sees the hollowness, the absurdity of "nobility" as it has become in England, the utter absence of the sentiment of *noblesse oblige* among its members and the sham that underlies the whole fabric. A coronet is out of place quite as much on the brows of the descendant of a corrupt king's favorite as it is on those of a self-made, purse-proud brewer or iron-monger. It is, therefore, not out of any respect or reverence for the volume, or those whose history it is, that I recommend its purchase to Americans who like titles, but as a shelved watchdog to keep off the heiress-hunting and dinner-eating adventurers, who, as English dukes, marquises, earls, viscounts, barons and honorables, come and accept their hospitality and marry their daughters.—*London Cor. San Francisco Argonaut.*

—A Pennsylvania farmer recommends peach crates for storing and keeping apples. The advantages claimed are: The apples can be picked and laid directly in the crates and loaded with ease and without fear of injury in the wagons, and left in a cool store-room until colder weather. Being open, the air has free circulation, and if they begin to decay, these can be readily picked out for use.

—An thirteen-year-old lad at Portland, Ore., a few days ago devoured three pounds of strawberries in thirteen minutes in a berry-eating contest with another lad twelve years old, who came in a good second in fourteen and a half minutes.—*Denver Tribune.*

GRANT'S FIRST BATTLE.

The Hero's Experience at Belmont—He Acknowledges a Lack of Moral Courage.

"As soon as the enemy saw us [speaking of *his* first battle in the civil war] they decamped as fast as their horses would carry them. I kept my men in the ranks and forbade them entering any of the deserted houses, or taking anything from them. We halted at night on the road, and proceeded the next morning at an early hour. Harris had been encamped in a creek bottom for the sake of being near water. The hills on either side of the creek extend to a considerable height, possibly more than one hundred feet.

"As we approached the brow of the hill, from which it was expected we could see Harris' camp and possibly find his men ready formed to meet us, my heart kept getting higher and higher, until it felt to me as though it was in my throat. I would have given anything to have been back in Illinois, but I had not the moral courage to halt and consider what to do. I kept right on. When we reached a point from which the valley below was in full view I halted. The place where Harris had been encamped a few days before was still there, and the marks of a recent encampment were plainly visible, but the troops were gone. My heart resumed its place. It occurred to me at once that Harris had been as much afraid of me as I had been of him. This was a view of the question I had never taken before, but it was one I never forgot afterward. From that event to the close of the war I never experienced trepidation upon confronting an enemy.

"At the battle of Belmont, fearing that the enemy we had seen crossing the river below might be coming on us unawares, I rode out in the field to our front, still entirely alone, to observe whether the enemy was passing. The field was grown up with corn so tall and thick as to cut off the view of even a person on horse-back, except directly along the rows. Even in that direction, owing to the overhanging blades of corn, the view was not extensive. I had not gone more than a few hundred yards, when I saw a body of troops marching past me, not fifty yards away. I looked at them for a moment, and then turned my horse toward the river and started back, first in a walk and, when I thought myself concealed from the view of the enemy, as fast as my horse could carry me. When at the river bank I still had to ride a few hundred yards to the point where the nearest transport lay. The corn-field in front of our transports terminated at the edge of a dense forest. Before I got back the enemy had entered this forest and had opened a brisk fire upon the boats. Our men, with the exception of details that had gone to the front after the wounded, were now either aboard the transports or very near them. Those who were not aboard soon got there, and the boats pushed off. I was the only man of the National army between the rebels and our transports. The captain of a boat that had just pushed out but had not started recognized me, and ordered the engineer not to start the engine. He then had a plank run out for me. My horse seemed to take in the situation. There was no path down the bank, and every one acquainted with the Mississippi river knows that its banks, in a natural state, do not vary at any great angle from the perpendicular. My horse put his fore feet over the bank without hesitation or urging, and, with his hind feet well under him, slid down the bank and trotted aboard the boat, twelve or fifteen feet away, over a single gang-plank. I dismounted and went at once to the upper deck."—*From General Grant's Personal Memoirs.*

HUDSON BAY.

Some of the Secrets of the Canadian Mediterranean Exposed.

In the month of February last a report was laid before the Parliament of Canada detailing the results of an expedition dispatched by the Government of that country particularly for the purpose of inquiring into the navigability of Hudson Strait and Bay, and, at the same time, of gathering information concerning the resources of that region, and its availability as a field for settled habitation. This report represents the first properly organized attempt that has ever been made to pierce the secrets of Hudson Bay for the public benefit.

It is at first blush not easy to understand why this mighty expanse of water, occupying the peculiarly important position that it does, should remain for so many generations comparatively unexplored, and wholly unutilized, except as a hunting-ground for a few New Bedford whalers, or a medium of easy communication between some half-dozen scattered factories of the Hudson Bay Company. Although called a bay, it is really an inland sea, 1,000 miles in length by 600 in width, having thus an area of about 500,000 square miles, or quite half that of the Mediterranean. It drains an expanse of country spreading out more than 2,000 miles from east to west, and 1,500 from north to south, or an area of 3,000,000 square miles. Into its majestic waters pour feeders which take their rise in the Rocky Mountains on the west and in Labrador on the east, while southward it stretches out its river-roots away below the forty-ninth parallel until they tap the same lake-source which sends a stream into the Gulf of Mexico. Despite its distance northward, its blue waves are never bound by icy fetters, and its broad gateway to the Atlantic is certainly navigable four months out of the year, and possibly all the year round to properly equipped steamships. Its depths abound in finny wealth, from the mammoth whale to the tiny caplin. Its shores are serrated by numerous streams, some navigable for long distances inland, and all stocked with the finest of fresh-water fish, and clothed as to their banks with valuable timber ready for the lumberman's axe. Its islands are rich in mineral ore of many kinds. The country whose margin its tides lave is well adapted for tillage and pasturage, while all around the region swarms with animals and birds whose flesh or fur renders their chase a highly lucrative employment.—*J. Macdonald Oxley, in Popular Science Monthly.*

SCHOOL AND CHURCH.

—There are 29,000 English-speaking Episcopal clergymen in the world.

—Mr. Moody has associated with him in his evangelistic labors Mr. D. B. Towner, late chorister of Union Chapel, Covington, Ky. The engagement is for five years.

—President McCosh, of Princeton, said recently that the age of nine or ten was the time for learning languages. Then the child can acquire more in this department than a man of twenty-five.

—Ex-President Mark Hopkins, of Williams College, although over eighty-two years old, preserves his mental faculties unimpaired. He recognizes with ease the faces of men who were his pupils half a century ago.—*Troy Times.*

—Hampton Institute, Virginia, had enrolled this year 548 negroes and 127 Indians. The "Butler" primary day school, taught by the institute teachers and graduates, had 360 little colored children. More than one thousand pupils have been instructed on the institute grounds.—*Chicago Times.*

—Mrs. A. T. Stewart has signed an agreement to pay $15,000 annually to the support of the institutions recently transferred by her to the corporation of Garden City, L. I., and has executed a penal bond in the sum of $300,000 to secure its payment in perpetuity.—*N. Y. Sun.*

—The question whether women can sit as delegates in a religious convention was decided adversely by the Southern Baptists, who met recently in Augusta, Ga. Two women representatives were accredited from Arkansas, but their admission was opposed so strongly that they voluntarily withdrew.—*Chicago Herald.*

—De Candolle, the distinguished Parisian scholar, has spoken a good word for the children of the clergy. He shows that the hereditary effect of religion on intellect for the last 200 years has been good. And he gives a long list of clergymen's sons and daughters who have risen to eminence.

—The Hungarian Episcopacy is one of the richest in the world, but the condition of the lower clergy in the kingdom is most miserable. The Magyar Minister of Worship, Treport, has addressed a circular to the Archbishops and Bishops calling their attention to this contrast. The Prince Primate and three Bishops have answered saying they are considering how to improve the lot of their poorer brethren.—*N. Y. Tribune.*

—The University of Strasburg, founded in 1567, was reorganized in 1871, and is thus in a certain sense a monument of the new political conditions. Since the reorganization over $3,500,000 has been expended for new buildings, etc., and there is an annual appropriation of nearly $250,000 for its support. Its new edifices are a series of magnificent palaces, and its library contains 560,000 volumes. No other institution in Europe has so rich a provision for higher education. It now has seventy-three ordinary and nineteen extraordinary professors. Last year there were 858 students.

PUNGENT PARAGRAPHS.

—Poets in the olden times used to spend a whole week on a single line. It would be a good thing for the public if the modern versifiers had kept up the honored custom.—*N. Y. Post.*

—Judge—"How old are you, madam?" Witness—"I have no personal knowledge of my age, and hearsay testimony, I understand, is not accepted in this court."—*Boston Beacon.*

—A man in Luzerne County has had a portion of his brain removed. Should he recover, his friends fear he will become a dude; but the fact that he has some brain left should dispel that apprehension.—*Norristown Herald.*

—"Pa, who was Shylock?" Paterfamilias (with a look of surprise and horror)—"Great goodness, boy; you attend church and Sunday-school every week and don't know who Shylock was? Go and read your Bible, sir."—*Rambler.*

—"Doctor, I'm worried about my husband! Do you think him seriously ill?" "To the best of my judgment, madam, he is suffering from gastritis." "I knew it. I told him his trouble was from fooling with that gas meter yesterday."—*Yonkers Gazette.*

—If you have been moving and can not find the blacking brush, don't spend your time in looking in this corner and that, but go directly to the box where you keep your white neckties and you will find it. If you can't find your white necktie, look in the blacking case. These rules always hold.—*Boston Post.*

—An Irishman tried to shoot a sparrow with an old Queen Anne musket. He fired. The bird, with a chirp or two, flew away unconcerned in the foreground, and Pat was swiftly and noiselessly laid on his spine in the background. Picking himself up, and shaking his fist at the bird, he exclaimed: "Be jabers, you wouldn't a chirped if you'd been at this end of the gun."—*Chicago Tribune.*

—A gentleman visiting in town was much pleased with the appearance of a lady to whom he was introduced, and asked several questions in regard to her. Upon being told that she kept a shooting gallery he was much surprised and shocked. After he had given vent to his astonishment in several interjections, his informant told him that she only meant that she was a school-teacher and taught "the young idea how to shoot."—*Lawrence (Mass.) American.*

—"Young gentleman," said the lecturer in chemistry, "coal exposed to the elements loses ten per cent. of its weight and power. This is due to the action of the alkili constituents of——" "But what if there is a dog sleeping near the coal, professor?" "None of your levity, young man; this is a serious matter." "That is what dad thought when seventy-two per cent. of his coal pile disappeared during three nights of exposure. Then he asked my advice as a student of chemistry, and I told him to buy a dog. He bought a dog with bay-window teeth and the spring-halt in the upper lip, and now we don't lose one per cent. of our coal a month. That's the kind of a practical chemist I am. Now go on with your theory."—*Chicago Herald.*

FOR OUR YOUNG FOLKS.

BAYBERRY LODGE.

How Little Di Earned the Right to Be Its Mistress.

Miss Eunice was sitting on her own piazza which overlooked the sea. Before her stretched, first a shelving slope of turf broken by masses of rock, overgrown with creepers, then a craggy edge rising here and there into cliffs, and beyond that the wide blue of the ocean. On the right hand, toward the sunset, the water curved inland and made a winding bay, half uncovered at low tide, with rocky shores and points and wooded islands. Boats lay motionless in the bay, each with its double in the shining depths, where dark hulls and white sails were perfectly reflected; and far on the horizon the mackerel fleet drifted past like a swarm of white-winged butterflies.

Miss Eunice had seen this view every day, and all day long, for most of the summers of her life; but she never got tired of it, or thought it less beautiful, and she now dropped her work in her lap, and looked and looked with as much pleasure as though it were for the first time. Presently she began to hum to herself the words of the old hymn:

"If such the pleasures of the spring,
What must the fountain be
Where saints and angels draw their bliss
Immediately from Thee?"

Beautiful sights were apt to recall old hymns to Miss Eunice.

The singing ceased, and her thoughts came back to earth at the sound of voices from the lower cliff, where her nephews and nieces, who had arrived the night before to spend the summer with her, were building a play-house. It had a shed-like roof of boards laid over two tall rocks, the back was made of stones piled together, and a fireplace was being constructed with a length of drain-pipe by way of a chimney.

"That's daisy, I tell you," Fred was saying, just as his aunt began to listen. "Set the pipe a little mite farther this way, Tom. Look sharp! don't let it tumble, I tell you! What a duffer you are!"

"You hold your jaw," retorted Tom. "I know as much about chimneys as you do any day, I'll bet."

"Well, I should smile! You! When did you ever build a chimney before, Butterfingers?"

"Boys, don't quarrel," cried Fanny. "It's a lovely chimney. It's *go'op'tious!*"

"It's bang-up," said Ted.

"It's bully," added Tom. "My! ain't I hungry? When do you suppose aunty's grub will be ready?"

"Hungry! after that big dinner I saw you eat a few minutes ago!" exclaimed little Di. "Why, Tom, you're as bad as Jack the Giant Killer!"

"You shut up," rejoined Tom, politely. "Small kids like you should be heard, and not seen."

"I'm not a kid," retorted Di, valiantly. "And you're a boss—Ted said so. You're always trying to boss the rest of us."

"Children! children!" called Miss Eunice, who had listened to these flowers of speech with a mixture of astonishment and dismay. "Tea in twenty minutes. Come in, and get ready."

Up the rocks they scrambled, all four, rosy, hungry, and, it must be confessed, dirty, for drain-pipes and wall-building leave traces on hands and clothes. Miss Eunice ordered all up-stairs, and presently they came down again presentably clean, and with hair freshly brushed.

"Aunty, our house is too daisy for anything," declared Ted.

"And we've chosen a name for it," said Di; "we're going to call it Bayberry Lodge."

"Don't you think I have a right to be the housekeeper, and call it my house?" asked Fanny.

"And have the others live with me, and be my children. I'm the oldest, you know."

"Well, I should smile," retorted Tom. "You may be the oldest, but I'm the biggest. And I say it ought to be my house. I'll be the father of the family."

"You'd be a daisy sort of a father," remarked Ted, while little Di put in:

"Tom is so swell. He always wants to boss us."

"But Aunt Eunice, please say which of us shall call the house ours—because we agreed to leave it to you," said Fanny, anxiously.

"If you leave it to me," replied her aunt, "I shall say the one who earns it."

"Earns it? How can we earn it? What do you mean, aunty?"

"I'll tell you. Did you ever hear of such a thing as the English language?"

"Why, aunty—that's what we speak."

"I'm not so sure as to that, my dear. The language you speak seems to me, for the most part, quite different from English."

"What times *do* you mean, aunty?" cried little Di, with wide-open eyes; while Tom relieved his feelings by twisting his legs over the arm of a chair, and muttering under his breath: "Crickey! Here's a go!" Miss Eunice's quick ear caught the remark.

"An example in point," she said. "Tom, oblige me by explaining where, in the English language, the word 'Crickey!' is found, and what 'Here's a go!' means."

"Why—it means—it is—it isn't—it's just a common expression, aunty."

"Like 'daisy,' and 'bully,' and 'boss,' and 'goloptious,' and 'I should smile,' and 'kid,' and 'butter-fingers,' and 'buffer,' and 'duffer,' and 'muff;'" went on Aunt Eunice, with unsparing calmness; "my dear, misguided children, do you really suppose, when you use such words as these, that you are talking English?"

"They're not French, anyhow," said little Di.

"No, Di, but neither are they English anyhow. They are slang, which is a language by itself."

"Well, I know them any way, if they're not English," said Tom, sturdily; "all the boys use them."

"I'm afraid they do. Slang creeps in everywhere now-a-days, and the result is that children grow up with vulgar and careless methods of speech, which are hard to get rid of, and which hamper them all their lives long, and prevent them from appearing like well-bred and well-educated people."

"But doesn't everybody talk slang?" asked Fanny. "I'm sure all the people in English story-books do."

"Boys and young men do, I suppose," admitted Aunt Eunice, "and girls, too, sometimes; but they don't do it without correction, as with us; and grown people, as a rule, talk more carefully than we do, and are far more particular as to what expressions they use."

"What a bother it must be!" said Ted.

"No, Ted, it's just as easy to speak good English as bad, if once you form the habit. Now I will propose a bargain. The one of you who uses the least slang for the next month shall have Bayberry Lodge, and the others shall live with him or her. I will keep a little note-book, with your names, and whenever I hear a word that isn't good English I will note it down. What do you think of the plan?"

The children were doubtful as to what they thought, but Aunt Eunice was as good as her word. She showed them the note-book with "Ted," "Tom," "Fanny" and "Di" written at the top of four different pages. And though nothing was said on the subject, the children were conscious every now and then, as they sat chattering about her, aunty produced her pencil and made an entry in the book. They could not tell against which name the entry was made, and the uncertainty rendered them more careful.

"Aunty only caught one of us to-night," Fanny said to Di once after they had gone up-stairs to bed.

"Yes, and that was you," replied observant little Di; "I saw her take out her pencil when you said 'hifalutin' that time."

"Oh, bother! did I say that? I didn't mean to."

Gradually the four got into the habit of discussing words beforehand, to make sure if they were not slang, and liable to be counted against them. And they were somewhat surprised to find how many phrases which they were in the habit of using came under this objectionable head.

"It's perfectly mizziable," declared Tom. "We're getting so pertikilar and pernickitly that I feel like a deacon in a pew. I haven't said 'boss' for three days."

"No, but you did say 'bully' yesterday; you said it twice and aunty wrote it down," retorted Fanny.

"Oh, botheration twice over! This is a wale of tears and I'm sick of it." Tom was just eleven.

However, his pride was roused and he much desired to be master of Bayberry Lodge. So he struggled on, and did his best, discovering, as all of us do sooner or later, how much harder it is to break off a foolish habit than to form a good one.

At last the end of the month came. It was a beautiful, brilliant day in mid-July. Aunt Eunice had spent the morning at Bayberry Lodge, mysteriously busy, and the children had been requested to play elsewhere till after dinner.

About four she appeared and called them, and when they reached the rock house, they found it beautified beyond their hopes. A little crane with a tea-kettle hung above the fire-place, Chinese lanterns hung from the roof, four rustic seats had been added to the furniture; and on the platform, before the entrance, appeared two long, narrow boxes, planted with geraniums and gay nasturtiums which had a very ornamental and pleasing effect.

"It's ten times prettier than it ever was before," declared Fanny.

Aunt Eunice sat down on a rock, and took out her note-book. The children seated themselves on the new seats, and waited in breathless expectation for what she had to say.

"Thomas Whittemore," began Aunt Eunice, solemnly, "between June 16 and July 16 used slang words, or expressions not belonging to the English language, two hundred and thirteen times."

"Aunty!" said Tom, in a horrified tone.

"Francis Mary Whittemore," went on his aunt, "in the same time used the same sort of expressions one hundred and ninety-eight times."

"Aunty!" exclaimed Fanny, in the same horror-struck tone as Tom.

"Theodore James Whittemore, in the same time, two hundred and four times."

"You're more than I am, anyhow," cried Fanny. "That's jolly!"

"I now add one to Francis Mary Whittemore's count," remarked Aunt Eunice, immovably, "which makes it one hundred and ninety-nine."

Fanny looked doubtful whether to laugh or cry, but she deemed it wise to say nothing.

"Diana Rockwell Whittemore," pursued Miss Eunice, "during the same time, and under the same circumstances, has used slang expressions one hundred and forty-six times. Di, therefore, is the mistress of Bayberry Lodge."

This decision was, on the whole, easier to bear than any other could have been. The older ones would have found it hard to yield the precedence to one another, but little Di was the general pet. She made a sweet little mistress of the Lodge, and ruled her subjects wisely and well till the end of the summer. Aunt Eunice gave them tea-parties and all sorts of treats in the play-house; and although Ted persisted in calling what he liked "daisy," and Fanny clung to her favorite word "goloptious," their aunt noticed, or fancied that she noticed, that on the whole the children used less slang than before her experiment. And this, if it was so, was an excellent result, for the English language is too admirable and valuable and perfect a thing to be spoiled and deformed by vulgar and inelegant expressions.—*Susan Coolidge, in S. S. Times.*

—M. Foye, a French astronomer, maintains that the earth is older than the sun. He says all the planets, from Mercury to Neptune, were formed first. The sun was a nebular mass far outside their orbits, and subsequently it passed over to the center of the planetary system and collected there as the grand luminary which we know.

—Widows in Wareham, Mass., are allowed a barrel of herrings free from the town fishery.—*Boston Journal.*

FARM AND FIRESIDE.

—Feather Cake: One cup sugar, half cup butter, half cup milk, one teaspoonful cream of tartar, half teaspoonful soda, or one and a half teaspoon baking powder.—*The Household.*

—Soaking a ham over night before boiling takes away much of its saltiness and rancidity. It will also cook in less time and have a better flavor than if not previously soaked.—*N. Y. Examiner.*

—A practical experimenter advises subjecting potatoes to the light and air after being cut, with the eyes upward until the sprout appears—a sensible idea long practiced by some gardeners.—*N. E. Farmer.*

—A goose may be plucked three or four times during the warm season, and despite the cruelty of the operation, the geese are usually in as good condition in the fall as if the feathers had been allowed to drop out.—*Troy Times.*

—An exchange thinks heifers intended for the dairy should not be fed on fattening food. Plenty of coarse provender is better. It enlarges and strengthens the digestive organs, and when they come in profit, the tendency will be to milk and not to fat.

—Drainage is not less valuable to the stock-raiser than to the grain farmer. It lengthens the season both in the spring and fall, keeps the soil from poaching, and allows the cultivation of the finer and more nutritious grasses—three most important considerations.—*Chicago Tribune.*

—For steamed rhubarb: Wash, peel and cut the rhubarb into inch pieces. Put it into a granite double boiler, add one cup of sugar for a pint of fruit, and cook till the rhubarb is soft. Do not stir it. When the rhubarb is very sour steam it without sugar until the juice flows, then drain it; add the sugar and steam again till the sugar is dissolved. Or, pour boiling water over it and let it stand five minutes, then drain and steam.—*Boston Globe.*

—The *Breeders' Gazette* thinks wool can be profitably produced in this country at the present prices. To do this the farmer must cull out the poor sheep, keeping only those that will shear eight or ten pounds of wool, and aim to secure flocks that will produce a clip that is uniform in length and fineness. It says that prolonged depressions in the price of wool have always resulted in marked improvements of American flocks.

—A horse has a small stomach, and must be fed with concentrated food chiefly. Nevertheless, a change of food during winter, to succulent vegetables, as carrots or rutabagas, is often desirable, but only small quantities should be given. Four quarts of rutabagas may be given to a horse two or three times a week with benefit, but it is not advisable to add any meal or grain with the roots, lest the food might ferment in the stomach and produce colic.—*Prairie Farmer.*

FASHION NOTES.

Some Fashionable Intelligence from the City of Brotherly Love.

In place of white collars and cuffs, velvet bands encircle the wrists and neck; these have more of novelty than beauty to recommend them. Ordinary crepe lisse and lace frilling are out of date and continue to be replaced by many novelties. Bands of cream etamine, shaped somewhat like upright linen collars, embroidered in cross stitch, with red and blue ingrain cotton or silk, are the latest. These are very stylish. Bands of colored satin, just appearing above the dress collar and below the sleeves, are fashionable, and bands of gauze, threaded with gold or silver, are very becoming to the face.

The most stylish collars and cuffs are cut with square ends. Plain dark red ones are worn with house dresses. Striped, spotted and self-colored collars are all worn; some of those of red or gray linen have bands of gold tinsel stitched upon them, which are dressy and effective. The tinsel is easily removed when the linen needs washing. Handkerchiefs are very showy and are sold to match the cuffs and collars.

Yellow in all shades still remains popular.

Silk hose in pale creams, blues, pinks and in black are to be worn with slippers and low-cut shoes this season.

Buttons for lawns and other wash dresses are more ornamental than they have been.

A great many jetted Souave jackets are now worn with black silk and satin skirts. They are only becoming to slight, graceful figures.

New shoes have the uppers of dark, tan-colored or maroon leather. They are for walking purposes.

Byron collars of "solid" jet, with two scarfs of beaded net to tie below the throat are made to wear with black dresses.

Swiss girdles, pointed above and below the waist, both in front and behind, are made entirely of jet beads.

Black lace jackets are revived, and are now made of piece lace cut with darts and side forms, precisely as basques are. One of the prettiest of French thread net has five deep points on its edge, covered with lace, laid in accordion pleats. A palm leaf of jet is above each point.—*Philadelphia Times.*

The Cultivation of Smilax.

As soon as the seeds are ripe the earth is allowed to dry out and the foliage to die. The pot is then turned upon its side in some convenient place in the open air out of the way and where it will get no water. About the first of September take the bulbs from the pot and shake the earth from them. To prepare for planting, put a quart or more of broken bones in the bottom of the pot, then fill with soil of about one-half leaf mold, one-fourth fine sand and one-fourth garden loam, pressing it down firmly with the hand and filling not quite to the top of the pot. Select the choicest bulbs and place them around near the sides of the pot, then cover with earth, but not too deep. Set a trellis firmly in the center, place the pot where it will get plenty of sun, and water lightly until the plants begin to shoot up. The water may then be increased, but it must not be watered freely until it grows freely. Many make the mistake of watering too much, causing the bulbs to rot.—*Iowa Journal.*

HORSES WITHOUT GRAIN.

How Underdrainining Improves the Nutrient Qualities of Hay.

I notice a correspondent asks in a late paper how I manage to make my hay nutritious enough to keep work horses on without grain.

Hints have been thrown out from time to time as to how I managed. The soil is deep, mellow and rich, so that large crops grow, and I consider the hay grown on such land, that will produce some four tons to the acre in two or three cuttings, as superior in quality to that grown on poor, thin land, that will produce but one ton, or less. A good friend once asserted that his fine hay was better than my coarse hay. He had old meadow which yielded about three-quarters of a ton to the acre, and then a little "fall feed." We agreed to leave it to the cattle, and a sample of each was placed before them, when, much to his disgust, mine was eaten first, and noses thrust out plainly asking for more.

There is as much difference in hay as in butter, in my estimation. Fancy creamery can not be compared with "store-packed." And then there is a difference in the making and time of cutting. I have often urged farmers, through your columns, to cut their grass early, when at its best, and cure it nigely; in short, to have dried grass and not hay. Again, to feed work horses, two-thirds at least should be clover, and the rest timothy. Such hay, properly cut and cured, is just about as good as very much hay made on farms, and grain; at least, after some ten years' experience, it seems so to me. Not long since some writer in your paper spoke of the loss in weight from cutting hay so early. Did it not occur to him that what was lost by not letting the first crop stand a few days longer, was gained in the second crop—that that had just so much the better chance? Still I do not believe in going to extremes. I would let the grass stand till the first clover blossoms were beginning to fade. With me, this time comes about the 15th or 20th of June.

Again, it makes a difference, as I wrote you lately, how a team is driven—whether they are over-worked or over-driven, and whether they are pretty good, solid-built horses, or of the small-stomach, race-horse style. I have one pretty solid team that has been kept on early-cut hay alone, summer and winter, for nearly four years, except that when idle in the winter they are fed part straw to keep them from getting too fat. No man could ask for a better team to work. They are active, and always ready for business. We have just finished getting in our crop of potatoes. For four weeks they have had solid work, such as plowing eight to ten inches deep, drawing subsoil plow, Acme harrow, Thomas harrow loaded, and the potato planter running five inches deep. It has been mostly pleasant weather, and it has been all work and no play, as the season was so late we felt compelled to push things. After this hard pull, made extra hard because they were idle most of the winter, and not accustomed to work, they are as fat and sleek as any one could ask for, and if you should drive them to town, where there was a chance to show off, you would need to wind the reins around your hands to hold them. Now I do not say this to brag, but simply to show what can be done, and I will give any man the team who will prove that I have fed them any grain for the last three years.

But the point I particularly wished to speak of in this letter occurred to me a few days ago. It is, that underdraining helps the horses very much. It will puzzle you, no doubt, to see how I make that out. This is the way: We can get on the land to do the heaviest plowing and working early in the season when it is cold. I have plowed many a day on my land, drained by nature or with tile, when the temperature was but little above freezing, and a cold northwest wind blowing, when the team would turn over two acres or more in a day, and not seem to feel it at all. When our undrained clays get dry enough to work, the thermometer is apt to be up to seventy or eighty degrees a good deal of the time. Men told me this year that they had not plowed a furrow after my own plowing was all done. Now this may seem like a small matter, but it is a great saving of horse strength and flesh, and it is attention to such little points that makes farming profitable. It puts one ahead with his work, so he does not feel compelled to work his horses when it is excessively warm, at heavy work, but can take some lighter job till a cooler day comes. If I were a horse, I should feel good every time my owner got a load of tiles.

It may be well to say that many horses are fed too much hay. A horse may eat himself poor, with hay before him all the time, particularly if he is idle. I would have the hay choice, and feed only what they will eat up clean in two hours in the morning, and one hour or one and a half at noon, and two at night, ordinarily. When worked very hard, we give them all they will eat up clean during the night. The best horseman I ever knew once told me: "If you want to work a horse hard the best time to feed him is the night before." Your correspondent will see by this time, perhaps, that the quality of the hay, although important, is not the only thing necessary.

I will close by quoting a remark made to me by a first-class veterinary surgeon. He said in substance: "If all farmers would feed their work horses and care for them as you do, my business would be about ruined." Dried grass is wholesome as well as nutritious. Of course, slim built horses for fast driving should not be fed in this way.—*T. B. Terry, in Country Gentleman.*

—A New York correspondent has been writing up the potter's field, which cheerful place of last repose is on Hart's Island, twenty miles from the city. Among the occupants of its nameless graves are people who once were social stars and favorites of fortune, and not a few who could never be convicted of any offence more heinous than poverty.—*Indianapolis Journal.*

—The water frontage of Boston is about 20,000 feet, and ships are accommodated at 164 wharves.—*Boston Post.*

PARSONS' PURGATIVE PILLS

MAKE NEW RICH BLOOD.

Positively cure SICK-HEADACHE, Biliousness, and all LIVER and BOWEL Complaints, MALARIA, BLOOD POISON, and Skin Diseases (ONE PILL A DOSE). For Female Complaints these Pills have no equal. "I find them a valuable Cathartic and Liver Pill.—Dr. T. M. Palmer, Monticello, Fla." "In my practice I use no other.—J. Dennison, M.D., DeWitt, Iowa." Sold everywhere, or sent by mail for 25 cts. in stamps. Valuable information FREE. I. S. JOHNSON & CO., BOSTON, MASS.

Copyrighted.

MR. S. K. CHASE,

Of Chase's Market, Lowell, Mass., is frequently called upon for information in regard to his wonderful cure by the use of

Ayer's Sarsaparilla.

He assures all inquirers that his testimonial is strictly true. Here it is:—

From my infancy I was afflicted with Scrofula. The doctors pronounced my case incurable, and were of the opinion that Consumption, induced by scrofulous poison in the blood, would terminate my life. About five years ago I had become so debilitated that to do a day's work was an impossibility. I was completely discouraged, when a friend advised me to try Ayer's Sarsaparilla. I bought one bottle, took the Sarsaparilla regularly, and began to improve at once. Continuing the treatment, I was permanently cured—taking less than one dozen bottles in all. The virulent sores, which had eaten through my neck in a number of places, rapidly healed, and my strength gradually increased, until I became a vigorous man, as I am to-day.—S. K. Chase, with I. M. Chase, Provision Dealer, 253 Merrimack st., Lowell, Mass.

Ayer's Sarsaparilla,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists. Price $1; six bottles, $5.

A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE

CHICAGO, ROCK ISLAND & PACIFIC RAILWAY

By reason of its central position and close relation to all principal lines East and West, at initial and terminal points, constitutes the most important mid-continental link in that system of through transportation which invites and facilitates travel and traffic between cities of the Atlantic and Pacific Coasts. It is also the favorite and best route to and from points East, Northeast and Southeast, and corresponding points West, Northwest and Southwest.

The Rock Island system includes in its main line and branches, Chicago, Joliet, Ottawa, La Salle, Peoria, Geneseo, Moline and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Watertown in Dakota, and hundreds of intermediate cities, towns, villages and stations.

THE GREAT ROCK ISLAND ROUTE

Guarantees its patrons that sense of personal security afforded by a solid, thoroughly ballasted road-bed; smooth tracks of continuous steel rail; substantially built culverts and bridges; rolling stock as near perfection as human skill can make it; the safety appliances of patent buffers, platforms and air-brakes; and that exacting discipline which governs the practical operation of all its trains. Other specialties of this route are Transfers at all connecting points in Union Depots, and the unsurpassed comforts and luxuries of its Passenger Equipment.

The Fast Express Trains between Chicago and the Missouri River are composed of well ventilated, finely upholstered Day Coaches, Magnificent Pullman Palace Sleepers of the latest design, and sumptuous Dining Cars, in which elaborately cooked meals are leisurely eaten. "good Digestion waiting on Appetite, and Health on both." Between Chicago and Kansas City and Atchison, are also run the Celebrated Reclining Chair Cars.

THE FAMOUS ALBERT LEA ROUTE

Is the direct and favorite line between Chicago and Minneapolis and St. Paul, where connections are made in Union Depots for all points in the Territories and British Provinces. Over this route Fast Express Trains are run to the watering places, summer resorts, picturesque localities, and hunting and fishing grounds of Iowa and Minnesota. It is also the most desirable route to the rich wheat fields and pastoral lands of interior Dakota.

Still another DIRECT LINE, via Seneca and Kankakee, has been opened between Newport News, Richmond, Cincinnati, Indianapolis, and Lafayette and Council Bluffs, Kansas City, Minneapolis and St. Paul and intermediate points.

For detailed information see Maps and Folders, obtainable, as well as Tickets, at all principal Ticket Offices in the United States and Canada; or by addressing

R. R. CABLE, President and General Manager, Chicago.

E. ST. JOHN, General Ticket and Passenger Agent, Chicago.

Statue of "Liberty Enlightening the World."

The Committee in charge of the construction of the base and pedestal for the reception of this great work, **in order to raise funds for its completion,** have prepared a miniature Statue *six inches in height*—the Statue Bronzed; Pedestal, Nickel-silvered—which they are now delivering to subscribers throughout the United States at **One Dollar Each.**

This attractive souvenir and Mantel or Desk ornament is a *perfect fac-simile* of the model furnished by the artist.

The Statuette in same metal, *twelve inches high,* at **Five Dollars Each,** delivered.

The designs of Statue and Pedestal are protected by U. S. Patents, and the models can *only* be furnished by *this Committee.* Address, with remittance,

RICHARD BUTLER, Secretary,
(American Committee of the Statue of Liberty),
33 Mercer Street, New York.

INVALIDS WANTED.—One in every neighborhood, to try, and also to sell, the **Celebrated INDIAN BLOOD, LIVER AND STOMACH REMEDY. Agents are well paid.** Address HOPKINS & CO., Three Rivers, Mich.

$65 **A MONTH AND BOARD** for **THREE** live Young Men or Ladies in each county. Address P. W. ZIEGLER & CO., Philadelphia.

EDUCATIONAL.

1885. THE NATIONAL NORMAL 1885.

UNIVERSITY Entire expense $2.50 to $3.00 a week. Over 2,500 enrolled. Over 30 Departments maintained. All professions provided for. **Legal Diplomas** conferred. Over 5,000 **Teachers and Bookkeepers,** trained here, have been helped to **Good Situations.** Any Young **Man** or **Woman** can pursue any study with **Less Expense of Time** and **Money** than at any other Institution in the U. S. Catalogue and full information free. Address,

DRIVEN FROM SEA TO SEA!

Positively the fastest selling book since the days of "Uncle Tom's Cabin," and constantly compared to it by the ablest critics.

Agents Wanted READ

A few extracts from the hundreds of endorsements already received:

Gen. Benj. F. Butler, says: "It is the most timely book that has been published, and as a piece of bookmaking its execution is very remarkable." He also sent the book to "resident Arthur to be read, and in a letter accompanying, said: "I think it will do the same service to the country in regard to the silence of our Land System that 'Uncle Tom's Cabin' did with regard to slavery."

Hon. B. F. Shively, of Indiana, says: "It is impossible to sufficiently commend your book. It comes like a *revelation.* It deserves and will receive a larger circulation than any other book of history or fiction published within the present century."

"The author writes to correct great wrongs and fortifies his statements by *facts* within the knowledge of intelligent readers. Since the day that Mrs. Stowe wrote the doom of the slave-driver in 'Uncle Tom's Cabin' no more vigorous blow has been struck in favor of the rights of the laborer."—*Chicago Inter Ocean,* Jan. 24, 1885.

Large 12mo., Cloth, 334 pages, with appendix 414 pages, **Illustrated.** Canvassers already at work are having remarkable success. Send for circulars and terms to **W. T. RAYCROFT & CO.,** Publishers' Agents, **109** Wabash Ave., Chicago, Ill.

R. U. AWARE

THAT

Lorillard's Climax Plug

bearing a *red tin tag;* that Lorillard's **Rose Leaf** (fine cut); that Lorillard's **Navy Clippings** and that Lorillard's **Snuffs,** are the best and cheapest, quality considered?

DRUNKENNESS AND OPIUM HABIT.

These diseases absolutely cured and the system restored to health by C. C. BEERS, M. D. In cases of intemperance the medicine can be successfully administered unknown to the patient. Send stamps for evidence to **41 Appleton Street, Boston, Mass.**

WHEN WRITING TO ADVERTISERS, please say you saw the Advertisement in this paper.

The Belle of Mountain Dew.

Miss Bettie Smith, of Fentrers county, Tenn., who was arrested on the charge of illicit distilling, is said to be handsome and accomplished, and is supposed to have written that wild and stirring romance "The Blue Headed Sap-Sucker, or The Rock Where the Juice Ran Out." Col. Harvey Mathes, editor of the Memphis *Ledger*, says that Miss Smith is undoubtedly the author of the story. This is a startling revelation in Tennessee. At one time Col. Mathes offered $3,000 for the discovery of the author.

When Msss Smith was arraigned before the United States Court at Nashville she conducted herself with such grace and dignity that the polite old judge, deeply impressed, arose and made her a profound bow.

"Miss Smith," said the judge, "to see you in this awful predicament seriously touches me."

"It does me, too, judge."

"How old are you?"

"Judge, you should not ask such a question, but I will tell you. I am two years older than my married sister, who was married before she was as old as I am. She has been married eighteen months and still speaks well of her husband. Now how old am I?"

"I cannot tell."

"I am not to blame for your mathematical inefficiency,"

"Why did you go into the business of illicit distilling?"

"Because I wanted to make whiskey."

"I suppose so. How long have you been a distiller?"

"Ever since I was sixteen years old."

"When were you sixteen years old?"

"The year my father died."

"What year was that?"

"The year my Uncle Henry moved to Texas."

"Miss Smith, you are a woman, but I insist that you shall answer my questions. Remember that if convicted of this awful charge you will be sent to the penitentiary. What did you do with the whiskey you made?"

"Sold it."

"Who bought it?"

"Well, judge, it would be rather hard to tell who bought it all. Some time ago, a party of gentlemen came out into my neighborhood to hunt deer. The party got out of whiskey, but found it difficult to buy any. After awhile I told a man if he would put his jug down on a dollar and go away he might, when he came back, find the jug full of whiskey. He did so.',

"Would you know the man?"

"Oh, yes sir; I recognized him in a moment. You are the man judge."

Women Clerks in Shoe Stores.

New York Mail and Express.

"The reason that so few women are employed as clerks in retail shoe stores," said a shoe merchant, "is that they will not, with any degree of politeness, try a pair of shoes on a lady customer. Every lady who buys a pair of shoes now desires them tried on, and custom within the last few years imposes upon the clerks the task of kneeling down and fitting them to the feet. Male clerks do not mind it, but one woman never likes to put a shoe on another. If they do bring themselves to do it they exhibit such utter repugnance to the customer that she rarely comes back again. If she does, she will not let a female clerk wait upon her. I know some ladies who will wait an hour for a male clerk to become disengaged rather than have one of her own sex wait upon her. Yet I keep several women in my store to wait upon a certain class who are exceedingly modest and will not permit a man to try a pair of shoes on their feet. The female clerks all say they prefer waiting on men; that they are not particular and exacting as women, and either take an article immediately or refuse it. On the contrary, a lady is very particular and takes a long time to decide upon what she desires to purchase. Nothing flatters a woman more than to have a polite clerk try on a pair of shoes and make some remark about the beautiful shape of her feet. A female clerk never indulges in such compliments to her own sex. My experience is that men alone are best fitted to sell ladies' shoes."

A curious law case is recorded by a Jacksonville, Fla., paper in the case of a Florida Judge who was arrested and locked up in jail for drunkenness on the street. After becoming sober he called for a pen and paper and issued a writ of habeas corpus directing the Sheriff of the county to bring the body of himself before himself as Judge, and, on the perplexed officer's refusal to obey the mandate, fined him for contempt of court.

Safe, swift, and sure to regulate the bowels, are Ayer's Cathartic Pills. Recommended by eminent physicians.

The Girl at the Front Gate.

Heaven bless the girl at the front gate with peach bloom on her cheeks and love-light in her eyes. Men would shut her out of our literature but I am not one of them. The girl at the front gate can never grow old to those who have been there with her. Years may come and years may go, but the music of the low voice at the front gate will not be stilled, and the memory of cherry lips we kissed at the front gate will hold out faithful to the end. What if the old gate does swag, and its hinges rattle and its latch refuse to hold it shut? What if its posts are shaky and some of its pickes gone? We love the dear old relic still. We love it for the sake of the girl who used to stand out there by it with roses on her cheeks and nectar on her lips. We held the old gate up and counted the stars and bid good bye and then counted the stars again. How many times of a night was good-bye said? How many times did lips meet o'er the old dear gate? The old gate knows but it will never tell. The old front gate may may have counted the kisses, but I never did. And I am sure the girl with peach-bloom cheeks never did. And what of the girl with peach-bloom cheeks? Ah, me! she married another. She forgot her vows at the old front gate, as some girls will, and married a richer and handsomer man. And I? Well, I went off to another front gate where there were peach-bloom cheeks and other lips as sweet and just as many stars to count. And now I have a front gate of my own and a girl of my own with peach-bloom cheeks who counts the stars with the boy of the girl whose vows made with me at the first front gate were broken. But he is a true good boy and my girl is a true good girl and heaven bless them both as they stand to-night at the old front gate.

Josh Billings' Philosophy.

Happiness kan't be defined without making it look suspishus; the happyest kno it the least.

Luv iz like truth; it will translate. It iz the same in all languages.

Ambishun's ladder rests against a star.

The man who haz nothing to do iz either a loafer, or in danger of being one at any time for the next ninety days.

Thare iz more real karakter in the two little words "yes" and "no" than in all the rest ov the language.

It may be possible for a man to tell how wicked he iz, but impossible to tell how wicked he may be.

Talk is the cheapest literature I know ov; it iz az cheap az wind, and just about az plenty.

To give it up iz to meet defeat more than half-way; a forlorn hope iz a humbug.

Poverty haz no bakbone; it makes a man az hollow az a goose-quill, and az limpsy az a string.

It is really wonderphull how much we all kno. I never hav suggested an idea that allmost enny one could not improve upon; and never hav herd one suggested by others that I did not hav an itching to supplement myself.

Cunning at best iz but the chicanery ov wisdom.

Young man, don't study the heavens; the Lord haz promised you a time to sow oats and gather the krop, and that iz enuff for you to kno about the weather.

Sam Jonesisms.

God won't keep a young lady pious who has her waist encircled seven times a week by the arms of a spider-legged dude.

Some of you little sinners are sitting around here waiting for salvation to strike you as it did St. Paul. Snowbird waiting to be hit with a cannon ball. God adjusts His ammunition to the size of the man He is after. Mustard seed shot will do for you.

Sow billiards, reap fools. Sow cards, reap gamblers. Sow whisky, reap drunkards.

The dude looks as if he was melted and poured into his pants.

There's many a fellow with a whitewash brush trying to clean up a little before he goes to God.

Many men think the people don't know that they are gamblers, but they do. You wear fine clothes, and look like a gentlemen, and think people don't know what you are. But you don't find the town full of greenies, you big old fool you.

Some men are feeling all right, because all their boys are girls; but the first thing that you know, the devil will pack off a drunken son-in-law on you. He couldn't do anything worse than that if he had a thousand years to work up a bad thing.

There is not a man in Chattanooga who doesn't have family prayers that has as much religion as a goat.

Do not go to ask your debtor the payment of a debt on the day when you have no other resource.

NEW ADVERTISEMENTS.

A Remarkable Case.

Mrs. Henry Ellis, 500 Scott street, Milwaukee, Wisconsin, writes: "DR. S. B. HARTMAN & CO., COLUMBUS, O.: I am induced by a sense of duty to the suffering to make a brief statement of your remarkable cure of myself. I was a most miserable sufferer from the various annoying and distressing diseases of delicate persons, which caused me to be confined to my bed for a long time, being too weak to even bear my weight upon my feet. I was treated by the most reputable physicians in our city, each and all saying they could do nothing for me. I had given up all hopes of ever being well. In this condition I began to take your MANALIN and PERUNA, and I am most happy to say in three months I was perfectly well—entirely cured, without any appliances or support of any kind."

Mr. G. A. Proehl, New Portage, Summit County, Ohio, writes: "My wife has been sick for about five years. In the first place the doctor called it leucorrhœa, and treated it about one year, and she grew worse, and turned to ulceration of the womb, and was treated for that two years, but she grew worse and the doctor gave her up. Then I employed Dr. Underwood, one of the best doctors of Akron, but under his treatment she grew worse. She was paralyzed; she had lost all of the sense of feeling and her eyesight. She could not walk for nearly two years. About six months ago Underwood gave her up. She tried your PERUNA. She has taken three bottles, and it did more good than any other medicine. The paralysis has about left her; her eyesight is getting better. We will continue the use of PERUNA until she is well."

Mr. Isaac Nicodemus, Schellsburg, Bedford County, Pa., writes: "I am induced, by a sense of duty to the suffering, to make a brief statement of your remarkable help, as a sufferer of catarrh in my head and throat. I doctored with one of the best physicians in our place for that dreaded disease, catarrh, and found no relief. But in 1883 I lost my speech, and was not able to do any kind of work for near three months. I could neither eat nor sleep. PERUNA and MANALIN did wonders for me. I used three bottles of PERUNA and one of MANALIN, and now I am in better health than I have been for ten years, and I can heartily recommend your medicine to all suffering from that dread disease, catarrh."

Mr. I. W. Wood, Mt. Sterling, Ohio, says: "Your medicine gives good satisfaction. My customers speak highly of its curative properties."

LAND! Claims a specialty. Warrants, and ADDITIONAL HOMESTEAD CERTIFICATES and all kinds of LAND SCRIP bought and sold. SUSPENDED ENTRIES, LAND, PATENT and PENSION cases attended to. Correspondence solicited. A. A. Thomas, Attorney at Law, Room 25 St. Cloud Bld'g, Washington, D. C.

An Old Soldier's EXPERIENCE.

"Calvert, Texas, May 3, 1882.

"I wish to express my appreciation of the valuable qualities of

Ayer's Cherry Pectoral

as a cough remedy.

"While with Churchill's army, just before the battle of Vicksburg, I contracted a severe cold, which terminated in a dangerous cough. I found no relief till on our march we came to a country store, where, on asking for some remedy, I was urged to try AYER'S CHERRY PECTORAL.

"I did so, and was rapidly cured. Since then I have kept the PECTORAL constantly by me, for family use, and I have found it to be an invaluable remedy for throat and lung diseases. J. W. WHITLEY."

Thousands of testimonials certify to the prompt cure of all bronchial and lung affections, by the use of AYER'S CHERRY PECTORAL. Being very palatable, the youngest children take it readily.

tf 24 DAVID LITTLE.

AYER'S Ague Cure

contains an **antidote for all malarial disorders** which, so far as known, is used in no other remedy. It contains no Quinine, nor any mineral nor deleterious substance whatever, and consequently produces no injurious effect upon the constitution, but leaves the system as healthy as it was before the attack.

WE WARRANT AYER'S AGUE CURE

to cure every case of Fever and Ague, Intermittent or Chill Fever, Remittent Fever, Dumb Ague, Bilious Fever, and Liver Complaint caused by malaria. In case of failure, after due trial, dealers are authorized, by our circular dated July 1st, 1882, to refund the money.

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

NEW ADVERTISEMENTR.

AYER'S Sarsaparilla

Is a highly concentrated extract of Sarsaparilla and other blood-purifying roots, combined with Iodide of Potassium and Iron, and is the safest, most reliable, and most economical blood-purifier that can be used. It invariably expels all blood poisons from the system, enriches and renews the blood, and restores its vitalizing power. It is the best known remedy for **Scrofula and all Scrofulous Complaints, Erysipelas, Eczema, Ringworm, Blotches, Sores, Boils, Tumors, and Eruptions of the Skin,** as also for all disorders caused by a thin and impoverished, or corrupted, condition of the blood, such as **Rheumatism, Neuralgia, Rheumatic Gout, General Debility, and Scrofulous Catarrh.**

Inflammatory Rheumatism Cured.

"AYER'S SARSAPARILLA has cured me of the Inflammatory Rheumatism, with which I have suffered for many years.
W. H. MOORE."
Durham, Ia., March 2, 1882.

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.

Sold by all Druggists; $1, six bottles for $5.

DR. JOHN BULL'S

Smith's Tonic Syrup

FOR THE CURE OF

FEVER and AGUE

Or CHILLS and FEVER,

AND ALL MALARIAL DISEASES.

The proprietor of this celebrated medicine justly claims for it a superiority over all remedies ever offered to the public for the SAFE, CERTAIN, SPEEDY and PERMANENT cure of Ague and Fever, or Chills and Fever, whether of short or long standing. He refers to the entire Western and Southern country to bear him testimony to the truth of the assertion that in no case whatever will it fail to cure if the directions are strictly followed and carried out. In a great many cases a single dose has been sufficient for a cure, and whole families have been cured by a single bottle, with a perfect restoration of the general health. It is, however, prudent, and in every case more certain of success, if its use is continued in smaller doses for a week or two after the disease has been checked, more especially in difficult and long-standing cases. Usually this medicine will not require any aid to keep the bowels in good order. Should the patient, however, require a cathartic medicine, after having taken three or four doses of the Tonic, a single dose of BULL'S VEGETABLE FAMILY PILLS will be sufficient.

BULL'S SARSAPARILLA is the old and reliable remedy for impurities of the blood and Scrofulous affections.

Advice to a Young Man.

My boy, if you want to be somebody in this world, you must begin by being somebody. You must have and assert an individuality. If your family tree reaches to the stars, draw your pen through every name on the record until you come to your own and stand squarely on that. A grand old ancestry is a splendid thing to have, and a grandfather is something for any man to be proud of. But your ancestors won't make you, my boy, because they are dead, and the world of to-day wants live men. Nobody gropes in the graveyard except medical students.

Queen Victoria traces her blood back to William the Conqueror. Well, she can't help it. She isn't to blame for it, nor does she deserve any particular credit for it. Such a woman as Victoria, my boy, reflects honor upon her ancestors, her pure womanhood would honor them though she never were a monarch, but I can't see that her ancestors do her any great honor. Why, suppose you can only trace your ancestry back to your father, why, your father is a better man, a better Christian, he wears better clothes, he lives in a better house, he has more luxuries and conveniences in life than was or did or had William the Conqueror, and so you are that much ahead of the Queen.

Look me in the eye, Telemachus; would you feel proud if you could prove that you were a lineal descendent of the four Georges? Certainly you would not. If you should have said yes, I should have advised you to stuff yourself and sell yourself for a cigar sign. If you assert yourself, my boy, that is all the world asks of you. If the world has work for you do it, if it wants you and needs you, it isn't going to bark up your family tree.

Who asked about Lincoln's ancestors? Who stopped in 1863 to ascertain if Grant's family came over in the Mayflower? What "old family" did the American people elect President in 1880? What great-great-grandfather invented the telephone? Who knows Brigham Young's mother-in-law? God bless your grandfather, my boy. Love his memory, honor his name, revere his teachings, but don't try to wear his shoes today. You can't run and you can't climb in them. I tell you your neighbor will question more closely the pedigree of the blooded horse or the milch cow you want to sell him than he will your own.

When I hear a man talking too much about his ancestors, I begin to think he needs them very much. And I always feel sorry for a man who died before he was born, and lives only in the deeds and words of great-grandfather. Don't die out two or three generations before you begin, my boy. Live your own life, if it kills you. I have known some men who were very proud of their ancestors, whose ancestors would have been most dismally ashamed of them.

Pride of ancestry! It is dust under your feet compared with pride of posterity. You never in all your life felt that pride in your great-grandsire, who fought at Bunker Hill and shivered at Valley Forge, that you will feel in your first boy, even when he is three days old and has nothing to show but flannel and wrinkles. When a man, on his way to the drug store for ten cents worth of paregoric meets the younger man going to the furniture store to buy a $35 cab for his first, he cannot repress the smile of pleasant pity that curves his old lips. But bless you, it doesn't hurt the young man a particle. He can stop right there on the street and give the older neighbor points on the treatment and culture of children.

Don't waste your pride on your ancestors, my boy. Save it for your posterity. They will be in better circumstances and live in better times. While your ancestors came over in the Mayflower, a leaky old tub of a vessel that landed the pilgrims and then went straight away for a cargo of slaves to land in the West Indies, your children will go across in a Cunarder, first cabin, faring sumptuously and only ten days out.

It is enough for you, my boy, to know that your ancestors were good, brave, honest, hard-working Christian men and women. For the rest of it, do you live your own life and live that you will honor them and add new lustre to their good names, but don't my boy, I beg of you, don't try to "boast" yourself up in the world on what they did long before you were born. Do something yourself.—*By the Hakkeye Philosopher.*

Rabbits' Feet as a Charm.

"I can't go out to-day," said an engineer stepping from his cab.

"Why?" asked the conductor, who happened to be standing near.

"Look there," and the engineer pointed to a cat lying on the coal.

"What difference does that make?"

"So much that I would risk my life if I were to go out. Don't you know that is a warning? I do if you don't, and he refused to have anything to do with the engine. This was an exhibition of the popular superstition among railroad men. Although sensible men, practical, and many of them well educated, yet so strong is their superstitious belief that no reasoning can convince them of their silly weakness. The different roads have different superstitions, and different means of counteracting threatened evil. On the railroads in Arkansas nearly every engineer, fireman and brakeman carries rabbits' feet. This precaution, it is affirmed, prevents serious accidents. Some time ago, on one of the roads running into Little Rock, two trains collided killing two engineers. These two men, against better judgment, neglected their rabbits' feet. A disaster was predicted by a brakeman on each train, and the fact that it came was an indisputable argument in favor of the rabbit's foot.

A few days ago the writer was riding on a locomotive with a well-known engineer, who was very communicative, suddenly became silent.

"I don't like this," he said.

"What?"

"The way I feel," and he grew pale. He looked ahead with eagerness, and after remaining fixed for a few moments, shut off steam and whistled "down brakes."

"What's the matter?"

"Didn't you see it?"

"What?"

"That cat cross the track."

When the engine stopped he got off, and approaching the place where he said the cat had crossed, began to rub himself with a rabbit's foot. After continuing this for some time, he rubbed the rail with the foot, mumbled a strange jargon and went to his engine.

"You may regard it as foolish," he said, as we again flew along, "but you see I know. If I hadn't seen that cat we would have had an accident by this time. There was a time when I laughed at it, but I have learned better. Sometime ago a cat crossed the track in front of me. My fireman begged me to stop and let him rub the rail, but I laughed at him. He vowed that we would have an accident, and, sir, before we had gone five miles further the engine jumped the track and did considerable damage. I barely escaped being killed, and since then I have carried a rabbit's foot. When six white cats cross the track nothing can prevent a calamity; that is, if the engineer keeps on, but if he gets off everything may be all right."

"Do the conductors believe in the rabbit foot theory?"

"Many of them do. Sometimes a new man hoots at the idea, but after a while he is convinced and gets him a foot. On some roads an owl claw is necessary, and still on others nothing but the tip end of a coon's tail will answer."

"How is this discovery made?"

"Always by the oldest engineer. When a new road is built the oldest engineer on the line can determine what to use. The more dangerous the road, the scarcer are the charms. I know one road in Mississippi where nothing but a piece of tiger ear will answer. In consequence of this, accident are very frequent. A friend of mine ran on the road and never had an accident. He went to a circus one night and cut off the tip end of a tiger's ear. The beast howled terribly, and died within fifteen minutes. The rabbit foot is the standard, and, as a rule, will do for narrow gauge roads. On the eastern roads, beef bone is the thing. When a road becomes known as a beef bone road, it is regarded as the best. Next is the goat bone, then the rabbit foot, then the owl claw, then the coon tail, then the mole nose and lastly the tiger ear."

"Did you ever run on a mole nose road?"

"Yes, for a little while, but the company was doing a great deal to put the road in good shape, and it soon became a rabbit foot. I have recently heard that it has become a goat bone."

The best thing for the complexion is Ayer's Sarsaparilla. It brings the bloom of health to the wan cheek.

Hysteria in Religion.

The epidemic character of certain socalled religious manifestations in which trances and swoonings figure prominently has been pretty thoroughly established. These are now well understood in medical circles as nothing more nor less than the manifestations or symptoms of the disease known as hysteria, called into play by the peculiar methods adopted by a class of travelling "evangelists" who appeal to the emotional feelings of people whose nerves are unstrung. One of the most remarkable recent instances occurred in Indiana, where, under the lead of a female evangelist, whole communities caught the contagion. Speaking of outbursts of this character a secular journal sensibly concludes that they betray an alarming prevalence of hysterical complaints, particularly among women. The same journal says:

The precise aspects of the epidemic may be determined by almost any trival external incident, and it depends upon something of this kind whether the victims shall all mew like cats, as did a whole convent full of nuns in Italy, or imagine themselves monkeys, and try to climb the pillars of the churches, as happened to congregations in Ireland, or shout "Glory!" and roll on the ground, as do the negro ecstatics at Southern revivals.

The Convulsionaries of St. Medard belonged in the same category. They were seized with a furious desire to be beaten, and so transported were they by their hallucination that they actually endured the most violent blows, not only without sustaining permanent injury, but without showing the least external lesion. In the Irish epidemic, half a century ago, the people of whole parishes were affected, and it was observed that when those who passed from an infected village to one which had previously escaped, the epidemic was spread by contagion, just as a zymotic disease might have been. In revivals this is one of the most marked characteristics of hysteria. Merely looking at a person in a convulsion will often throw sentitive persons into a precisely similar state. The phenomena, however, have nothing to do with the will or the understanding. They are physical, not mental, and it is for this reason that they do not produce any permanent effects. The common experience of lay observers respecting the after effects of spasmodic revival meetings is simply a confirmation of the scientific conclusions. The evangelists who operate by means of trances and exciting the emotions of their hearers powerfully often produce very striking effects, but cannot expect any lasting changes in their subjects.

There is mischief in the delusion which confounds hysteria with religion, for the consequences of this mistake are of a kind to disgust sober and rational people, while they afford opportunity for ridicule to unbelievers, and disturb and expose to bad influences the weak men and women who accept them for what they are not. A little sound education in physiology and the elements of medical science would dissipate the hallucination that the evidences of diseased condition are analagous with the proofs of religious conviction.

A Remarkable Escape.

Mrs. Mary A. Dailey, of Tunkhannock, Pa., was afflicted for six years with Asthma and Bronchitis, during which time the best physicians could give no relief. Her life was despaired of, until in last October she procured a Bottle of Dr. King's New Discovery, when immediate relief was felt, and by continuing its use for a short time she was completely cured, gaining in flesh 50 lbs. in a few months. Free Trial Bottles of this certain cure of all Throat and Lung Diseases at Nydegger's Drug Store. Large Bottles 50c and $1.00.

The use of such a motto as "In God We Trust," on such a fraudulent silver piece as our silver dollar, by the sanction of the United States Government, is a national crime and a monumental insult to the Creator. There is but one being in the universe that can complacently smile on such national dishonesty, and that being is his satanic majesty, the father of lies.—*Independent.*

There are some who affect a want of affection, and flatter themselves that they are above flattery; they are proud of being thought extremely humble, and would go round the world to punish those who thought them capable of revenge.

The Republican.

JAS. A. HAYDEN, Publisher.

OAKLAND, GARRETT CO., MD.

VERY TRUE, SO MAY YOU.

Young man, you say you want a wife
To bless your home and cheer your life,
A woman true in every way,
Who does her duty every day;
Whose love is strong and good and pure,
A love that wins and holds secure;
A wife that will not scold and fret
And make you wish you ne'er had met;
Whose presence is a shining light;
Whose counsel guides and keeps you right;
Who tries to please in little things,
And to your home rare comfort brings;
A woman who knows how to mind
Her own business, that's the kind;
Who loves her home and stays right there
And does not run 'round everywhere
To gossip and to idly chat
And tell the neighbors this or that;
Who, when you're troubled, cheers you up,
And sweetens every bitter cup;
Who, when you're sick, will nurse you through,
As only loving hands can do.
Young man, take my advice in this,
If you're in search of perfect bliss,
In weighing girls, see that you place
Good sense 'gainst beauty, wealth or grace.
My friend, you think that you are wise,
But some shrewd girl may shut your eyes;
You think you know just what you need,
But your impressions may mislead,
For other men have thought so, too,
But they got fooled, and so may you.
—*Camden Post.*

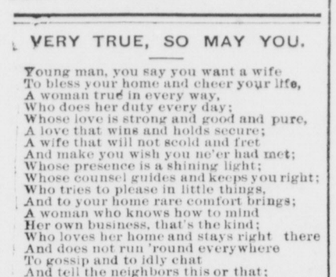
FARMING IN MAINE.

Observations of William Nye, the Veracious Chronicler.

Sleigh-Riding and Corn-Hoeing—A Great Stone Crop—The Wormless Railroad Pie—Gathering the Cranberry Crop.

The State of Maine is a good place in which to experiment with prohibition, but it is not a good place to farm it in very largely.

In the first place, the season is generally a little reluctant. When I was up near Moosehead Lake a short time ago people were driving across that body of water on the ice with perfect impunity. That is one thing that interferes with the farming business in Maine. If a young man is sleighriding every night till midnight he



SLEIGHING TILL MIDNIGHT.

don't feel like hoeing corn the following day. Any man who has ever had his feet frost-bitten while bugging potatoes will agree with me that it takes away the charm of pastoral pursuits. It is this desire to amalgamate dog days and Santa Claus that has injured Maine as an agricultural hotbed.

Another reason that might be assigned for refraining from agricultural pursuits in Maine is that the agitator of the soil finds when it is too late that soil itself, which is essential to the successful propagation of crops, has not been in use in Maine for years. While all over the State there is a magnificent stone foundation on which a farm might safely rest, the superstructure, or farm proper, has not been secured.

TAKES AWAY ALL DESIRE TO HOE CORN THE NEXT DAY.

If I had known when I passed through Minnesota and Illinois what a soil famine there was in Maine, I would have brought some with me.

The stone crop this year in Maine will be very great. If they do not crack open during the dry weather there will be a great many. The stone bruise is also looking unusually well for this season of the year, and chilblains were in full bloom when I was there.

In the neighborhood of Pittsfield the country seems to run largely to cold water and chattel mortgages. Some think that rum has always kept Maine back, but I claim that it has been wet feet.

The agricultural resources of Pittsfield and vicinity are not great, the principal exports being spruce gum and Christmas trees. Here also the huckleberry hath her home. But the country seems to run largely to Christmas trees. They were not yet in bloom when I visited the State, so it was too early to gather popcorn balls and Christmas presents.

THE WAY TO BREAK THE WORMLESS RAILROAD PIE OF COMMERCE.

Here, near Pittsfield, is the birthplace of the only original wormless dried-apple pie with which we generally insult our gastric economy when we lunch along the railroad. These pies, when properly kiln-dried and riveted, with german silver monogram on top, if fitted out with Yale time lock, make the best fire and burglar-proof wormless pies of commerce. They take the place of civil war, and as a promoter of intestine strife they have no equal.

The farms in Maine are fenced in with stone walls. I do not know why this is done, for I did not see anything on these farms that any one would naturally yearn to carry away with him.

I saw some sheep in one of these inclosures. Their steel-pointed bills were lying on the wall near them, and they were resting their jaws in the crisp frosty morning air. In another inclosure a farmer was planting clover seed with a hypodermic syringe, and covering it with a mustard plaster. He said that last year his clover was a complete failure because his mustard plasters were no good. He had tried to save money by using second-hand mustard plasters, and of course the clover seed, missing the warm stimulus, neglected to rally, and the crop was a failure.

Here may be noticed the canvas-back moose and a strong antipathy to good rum. I do not wonder that the people of Maine are hostile to rum—if they judge all rum by Maine rum. The moose is one of the most gamey of the finny tribe. He is caught in the fall of the year with a double-barrel shot-gun and a pair of snow-shoes. He does not bite unless irritated, but little boys should not go near the female moose while she is on her nest. The masculine moose wears a hare lip and a hat rack on his head, to which is attached a placard, on which is printed:

KEEP OFF THE GRASS.

This shows that the moose is a humorist.

GATHERING THE CRANBERRY CROP WITH A STOMACH PUMP.

Near Pea Cove I saw a strange sight. A farmer was rowing around over his cranberry orchard in a skiff. I stood up on the stone wall and watched him for some time, because I am greatly interested in farming, and dearly love to watch any one else who may be engaged in manual labor. It was a long time before I could make out what he was doing. At last, however, I figured it out, and I was very much surprised, indeed, for I had never seen horticulture carried to that extent, and, as Mr. Sayward would remark, "I thought he was carrying that thing too far."

Many will doubt my word, and I would not have believed it myself if anyone else had told me, but the man was actually picking cranberries out of his submerged orchard with a stomach pump. I have one of the cranberries at home now.—*Bill Nye, in Boston Sunday Globe.*

He Knew the Climate.

Commercial Traveler's Wife—"Now, my dear, what coat will you take with you? It is almost June; your linen duster will be enough, I guess."

C. T.—"Lay out my fur overcoat, my heavy cloth overcoat, my spring overcoat and my linen duster."

C. T.'s W.—"Why, my dear!—You are joking, ain't you?"

C. T.—"Certainly not. I'm going to travel in New England."—*Boston Courier.*

—In the Bernese Oberland a parrot one day made its escape and perched on the rain trough of a farm house in the neighborhood. The farmer, who had probably never been out of his native village, brought a ladder to capture the strange animal. When he had reached the top and was reaching out his hand, the parrot called out: "What do you want? What do you want?" The astonished peasant at once took off his cap and said: "O, I beg your pardon, I thought you were a bird!"—*Mitzetheilt.*

—In the course of a recent Montana cattle case a cowboy testified that "a maverick is somebody else's calf that you get your brand on first."

HE MADE A MISTAKE.

Better Be Imposed on by Frauds Than Do an Honest Person an Injustice.

"Yes, he may be a fraud—probably is one," replied the man under the white plug hat as he replaced his change, "but I made a mistake on the wrong side of the ledger once and I don't want to get caught that way again."

"How was it?"

"Well, I'm neither a Christian nor a philanthropist. Fact is, I'm a pretty hard-hearted man on the average, but I used to be a little worse than I am now. One evening, five or six years ago, right in front of this very store, a boy about twelve years of age hit me for a dime. He had tears in his eyes, a drawl to his voice, and I spotted him at once for an impostor. He went on to say that his father was sick and unable to work, and that he himself had been down with a fever and had no strength to look for a job, and I laughed in derision and told him to clear out or I'd give him in charge."

"It's an old dodge," observed the man who was smoking a corn-cob pipe.

"Exactly, but it may not always be a dodge. I had a pocket full of silver, and I was too ornery mean to hand over a dime. Suppose the boy was lying? Suppose he wanted the money for himself? How contemptible in me to begrudge that trifling sum to a little chap who was certainly all skin and bone, and evidently needed a square meal."

"But it would have been encouraging vice," said the man with the check shirt front.

"Bosh! There are men in this city who are looked upon as shining examples, who cheat and swindle the people out of a thousand dollars where vice gets a shilling. This little incident I have been relating went out of my mind in an hour, but next day, as I was looking over an old tenement with the owner, who wanted me to figure on repairs, who should I come across but the boy of the night before. He was in bed and raving with fever. In bed? Well, he was tossing around on a heap of rags. In the same room was the mother, trying to earn a few cents at the wash-tub, but not having the strength to work for more than five minutes at a time. Also, the father—just alive with consumption, and occupying a bed no better than the boy's."

"Same boy, eh?" queried the corn-cob-pipe man, as the hard lines in his face began to melt.

"The very same. There was a quaver in his voice no one could forget in a day. He was raving away of this or that, but the father was quiet and inclined to be cheerful. As I sat down beside him for a moment after leaving a $5 bill in his skeleton hand, he said:

"God bless you for a good man! When little Ben started out last night we hadn't either light, fuel or food in the house. He met some kind-hearted man who gave him a dollar. It might have been you. But for that money God knows how we must have suffered."

"Might have been me! When I remembered how I had repulsed that boy the thought stabbed me like a knife! I was trying to say something to cheer the dying man, when that fever-stricken lad sprang up, evidently recognizing my voice, and cried out:

"'Please, mister, don't have me arrested! Don't let 'em lock me up! I'm telling the trnth—I ain't lying!'

"He came right over and got hold of me, and I tell you if ever a man was broken down it was this very individual. I left twenty-five dollars there when I went away, and I sent a doctor around, but inside of a week father and son were dead. One died blessing me, and the last words of the other were an entreaty to me not to call him a fraud and have him locked up. That's why my hand goes down for the chink when man or boy strikes me for change. I'd rather give a thousand dollars to frauds than to have another honest boy die with my refusal grinding into his soul."—*Detroit Free Press.*

HINDOO LAW.

A Remarkable Decision by an Indian Magistrate.

A judgment was recently delivered in the high court of Bombay, after a trial of fourteen days, which deserves more than local notoriety. The *Times of India* says it is "the most important case that has been tried in Western India for many years." The claim was by the son of a Hindoo millionaire, Sir Munguldass Nuthoobhoy, and he demanded from his father a partition of all the family property and an equal share. The father refused the partition and the son appealed to the high court. The Judge who tried the case, Mr. Justice Scott, following decisions of the Privy Council, ruled that a son who was a member of a Hindoo joint family had an equal right with the father and an equal share in the family property, and could claim partition against the father's will at any time after majority. The Judge pointed out that such a claim was reprobated as immoral by the ancient writers, but still admitted as just by the highest authority in Bombay. This seems an astonishing decision to European minds, but the authorities cited by the learned Judge show its absolute legality in Hindoo law. At the same time it has struck consternation through the wealthy families of Western India. The rule, no doubt, is a survival of the primitive idea that the family is an aggregate or collective unit, of which all members have an equal interest in the common property. As the learned Judge pointed out, the current of authority tends to overthrow parental authority and to effect a painful revolution in the family system throughout Western India. It was also decided in the case that property that was not family or ancestral property, but self-acquired, could be devised by will by a father to his son, and that the property retained its self-acquired character in the hands of the son. This will considerably diminish the danger that might arise from an unrestrained exercise of the right now fully declared. The case has been for a long time the subject of much discussion and great anxiety in all native circles, and, although experts in Hindoo law agree in the strict legality of the decision, there is a general opinion that the altered conditions of Hindoo society render legislation necessary on the subject, in spite of the extended effect now given to the exercise of the testamentary power.—*London Times.*

A SAD STORY.

A Daughter's Last Night With Her Father—She Learned What Death Was.

A few nights ago the writer was ordered out to one of the smaller Illinois towns to investigate a certain case over Sunday. On the train was a remarkably bright and cheery little girl, seven or eight years of age, who broke up the weariness of the early night for all the passengers in her vicinity with her childish wit and fun. She was accompanied by a prominent Prairie State politician, who looked at her rather sadly now and then as he told her story and his errand. Her father was a distant relative of General Grant, and during the latter's second administration was made a Consul at some gay European port. After marrying the daughter of a well-known and wealthy citizen of his native city, they went abroad with the brightest prospects of happy life. Fast companions proved too much for the husband, and by the the time of his return home he was a wreck. Influence, however, secured him a good place on a Western railroad as its traveling passenger agent, but his course went straight downward until his wife with her two children went back to her father's home, and he became a common sot. Two days before, broken down with the ravages of consumption and disease, he had come back to his native heath, as he said, to die. His continual wail had been to see his little daughter, and finally the request had been granted by the grandparents, who had removed to Chicago to escape the humiliation his career had brought upon them.

The next morning it was found the party was stopping at the same hotel as the writer, and the garrulous landlord told a pitiful tale of how his sick guest had bribed his attendants to get liquor the evening before, and how they and the dying man had lain all night in a drunken stupor. The second morning there was an unusual hush about the place. Even the porter walked on tiptoes, and the frisky girls of the dining-room were frisky no longer. When the landlord came in he said, quietly: "He is dead." He then said that during the evening the patient had come to himself and recognized his daughter, a contented smile passing over his haggard face when he saw she was with him once more. The contrast between the youthful innocence of the one and the wreck dissipation and vice had made of the other was so striking as to affect even the stolid landlord, whose voice grew husky as he described the scene. With scarcely a word spoken father and child remained hand in hand as the night wore on, the pulse of the dying man growing weaker until life went out, only a gasp marking the end.

On the return train, her mission over, was the daughter in charge of the same friend. She was no longer chirping about the car like a robin in May. Her eyelids were swollen, the trace of tears remained, and she gazed earnestly out of the car-window as the train rolled along, scarcely speaking a word for miles. She had learned what death was.—*Chicago Tribune.*

GORGEOUS GOLDEN TROUT.

A Mysterious Denizen of a Kansas Creek That Glitters in Dazzling Beauty.

"There is a trout in Whitney Creek, a tributary of Kern River, in Kansas," said a veteran New York angler, "the like of which does not exist in any other water of the globe. It has an abode of its own in the upper waters of the creek, and it is not invaded by any of the other breeds of trout, which swarm in the waters below, simply because it can not be got at by them. The reason of this is very simple. About six miles from the head of the creek there is a perpendicular waterfall, 150 feet high. The rock down which the water tumbles is solid and smooth on its face from base to summit. There are no protruding ledges or hollows at short intervals on the rock, by means of which other trout, with leap after leap, from ledge to ledge and hollow to hollow, can scale this watery precipice, as they do in the case of thousands of high waterfalls elsewhere, and no trout or salmon that ever climbed from mouth to head of the steepest mountain streams can go up this sheer fall of a hundred and fifty feet. Consequently the trout above the falls have never been disturbed by interlopers of a different variety, and they live by themselves in the pure, cold water, the most splendid family of fresh water fish.

"They are a fish literally bespangled with burnished gold and dashed with spots of the brightest crimson. The first time I ever saw one of these trout I actually thought it had been ornamented by the person who had it with flakes of gold leaf, and that its red spots had been heightened in color with the brush. But this is their natural appearance, and when they are taken from the water and the sunlight strikes them they glitter as if they were clad in brilliant armor. They are called the golden trout. Their habits are the same as the ordinary brook trout, and they take a fly just the same and fight as gamely. Their flesh is no better. It is their beauty alone that places them at the head of this great fish family, noted for its beauty.—*N. Y. Sun.*

—George Law, son of the famous New York millionaire, is a liberal patron of sports, the demigod of the sporting fraternity, a free dispenser of money among them, and it is an unwritten law to them that he shall not be molested. Fear has more to do with this than love. The thief who robbed him would be hunted out of town by his fellows. It is said that he spends $100,000 a year in purses for contests, materials for revelry, and direct gifts to professional athletes. That is his diversion. He is a gentleman in rearing, education, and instincts; the toughs with whom he comes in contact are merely the creatures of his pleasure. He would kick any one of them out of the street railroad office in which he spends his business hours, but at night they may be convivially familiar with him.—*N. Y. Times.*

—The Supreme Court of Oregon recently decided that women should not be admitted to the practice of law in that State.

TEMPERANCE READING.

HARRY HALE.

'Twas a bright May morn when the springing corn
Marked furrows through the vale,
When friends met in mirth at the wedding feast
Of the blithesome Harry Hale.

CHORUS—O, Harry, loved Harry!
Lost Harry Hale!
'Twas the social glass at the licensed bar
Wrecked my own lost Harry Hale.

O, his eye was bright, his step was light,
His loving heart could not fail,
I loved him best, and I gave all my trust
To my noble Harry Hale.

Our cottage so neat, with its roses sweet,
Was the pride and gem of the dale,
'Till a luckless day to the dram-shop door,
Friends lured my dear Harry Hale.

O, I wept and prayed, while all night he stayed
Till morning stars grew pale,
For a demon's chain bound fast the soul
Of my once kind Harry Hale.

Soon, alone with God, 'neath the fresh, green sod;
O list ye to the tale:
In a drunkard's grave by the old willow tree
They laid my lost Harry Hale.

Now, all sad and lone by that cold gray stone
I breathe my sorrowing wail;
'Twas the social glass at the licensed bar that
Wrecked my noble Harry Hale.

THE BOTTLE'S STORY.

Why It Preferred Honest, Sour Vinegar to King Alcohol.

"I believe I'll have a glass of something comfortable," said Tom Barnaby.

Tom Barnaby was not a member of any Temperance society whatever, and had no dislike to the taste of liquor. Not that he was a drinking man. Oh, dear, no! Never was drunk in his life; never even slightly overcome by liquor. But still—well, still a nice glass of something comfortable struck Tom in a pleasant light, and he generally took it when it did.

To-night it was cold and chilly and gloomy, and the wind rattled the shutters and crooned down the chimney, and made a banshee of itself along the street; and Tom, who was not very fond of reading, could not lose himself in book or magazine, and there was no one to talk to, and the resolution above recorded seemed to be the most natural thing in the world. "A glass of something comfortable," said Tom, "and a biscuit, and then I'll turn in."

Then Tom went to the closet to look for a vessel in which to bring the necessary liquor for the comfortable something from the corner store, and spied on an upper shelf a green bottle, with a fat body and a long neck, which had nothing in it, and smelled of nothing, and he set it upon the table, while he stirred the fire and put the kettle on, that everything might be ready on his return.

Mrs. Tom was absent from home, and Tom was keeping house for himself. He was on his knees before the stove, raking it, when he heard a groan. It was a faint, far-away sounding groan; but it had such a ghostly sound that he started.

"What's that?" he cried; and something answered:

"Only me."

And jumping to his feet, Tom Barnaby stood staring about; for there was nothing in the room that ought to have had a voice but himself—not even a kitten or canary bird.

"Who is me?" cried Tom.

"Tom ought to know," said the voice.

And this time Tom saw it came from the green bottle.

"Hanged if it isn't the bottle!" said Tom. "Is it spirits, or what?"

And the bottle answered:

"Yes, worse luck. It is spirits. Bad spirits, too. Gin, rum and brandy—whisky and alcohol!"

"Oh, that kind!" said Tom.

"Yes," said the bottle. "Five devils. I've been possessed by them all. Years and years they led me such a life that I wished I was smashed; years and years until your wife got me and put blessed vinegar in me. Nice, sharp, respectable vinegar, that never did worse than give some poor cabbage eater the colic. And I thought I should end my days in a decent vinegar bottle, and here I am—going to have one of the devils back, I know. Oh, what did that dear woman go away for? Why did she go?"

Tom, who had grown used to the phenomenon of a talking bottle, and did not mind it at all by this time, nodded his head sagely.

"Right there," he said. "It's exceedingly uncomfortable to have wife away, but you are very foolish to talk as you do. What harm is there in a moderate drink? All you'd hold wouldn't hurt a fly. You've been listening to teetotalers."

"I haven't been listening to anybody," said the bottle. "I've formed my own conclusions. There was a time when I thought as you do. It was when I was a brand new bottle, with a gilt label, 'Best Holland Gin,' on me, and my owner, the liquor dealer, took me out of my case and handed me to Jack Barker, who had just finished painting the store.

"'Here, Jack,' says he, 'this will help you keep Christmas.'

"'Thank ye,' said Jack; and off I went under his arm.

"And there, in a bright little room, with a pretty wife and a nice old grandfather and two cunning little babies looking on, he opened me.

"'What a nice smell!' said she—the pretty wife.

"And then he made some stuff with lemon and sugar, and they all drank some; and the babies looked at the light shining through my green sides and the gilt label on me. And the old grandfather said the drink had gone to his head, and he should have to be carried upstairs and they laughed at that, because it was such a good joke.

"I liked myself then and what was in me.

"Before I was empty the first time I felt pleased to be such a favorite as I was.

"Ah, dear; I was filled up again, and again, and again; and after awhile I began to see things changing about me. The wife's face was not so bright; the old grandfather never laughed; the baby's toes were out; and one day Jack staggered in, took me up, drank the last drop from me and tumbled into a chair. The wife began to cry.

"'Oh, Jack!' says she. 'Oh, Jack! how I hate that dreadful bottle. We were so happy before it came into the house!'

"She blamed me but I knew it was the evil spirit in me she meant.

"'You've lost your place, Jack,' says she. 'Everything has changed. You don't love me any more. You don't care for the children. It's all that bottle.'

"But Jack was too tipsy to care what she said. He staggered over to the table, took me by the neck and carried me to a liquor store. There they put another evil into me. That one drove the furniture out of the house; bit by bit it was pawned.

"Then they left the house itself and were living in a cellar somewhere. She took in washing; some of the money she earned went for more evil spirits to fill me.

"Didn't I loathe myself? One night I sat on the table and saw the old grandfather lying dead and Jack drunk on the floor at the foot of the bed. Didn't I loathe myself? I tried to topple off, but I couldn't manage it. If ever bottle did desire to smash itself, I did. But it was no use. Happy bottles, beautiful cut glass cologne bottles, innocent water bottles have been broken when they most desired to last, no doubt; but I, who had become a dwelling-place for devils, I lasted.

"They carried the old grandfather away, and his poor daughter got a black dress somehow. One night Jack went sneaking out of the house with a bundle under one arm and me under the other. The bundle was his wife's mourning dress for her father. He took it to a pawn-shop and pawned it for enough to fill me twice. The poor woman never had a decent dress again.

"She was in rags. She was hungry. I've seen Jack clutch her hand and wrench the money she'd earned for her children's bread from it, and then go off with me. Think of it! I had to aid and abet him, and hear her say things about me that were very natural, seeing that she didn't know how I hated the devils that lived in me, but that were hard to bear. But he fell down-stairs with me in his pocket and broke his head, and didn't break me. He hit me against things, to their injury, not mine. I must have a guardian devil, I lasted so.

"One day—it was such a bitter day, ice and snow and sleet everywhere—just five years from the Christmas I'd been made a present to Jack, he stood, ragged and dirty, at a barroom stove, with me in his pocket—my neck sticking out. Up came the proprietor.

"'Now, Jack Barker,' says he, 'why don't you go home?'

"He was ashamed to have him there, you see, a ragged creature with his toes out and a black eye and a broken nose. He used to be called Handsome Jack Barker before he took to filling me. Think of that.

"Now he looked up with a miserable, abject whine.

"'Go home with an empty bottle on a Christmas eve?' says he. 'You didn't use to say go home when I came here with ful pockets, Mr. Jones.'

"'Well, no, I didn't,' said the man; 'and it would have been better if I had. I'll fill your bottle for you, Jack Barker.'

"He filled it—goodness knows with what—and the poor wretch staggered home. Oh, the wretched cellar; the miserable straw bed in the corner; the wife lying sick upon it. I remember them so well.

"She was very sick, and there was a little baby beside her. Just think of another baby there.

"'Happy Christmas!' said he, as he staggered in. 'Happy Christmas, old girl!'

"'Happy!' said she. 'Oh, this dreadful day! That bottle came to us first on Christmas.'

"It takes so little to put a drunken man in a rage. He answered her with an oath.

"'Anybody would think I was drunk to hear you talk,' said he. And the poor woman answered:

"'Oh, good Heaven! are you ever sober? Oh, Jack! Jack!'

"And then he flew at her. He took me by the neck and beat her over the head with me. The cork fell out and the liquor poured over her breast and over the face of the little baby lying upon it. It mingled with her blood.

"At first she screamed. Then she lay still. Her face grew white. I knew I was a murderer. 'Oh, let me break!' I cried. 'Let me be broken into fragments!' But her fair flesh was mashed to pulp, her delicate bones broken, and I was sound as ever, when Jack, led by Heaven knows what mad fancy, left his victim and staggered into the street again. The snow was falling. The air was white with it. He staggered along, muttering to himself. At last he came to a wharf and stumbled across it. I believe a boat lay there on which he had been once before and on which they had given him drink.

"'Sea Bird, ahoy!' cried he. 'Hullo! hullo! Sea Bird, ahoy!'

"Nobody answered him.

"'I'm coming aboard,' he muttered—'I'm coming aboard. I shan't stay at home to be preached to. I'm my own master.'

"Then he took one step more. Splash—crash! He was through the thin ice under the water.

"'Thank Heaven,' said I, 'my miserable career is ended.'

"Then I turned cold as ice myself, and there was a roaring in my neck.

"Next thing I knew it was broad daylight, and I was floating on the water.

"'There's a bottle,' said some one. It was a bare-legged boy. He stooped over the side of a boat, and caught me.

"'There was a man drowned here last night,' said he to another boy at his side.

"'Did you see him?' said this one.

"'Yes,' said the first. 'He was drunk, and killed his wife. They've got an inquest on her, down in the cellar over there. I say, I'm going to sell this bottle to Bill, the junk man.'

"So I was saved, and much against my will stood in the junk shop window for a week. The water had washed the blood off of me. I had no smell of liquor left, and along comes your wife.

"'What a nice, flat bottle!' says she—'just what I want. How much for it?'

"'And Billy charged her four cents, and home she brought me.

"'My career of vice has begun again,' said I. 'And I expected nothing else, but, bless the dear soul, she put vinegar in me—nice, sour, innocent, respectable vinegar—and I've been a good reformed bottle ever since. And now you—you—you—her husband, are going to put the devilish spirits into me again. For Heaven's sake break me first! I don't want to destroy another household.'

"'You shan't!' said Tom Barnaby. 'Here you go back on your shelf, I leave you to innocence and vinegar; and I think I'll make a cup of strong coffee.'

"'Right,' said the bottle.

And so the bottle stands still beside the cruet on Mrs. Barnaby's dresser; and Tom Barnaby is still a sober man.—*Chicago Herald.*

A GOAT'S EXPERIENCE.

He Wages an Effectual War Against the Cause of His Disgrace and Shame.

Never had regimental goat been more attentive to duties than was Billy. At drill, parade and roll-call, Billy was ever to the fore. He seemed to take as much pride in the regiment as the men did in him. And when the men—overgrown boys that they were—had leisure, as they had in abundance, they found in Billy as hearty a playfellow as they found him a ready comrade in duty.

Well fed, well groomed, well housed, well cared for in every way, Billy's lot among goats was indeed a happy one. But, alas! pride goeth before a fall; and Billy was to be no exception to the rule.

Billy had not merely the right of entry to the mess-room, but was always a welcome guest there, and received many a dainty morsel from the friendly hands of the men. One evening, however, it happened that Corporal Price, out of a spirit of thoughtless mischief, proposed that Billy should partake of the liquids as well as of the solids of the mess-table. The suggestion was at once seized upon, and the men eagerly watched Billy's first bibulous attempt.

Corporal Price coaxingly held out his cup; and Billy, after a suspicious preliminary sniff, quaffed off the contents. Another and yet another of the men offered Billy a drink, an invitation he could not think of declining. Finally, the large earthen vessel which held the beer at the head of the table was placed upon the floor; Billy was directed to help himself, which he proceeded to do with such hearty good-will that he became—to the intense amusement of the men, I am ashamed to have to acknowledge—helplessly, unmistakably intoxicated.

I shall not attempt to describe his symptoms. Suffice it to say that the next morning Billy was for the first time absent from roll-call, and did not put in appearance all day. Nothing could tempt him to leave the stable.

When a second day brought a repetition of the desertion, and a second evening mess commenced without Billy putting in an appearance, Corporal Price was directed to bring the deserter before a court-martial of the men's mess.

With considerable difficulty, he managed to induce Billy to leave his lair at all; and it was only by dragging him by main force he could get him inside the door of the room which had been the scene of his orgies two nights before.

Billy's appearance was greeted with a cheer, but sadly changed were his looks. His once glossy coat had an unkempt appearance, while the once proud and erect head was lowered in shame.

"Come, Billy, take a drink!" said the sergeant at the head of the table.

The words seemed to rouse the animal. He lifted his head, his eye lit up, his fore-hoof beat the floor. Then with a snort, a rush and a bound, Billy butted full against the large earthen vessel containing the men's evening allowance of ale, breaking it into a thousand pieces, and deluging not only the table, but the men who sat near. Then, with his head once more erect, he stalked proudly and majestically out of the room.

"And really, sir," said the corporal to me in reciting the incident, "Billy's was the best blue-ribbon lecture I ever listened to!"—*Boy's Own Paper.*

THE colored people of Raleigh, North Carolina, are organizing a Temperance society, its mission being "to teach and preach Gospel Temperance, and point out the evils of intemperance."

FOR OUR YOUNG FOLKS.

THE ROGUISH PUCK.

"Do I believe in fairies? Yes, Master Hazel-eyes."
And the roguish face grew scornful and grave with great surprise.

"Well, I don't," said he, firmly. "I'll tell you why—because
I've never seen a single one, not even Santa Claus."

Said I to this small skeptic, aged seven:
"Then you know
Much more than Master Shakespeare did, who lived so long ago.

"For he believed in fairies—Peas-blossom, Mustard-seed,
Oberon and Queen Titania—and so do I, indeed.

"In Mab, who sets poor mortals dreaming of wondrous luck;
In airy, dainty Ariel, but most of all in Puck.

"In Puck, the rogue, the rascal, the naughty, tricksy sprite!
To torment every living thing is his supreme delight.

"He's always lurking near us, some naughty trick to play;
I come across the traces of his mischief every day."

"What, here? You're joking with me," cried Master Hazel-eyes.
"You just are talking nonsense." And he looked severe and wise.

"Who else would throw my scissors," I asked, "down in the well?
And who would thrust poor pussy's feet each in a walnut shell?

"Or dance upon the shed-top, dressed like a ghost in white,
To scare mamma and auntie, at nine o'clock at night?

"Who ate the floating island from off the custard sea,
When all the aunts and uncles were coming here to tea?

"Who was it pulled the needles out with a single jerk,
And left all those dropped stitches in grandma's knitting work?"

By this time Master Hazel-eyes had very sober grown,
As I wished that Puck, the rascal, would let us all alone;

And said that he was cruel, and—wretched, heartless sprite—
Delighted to set all things wrong, but never made them right.

A fairy whom no one could love, for 'twas his only care
To frighten us, and bother us, and vex us everywhere.

"Please stop!" And Master Hazel-eyes turned red as red could be.
And then, forgetting grammar, said: "It isn't Puck; it's me

"You're talking of. I know it is. Do stop! I wish you would.
I'm sorry that I acted so—I'm going to be good.

"I didn't mean to be so bad, and trouble every one;
But I forgot, and *everything*, and then it was such fun!

"And you pretended it was Puck. But that's just what I say—
There isn't any Puck at all, nor fairies anyway."

So answered Master Hazel-eyes, whom I could not convince;
And as for Puck, the rascal, I haven't seen him since.

But in his stead a brownie comes, who, to my great surprise,
Is always kind and helpful, and he looks like Hazel-eyes.

—*Eleanor A. Hunter, in Golden Days.*

A LOST BOY.

A Fruitless Search and an Accidental Discovery.

Such a lovely spring day! But dear Aunt Molly, in her country home, was among the clouds. Not that she was at all lifted up from this earthly sphere. Oh! no. She was in the midst of as dreadful fright and worry as ever had darkened her sweet country home.

Tommy, that nephew of hers, always into some unheard of exploration—that child of nine summers, who had been left in Aunt Molly's care while his parents took a trip to Europe—this important individual had been missing ever since morning, and now it was long past dinner-time. Wasn't that enough to put a conscientious maiden lady, who knew but little about children; into the clouds of despair?

"If that child ever gets safe into his mother's arms I never will take care of another while my name is Mary Cheeseboro," said Aunt Molly.

They searched the house, she and the hired man, who had always been right foolish over Tommy, giving him many a ride on the great garden gate—a luxury strictly forbidden the youthful population of Hawleyville. The village doctor started in the search with his gig; Johnny Smith whirled away on his bicycle; Mary Perry promenaded off on her roller skates; Felix Morton galloped forth on his pony; and, in fact, the whole village was in arms, or more literally, on its legs, in search of the lost boy.

Aunt Molly wisely kept a plate of hot dinner for the hopeful result, and then sat down and cried heartily, assisted in her lachrymose condition by loud bursts of sorrow from the hired girl, who now and then wiped her tears with her apron and comforted Aunt Molly with such remarks of the departed as these: "Sure, but he was a beautiful b'y! We niver shall see the loiks of him again. Little did I think this mornin' when he was aitin' his bread and milk that I should niver see his swate face again. 'Bridget,' says he, 'will ye give me some cookies, plase, to put in my pocket; for ye know, good Bridget, I might mate a hungry little b'y.' Och! the dear child—niver to have a funeral!"—and at this, an added misfortune in the Irishwoman's eyes, she wailed afresh.

By the time the doctor's gig, Mary Perry's skates, Felix's pony and the other messengers had returned without any news, anxiety was written more deeply on every countenance. Aunt Molly thought of the gypsies who had gone by yesterday, and shuddered as she remembered the long look that one of the men had given Tommy. What if * * * Poor Aunt Molly! She went out again to the great barn, hardly knowing why, but feeling that she must continue the search somewhere, although they had hunted the barn over a dozen times, and shouted "Tommy!" in a dozen different keys, all around it. Peering through her glasses in every direction, she caught a glimpse of some bright feathers up in the hay-loft.

"Now, I wonder," she said, indignantly, "what on airth that old hen is a pryin' around up in the hay-loft for; she ain't got no business up there—just as inquisitive as the roosters are, if I must say—pryin' round as though she'd got a family to bring up. And what a time she's a making—acts if she's caught fast to somethin'."

Without further speculation she climbed to the hay-loft as nimbly as a girl, and there, what do you suppose she found? Tommy! fast asleep, and that old hen with a string around her leg, fastened to a beam, and making ineffectual attempts to reach one of Bridget's cakes in the hand of the considerate young man who thought he "might meet a hungry little boy."

It didn't take Aunt Molly long to release the one and awake the other. I don't believe she gave Tommy a very *gentle* shaking to arouse him. As the three descended, the news spread that the lost was found, and the young urchin became the hero of the hour. As he devoured the waiting dinner and related his experience, he said:

"I heard the old hen up in the loft a makin' an awful clucking noise, so I thought I'd go up and see if dere was any new eggs, but dere wasn't any; she's always a foolin' me—dat old hen. Well, I thought I'd just play she was a wild Injun, so I tied a string round her leg and gave her some cookey so I could keep her still, you know, then I took her prisoner and fastened her to the beam, and played I owned the prison. So I laid down in the hay, and that's all I know till Aunt Molly was a shakin' me awful."

"Shure," said Bridget, replenishing his plate, "and didn't I think we'd be afther havin' a *wake* over ye."

At this Tommy laughed and said: "Aunt Molly made me a-*wake!*" and at this they all hugged him and declared they never would worry about him again, for he'd be sure to turn up somewhere; such a boy was too smart to be lost. But Aunt Molly determined to keep a careful eye on him thereafter.—*Treasure Trove.*

SLEEPING IN A TENT.

Not a Bit Afraid—Freddie and Harry's Adventure with a "Lion."

"Please, mamma, dear! please let us!"

"Now, mamma, please to do!"

Two eager voices begged and coaxed and argued and plead and teased, but still mamma would not consent, and at last Harry and Fred had to go up to bed in their own little room, instead of sleeping out in the tent, as they wanted to do. It was such a pretty tent, and such a nice, cool place to sleep in on this hot night!

"I don't see why mamma won't let us," growled Harry.

"Less we might get the whooping-cough," suggested little Fred.

"Oh, nonsense! It's just because she's nervous. I heard grandpa tell her so once, and now I know what he meant."

"She says we might get scared."

"But we won't. I tell you, Fred," said Harry, his eyes sparkling with mischief, "if we just slept out there once, she'd let us all the time, 'cause then she'd know it wouldn't make us sick."

"But she told us not to."

"Oh, well, you know she wouldn't really care if she found we didn't get cold, or rheumatism, or ammonia, and weren't a speck frightened."

"But she said we mustn't."

"Oh, you're afraid!"

"I ain't."

"Yes, you are. I don't want you to go with me, anyway. I'd have more fun by myself. Good-bye, 'fraid cat!"

"I ain't a 'fraid cat, and I'm going to sleep in the tent if you do!" cried Freddie, sturdily. "Only—I—guess you'd better take your pop-gun, Harry."

So Harry armed himself with his pop-gun, and the two boys stole down stairs. Freddie did hope his mother would hear them, and come out to see where they were going, but she didn't.

How dark it was outside! The moon had gone behind a cloud, and somehow the clouds looked dim and sleepy.

Harry kept saying the tent was so pleasant and cool and comfortable, and he just wished somebody would dare to disturb them, so he could shoot him down dead with his pop-gun. But dear me, how dark it was inside!

Freddie was nearly frightened out of his wits, but he had been playing hard all day, so he just curled himself up and said: "You kill—anything—down dead—that"——and was off to the land of Nod before he could finish.

"What did he mean?" thought Harry. There isn't *anything* that could hurt us really and truly. There aint any ghosts, and I guess lions don't live anywhere near here."

He wasn't afraid, oh no, indeed! but somehow he couldn't get to sleep and kept sitting up and listening to the queer noises and wondering whether mamma had gone to bed, and handling his pop-gun.

What was that? Surely he heard something creeping, creeping, creeping softly over the grass!

They had fastened the tent back on both sides to let the cool air come in, and at one of these openings appeared a big black head.

It was a lion!

Harry was so terrified that he could not even scream. His heart went pit-a-pat, and his hands grew cold as ice, and he never once thought of his pop-gun.

Then the lion uttered a low growl!

"Freddie! Freddie!" cried Harry.

"What? what?" gasped Freddie, waking from a sound sleep in a great fright.

"Run! Run! *There's a lion after us!*"

And in a moment the two boys were rushing across the garden screaming at the top of their voices, with the horrible creature close behind them.

Mamma heard the cries and came running out to meet the two naughty youngsters. "Why, what is the matter?" she asked, breathlessly. "Where have you been? What has frightened you? Why, surely you can't be afraid of Carlo!"

Then these two brave, brave boys looked at the lion again and saw that it was Carlo, dear, kind, gentle old Carlo, the big Newfoundland!

Harry burst into tears, and threw his arms around his mother.

"Oh, please forgive us," he sobbed, and mamma just kissed them both and did not ask any questions, or say another word about the lion. She understood what Harry meant, just the way mammas always do.—*Bertha Watson, in Youth's Companion.*

—The hog-pen should be always liberally bedded with straw, not only where the pigs sleep but the yard outside, where they run. Unless this yard is well bedded much of the liquid manure will be lost.—*Prairie Farmer.*

—Newfoundland has a population of 193,000. In 1874, when the preceding census was taken, it had a population of 161,374. During the time the Catholics have increased in numbers sixteen per cent. and the Protestants thirty-one per cent.

—A bicycler fell from his machine in the early part of a twenty-mile race in New Haven a few days ago, and broke his wrist, but he didn't discover the extent of his injury until he had arrived home. He finished the race, and came in first.—*New Haven Register.*

—An Indiana lady has been decorating a set of dinner plates in a novel manner. On each (of eighteen) she has painted a bird of different species, and on the border of the plate a verse, in old English text, of poetry, written by one of the best authors about that particular kind of bird.—*Indianapolis Journal.*

—In regard to the operation for dividing certain fibrous bands in the little finger so as to give pianists more freedom in the use of it, the *British Medical Journal* says that in the fourteen cases of Dr. Forbes, of Philadelphia, good functional results have been obtained, but it suggests that "the effort necessary to stretch any fibrous band existing between the fingers is itself useful, as tending to stretch all the muscles attached to them."

—A good old deacon in Connecticut was very pious and fond of clams. When once upon a time he attended a Rhode Island clam bake he overtaxed his capacity, and was sorely distressed. But his faith in prayer was unabated. Leaving the party, and going down upon his knees behind a tree, he was heard to supplicate: "Forgive me, O Lord, this great sin of gluttony. Restore my health, and I will never eat any more clams." Then, after a judicious pause, "Very few, if any. Amen."—*Christian at Work.*

—Some time since, Newton Irvine, living in a cabin near Blocksburg, Humboldt County, Cal., received a present of a quarter of veal from some unknown party. His suspicions were aroused at such an unwonted act of generosity, and he fed a piece of the veal to a dog, which died soon afterward with all the symptoms of poison. He buried the veal, and a day or two subsequently he was shot near his cabin, the murderer putting seven rifle-balls into his body. The reason for the murder and indentity of the man who committed it are alike a mystery.—*San Francisco Chronicle.*

—A New Yorker has patented a railroad indicator to be used to indicate the time at which trains pass a station. The indicator is composed of a clock set in a case about eight feet above the ground. The dial looks like an ordinary clock; the hands are stationary except when a train passes on the track where the indicator is attached, when the hands suddenly move to the hour, minute and second, giving the correct time when the train passes. The hands point at this time until another train passes, when they move ahead as before. The invention has been satisfactorily tested.—*N. Y. Tribune.*

—The Texas Congress once took exceptions to President Sam Houston's habit of giving them his messages orally, and insisted that he should write them out; that the habit of delivering them orally was highly dictatorial, and lacking in respect for Congress. Houston agreed to conform to their wishes, and as the next day was the one set apart for the delivery of his inaugural, he made his appearance in the halls of Congress with a roll of paper in his hand, tied with red tape, and marked in large letters, "Inaugural." He addressed them with the roll in his hand, waving it gracefully that all might see it, and on concluding handed it with a bow to the clerk, and strode out of the chamber. On being opened it was found to be a roll of blank paper.—*Chicago Herald.*

THE SUN.

A Scientist Who Believes That Its Color Is Blue.

It may be asked, What suggested the idea that the sun may be blue rather than any other color? My own attention was first directed this way many years ago, when measuring the heat and light from different parts of the sun's disk. It is known that the sun has an atmosphere of its own, which tempers its heat, and by cutting off certain radiations, and not others, produces the spectral lines we are all familiar with. These lines we customarily study in connection with the absorbing vapors of sodium, iron, and so forth, which produce them; but my own attention was particularly given to the regions of absorption, or to the color it caused, and I found that the sun's body must be deeply bluish, and that it would shed blue light, except for this apparently colorless solar atmosphere, which really plays the part of a reddish veil, letting a little of the blue appear on the center of the sun's disk where it is thinnest, and staining the edge red, so that to delicate tests the center of the sun is a pale aquamarine, and its edge a garnet. The effect I found to be so important that, if this all but invisible solar atmosphere were diminished by but a third part, the temperature of the British Islands would rise above that of the torrid zone; and this directed my attention to the great practical importance of studying the action of our own terrestrial atmosphere on the sun, and the antecedent probability that our own air was also and independently making the really blue sun into an apparently white one.—*Prof. Langley, in Science.*

EDWIN M. STANTON.

How His Life Was Believed to Have Been Saved.

General Grant, in his biography, refers to a meeting at Louisville with Edwin M. Stanton, when the Secretary of War had such a cold that Grant expected him to die. Ex-Senator Learned, of Massachusetts, relates the sequel of that meeting in an interesting way. Mr. Learned was at that time President of the Ohio & Mississippi Railroad. When Stanton left Louisville he went to Jeffersonville on his way to Indianapolis. He was met there by Mr. Learned, who had gone there to see about the transportation of troops. A car was set aside for the Secretary of War. It had been used by troops and was somewhat filthy. The hose was turned on to its floors, and it underwent a thorough scrubbing. In the big stoves at either end huge fires were built. It was bitter cold weather, and the car was a long time getting a comfortable temperature. Mr. Stanton, General Anson Stager (since dead), and Mr. Learned and his wife occupied the car. Mr. Learned says that he never saw a man traveling in worse condition than Stanton, who had a congestion that was rapidly closing in on him with a death-grip. He went over and said to Stanton: "Mr. Secretary, I presume as head of the War Department and chief of its allopathic medical branch, you would not feel at liberty to accept relief outside?"

"I don't understand," said Stanton.

"Well, I've been a homeopathist for twenty years, and I know you are a sick man. If you will permit me, I think my wife has her package of medicines along and that I can prescribe for your relief."

"What would you give me?"

"I think you should have stibium."

"What is that?"

"The first preparation of tartar emetic."

Then the Senator told the story of old Dr. Grey, who always prescribed stibium, and had once said he expected to have inscribed on his tombstone, "He prescribed stibium and died." Stanton said: "I don't know about stibium, but I think tartar emetic would do me good." Mr. Learned gave him doses every ten minutes, finally lengthening the doses to half an hour. At Seymour Mr. Stanton was much relieved, but begged Mr. Learned to go on to Indianapolis. Just before reaching that city he got a dispatch which he told the Senator required his presence at Washington as soon as he could get there. Mr. Learned insisted that he would endanger his life by attempting the trip in his condition. "Human life is nothing in times like these," was Stanton's response. He asked for the bottle of stibium and declared his intention of going on to the Capital. The bottle was given to General Stager, with instructions to lengthen the periods of doses to two hours unless the congestion should grow worse, when they were to be shortened. Stanton went on to Washington under this treatment and recovered. Months afterwards he told Mr. Learned that he considered himself indebted to Mrs. Learned's homeopathic medicine case for his life.—*Chicago Tribune.*

Tempting to Steal.

The practice of placing goods outside shops, thus tempting starving people to steal, is so utterly indefensible that its continuance can only be accounted for on the theory of its greatly stimulating business. On that head a boot and shoe dealer at Birmingham gives evidence which appears almost incredible. Having been reprimanded by the bench for putting a considerable portion of his stock in trade outside his shop, he declared that he could not help himself. He had tried the other plan for seven months, and his books showed that it made on the average a difference of 150 pairs weekly in his sales. According to his story, therefore, he must have sold 4,500 fewer pairs during the period when virtue triumphed over greediness. That was, he evidently thought, far too high a price to pay for doing right, and he therefore relapsed into selfishness, with the result of his having to prosecute a father and son for stealing a pair of boots from outside his shop. The elder received two months' imprisonment, the younger fourteen days' imprisonment and five years' incarceration in a reformatory. Clearly, therefore, however profitable the practice may be to traders, it is very expensive to the general community who have to maintain the offenders in prison. On that ground alone, and putting humanity out of the question, the State has an excellent right to interfere. Moreover, if the practice were prohibited throughout the kingdom all traders would be placed on the same footing, and, as the public are bound to supply their own requirements, there could not be any loss of trade in the aggregate.—*London Globe.*

VICTOR HUGO.

How He Would Have Punished Marshal Bazaine.

At Victor Hugo's house one evening the question of capital punishment was discussed, anent the commutation of the sentence of Bazaine into perpetual imprisonment. Several politicians who were present blamed this commutation and maintained that no one had ever better deserved death than Bazaine. "No," said Hugo, "I would not have loaded chassepots for him; but, if I had been President of the Council of War, this is what I should have done: I should have convoked to the Champ de Mars the National Assembly, all the troops of Paris, all the people; and there in the presence of that crowd, in presence of that army, in presence of the representatives of the nation, I should have had Bazaine brought forward, dressed in all the insignia of a marshal of France. Then the President of the Assembly would have read aloud the judgment declaring Bazaine a traitor to his country, and condemning him to degradation. Then the senior subaltern officer would have torn off his crosses, broken his sword, trampled his epaulettes under foot, and, the ceremony over, would have said to the degraded man: 'Now, Monsieur Bazaine, go! you are free!' No one can deny the grandeur of this conception of moral and exemplary chastisement.—*Paris Morning News.*

THE TURKISH POSTAL SYSTEM.

A Holy War Imminent Unless Its Efficiency is Improved.

The crusaders of old, from Peter the Hermit to Prince Methusalem, would gird up their loins anew and raise again the tattered banner of the cross, if they could but know of the war now in progress between United States Consul Selah Merrill, of Palestine, and the Turkish Government, anent the mail service of Syria. In one of his reports to the State Department last fall, Mr. Merrill took occasion to say that "Turkey is in the postal union, and in Europe and America it is supposed she is sufficiently civilized to deserve to be thus admitted, but those Europeans and Americans who reside here realize to their sorrow often that letters in the Turkish post are common property when they see them scattered promiscuously about the single room of the postoffice, on window ledges, and the tops of boxes, on divans and on the floor." This was worse than a charge of "offensive partisanship" against the postmaster at Jerusalem, and the State Department of this country made up its mind to investigate him. This it did by requesting of Consul Merrill a bill of particulars.

The Consul has made a lengthy report, bringing extensive and alarming allegations against the whole postal service of Turkey, but particularly that of Palestine. It seems that in Jerusalem there are two mail services, the Turkish and the Austrian, but no complaint is made as to the latter. The only seaport of Jerusalem is Jaffa (the ancient Joppa,) forty miles distant, and the mail is conveyed across the country by almost anybody who will consent to carry it. The Austrian mail arrives in Jerusalem about eighteen or twenty hours after its reception at Jaffa, and is distributed by seven o'clock in the morning, while the Turkish mail is seldom open until six hours later. The Consul says that on one occasion the bag containing the mail was given by the Turkish officials at Jaffa to a common peasant, who agreed to carry it to Jerusalem for one medjidi, or about one dollar. The man took the bag, disappeared, and has never since been heard of, the authorities claiming they could not be expected to find a man of whose name and residence they were ignorant.

The Consul declares the mail-bag is sometimes taken from Jaffa and left for hours by the side of the street outside the gates of Jerusalem, where crowds of men and animals are constantly passing. Near this point there is a large khan, where mules and donkeys are kept, and here the mail-bag is often dumped on its arrival from Jaffa, remaining for the night or day, or until some official from the postoffice sends for it. In the meantime anybody and everybody takes the liberty of opening the bag and getting out his mail. It frequently happens, says the Consul, that during Ramadan (the great Mohammedan feast, which continues for a month) the mudi lolls down to the postoffice at noon, opens the bag to give out Government mail to some official messenger, and then deliberately sits down to smoke, leaving the European patron to cool his heels on the stone floor. When the mail is finally distributed, the Christian is quietly told there is nothing for him, when the fact is the letters are scattered all over the room, and it is much easier to say "no" than to ascertain who they are really for.

In this manner, says the Consul, valuable letters are lost through the dishonesty and carelessness of the Turkish postal officers, and he advises all American mail for Syria to be sent by way of Brindisi or Trieste, instead of by Constantinople. Naturally enough, when these charges were formally laid before the Director General of posts at Constantinople, supplemented by similar charges from the French Consul at Jerusalem, there was a great gnashing of teeth and the Turkish anger was kindled. After several months of waiting, the Director General now files with the Government of the United States a denial of the charges in language that would do justice to a Kentucky duelist. He says he caused an investigation to be made of the mail service of Syria and that no complaints were heard from anybody but the American Consul, "whose charges are inexplicable and intentionally untrue." Now the State Department is scratching its head and wondering how long anybody but a consul could live in Syria after daring to complain at anything the Turkish Government did, and Consul Merrill is roosting in the Mount of Olives with a knife up his sleeve. There will be a holy war if Mr. Merrill doesn't get his next love-letter on time.—*Washington Cor. St. Louis Globe-Democrat.*

"When She Will, She Will."

"I thought only a few men were up to the winter bathing mark," observed the reporter. The bath man laughed scornfully. "When a lady makes up her mind to bathe every day in the year," he said, "nothing can stand her off. I've seen men who would come here on cold mornings, undress and walk to the water's edge, but the minute it touched their toes, race back and get into their clothes again. Not so with women. When they are in bathing trim it means bathing and nothing short of a tidal wave will stop them. Here comes the daisy bather of the lot. I've seen that girl here when it was so cold that to even look at the water used to give me the shakes. Now, what do you think first induced that lady to bathe all the time? For the pure love of it? No, sir. She was getting too fat. She tried everything—dieting, exercise and medicine, but nothing would take her down. At last she dropped on sea bathing, and it fetched her. She is nice and slim now, though plump enough, but when she came here first she was as fat as a butter ball. I wish all the fat ladies in the city would have her courage, and our winter business would be worth something."—*San Francisco Alta.*

—An effort will be made to secure a statue of ex-President Pierce, to be placed in the Capitol Park at Concord, N. H., as a companion to that of Daniel Webster.—*Boston Post.*

HIDDEN INCA TREASURES.

The Efforts That Have Been Made During the Last Three Centuries to Locate Them.

The Spaniards under Pizarro landed first on the Island of Puna, at the mouth of the harbor of Guayaquil, and afterward upon the main coast at Tumbez in Peru, a few miles southward. Here they found that the Incas, for the first time in the history of that remarkable race, were at war. Huayna-Capac, the greatest of the Incas, made Quito his capital, and there lived in a splendor unsurpassed in ancient or modern times. At his death he divided his kingdom into two parts, giving to Atahuallpa the northern half, and to Huscar what is now Bolivia and the southern part of Peru. The two brothers went to war and while they were engaged in it Pizarro came. Everybody who has read Prescott's fascinating volumes knows what followed. With the aid of the Spaniards, Atahuallpa conquered his brother and then the Spaniards conquered him. When he lay a prisoner in the hands of the guests he offered to fill his prison with gold if they would release him. They agreed, and his willing subjects brought the treasure, but the greedy Spaniards, always treacherous, demanded more, and Atahuallpa sent for it. Runners were hurried all over the country, and the simple, unselfish people surrendered all their wealth to save their King. But Pizarro became tired of waiting for the treasure to come, and the men in charge of it, being met by the news that Atahuallpa had been strangled, buried the gold and silver in the mountains of Llauganati, where the Spaniards have been searching for it ever since.

No amount of persuasion, temptation or torture could wring from the Indians the secrets of the buried gold. Two men of modern times are supposed to have known its hiding place. One of them, an Indian, became mysteriously rich, and built the church of San Francisco in Quito. On his death bed he is said to have revealed to the priest who confessed him that his wealth came from the hidden Inca treasure, but he died without imparting the knowledge of its location. Another man, Valverde by name, a Spaniard, married an Inca woman, and is supposed to have learned the secret from her, for he sprang from abject poverty to the summit of wealth almost in a single night, "without visible means of support." Valverde when he died left as a legacy to the King of Spain a guide to the buried treasure. Hundreds of fortunes have been wasted and hundreds of lives have been lost in a vain attempt to follow Valverde's directions. They are perfectly plain to a certain point, where the trail ends, and can not be followed farther because of a deep ravine, which the credulous assert has been opened since Valverde died by an earthquake. These searches have been prosecuted by the Government as well as by private individuals, and if all the money that has been spent hunting for Atahuallpa's ransom had been invested in roads and other internal improvements the country would be much richer and the people much more prosperous than they are.

The devotion of the Indians to the memory of their King who was strangled 350 years ago is very touching. When "the last of the Incas" fell he left his people in perpetual mourning, and the women wear nothing but black to-day. It is a pathetic custom for the race not to show upon their costumes the slightest hint of color. Over a short black skirt they wear a sort of mantle, which resembles in its appearance as well as in its use the "manta" that is worn by the ladies of Peru, and the "mantilla" of Spain. It is drawn over their foreheads and across the chin and pinned between the shoulders. This sombre costume gives them a nun-like appearance, which is heightened by the stealthy, silent way in which they dart through the streets. The cloth is woven on their own native looms of the wool of the llama and the vicuñas, and is a soft, fine texture. While the Indians have accepted the Catholic religion, 350 years of submission has not entirely divorced them from the ancient rites they practiced under their original civilization. Several times a year they have feasts or celebrations to commemorate some event in the Inca history, and like the Aztecs in Mexico, they still cling to a hope that future ages may restore the dynasty under which their fathers lived and destroy the hated Spaniards.—*Quito Cor. Boston Herald.*

Cast-Off Foot-Gear.

Hundreds of men, women and even boys, in New York, are engaged in the "business" of collecting old boots and and shoes, which they take to the wall-paper factories, where they receive from five to fifteen cents per pair. Calf-skin boots bring the best price, while cowhide ones are not taken at any figure. These boots and shoes are first soaked in several waters to get the dirt off, and then the nails and threads are removed and the leather is ground up into a fine pulp. Then it is pressed upon a ground of heavy paper, which is to be used in the manufacture of "embossed leather." Fashionable people think they are going away back to mediæval times when they have the walls of their libraries and dining-rooms covered with this, and remain in blissful ignorance that the shoes and boots which their neighbors threw into the ash-barrel a month before now adorn their walls and hang on the screens which protect their eyes from the fire. Carriage-top makers and book-binders also buy old boots and shoes, the former to make leather-tops for carriages and the latter leather bindings for the cheaper grades of books. The new style of leather frames with leather mats in them are entirely made of the cast-off covering of our feet.—*Utica Herald.*

—Judge Laporte, of Huntington, Pa., is of the same stuff the ancients found in their heroes. His son, accused of murdering a friend, fled to his father for refuge, and there confessed to the killing. The old Judge told the boy he had sworn to obey the constitution and enforce the law, and taking him in his buggy to the county seat delivered him over to justice.—*Philadelphia Press.*

SATURDAY, JULY 18, 1885.

The time is rapidly approaching when the Republican party of Garrett county will be called upon to nominate candidates for the various local offices to be filled next fall. We think, as a general thing, the people at large do not give as much attention to the matter of selecting candidates as they should. Much of the growling as to the unfitness of candidates might be prevented if the people would take the time necessary for the purpose, attend the primary meetings, and participate in the nominations. Indeed it seems to be the duty of good citizens to pursue the course indicated. Again, we would remind our Republican friends throughout the county that it is important that our party should nominate its best men for the various offices. We hold that incompetent men should not be nominated at all. It very often happens that persons, the least qualified, consider themselves the best fitted for a given position, and, acting upon their own judgment, attempt to thrust themselves upon the people. Such aspirants for public favor should be promptly checked, and if, through political intrigue or otherwise they secure a nomination, then the people should see to it that they are defeated at the polls. The proper way to obviate difficulties of this character is to nominate good men, men who are competent, men who have the confidence of the people, and who will poll the solid vote of the Republican party. It is the most absurd nonsense in the world to suppose for a single moment that it is necessary to nominate a man or men who can carry a few Democratic votes and thus be elected. What we want to do as a party is to nominate men who can poll the full Republican vote. In that case there will be no difficulty about electing our nominees. We would especially call attention to the importance of nominating good men for County Commissioners. Our taxes are very high, and many people believe that with proper management the tax rate might be reduced. But we can not reasonably expect this if we elect incompetent men. If we want the finances of our county managed skillfully and economically we must elect our very best men County Commissioners. If we nominate men who never were able to manage their own business successfully, who can't even manage a small farm or any other small business properly, and then expect them to manage the county affairs carefully, we shall be doomed to disappointment. A deal of trouble may be saved by looking at these matters calmly beforehand.

The coils are tightening about the Democratic temperance conspirators in Ohio who desire to see Democratic success. The Women's Christian Temperance Union of Cleveland, Ohio, has awakened to the error of mixing their moral cause with a political one, and has withdrawn from the State and National Union. Besides this, the congregation of Brother Leonard, the Prohibition candidate for Governor, is considerably torn up over the candidacy of the pastor. The official board of the church has by a majority vote allowed him the "freedom of his conscience," but it is a notable fact that two Republican members of the board refused to vote. This, together with ex-Governor Foster's expression that the Prohibition vote would not seriously cripple the Republican cause this year, is a sign that no true Republican will be deluded into voting for the Democratic side show ticket.—*Wheeling Intelligencer.*

Howard Cooper, the colored assailant of Miss Katie Gray, in April last, was hanged about thirty yards from the jail at Towson, Baltimore county, at 12:50 o'clock Sunday morning. Sheriff Knight was asked by the mob for the keys of the jail, He refused, saying that it was his sworn duty to protect the prisoner. The mob battered down the jail door with a telegraph pole. After some difficulty the lynchers gained admission to the Sheriff's room, where they secured the keys to Cooper's cell. The prisoner was then led from the jail with his hands tightly pinioned behind him, ahd was conducted to the nearest tree, where he was unceremoniously hanged,

[From the Cumberland Civilian.]

A Plea for Constitutional Money.

CUMBERLAND, MD., June 25, 1885.

The silver question is now about the most lively and interesting national problem undisposed of; all others, or nearly so, having been practically settled with the acquiescence of the people. This important topic has been occupying the minds of the Executive and Congress for several years past. The aspect with which it usually presents itself, or rather with which the President and Congress have been treating it, is to have the law of 1879, requiring not less than $2,000,000 to be coined monthly at our mints, repealed. The popular branch of Congress has steadily opposed such repeal with good majorities, thus showing how the masses of the people feel when their traditionary money is in danger of being taken away from them.

This opposition has its origin and volume with the financial institutions of the country, and no doubt the real reasons lie in the inconvenience and tediousness in handling cumbersome and small denominated money, but these do not vex the masses, for whom this form of money was, and is intended, in their small transactions.

The arguments against the circulation and further coinage of the standard dollar of 412 grains under the act refered to are as various as specious and unsound. The main one is that it is not honest, and does not contain the value of a dollar. The standard dollar of 1879 is of precisely the same weight and fineness as the one under the law of 1855. The veritable dollar of our "daddies" under the law of 1792 contained 416 grains of standard silver, or 371¼ of pure silver. The alloy has always been about 10 per cent. of copper. Two things combine to make a silver dollar worth 100 cents; first the intrinsic value of the metal itself, and second, the power and currency which the law gives it. The trade dollar of 1873 contains 420 grains of exactly the same metal, yet it is worth only about 80 cents, and simply because Congress has not given it a legal tender power. Surely if Congress can make a par dollar out of 412 grains, it can do the like with 420; and why does it delay or hesitate to do such a plain act of justice. To show that the stamp of law has much to do with giving standard value to metallic money, I need but remind the many who may not know the fact, that by the act of 1853 the fractions of a legal silver dollar only weigh 384 grains, 28 less than the unit dollar. Did ever any body hear of complaints of the fact that two halves, or four quarters, did not have the value of a dollar in them? Congress has shown its power over monetary matters by making legal compulsory money out of the baser metals, to-wit: copper and nickle. 300 tons of copper were coined into pennies and half pennies by "our fathers," under the administration of our first Secretary of the Treasury, Alexander Hamilton. It has gone still further in late years in exercising its almost omnipotent powers, and made legal tender money of something entirely without intrinsic value. We all know the greenback is invested with nothing but promise to pay a given sum of dollars; no basis or reserve of intrinsic value sacredly put away for its redemption. Nothing but faith; and it must be taken, though the debt for which it is offered be a loan in gold.

Another objection to the further production and coinage of silver is that the U. S. Treasury vaults are now overflowing with it. This is only true in technical sense, as $141,000,000 of it are among the people in the form of silver certificates, issued by the Secretary of the Treasury under law. The coin lying in the National vaults as a security or mortgage for their redemption, or conversion. Surely it would not be right or honest to have the reserve and its representative in circulation at the same time. The same remarks are applicable to the large amount of gold now in our vaults; $136,000,000 of which in the shape of gold certificates are now held by our people as currency. Thus it is shown there are now the enormous sum of $277,000,000 of silver and gold certificates out as a circulating medium, but not as money, when in reality they are superior to any of our soft money. Why dses not Congress make legal tenders out of them? Certainly if Congress can make forced money out of a mere promise such as "the United States will pay to bearer," they can give that quality to a certificate which is convertable at pleasure into undoubted constitutional money. A plain-minded man can not restrain himself from believing that the provision in the Constitution, "shall not make anything but gold and silver coin a tender in payment of debts," is less strained in making money out of the immediate representative of Constitutional "coin" than a mere piece of paper with a promise to pay upon it.

Again it has been said that the standard dollars are so lacking in the elements of value as to be a fraud upon the poor man, and demoralizing of the tone of our mixed currency. If the name of all that is candid and honest, is not a silver dollar as good as a paper one? Congress has stamped each as good for 100 cents. The former being the redeemer of the latter, hence its superiority or seignority. National Bank notes have for their basis nothing but government faith, and are not legal tender money; yet they pass at par readily, simply because they are convenient and not in small denominations. When Congress has exercised its just powers in establishing our money of different forms, it is not in the power of any class of people to depreciate or discredit it, nor shall they attempt to do so.

There is still another view of the silver question to be presented. The mining and production of silver is one of the chief industries in this country. Many thousands of our hardy and resolute laborers are engaged in them at only remunerative wages, apart from the millions of capital thus invested.

The people in this country have a settled judgment that our industries, labor and invested capital, are entitled to protection by judicious legislation, and they are now profitting by it. American silver has its protection and encouragement in the laws, that make and maintain it as one of our money standards, and the compulsory coinage of a given quantity per month. But repeal these laws, and an unusual industry of $40,000,000—one larger than our coal interest—will be destroyed. Let Congress remove the duty or protection to coal and iron, ruin and consternation among the people will follow. Like causes always produce like results.

The production, however, of the precious metals are not like the other products, for instance, our great grain and cotton crops are perishable, here this year and consumed the next. But the yield of the precious metals is wealth to us this year and for all time to come. Each year contributes its quota to the imperishable stock, which has never yet nor never will be too large. They are inherent wealth, and the begetters of all other forms of wealth, prosperity and comforts. Dispense with gold and silver (the Constitution makes twins of them and where is the right to separate them) and we will drop from enlightened civilization down to barbarism.

In the time of peace and prosperity a nation can glide along with most anything called money, but when war (against which no people have an exemption) comes, all soft money shrinks and depreciates, and gold and silver will hide themselves because they are insufficient in quantity to meet the extraordinary demands and wastes incident to a state of war. Our own late struggle is a sad proof of all this. National securities were sold at a discount, or loss of a thousand million dollars to the producing people, most of which inured to the bond holders, more, however, through good fortune and wise government than their own foresight. There can be no greater security to the peace of a nation, which desires that condition, than an overflowing treasury. It is the nations with hollow vaults that are in danger of being overrun. The recent cases of Mexico, Turkey and Egypt, are in direct point.

Let the production of the precious metals continue, and if necessary enlarge our strong boxes. And if there are really those who think they see harm in the increase, compensate them with an abundance of pitty, but by all means let common sense have its sway.

DOUBLE STANDARD.

Where the Shoe Pinches.

As the days wear on the Democratic party finds the civil service reform shoe, into which its foot was unwillingly thrust, continually becoming more and more uncomfortable. It was fondly hoped at the time by the temporary friends of the party that the foot, though misshapen would become moulded to the fashionable shoe, while the enthusiastic members of the party had no doubt that the shoe would in a short while adapt itself to the foot. The latter expectation was certainly the more reasonable, for the former anticipated a consummation that was unnatural. However, neither has been realized. The more the Democrats see of civil service reform the less they like it. The mugwumps keep patting them on the shoulder and advising them to go slow; but the demands of the henchman are more exacting, and call upon them to go fast. The offensive partisanship device, and others of like character, have been tried to stretch the shoe, but it is still uncomfortable. There are incompatibilities between the shoe and the foot which even these effective agencies cannot remove. The Chenoweth-Kellar case has disclosed the inefficiency of this instrument. From the beginning there were some members of the party who felt convinced that the shoe could never be made to fit, and the experience of the new administration has so thoroughly borne out their views that there have been daily converts to this idea, and the pressure upon the party to cast off the ill-fitting shoe is daily increasing. From the Hoosier State, the home of the Vice President, comes the most plaintive cry. Great hopes had been placed upon the influence of Mr. Hendricks to check the progress of the new ideas; but, alas! his voice had been unheeded, and his views have not received the consideration that had been expected. Completely disgusted and disappointed, the Democratic editors of Indiana, in convention assembled, sign a resolution that the Pendleton act ought to be repealed. The mugwumps shout Peace! Peace! but, alas! there is no peace so long as the thousands upon thousands of Democratic workers who cannot pass the examination must remain out in the cold.—*Balto. American.*

The Wheat Crop.

Speculators resort to all kinds of reports to suit their purposes, and it is difficult to determine the results until the harvest is completed. An Eastern contemporary remarks that notwithstanding the fact that the report from the Agricultural Bureau respecting the condition and prospects of the crop of winter wheat throughout the country is so unpromising, it is by no means to be taken as discouraging. Just twenty years ago, in 1865, the winter wheat in middle latitudes was blasted in the bloom by the extremely hot April weather of that year, so that the final yield was not considered to be really worth harvesting. Prices were at that time low, as they are now; but in the interval to the next crop, or in the summer of 1866, wheat brought $4 a bushel and flour from $18 to $22 per barrel. We even imported wheat from Liverpool to supply our necessary wants. Our people may have forgotten all about this. Shipments from the Pacific coast were likewise diverted to the Atlantic ports. There can be no such deficiency this year, for the reason that the circumstances are so different from what they were then. We now have on hand a large surplus of wheat remaining from last year. The area of spring wheat planted is likewise very greatly extended. Consequently there is no danger of any such deficiency now as there was then. And it is still insisted that the condition of winter wheat has much improved upon that from which the bureau compiled its report.

The Maryland Wheat Crop.

The Baltimore *Sun* publishes reports on the wheat crop from the various counties of Maryland. They show that the wheat crop for 1885 is not the failure that was anticipated early in the season when, on account of the severe drought last fall, and the rigorous and protracted winter, the gloomiest prognostications were indulged in by the farmers of almost every county in the State. It appears that while there was a large falling off in the acreage planted last fall, owing to the drought, and also in the yield per acre, due in the main to "winter killing," the quality of the wheat is unusually good, the heads being reported, as a rule, as well filled and the berry plump. In some of counties—notably in Carroll and Dorchester—the falling off is not such as to be a matter of serious concern to the farmers, while in others there is much complaint of exceptional shortness of the crop. Frederick and Washington counties especially seem to have suffered greatly from the fall drought and the severe winter weather, and not more than half an average crop is reported. The farmers of Maryland on the whole, however, seem to have good reason to congratulate themselves on their escape from what seemed to be the inevitable failure of the crops to a much greater extent than now appears to have been the case.

Cremated by their own Carelessness.

BELFAST, Me., July 12.—Shortly before 1 o'clock this morning Wesley Twombley, John Casey and James McCabe returned from a drive. They were very drunk, and, while engaged in putting their horses in the stable of the Belfast Livery Stable Co., where Twombley was employed, one of their number kicked over a lantern, which exploded, and in an instant the building, which contained 20 horses, was in flames. McCabe succeeded in making his escape, but Twombley and Casey, instead of running out of the building, rushed upstairs, and their charred corpses were found this morning lying with the bodies of the horses, all of which were burned to death. From the stable the fire spread to the Atlantic House, owned by George Weeks, and before the flames could be extinguished 23 houses and stores in the center of the town, with the hotel, were totally destroyed. The insurance will not cover one-third of the losses, which amount to $50,000.

General Grant's Preface.

From Gen. Grant's Forthcoming Memoirs.

"Man proposes and God disposes." There are but few important events in the affairs of men brought about by their own choice.

Although frequently urged by friends to write my memoirs, I had determined never to do so, nor to write anything for publication. At the age of nearly 62 I received an injury from a fall, which confined me closely to the house while it did not apparently affect my general health. This made study a pleasant pastime. Shortly after, the rascality of a business partner developed itself by the announcement of a failure. This was followed soon after by universal depression of all securities, which seemed to threaten the extinction of a good part of the income still retained, and to which I am indebted to the kindly acts of friends. At this juncture the editor of the *Century Magazine* asked me to write a few articles for him. I consented for the money it gave me; for at that moment I was living upon borrowed money. The work I found congenial, and I determined to continue it. The event is an important one for me, for good or evil; I hope for the former.

In preparing these volumes for the public, I have entered upon the task with the sincere desire to avoid doing injustice to anyone, whether on the National or Confederate side, other than the unavoidable injustice of not making mention often where special mention is due. There must be many errors of omission in this work, because the subject is too large to be treated of in two volumes in such way as to do justice to all the officers and men engaged. There were thousands of instances, during the rebellion, of individual, company, regimental and brigade deeds of heroism which deserved special mention and are not here alluded to. The troops engaged in them will have to look to the detailed reports of their individual commanders for the full history of their deeds.

The first volume, as well as a portion of the second, was written before I had reason to suppose I was in a critical condition of health. Later I was reduced almost to the point of death, and it became impossible for me to attend to anything for weeks. I have, however, regained somewhat of my strength, and am able, often, to devote as many hours a day as a person should devote to such work. I would have more hope of satisfying the expectation of the public if I could have allowed myself more time. I have used my best efforts, with the aid of my eldest son, F. D. Grant, assisted by his brothers, to verify from the records every statement of fact given. The comments are my own, and show how I saw the matters treated of, whether others saw them in the same light or not.

With these remarks I present these volumes to the public, asking no favor but hoping they will meet the approval of the reader.

U. S. GRANT.

Mount MacGregor, N. Y., July 1, '85.

The "Pall Mall Gazette's" Charges

LONDON, July 14.—The editor of the *Pall Mall Gazette* has received letters from the Queen and Mr. Gladstone, in which they heartily thank him for the recent exposures of the traffic in young girls for immoral purposes, and assure him that he has their full sympathy in the matter.

The *Pall Mall Gazette* announces this afternoon that the Archbishop of Canterbury, the Bishop of London, Cardinal Manning and the Hon. Samuel Morley have consented to act as a committee of inquiry into the charges of aristocratic iniquity made by the *Gazette* in its revelations during the past week. The committee, which is looked upon as one of the most extraordinary in the high character of its members ever organized, will begin the work of investigation to-morrow afternoon. The *Gazette* will place in confidence before the committee every detail of the evidence gathered by the paper's reportorial commission on which it relies to prove the existence of the wickedness unveiled by it. Every reporter engaged in the *Gazette's* investigations will appear under oath before the committee, and each will produce all the memoranda gathered by him during the several weeks of inquiry, together with all the addresses, letters, portraits, descriptions and identifications of persons, certificates and agreements collected, and referring in any wise to persons, directly or indirectly implicated in the discoveries made. The committee will treat confidentially all the information placed before it, but will make a general report as to the truth of the *Gazette's* revelations.

State of Trade.

NEW YORK, July 11.—*Bradstreet's* in its commercial summary says: "There has been no increased volume of moving merchandise during the past week. Special telegrams to *Bradstreet's* from many of the larger trade centers report almost uniformly a midsummer dullness in staple lines. At Baltimore, as well as at New Orleans, although business is inactive, the tone is reported to be stronger under the influence of expectations of full crops at the South. This holds true at Galveston and others of the larger Southern cities, where at present buying is conservatively slow. At Minneapolis and St. Paul the country merchants are said to be buying in small lots only, but the prospects of a fair harvest of spring wheat, as reported by wire yesterday to *Bradstreet's*, encourages jobbers to look ahead to a good business in the autumn. The advance in eastbound rail rates on grain and provisions to 15 cents and to 20 cents per 100 pounds respectively did not result in any appreciable change in the movement of produce, owing doubtless to the existence of unexpired time contracts at low figures with heavy figures.

The leading financial centers of the country are as heavily charged with surplus funds as ever. At Chicago, as at New York, the lowest call rates known have been made, and large lenders on good securities are practically in the hands of borrowers. *Bradstreet's* calculates on the basis of production, exports, average domestic consumption, and increase in population for three years that there were about 116,000,000 bushels of old crop wheat still on hand on the 1st inst. Of this 58,000,000 bushels as wheat and 10,000,000 bushels as flour were accounted for in *Bradstreet's* visible supply of July 1, thus pointing to 48,000,000 bushels still in the first hands, of which about 28,000,000 may be considered available. This points to 96,000,000 bushels of available old crop wheat, allowing 20,000,000 for next year's surplus.

Dry goods are quiet. Print cloths are a little firmer, owing to the restrictions placed on production. At a number of points the volume of dry goods placed during the first half of 1885 was quite equal to that in a like part of 1884, but prices have been much lower.

BOSTON, July 11.—The *Advertiser* in its weekly review of the wool market says: The market has been more active. A more general inquiry has been made by manufacturers and more interest shown by them than for some time, There has been an advance in unwashed and unmerchantable and staple wools of about 1c. per pound over last week, and manufacturers have bought these very freely. Another feature of the market has been more confidence on the part of dealers, commission men and buyers of wool in the values now prevailing. It is evidently thought that for some descriptions prices are at bottom.

Baltimore Live Stock Market.

[From Baltimore American.]

MONDAY, July 13, 1885.

PRICES OF BEEF CATTLE AT THE MARKET TO-DAY.

Very best on sale to-day 5¼@5½c., that generally rated first quality 4¼@5¼ cts; medium or good fair quality 3½@4 cts; ordinary thin steers, oxen and cows 2½@3½ cts; extreme range of prices 2½@5¼ cts; most of the sales were from 3¾@5½.

REMARKS ON BEEF CATTLE.

The arrivals of Cattle during the week amounted to 1,341 head, against 1,847 last week and 2,173 head the corresponding week of last year, and the sales were —— head, against —— last week, and 1,212 head the corresponding week of last year.

There is little or no improvement in the activity of the market to-day, as compared with that of last week. Prices for tops were off ½c., as to quality, and other grades much more, ¼@½ in some instances. The quality will not average near as good as it did last week, a smaller number of nearly as good tops, and a longer line of middle and common cattle, thin stockers and heifers, which were very difficult of sale, being fairly well represented among the offerings. Prices 2½@5½c., few at the latter, and none at or near the former figure. Most sales 3¾@6¼c.

THE SWINE MARKET.

The receipts were rather light and prices a shade higher than they were last week, ranging from 5½ to 6¼c., with most of the sales at the latter figure, those under that—ranging from fair hogs to common rough sows and stags—as low down as 5¼c., at which there were not many sales. The quality will average about like last week's offerings, some dealers reporting falling off in that regard, and as many say their hogs were better than they were then. Same time last year hogs sold at 6¼@7¾c., with a fair number at the latter price,

THE SHEEP MARKET.

There is a fairly good supply of sheep in the market, and no improvement in the quality over last week's offerings. Trade is quite dull for most of the stock, which is not of a very superior order, while good sheep and lambs are in fairly good demand. There is no outside demand, our home butchers chiefly being the buyers. Prices range from 2 to 4½c., few selling at the latter price, and a fair number under 2; lambs 3 to 6c. gross. Same time last year sheep sold at 3@4¼c., and lambs at 4@6½c., few bringing the latter price.

The railroad estimate of the Peninsula peach crop is 3,000,000 baskets.

LOCAL NEWS.

LODGE MEETINGS.

OAKLAND LODGE, I. O. G. T., meets in Sturgiss' Hall every Tuesday night.

LOCAL BRANCH, No. 85, of the Iron Hall, meets in same Hall 1st and 3d Saturday nights of each month.

ALTA LODGE, No. 574, K. of H., meets in same Hall 2d and 4th Thursday nights of each month.

SHEALTIEL LODGE, No. 122, I. O. O. F., meets in Legge's Hall every Monday night.

PATMOS COUNCIL, No. 386, A. L. of H., meets in same Hall 2d and 4th Friday ntghts of each month.

ANNOUNCEMENTS.

[Advertisements under this heading will be inserted at the following rates: For Members of the Legislature, Clerk of the Circuit Court and Sheriff, $4.00; Surveyor and County Commissioners, $3.00, and for Register of Wills, $2.00. Advertisements to run till the meeting of the Nominating Convention. The space allowed will be six lines or less, and 50 cents per line will be charged for each line in excess of that number. No name will be announced until the fee is paid.]

FOR SHERIFF.

At the solicitation of many friends I hereby announce myself as a candidate for Sheriff of Garrett county, subject to the action of the Republican County Convention.

JOHN H. RILEY.

July 7, 1885.

—Jacob Brown, Esq., of Cumberland, paid us a pleasant call Monday.

—Mrs. General Crook and her sister, Mrs. Read, are at the Glades Hotel, Oakland.

—Mrs. Stahl, widow of the late John Stahl, desires to dispose of her house and lot in Oakland. Persons desiring a cheap property should make a note of this. 7 18 tf

—Mr. John A. Wolf has just received from Chicago a large lot of frames, mouldings, brackets, cornice polls, &c. Call and see his stock at his shop East end of Oak street.

—Mr. H. Allen Ison, of Washington, D. C., is at his home in Oakland, where he will remain about two weeks. We hope Allen will not be considered an "offensive partizan" by the present administration.

—Mr. G. H. Pritchard is now prepared, in his new gallery, to take pictures of all kinds. He has engaged the services of a first class re-toucher, and feels confidant that he can give entire satisfaction. Gallery in the new Pritchard Building, up-stairs.

—Alfred Howell, Esq., and his son, George D. Howell, Esq., of Uniontown, Pa., are at the Oakland Hotel. They will remain here a short time and return home by way of Berkely and Bedford Springs. We would be glad to have them here every season and make their stay more extended.

—We neglected to state in our last issue that we had received from Mrs. Jacob Mosser, of Accident district, a few specimens of strawberries raised by that lady this season. They were decidedly the largest berries that ever came under our notice, and would command a fancy price in any market.

—Joseph Paxton, a character well-known in Piedmont, was arrested there Saturday night by Officer Combs charged with assaulting Miles Long, a machinist, of Altoona, who had been doing some work in the Elk Garden region. Paxton was taken before Justice Maner Jenkins, who committed him to jail. It is stated that Paxton struck Long with a car coupling, knocking him down and then attempted to rob him. Before Paxton got any money, however, he was frighted off by persons whom Long's cries brought to the scene. The affair occurred behind the sand house in the Baltimore and Ohio railroad yard at Piedmont.—*Cumberland News.*

Church Services--Sunday.

M. E. Church—Preaching at 8 P. M. by Rev. M. W. Rider.

Garrett Memorial (Pres.) Church—Preaching at 11 A. M. by Rev. John S. Foulk.

St. Peter's, Catholic— Preaching every Sunday at 10½ o'clock A. M., except the second Sunday of each month.

Notice!

All persons knowing themselves indebted to me will please call and settle by cash or note. All claims not settled by the 1st of June next will be given out for collection.

H. A. RASCHE.

Chance for Investment.

For sale or rent, two cottages, furnished, with use of horses and carriages.

MRS. E. A. KILBOURN,
4 11 Oakland, Md.

Marriage Licenses.

Marriage Licenses were granted to the following parties during the month of June:

George W. Smith and Mary E. Durst.

John McKinsey and Catherine Langley.

Andrew J. Oester and Lucinda Brenneman.

Charles A. Green and Lizzie Greene.

Charles H. Feaster and Annie Groves.

Ellsworth M. Golden and Annie L. Grover.

—List of names in Jury Box after drawing Jury to September Term, 1885: Charles Murphy, Henry Paugh, Alex. Fairall, Edward I West, John Ashenfelter, George W. Lee, J. Z. Browning, Allen Garlitz, Isaac V. Lansdale, George O'Brien, Wm. A. Coddington, Harrison Collins, Newton Guard, John T. Geary, Hiram Hileman, George D. Frantz, Wm. H. Frazee, Taylor Friend, Samuel Falkner, John M. Miller, Wm. McCabe, Jonas E. Gnagey, Gilead Broadwater, Freeman H. Graham, Michael Nathan, George Royer, Peter J. Stevens, Antony Layman, Patrick Garlitz, Josiah N. Patton, James Ravenscraft, Mark Fazenbaker, Henry Wagner, John Mellinger, Henry Muhlenburg, Lloyd Dawson, Thomas E Harrison, George L. Michael A. J. Real Estate Transfers.

The following is a list of real estate transfers filed for record in the office of W. H. Tower, Clerk of the Circuit Court for Garrett county, for the month of June:

J. W. Baker and wife to Abraham J, and J. H, Wilson, all their right, title and interest in a tract called "Little," 50 acres; $100.

Wm. Barnes to Bushrod White, lot No, 491; $4.00

Noah Wilt and wife to Samuel Warnick, lot No. 1978; $450.

Edward Orado and wife to Wm. M. and Mary Thayer, part of a tract called "Deep Creek Farm," 240 acres, excepting therefrom 80 acres; $1120.

Daniel E. Beckman and wife to Rudolph Beckman, part of a tract called "Hinches Discovery," 129⅝ acres; $400.

Andrew Sebold to Noan Pysell, 42 perches of land; $42.

John Warnick and wife to Jesse Warnick, part of a tract called "Warnick's New Settlement," 149 acres, 159¼ perches, also 2 acres adjoining the aforenamed piece; $2500.

J. P. Rodruck and others to Mary Ann Garvey, North half of lot No. 15 in the Town of Bloomington; $60.

Moses A. Ross and wife to Cassius N. and Homer Friend, part of Lots Mos. 3277 and 3278, 64¾ acres; $895.

Thomas Fike and wife to Mary J. Welch, 5 acres and 90 perches of land; $69.53.

Thomas H. Layman and wife to Michael W. and Norman B. Durst, lots Nos. 744 and 783, 100 acres; $700.

C. F. Funk to Jacob F. Stoner, an undivided 3-32 part of two tracts, one containing 436 acres, the other 180 acres; $197.90.

John P. Hubbard and wife to G. W. Stewart, lot No. 162; $300.

Wm. R. Getty and wife to Louisa J. Merrill, their interest in a tract called "Bear Camp," and lot No. 5, also all that tract called "Correction," 100 acres; $958.

Mary Lish to Frank L. Lish, her interest in 33 acres in lot No. 493, no money consideration.

F. M. Conneway and wife to Geo. Shartzer, part of lot No. 4126, 12 acres; $60.

C. W. Hileman and wife to Asa and Wm. Durst, 176½ acres of land; $1000.

Susanna Beal and Wm. J. Beal and others to Lewis R. Learne, 3 acres of land on National Road; $150.

H. G. Davis and wife to J. W. Laughlin, lot of land in Deer Park; $180.

Smith Crane, special commissioner, to Henry Albright, 112¾ acres of a tract called "Livonia," or "Best Described"; $75.

Hetty Bowser to Noah Biddinger, her undivided interest in lots 2134, 2181, 2283 and 2293; $50.

H. G. Davis and wife et al to Jacob S. Sanders, part of a tract called "Strawberry Plains," 1 acre and 150 perches; $25.

Lochiel Lumber, Mining, Manufacturing and Improvement Company to Oliver K. Lapham, part of a tract called "Lochiel," 20 acres; $250.

John G, Knauer and wife to Wm. F. Welch, tract called "The W[illegible] ow's Fancy," 15 acres, also a piece called "Royal Charlotte," 8¼ acres, lot No. 2512 and one-half 2511; $1[illegible].

Gilmor S. Hamill, Mortgagee, to Wm. B, Hutson, 25 acres of lot No. 1228; $271.

Joseph R Anderson and wife to Argyle Twigg, part of a tract called "Latent Worth," 61¼ acres; $368.

George Schley and others to Johnson King, lot No. 1532; $575.

Margaret A. and Edward B. Fuller to Josiah W. Durst, lot ½ mile west of Grantsville, 114 perches, and another lot containing 2 acres; $282.

Wm. Wolf and wife to Reuben Liller, lot in Deer Park ½ acre: $300.

Reuben Liller and wife to Isaac I. Thompson, lot in Deer Park, ½ acre; $275.

John W. Shillingburg to Wm. P. Faherty, lot containing ¼ acre; $45.

Death of an Estimable Lady.

Died, at the residence of her son-in law, Dr. E. H. Bartlett, in Oakland, Wednesday night of last week, of neuralgia of the heart, after a brief illness, Mrs. Fairall, relict of the late Richard Fairall, in the 73d year of her age. Mrs. Fairall's maiden name was Taggart, and she was born in Romney, W. Va., March 12th, 1813. For more than fifty years she was a resident of this State. She had been a consistent member of the M. E. Church for many years, and was highly esteemed and beloved by all who knew her. She leaves eight children surviving her: Mrs. Dr. Bartlett, Mrs. R. J. West and Wm. Fairall, of Oakland, Mrs. Drs. Carr and Welfley, of Cumberland, Mrs. Jennie Fairall, of Baltimore, Richard Fairall, of Swanton, and Truman Fairall, of Tecumseh, Neb. The funeral took place from the residence of Dr. Bartlett, Saturday at 11 o'clock A. M., the services being held in the M. E. Church, conducted by Revs. Benjamin Ison and M. W. Rider, of the M. E. Church, and Rev. P. Hamill, of the M. E. Church, South. The interment was in the Odd Fellows Cemetery. The funeral was largely attended by relatives and friends of deceased.

A Sad Accident.

ELKINS, MD., July 6, 1885.

EDITOR REPUBLICAN:—Having observed that there has been no notice given through your worthy columns of the death of little Alma Harvey, we yet ask for space to report as given through the *Messenger*.

On Wednesday evening, May 20, 1885, near Camden, W. Va., Alma A., daughter of John W. and Mary E. Harvey, was found dead in a spring not far distant from the house, having fallen in and drowned before she was missed. Little Alma, whose age was just two years and eight months, seemed to possess more than ordinary knowledge and deportment for one so young. Her mother has been an invalid for over two years, but Alma seemed to understand it, and made but little trouble. She would show even patience and gentleness whenever she could not receive the accustomed maternal care. Quietly and demurely would she keep her seat during the course of Sabbath School or church service, as if fully comprehending the propriety of religious worship. Though young she will be missed. The bereaved family have the sympathy of the entire community, for the sudden departure of their cherished little one was a sad stroke.

A Grand Picnic.

On Saturday last the most enjoyable pinic of the season came off at Wm. Browning's grove, three miles south of Oakland, The success of the entertainment was due to the skillful management and untiring energy of Mr. L. L. Conneway, who originated the idea, and is a host himself on such occasions. The *sole* inspiring music of "Steye" Browning's fiddle could be heard from 8 A. M., to 11 P. M., keeping the disciples of Terpsichore in lively motion during the day and night. Good order prevailed, and all present, including many of Garrett's fairest daughters, declared it to be "the boss picnic of the season," and mine host Conneway a prince of good fellows.

PHŒNIX.

Bucklen's Arnica Salve.

The best Salve in the world for Cuts, Bruises, Sores, Ulcers, Salt Rheum, Fever Sores, Tetter, Chapped Hands, Chilblains Corns, and all Skin Eruptions, and positively cures Piles, or no pay required. For Sale Cheap.

A second hand Smutt Machine in good running order, will clean from 15 to 20 bushels per hour. Call on, or address,

H. A. RASCHE.
Oakland, Md.

Town Council Meeting.

A special meeting of the town council was held Monday night. Present Burgess Offutt and Commissioners Hamill, Helbig and Jamison.

The Burgess was authorized and directed to employ the county surveyor or to examine the plats of Wilson's First and Second Additions to the Town of Oakland, and to locate Wilson street.

Burgess Offutt suggested that the receipts for the present, to-wit: From uncollected tax bills of 1884, $236.14, from taxes for 1885, $1,053.08, from county $200, total, $1,489 22, be expended as follows: Set apart for Bailiff, $338.80, for lamps, $72.45, for election, $10.00, for Burgess and Commissioners $86.00, for clerk, $25.00 total, $532.25; which would leave a balance of $946.97. Of this amount $500 is to be set aside for the reduction of our present indebtedness, and the balance, $446.97, be used upon the streets.

Mountain Lake Park.

As was announced, the forty-first annual session of the National Division of the Sons of Temperance of North America convened here on last Wednesday, the eighth inst. There was a good attendance. Delegates came from New York, New Jersey, Maryland, Pennsylvania, Connecticut, Massachusetts, Maine, Ohio, Illinois, Rhode Island, New Hampshire, Nova Scotia, New Brunswick, Kansas, Ontario, Quebeck, District of Columbia, California, Minnesota, and Delaware. There were from one to eighteen delegates from the different states mentioned. They held their private meetings during the day, and at night held public meetings, which were very entertaining indeed. This entire body was made up of earnest and intelligent men and women, who are capable of accomplishing much good, and would be an honor to any community. Most of them left for their homes on Friday and Saturday, yet several stayed until Monday to attend the camp meeting, which began on Saturday morning.

The camp meeting started off grandly, and is increasing in interest and power. It could hardly be otherwise, from the earnest corps of workers present. Dr. Dugan Clark, of Richmond, Indiana, D. B. Updegraff, of Mt. Pleasant, Ohio, Captain Carter, of Chester, Pa., Miss Lizzie Smith, of Philadelphia, Miss Lizzie Boyd, of Wheeling, W. Va., Dr. I. D. Pepper, of Philadelphia, Smith Crane, of Kingwood, W. Va., and Rev. Hudson, the inspiring singer, with many others, are engaged in this grand work, which is to continue over next Sabbath.

Mrs. Hart, of Washington, D. C., is with us again to teach her elocution class, to begin July 15, but the demand put her to work last week.

Mrs. Eva Hubbard, teacher of Art in the Wheeling Female College, and pupil of Prof. Carrol Hecker, of N. Y. City, is opening a class of Art in this place. She will teach mechanical, landscape and crayon drawings and various paintings.

There are many visitors here now, who are delighted with the place. Lots are being purchased and improved property is being looked up.

J. A. E.

Accident.

Frost last week.

Rains badly needed.

Harvesters at work.

Too hot for anything now.

Politics way down below zero.

Mr. J. Miller is promised a house full of summer boarders.

Mrs. Stoffer is confined to her bed with a fracture in the hip joint.

Mr. Gnagey is selling quite a number of hay carriers and hay forks.

Mrs. Salem Lee, who has been quite ill with typhoid fever, is recovering.

The 4th was celebrated here after all by two church pic-nics, which were well attended.

Edwin Boyer, a son of Aaron Boyer, fell from a high porch and fractured his arm near the elbow.

Mr. Charles Troxele, formerly in the U. S. Internal Revenue service here, visited our merchants last week as a commercial traveller for a Hagerstown Manufactory Co.

Mrs. John C. Dunham lately visited friends and relatives in this vicinity. Mrs. Dunham has many warm friends in this section. Her daughter accompanied her.

We are under obligations to Mr. Abraham Turney for a fine specimen found in a lime kiln. We will be glad to receive and report on specimens of all kinds.

Mr. Gideon Miller is running the well drill. He has completed the parsonage well and gone to John Richter's. The drill got fast in the rock at 80 feet, and it seemed it was fast to stay, but it's a bad case if Mr. Miller can't overcome the difficulty, which he did in this case in rather short order.

The progenitor of the Miller family, Jose Miller, still lives near Grantsville, and was a mechanical genius, and the bent of the mind of the family all run in the same direction.

George Alt, Jr., and William Harden run the mail route between here and Grantsville. Charles Mitchell, of Addison, has the Petersburg and Oakland route.

The following young ladies and gentlemen are now taking music lessons from Miss Butler, of Washington: Misses Martha Glotfelty, Minnie Englehart, Laura Haman, Clara Gnagey, Bertha Glotfelty, Katie Garinger and Mr. Edwin McMillen.

Deer Park.

The Teachers' Convention last week was a very pleasant time for Deer Park, and some very interesting essays were read. The meetings broke up on Thursday evening, concluding with a ball at the Hotel. A part of the company went to Cheat River on an excursion Friday.

The Band of Hope met on Saturday evening last. Mr. Chas. Boyer and his sister, from Oakland, were present, and kindly gave some very excellent recitations.

Mr. George O. Lee fell from a haymow last week and injured his ankle very seriously, but is doing as well as could be expected.

Mr. C. H. Tillson has been unable to work for a week or two, in consequence of a severe sprain of the knee.

The B. & O. R. R. cottages very nearly finished, and the Hotel is daily increasing in numbers.

Misses Birdie and Helen Harrison, and Miss Annie Graham, of Piedmont, were in Deer Park during the Convention.

Mr. E. T. Sawyer, of Chicago, and Miss Maggie Schoolfield, of Baltimore, are visiting relatives at Wing-and-Wing.

Miss Mamie Jones, of Montgomery county, is visiting Miss Mattie Davis.

Miss Rosa Poesche, of Washington, is at Mr. John Friend's, near Altamont.

The glorious Fourth passed off pleasantly and without an accident. Fireworks were exhibited before the houses of Mr, Harrisan Garrett, Hon. S. B. Elkins and at Wing-and-Wing, and the Young Americans generally were independent.

Registered at Wing-and-Wing:

Pittsburg, Pa.—M. A. Ross.

Johnstown, Md.—E. E. Enlow.

Baton Rouge, La.—J. Simon, wife and two children.

Piedmont, W. Va.—Miss Jennie Fazenbaker, J. A. Suter and wife.

Cumberland, Md.—John R. Diffenbaugh.

Accident, Md.—Miss Hattie Beachy

Baltimore, Md.—Prof. Wm. Elliotte, Miss Rigott, Miss D. Franklin, Miss J. Franklin, J. A. Wheeler, Edgar G. Jones.

Washington, D. C.—Misses L. Silver, O. Silver, O. Eastward, Agnes L. Daly, Mary O'Driscole and W. P. Moore.

***

Maryland Items.

Sixty-four new buildings were erected in Hagerstown during the first half of the present year.

One hundred and eighty priests and scholastics are at St. Ingoes. They are principally from Woodstock College.

Mr. Austin Adams, of St. Ingoes, St. Mary's county, has 50,000 hills of potatoes planted. Other farmers have from ten to thirty thousand.

Mr. Hugh Harris, of Landing Neck, has a young turkey hen that has laid over a hundred eggs this season, and yet shows no disposition to set.—*Easton Ledger.*

A New England gentleman residing near here states that he saw no better wheat in Minnesota, where he once resided, than may be seen the present season within a circuit of ten miles of Federalsburg,—*Federalsburg Courier.*

Smithsburg has a lady resident who is a second cousin to President Cleveland and also a grand-niece of the late Martin Van Buren, but notwithstanding her Democratic ancestry she is a Republican.—*Hagerstown Herald and Torchlight.*

Mr. Elias Martz, living near town, lost two hogs last Friday evening, death being caused by eating locusts. Just before the hogs died they suffered great agony, as they jumped from the ground and would bite and snap as though mad. After they died a post-mortem examination was made, and nearly a peck of locusts were found in each hog's stomach. Those who performed the operation say that poison from the locusts existed in the stomach, which caused death. —*Boonsburo' Times.*

Sunday's American contained the following telegram from its special correspondent at Washigton: "For several days past the number of appointments made in the Treasury has been very small, each day that number has been growing less, until now the appointment clerk has not sent a paper or endorsement to the Secretary, nor did that Cabinet officer today appoint one of the usual Saturday budget. The sudden calling of "down brakes" has been noticed, and the Democrats have been busy within the last two days inquiring the why and wherefore of this sudden stoppage. Their inquiries have led them into other departments, and in all, except in the Postoffice, the same state of affairs has been discovered. In the Postoffice the fourth class postmasters are being appointed as usual, but a look over the list shows that they are appointed only to fill vacancies, and very few, if any, are being removed for offensive partisanship. The reason for this shutting off the food for the hungry masses is none other than an order from the White House. At a recent Cabinet meeting the question of discharging present incumbents on the ground of offensive partisanship was thoroughly discussed, and President Cleveland announced that the sword has two edges, and already it was beginning to cut the wrong way. The great delight with which this cause for removal was received promised good things, but it has proven a boomerang. It had already begun to hurt the administration, and the President called a halt for a time. His wishes were no sooner made known than his Cabinet bowed in obeisance, and that is why the appointments are now so few and far between. The Cabinet officers are looking up other charges than offensive partisanship to lay against office-holders. The course of the President is the result of advice and conferences with leading politicians who have seen the harm already done the administration by this cry."

"Thank heaven," exclaimed a fond father, as he paced the floor at midnight with his howling heir, "thank heaven you are not twins."

NEW ADVERTISEMENTS.

W. A. WORTMAN,

WATCHMAKER & JEWELER,

PRITCHARD BUILDING,

THE OLD MOWER.

[Recently read before the Ruggles Street (Boston) Young Men's Union.]

In the days of my youth I remember
An old mower sang me this rune:
"The aftermath of the September
Is not the sweet clover of June."
And he said: "Whatever thy station,
Whatever thy hands may employ—
Be true to thy best inspiration,
'Tis thy Angel of Blessings, my boy."
Then swift rung his scythe, that old farmer's,
And fast fell the grass to the rune:
"'The aftermath of the September
Is not the sweet clover of June.'"

The osprey's green wings drifted o'er me,
On the sun-tides, while glinting below,
The bob-o-links toppled before me,
And the wind blew the daisies like snow.
All nature seemed filled with elation,
And the old farmer whistled for joy:
"'Tis the fruit of life's young inspiration
That fills life with gladness, my boy."
And, his scythe all embedded with flowers,
He plied up the grass to the rune:
"'The aftermath of the September
Is not the sweet clover of June.'"

The gray walls with roses were glowing,
The blue lilies breathing below:
Afar were the meadow brooks flowing
By the mill, in the high noon aglow.
And he said, while the herons wheeled over,
And screamed in the sun in their joy,
"The a r is all fragrant with clover,
'Twas clover I planted, my boy."
And on paced the red-shirted farmer,
And on fell the grass to the rune:
"'The aftermath of the September
Is not the sweet clover of June.'"

"'Tis the spring-time that glows with endeavor,
And gives to young purpose its power:
The sun of the autumn will never
Bring forth the ripe fruit from the flower.
Though the aftermath springs from the clover,
The clover comes not from the fern;
Give thy hand to thy best inspiration,
Thy spring-time will never return!"
And on swept the scythe of the farmer,
And on fell the grass to the rune:
"'The aftermath of the September
Is not the sweet clover of June.'"

One day, when September was burning,
I met the old farmer again,
The thin swathes of the aftermath turning
Where once the thick clover had lain.
And gone were roses and lilies,
One lone robin sung in the tree:
"It is clover that comes from the clover,
But the first cut was double, you see."
And he rifled his scythe, that old farmer,
And cut the thin grass to the rune:
"'The aftermath of the September
Is not the Sweet clover of June.'"

"Ah, youth is no season for leisure,
Too wide its horizons expand:
In thy purpose and struggle find pleasure
That is worthy the brain and the hand.
And cold as the wiles of the tempter
Whatever that purpose debars;
The lamps of the red billiard palace
Are not the white lights of the stars."
And rung his old scythe to the rifle,
And cut the thin grass to the rune:
"The aftermath of the September
Is not the sweet clover of June."

The years of my youth are all ended,
The old man sleeps under the fern,
But oft the long days of my childhood
And the rune of the hayfield return.
'Tis the seed of the spring that has promise,
The choicest seed, bounteously sown,
And the breath of the spring-time will never
Come back to the fields that are mown.
And over, and over, and over,
My years bring the thought of the rune:
That no aftermath sweet of the clover
Is like the sweet clover of June.

—*Hezekiah Butterworth.*

AN "INSANE" PATIENT.

The Charlatan and the Absconding Bankrupt.

Dr. Clarence Jones was an enterprising young gentleman who meant to succeed in his profession. He was not clever in the sense of being well read, and, in fact, he had only just managed to scrape through the qualifying examination. But he did not aspire to scientific distinction and took no higher view of his calling than to regard it as a means by which he might possibly make a fortune. He considered that he would only be wasting valuable time by seeking a hospital appointment for the sake of gaining experience. Instead, therefore, of going through the routine of a young doctor's early career he took the bold step of renting the ground floor of a large house in a fashionable quarter and setting up immediately as a consulting physician. He was shrewd enough to perceive that he was best qualified to succeed in that branch of practice, being at heart a mere charlatan. He had acquired the art of making a great show of a smattering of knowledge, he had carefully cultivated a bland and impressive manner, and he thoroughly realized that the great secret of amassing wealth is to be utterly unscrupulous in the matter of fees, and never to release a patient while he can be imposed upon by humbug. As though to aid his ambitious designs, nature had endowed him with a good presence, a high and shining forehead, which was enhanced by premature baldness, and a soft, melodious voice.

He found it uphill work at first, of course; but he had no real cause for dissatisfaction. He went as much as possible into society and made useful friends. He was always particularly careful to be polite and attentive to the wives and daughters of physicians in good practice. In fact he showed his sagacity by assiduously courting the suffrages of lady acquaintances. The consequence was that patients soon made their appearance, while neighboring doctors, owing to domestic influences, found many opportunities of putting stray guineas into his pocket. In a very short time he contrived to gain the reputation of having established a practice and soon came to be regarded as a rising man.

Dr. Clarence Jones did not hide his light under a bushel, but was rather addicted to boasting of his success. Some of his professional brethren smiled at this, knowing from experience how slow and laborious is the work of making a remunerative practice. But the wisdom of his tactics was proved by the fact that even these skeptics had no suspicion of the real condition of affairs. The truth was that at the end of three years Dr. Jones found himself hopelessly in debt, his professional earnings having fallen far short every year of his modest requirements. His practice was increasing, to be sure, and in all human probability the time was not far distant when it would yield him a decent income; but meanwhile, just as it was more than ever necessary to keep up appearances, bankruptcy and ruin stared him in the face. He had spent his small capital, creditors were pressing, and he was literally reduced to providing for his daily wants by surreptitiously pawning his personal effects.

In such circumstances an elastic conscience is often a useful ally. Young Dr. Jones, having no scruples whatever on the subject of his liabilities, was enabled to devote all his energies to the difficult task of evading them. He was quite unmoved by the tailor's pathetic appeals, while he succeeded by sound argument in convincing that long-suffering individual that his only chance of getting paid was to wait. But his powers of reasoning and persuasion, though efficacious in some cases, often proved unavailing, so that the air became dark with writs and legal processes. The poor young man was thus fairly driven to his wits' end and saw no alternative but to make known his embarrassments and thereby jeopardize the success which seemed to be almost within his grasp.

One morning Dr. Jones was gloomily seated in his consulting-room, waiting for patients, when there came a knock at the door and a little, shabbily-dressed, bright-eyed elderly man was presently ushered in. Dr. Jones greeted his visitor with mingled feelings, being disappointed of a patient, yet relieved to find he was not a sheriff's officer.

"How are you, Mr. Graves?" he said, instinctively, adopting the condescending tone of a physician towards a general practitioner. "What can I do for you?"

"Nothing, thanks," said the little man, briskly: "but you can do yourself a turn, if you are so disposed."

"What do you mean?" inquired Dr. Jones, a trifle taken aback.

"Balmyre has asked me to go up to Highbury to give a certificate of insanity, and as he suggested that you might also be willing to take the job I called to carry you along with me?" returned Mr. Graves, putting his hands under his coat-tails and warming himself before the fire.

"Well, I am always glad to oblige Dr. Balmyre, but 'pon my word it is rather inconvenient," said Dr. Jones, with importance, but avoiding his companion's twinkling eye. "I expect half a dozen people here. Just the busiest time in the day, too," he added, glancing at his watch.

"They haven't come yet, and as the weather is bad I dare say they'll put it off till to-morrow," said little Mr. Graves, with a smile.

"Where did you say the place was? Highbury! That is a long way off," said Dr. Jones, endeavoring to look quite unmoved.

"We shall be back in less than an hour. My carriage is at the door, returned Mr. Graves, a little impatiently.

"Well, as I have said, I should be sorry to disoblige Balmyre; and as for my patients, if they won't keep their time, they must wait," said Dr. Jones, opening the door to his visitor and signifying that he would accompany him.

He felt relieved to escape the quiet and penetrating gaze of little Mr. Graves, for he was painfully conscious that his attempted air of superiority had been a failure. Of course, he was only too glad of the opportunity of earning a couple of guineas on a dull morning, but it was contrary to his creed to allow anyone to suspect it. Above all, he considered it essential to his dignity as a physician to appear a trifle condescending to a general practitioner and he honestly felt a tinge of contempt for little Mr. Graves. He might be clever enough—and, indeed, he was really a worthy disciple of the healing art. But what, he said, was to be thought of a man who, wantonly neglecting opportunities of amassing wealth and obtaining celebrity, went about in thick shoes and a shocking hat, visiting all the lowest and poorest parts of the district?

Little Mr. Graves showed he was a good fellow by not taking umbrage at the young man's impertinence and self-importance, and Dr. Jones insensibly began to adopt a more genial tone and manner during the drive. Their destination proved to be a small house in an unpretentious street near Highbury Station, and the formalities of the business on hand were quickly dispatched. The patient was a middle-aged man, whose behavior and conversation seemed to fully testify to the aberration of his intellect. Dr. Jones signed the certificate with a clear conscience, mentally contrasting the present case with others he had certified to for Dr. Balmyre when Mr. Graves had not been his companion.

When they took their seats in the carriage again to drive back, Dr. Jones glanced at the house they were leaving and said:

"I wonder who the patient is?"

"William Roberts," said Mr. Graves, in his matter-of-fact way.

"Yes, I know his name. But how the deuce can people in that position afford to pay Balmyre's terms? His asylum is one of the most expensive there is."

"Ah! That has struck you also, has it?" said Mr. Graves, meaningly.

"Well, it's odd, isn't it? However, I suppose his relatives will starve themselves to pay for him."

"Did anything else strike you?" inquired Mr. Graves.

"No. What do you mean?" said Dr. Jones, innocently.

"Have you any doubt of his being mad?"

"Good gracious, no! Have you?" demanded Dr. Jones, in amazement.

"I signed the certificate. I suppose it is all right, but when I reflect I feel a little uneasily," said Mr. Graves, seriously.

"I never saw a clearer case in my life—never!" cried Dr. Jones, slapping his knee emphatically. "I would stake my reputation that he is as mad as a March hare."

"Ahem!" coughed Mr. Graves, dryly.

"Look at his manner."

"Yes, his manner was eccentric enough."

"And his conversation. The man is a gibbering lunatic. You heard his answer when, on his saying he was the Emperor of Russia, I jokingly reminded him that a minute previously he had claimed to be the Grand Llama of Thibet. 'True,' he said, 'but that was by my first wife.'"

"Yes," returned Mr. Graves, pensively rubbing his nose; "I'm not sure I haven't read that joke before."

"Why, really, my dear sir," cried Dr. Jones, getting quite hot and angry, "what is it you suspect? I have not a shadow of hesitation that it is a clear case. At all events we shall hear what Balmyre says."

Mr. Graves smiled at this, but he only answered: "Well, there was no coercion. If the man is less mad than he appears to be he only has himself to thank."

With this remark the little man abruptly changed the conversation; but he had not succeeded, even when he set his colleague down at his own door, in completely restoring that gentleman's equanimity.

However, Dr. Jones did not long continue to marvel at Mr. Graves' extraordinary obtuseness, for the disagreeable discovery that in his absence a sheriff's officer had been placed in possession of his apartments effectually drove all other thoughts from his mind. As was quite natural he was considerably startled and upset, and for a time he lost his habitual fortitude and self-possession. The bailiff seemed a decent sort of man, and as he was decidedly disposed to be sympathetic, Dr. Jones could not refrain in his bitterness of spirit from inveighing against his evil fortune.

"Well, sir, it do seem 'ard, don't it? But, arter all, sir, wot is it? If you was as used to it as I am you wouldn't think nothink about it."

"But you are earning your living, remember. Meanwhile, how the deuce am I to earn mine with you about the place?"

"It's a small matter, sir, and will be easily arranged no doubt. Bring your friends to see me a-settin' 'ere. That always fetches 'em. Meanwhile, Lord bless you, sir, don't mind me. *I* won't interfere with your patients. For that matter, if you'll lend me a suit o' decent togs, I'll show 'em in and out as grave as a judge."

"I shouldn't mind so much if I owed twenty thousand, instead of a paltry hundred or two," groaned the unfortunate doctor, between his teeth.

"That's allus the way, sir," said the man, shaking his head. "It's the small fish as gets caught in the nets; the big 'uns break through 'em. Why, look at 'ere," he added, bringing forth a document from his pocket and unfolding it clumsily. "'Ere's a case in point. An absconding bankrupt got clean away with a 'undred thousand pounds. Just think o' that, and a livin' likea fightin'-cock in Americay!"

Dr. Jones mechanically took the paper which the man handed to him. It was an official hand-bill, containing a description of a certain Anstruther Meadows, a quondam city speculator of considerable notoriety, who had absconded with a considerable quantity of plunder, after ruthlessly robbing his customers and friends. Dr. Jones had heard of the man, and indeed his name had recently been on everybody's lips. The hand-bill was headed with an offer of a reward of £500 for his apprehension, and a full and detailed description was given of his personal appearance. Dr. Jones glanced through this abstractedly and then his eye lighted upon a rough wood-cut, purporting to be a likeness of the defaulter, which appeared in the margin. After a moment's scrutiny the young man sprang from his seat with an involuntary exclamation.

"Do you know him, sir?" inquired the bailiff, quickly.

"Know him! No. How the deuce should I?" said Dr. Jones controlling himself.

"I was 'oping, for your sake, you could lay your finger on him, for there's a nice little reward offered," returned the man.

"Five hundred!" said Dr. Jones, rather contemptuously, as he glanced at the document.

"Aye, a tidy sum, ain't it, sir?" said the man. "But, Lord bless yer! its all flummery—all a blind. He's hoff long ago, a-livin' in Americay, as I said just now."

"Well, wherever he is, he has got a fortune with him," said Dr. Jones, handing back the document with an animated expression. "Make yourself at home, my man," he added. "Order what you want. As you say, I daresay this little matter of mine will soon be arranged."

He hurried away as he spoke, and entered his consulting room, where, after locking the door, he commenced to stride about in a strangely excited manner. After a while, happening to catch sight of his flushed face as he passed the looking-glass, he paused and gravely addressed himself.

"Come, Clarence Jones, steady yourself. This looks like a stroke of luck. It may even be the foundation of your fortune. But you mustn't be too sure! You may be mistaken. In any case, you need a cool head to play your cards properly.

This soliloquy had a soothing effect, for he seated himself in the patient's arm-chair and deliberately knitted his brows to think. The result of his deliberations was that he started off with composure to his club, and spent some hours in going through the newspaper files of the past month or two. He met a city acquaintance, of whom he made particular inquiries concerning Mr. Anstruther Meadows. Altogether, he evidently considered that he had passed a profitable evening, for, upon his return, he saluted the man in possession with a friendly slap on the back, and promised him a five-pound note for himself if his hopes as to paying him out the next day were realized.

When he arose next morning, Dr. Jones wrote a little note to Dr. Balmyre, stating that he had a great desire to pay a visit to his asylum, and adding that having been summoned to attend a consultation in the neighborhood of the institution he should be glad of an authority to inspect it. He sent the letter round by a servant, who in reply brought back one of Dr. Balmyre's cards with a few words in the great man's handwriting scrawled on the back of it. An hour later Dr. Jones presented himself at the door of Dr. Balmyre's celebrated establishment.

He was civilly received by the medical gentleman in charge, by whom he was conducted over the spacious, gloomy building. Of course he expressed himself highly gratified and deeply interested in all he saw, though in truth his mind was entirely preoccupied with other matters. At length, as they were strolling through the grounds, he said, carelessly:

"By the way, I signed a certificate yesterday for Dr. Balmyre. Has the patient arrived?"

"What name, do you recollect?"

"Roberts, I think."

"O, yes!" was the reply. "He came yesterday evening. Would you like to see him?"

"Well—yes, I think I should," said Dr. Jones, carelessly. "His case rather interested me. Don't trouble to come if you are busy. He is quiet enough.

"Yes, he is quiet enough, so perhaps you'll excuse my running away from you. I must go my rounds. Hi! Edwards," to an attendant; "take this gentleman, Dr. Jones, to see William Roberts, No. 93."

A minute later Dr. Jones was ushered into a small sitting-room, where he found Mr. William Roberts, whose acquaintance he had made the previous day. Mr. Roberts gave a palpable start as his visitor entered, but immediately assumed a vacant expression and dropped his eyes on the book he was reading.

"You needn't wait," said Dr. Jones to the attendant, in a confident tone. "I want to have a little chat with my friend here."

The man, somewhat hesitatingly, withdrew, while Mr. Roberts, manifestly ill at ease, stole a hurried glance at the doctor out of the corners of his eyes.

"Well, Mr. Roberts. You remember me, I suppose," said Dr. Jones, pleasantly, when they were alone.

Mr. Roberts grunted without looking up.

"I see you do," replied his visitor, with increased affability. "But really—as no one is in hearing—there is not the least occasion for playing comedy. Yesterday I did not interfere, because it was, of course, desirable to deceive my colleague."

"I don't know you," said Mr. Roberts, glancing up at him and turning sulkily aside.

"That is quite immaterial. The important fact is that I know *you*, Mr. Anstruther Meadows," said Dr. Jones, in a low voice.

The moment his name was pronounced the man turned as white as marble, while beads of perspiration burst upon his forehead. He cast a terrified glance at his visitor's calm, determined face and apparently realized the uselessness of denying his identity.

"Are you a detective?" he gasped.

"My good sir, if you reflect you will remember that I am a doctor," remarked Dr. Jones quite soothingly.

"O, yes; to be sure," said Meadows, recovering himself. "Well, how did you find me out?"

"I recognized you yesterday the moment I set eyes on you, notwithstanding that you have shaved your mustache and whiskers and dyed your hair," said Dr. Jones, unblushingly. "You see I am not hostile to you."

"Thank God for that!" murmured the man.

"I suppose your design is to remain here until the hue and cry has died out, and then to quietly slip away when the police have given you up," said the doctor, smilingly.

"That was what Ainslie did," returned Meadows, mentioning another notorious rascal.

"Well, it is an excellent plan, no doubt. The police would never think of looking for you here," laughed Dr. Jones. "However, to come to the point. Of course I have no wish to denounce you."

"That is your game, is it?" cried Meadows, with a fierce oath.

"Well, you see your secret is worth something," said the unwelcome visitor, in business-like tones. "I should get the reward of £500 by raising my finger. But I prefer—for my own sake, as well as for yours—to make terms with you."

"I thought you were a gentleman," sneered Meadows.

"People used to think you were," said the doctor, quiet unmoved. "But, after all, the title is an empty one."

"Hang you, then, name your price!" cried Meadows, after a pause. "Balmyre has put you up to this; you are both in the swim."

"Dr. Balmyre has betrayed no confidence," said Dr. Jones, pricking up his ears. "No one has any suspicion of my discovery."

"Well, I suppose I can rely on you?"

"Implicitly. If you give me my price I shall be in your power."

"Well, you are a cool hand, anyhow," said Meadows, with a laugh. "But what you say is true enough. Come, what is it to be?"

Dr. Jones named his figure—an uncommonly stiff one, judging by the rage and indignation of Mr. Meadows. An angry argument then ensued, which, however, ended, through the doctor's firmness, in his terms being agreed to, Meadows, accordingly, gave him a letter to an individual in the city, through whose agency, in a round-about way, the requisite sum was to be paid.

"It is deuced hard lines that I should have had to pay twice for coming to this infernal place," grumbled Meadows at the conclusion of the interview. "However, as you declare Balmyre did not put you up to it I suppose it was an unlucky accident."

"Dr. Balmyre has never breathed a word to me or to any one else," said Dr. Jones, solemnly. "Remember he has his reputation to consider. My strong advice to you is not to frighten him by revealing what has passsed to-day. This for your own sake."

"And a little for yours, I dare say," laughed Meadows, who, apparently, could not help admiring his visitor's coolness. "However, perhaps you are right. Mum is the word for all of us."

Dr. Jones did not pause to exult over the success of his maneuvre. He went straight to the city in feverish haste, and never rested until the ransom paid by Meadows was safely lodged at his bank. Then, having got rid of the friendly bailiff, and sent round checks to his most pressing creditors, he indulged in delightful self-congratulations and reveled in the agreeable prospect of continuing his professional career with his debts paid and a substantial sum standing to his credit.

"It only shows," he murmured complacently to himself, "that some people are destined to make fortunes and others ain't. Look at that fool Graves. He suspected the man was shamming when I didn't, and yet he never troubled his head to get to the bottom of the mystery. Graves will probably die a workhouse surgeon, when I shall be a baronet rolling in wealth. For, by Jove! there is more to be made out of this business. I'm not going to let Balmyre off—the sly old Fox! I could ruin him if I liked; but I won't. I flatter myself I know a trick worth two of that! By Jove!" he added, energetically slapping his knee. "He has an only daughter, and he is as rich as Croesus. I'll keep his secret, but I'll be his son-in-law, or my name is not Clarence Jones."

—*London Truth.*

FASHION NOTES.

Some of the Elegant Trifles That Attract Attention in Fashionable Circles.

The Alameda is the newest parasol.

Flower weddings are the rage.

Arabian, Moorish and Egyptian household fancies are all the rage for London interiors.

The day of much-draped, much-cut-up, flounced, pleated, shirred and ruffled dresses is gone by.

To look well, tinsel braid must be of the finest quality, and must be put on by an artist-embroiderer.

Mittens and lisle thread gloves will drive *gants de Suede* and kid from the field from now until September.

The stuff of which a dress is made is of small moment compared with the cut and make, which must be now-a-days British, and by an English tailor.

Ecru canvas etamine and dark green velvet or velveteen are combined in the handsomest traveling suits, which must be tailor-made, of course.

Tailor cut and made suits are much more important as stamping the fashionable prestige of the wearer than costly fabrics made up by dressmakers of even fine ability.

There are ladies, and fashionable women, too, who utterly refuse to wear tinsel, high hats or bonnets, bustles or high coiffures, but they are the exception, not the rule.

From the description given in the London *Truth* of the Princess Beatrice's trousseau frocks, they are neither pretty nor sensible, even though made by the court tailor.

Little girl bridesmaids are the fancy of brides, and they are dressed in quaint Kate Greenaway styles and wear the flower adopted for the wedding, which must of course, be a flower festival.

The Alameda parasol is mushroom-shaped, with a depression in the centre, formed by attaching the ribs to the stick in a manner precisely the reverse of that of the canopy top umbrella.

The flower wedding is the fancy of the passing moment. One flower only is arranged in masses of decorative effects, other flowers forming dashes of another color at remote distances and long intervals.

A pretty fancy for a key rack is to cover a wooden rolling pin with plush, of any color preferred, adorn it with a spray of chenille and tinsel embroidery, and put into the roller a row of screw hooks. The roller is then hung on the wall, with ribbons attached to the handles.

Nothing can be more offensive than cheap gold braid put carelessly on cheap stuffs. It actually gives one a blow in the eye to look at some of the frocks thus decorated or defaced, worn along the retail business centre of the city, and which will soon put blots upon the beauties of nature along the seashore, among the mountains, and all over the country.—*N. Y. Sun.*

MERCERS OF OLD.

How the Silk Merchants of Ancient Times Were Esteemed.

Originally mercer was the name of a dealer in small wares; subsequently it implied one who sold silk. There was considerable silk trade carried on in England, even as early as the reign of Edward IV., and its consumption gradually increased. So numerous did the mercers become that, in 1182, they formed themselves into a guild, and so great was their importance that when the illustrious Whittington, who was a member of the fraternity, died, he left the mercers trustees of the educational and benevolent institutions he had founded.

The father of Thomas A. Becket, Archbishop of Canterbury, was a mercer, and many distinguished families are descended from this honorable profession; among which are the Earls of Ormond, the Dukes of Somerset, the ducal family of Newcastle, the Viscounts Camden, and the Earls of Denbigh.

The mercers were remarkably liberal and public-spirited men. Sir Baptist Hicks, a mercer, who was knighted in the reign of James I., and who had made a large fortune by supplying the court with silk, built a hall for the Justices of Middlesex to hold their sessions in. Another mercer, Edward Rich, founded several almshouses. Hugh Clopton built the stone-arched bridge at Stratford-upon-Avon. Sir Rowland Hill built several bridges and causeways, and Sir Thomas Gresham founded the Royal Exchange, Gresham College and several almshouses.

The dress, or livery, as it was sometimes called, of the mercers' guild, was designed to show their connection with the silk trade. Their robes and hoods were faced with satin; the ushers wore velvet coats and silk scarfs.

The pageants or street processions of the mercers were on an elaborate and costly scale. On the inauguration of one of their number as mayor, the chariot in the procession was of Roman form, adorned with paintings and metals, and embellished with flashing jewels. Seated in the chariot were several richly dressed persons representing Faith, Hope and Charity, and other characters. The charioteer was attired in scarlet and silver, and wore a golden mantle and crown of gold. Nine white horses drew the chariot.—*Demorest's Monthly.*

—Buns: One quart of bread sponge, three pounds of flour, three-quarters of a pound of butter, one pound of sugar and milk as required. Into a pint of water stir enough flour to make a smooth batter, add nearly a pint of yeast, cover, set in a warm place and let rise. Cream the butter and sugar together, rub the flour in by handfuls, work smooth, add the sponge and milk enough to make a soft dough, knead well and set to rise over night. In the morning knead it lightly and roll into sheets half an inch thick, cut into small round cakes and put in a buttered tin to rise. When light bake in a quick oven. When done wash over with the yelk of an egg and dust with powdered sugar.—*The Household.*

SCHOOL AND CHURCH.

—It is the sinners who find the least satisfaction in the revised version.—*Philadelphia North American.*

—The Presbyterian General Assembly, at its recent session, reported receipts of $103,745 for the year by the ministerial relief board, which maintains 264 clergymen, 279 widows and 23 orphans.

—The Chinese authorities have agreed to pay $3,500 as compensation for the destruction of the mission premises belonging to the Union Methodist Free churches at Wenchow during the late riots.

—The clergy of Florida in the past ten years have increased from seventeen to forty, and the list of communicants from less than 700 to 1,994. There have been erected in the same period forty-two churches and chapels.

—The second anniversary of the Chinese Sunday-school Union of New York was held at the Madison Avenue Congregational Church recently. About 500 Mongolians were present. There are connected with this Union twenty-nine schools, having 700 scholars.

—The King of Belgium, the President of the African International Association, has decided to open an African Seminary in connection with the University of Leyden, at which young men will be prepared for missionary work in the newly opened districts of the Dark Continent.

—The General Synod of the Reformed Church adopted a resolution appointing a committee of leading ministers to examine the Revised Old and New Testaments, "and report to the next Synod whether it be wise and expedient for this body to recommend the same for use in public worship or private, or in both."—*N. Y. Examiner.*

—It is not to the Methodists, as is generally thought, but to the Presbyterians, that America owes the word camp-meeting. Certain Presbyterian ministers held a sacramental meeting at a place called Cane Ridge, in Kentucky, in 1800. It was attended by more than 20,000 people, and was protracted for weeks. This was the first camp-meeting ever held in the United States.—*Chicago Herald.*

—Wycliffe Hall, at Oxford, and Ridley Hall, at Cambridge, were founded a few years ago by the Evangelical Party in the Church of England, for the training of graduates for the work of the ministry. The buildings have cost $200,000. The fees charged (twenty guineas) for each term pay all expenses, except the salaries of the principal and vice-principal, and for those purposes an endowment fund is being raised of $125,000.

—The Board of Trustees of Cornell University have made an appropriation of $1,600, to complete electrical apparatus on a large scale for the measurement of large electric currents. These experiments are considered of great importance, and Professor Anthony, the dean of the department of physics, will be assisted by prominent scientists from different educational institutions in the country. The experiments will be made during the summer.—*Buffalo Express.*

—In de bus'ness o' life er man mus' eider go up ur come down. Dar ain't no stand still. De sun doan stay at twelve er clock more den er minit.—*Arkansaw Traveler.*

—When a man nearly breaks his neck getting out of the way of a lightning bug, supposing it to be the headlight of a locomotive, it is time for him to sign the pledge.—*Norristown Herald.*

—"Hello, Dick; been to the lecture?" inquired a friend as they met about eleven o'clock in the street, outside of a public hall. "No, but I'm going to one now," replied Dick, as he made for home.—*N. Y. Post.*

—A family physician recommends those who expect to suffer from hay fever this summer to be careful in maintaining a health status, to live by rule, and avoid causes of excitement. Change of place is the most efficient remedy of the attack that has fully begun.—*Chicago Times.*

—Goaded by jealousy, a husband out in Ohio shot a professor of roller skating in the head. The physicians left the bullet where it was imbedded, plugged the hole up with a cork, and the professor now skates as well and knows as much as ever he did.—*Philadelphia Press.*

—Poetry, a waxed mustache, mystery, long hair and a sweet tenor voice will often make a woman feel as if there was only a sheet of tissue paper between Heaven and herself, but it is the man with the wart on his nose and six figures in the bank balance who scoops her in and makes her happy ever afterwards.—*N. Y. Journal.*

—Bound to be foolish.—

Women have many faults—
Man have only two:
There is nothing right they say,
And nothing right they do.
But if naughty men do nothing right,
And never say what's true,
What precious fools we women are
To love them as we do.

—A bashful young man who was afraid to propose to his sweetheart induced her to fire at him with a pistol, which he assured her was only loaded with powder, and after she had done so fell down and pretended to be dead. She threw herself wildly upon the body, called him her darling and her beloved, whereupon he got up and married her.—*Boston Post.*

—"O, I like traveling," said the fat passenger, as he snuggled his big body into one seat and his big feet beside his grip in another. "I like traveling, except that the noise rings in my ears rather unpleasantly." "Rings in your ears, eh?" spoke up the farmer man who was standing in the aisle; "that's queer. Out to my place when we want one to travel we put a ring in his nose."—*Chicago Herald.*

SCHOOL GIRLS.

The Effects of Over Pressure—Sound Advice to Mothers and Fathers.

A young girl of sixteen, of a healthy heritage, was brought into the consulting room of one of our Boston physicians for a slight lateral curvature of the spine. She never had been sick; she did not suffer from headaches or any of the functional disturbances sometimes seen in growing children. Her growth had been rapid, and she was pale, thin, and lacked the vigor of health. An inquiry brought out the fact that at her school she spent five hours a day, besides five hours' study out of school hours, stimulated to extra courses by ambition and the prospect of promotion.

A growth of three inches in a year, combined with ten hours' daily nervous strain, are component which will, as certainly as the formula of 2 plus 2 equals 4, produce an impairment of health, a diminution of force which, coming in the growing years, is so much taken from the eventual sum total of vital energy. The studies which were the most of a burden to this young girl were Greek and Algebra, and although the parents, if forced to choose, would agree that their daughters should forego the pride of possessing a knowledge of Greek, if that must be coupled with a certain amount of physical misery, yet nothing short of a dire necessity could justify the girl in falling behind her class or the standard imposed by emulation.

Such experiences lead us to believe that the root of the trouble is not so much in the school system as in the community itself, which, after all, creates the school system. With a certain amount of elasticity of requirements and an improved supervision of scholars, much of the evil of advanced courses and increasing stimulation could be avoided, provided the home influence were in the right direction. The ill effects are seen chiefly among the girls; for it is tacitly admitted that, books or no books, "boys will be boys," and the boy is largely an animal; but the American mother of the day not only wishes to stamp out what there may be of the animal in her daughter, to give her conventional manners, but, in the view of the lottery of American life, to teach her to support herself and also to shine socially as a possible mistress of the White House; and all this preparation is to be done during the pre-matrimonial years. Out-of-door sports are discouraged, and musical or intellectual pre-eminence considered desirable. Furthermore, among the girls themselves in a certain number the desire for distinction, the innate femininity, repressed by circumstances from finding vent in coquetry, prompts to attracting attention and admiration for proficiency as amateur musicians, for rank at school, for winning prizes in female colleges, for success in professions. Such a system of education may produce, in some instances, good results, and give us future George Eliots, Maria Mitchells, Mary Somervilles, Putnam-Jacobis, etc., yet the records of the nervous wards and the lists of the nervous prostrationists show that the success of a few individuals has been bought for the public at the price of many shattered lives of unsuccessful imitators.

What in our community is especially needed in regard to women is the better physical education of girls. A mother should be as much ashamed to bring up a flat-chested, round-shouldered daughter, to be a candidate for the Adams or other Nervine institutions, as if she brought her up unable to read or write. The introduction of any out-door game suitable for girls, and enjoyed by them, as base ball is by boys, would be an incalculable blessing, before which the joys of Greek and the aspirations for professional careers would be dust and ashes to the coming generation of mothers and the prospective generation of children.

A certain, and by no means small, proportion of our young women seems to be going through the same craze about mental forcing and professional careers which afflicted our young men of previous generations, and which with them was responsible for much ill health. Fortunately, a revival of athletics and sports, the war, and the development of more varied industrial pursuits created a revolution in this. It is already a long time since the dyspeptic, narrow-chested, pale-face, weak-eyed male became an object of interest by becoming a bookworm. A knowledge of Greek no longer condones a want of vigor and vivacity in the male, and we do not believe it is any more likely to in the female. Those who run any risk of health by pursuing advanced studies had best not trifle with the experiment.

The prophets of hygienic righteousness, as physicians have been termed, should throw the weight of their influence in favor of everything that improves the physical development of women. When they find the rate of growth is excessive or accompanied by an imperfect development in weight, when the chest capacity is small and the blood poor, they should prescribe more out of doors and a postponement of literary ambitions—more sunshine and fewer books. A good practical guide as to the physical condition in the rough is the relative increase of growth compared with the increase in weight. —*Boston Medical and Surgical Journal.*

Tough.

When it comes to toughness, Texas beef is entitled to the blue ribbon. The average Texas landlord usually manages to secure the toughest beef in the market.

"Is there a carpet beating establishment next door?" asked a newly arrived guest at an Austin hotel.

"Not that I ever heard of."

"Well, then you must have a blacksmith's shop in the cellar. Do you shoe horses down in the cellar?"

"Why, no, stranger, what makes you think so?"

"What's all that pounding as if there was a boiler factory in full blast, or some coopers were driving down the hoops on a wooden cistern."

"O, that! Why that's the cook pounding the beefsteak for breakfast."—*Texas Siftings.*

FARM AND FIRESIDE.

—To prevent a door from creaking apply a little soap to the hinges.

—Laundry starch makes the best paste for scrap books, because age does not turn it yellow.

—Straw matting may be cleaned with cold water in which some salt is dissolved, using a coarse cloth and not a brush. The salt prevents the straw from turning yellow.

—Cookies: One egg, one cup of sugar, one-half cup of butter, one-half cup of sour cream, one-half teaspoonful of soda, nutmeg or caraway seeds and flour to roll.—*Cleveland Leader.*

—It has been discovered recently by medical men that "lump-jaw," as it is called ,or lumps found on the jaws of cattle,are sometimes caused by decayed teeth. It is not known how much the poor brutes suffer with the toothache.

—A mixture of lard and snuff is the California remedy for lice on stock. This ointment does not need to be applied to the entire animal, but a ring of it two or three inches wide made completely around the neck will have the desired effect.

—Stuffed onions: Take three or four large Spanish onions, boil them slightly and cut them in half. Take out the centers, and the rings of the onions will form small cups, which should be filled with the same stuffing as that used for tomatoes. Fry or bake. —*N. Y. Herald.*

—It is not desirable to pasture cows in woodlands, especially in early spring. The grass grown under the shade is less nutritious, and the animals are apt to find many wild plants, the flavor of which spoil the milk for any use. This is especially true in woods where wild garlic abounds.—*Rural New Yorker.*

—When you are tired of plain boiled or fried eggs, try this way of serving them for breakfast: Butter a pie plate and cover the bottom with fine bread crumbs, then break up enough eggs for your family and drop them on the plate and cover them with a layer of bread crumbs; sprinkle pepper and salt over this and put some little lumps of butter over it. Bake in a quick oven for five minutes.—*Boston Budget.*

—One of the best and most convenient receptacles for table cutlery is a canton flannel knife case tacked to the inside of a cupboard door—to be so constructed that there will be a separate compartment for each knife or fork. The flannel is sure to absorb any moisture left on a knife by carelessness or by accident, and the whole affair is ornamental. White canton flannel bound with scarlet dress braid is prettiest.—*Exchange.*

—Hens' eggs were in great veneration with the ancients. The Romans exhibited them with great reverence in their festivals of Ceres. The Greeks equally honored them. The Japanese are very fond of eggs. They eat them at dessert like fruit, and very often with oranges. The rich Japanese are very particular concerning them. They will not eat those of fowls which have full liberty and feed on what they pick up. They must be fed on rice, and they must lay their eggs in rooms prepared for that purpose.

STABLE MANURE

A Fertilizer That Contains All the Elements of Plant Nutriment.

It is important that the farmer should understand thoroughly the effect that fertilizers have upon the soil, and the advantages (if any) that one kind possesses over another. First, it must be understood that plants must contain phosphoric acid, nitrogen, potash, lime, magnesia, sesquioxide of iron, and sulphuric acid, and therefore these must be present in order to secure the healthy nutrition of the plant. It is rather rare that a soil is found that is deficient in lime, magnesia, sulphuric acid or iron, but as stable manure is formed from the growth of plants upon the farm, and contains all the substances mentioned, it appears that stable manure contains *all the nutriments for plants* by which they are nourished, and hence is a *perfect* fertilizer of itself.

Further than that, stable manure contains that *organic substance* which, by its decomposition, creates in the soil what is known as humus, which assists largely in loosening the same, keeping it moist and warm; stable manure is also chemically active, and tends to produce favorable outward conditions. By the use of coarse, strawy manure upon a compact clayey soil, or compact loam, if well ploughed in and mixed with the soil, the result, in breaking up and loosening the soil, will be very marked. This formation of humus and change of texture of soils by the use of stable manure is of the greatest importance. Now the question arises, How is it with artificial manures? What is their effect? Or have they any two-fold effect? Do they furnish a supply of plant food on the one hand, and on the other do they exert a favorable influence upon the soil as regards its condition?

To these questions the answer may be given that, inasmuch as they contain a formulated quantity of phosphoric acid, nitrogen and potash, they furnish abundant nutriment if applied in sufficient quantity. But they do not exert any direct influence upon the nature of the soil, as they can not add any to the humus of the soil; nor can they change of themselves the mechanical texture of the same. By all experiments that have been made, it is pretty well determined that the greater the supply of humus in the soil, and the more favorable its external condition, the greater the effect produced by the application of special fertilizers; therefore, even by the use of green manures, or upon sod with a thorough working of the soil, rendering the external conditions as favorable as possible, artificial manures will prove efficient. Although it is possible to produce crops upon a poor soil by the use of special manures, the results bear no comparison with those where there is a liberal use of stable manure used in connection with the special. The more lasting effects of stable manures is a good reason why their use should be made as full as possible.—*Prof. Yeomans, in Boston Globe.*

FAW-TAW.

Chinese Lottery Methods—How the Fascinating Game Is Played.

The game is played with slips paper four inches square, on which written one hundred characters, t names of celebrated Chinese fema characters who have figured in the history of the many dynasties. Through the slip from right to left a line runs dividing the characters into five lines of ten each. The game consists in spotting out with India ink certain combinations of five each. For various sums, from ten cents to twelve dollars, the player may spot out from one to all the figures. Each day in this city, twice a day in San Francisco, a hundred sticks, marked with duplicates of the characters on the slips, are placed in a bowl, and twenty of them are drawn out by a blindfolded man and recorded. It looks like a comparatively easy matter once in a while to catch eight or nine in ten characters out of twenty, drawn out of 100, yet mathematicians have calculated that the chance of catching nine is about one in 1,000,000, and ten is such a remote chance that it is not worth calculating. To get five and six is comparatively easy. Five pay the holder twenty cents, six two dollars, seven twenty-five dollars and eight one hundred dollars. Other combinations are arranged, more difficult of securing, which may pay the player up in the thousands. Thus a player who pays seventy cents and spots out nine characters may get $1,200, if he gets all of them, while in combination games fortunes might be won, but they seldom are. The danger of Chinese lottery lies in the fact that its agencies spread all over a city. In San Francisco there are several hundred of these. Every laundryman is an agent, and even the Chinese house servants buy slips for their mistresses. So universal has the custom of playing with Chinese lottery become on the Pacific Coast that hardly a man, woman or child can be found that can say that at some time in their career they have not bought slips. In this city the passion for lottery is spreading. Laundrymen accommodate their customers, and the small winnings whet the appetite for more. The police usually ignore Chinese lottery until it fastens upon a town too strongly to be shaken off. Then they find themselves powerless. It is as hard as policy to stamp out, because the game is represented by slips of paper merely and the players need never visit a gambling resort.—*Philadelphia Press.*

How to Keep Cigars Fresh.

Ex-Congressman Paige, of Ohio, is a great smoker, and he uses the best brand of cigars. He has an especially good way of keeping his cigars, which he generally buys by the box. He has a close tin box about the size of a cigar box, with a close-fitting lid. When he gets a box of cigars he puts them into this, and then lays a piece of soft paper over the top of them. He next wets another piece of blotting-paper, lets the water drip off of it, and lays this on the top of the other. He then closes the lid and puts the box in the cellar. When he wants to use them he takes off the top layer and gets at those beneath. This keeps the cigars always moist and fresh, and Paige has never yet offered a friend a dry or a poor cigar. He learned the scheme, he says, from one of the most noted cigar-makers of New York—a man who has made a million out of tobacco and who is thoroughly posted on it.—*Washington Cor. Cleveland Leader.*

It's no secret that Pierce's Compound Extract of Smart-Weed is composed of best genuine French Brandy, distilled Extract of Smart-Weed and Jamaica Ginger Root, with Camphor Essence, and constitutes, therefore, the best remedy yet known for colic or cramps, cholera morbus, diarrhœa, dysentery or bloody-flux, or to break up colds, fevers and inflammatory attacks. 50 cents. By druggists.

"Hams and cigars, smoked and unsmoked," is a sign in a store in an Arkansas town.

When a girl is young she wants numerous dolls, but when she grows older her wants increase, and she desires several dollars.

AGUE-STRICKEN PLYMOUTH!

Is a Similar Danger Threaten Everyone Else?—How Public Attention is Directed to Personal Perils.

[Rochester (N. Y.) Correspondence Indianapolis Sentinel.]

"Judge," said a young lawyer to a very successful senior, "tell me the secret of your uniform success at the bar."

"Ah, young man, that secret is a life study, but I will give it to you on condition that you pay all my bills during this session of court."

"Agreed, sir," said the junior.

"Evidence, indisputable evidence."

At the end of the month the judge reminded the young man of his promise.

"I recall no such promise."

"Ah, but you made it."

"Your evidence, please."

And the judge, not having any witnesses, lost a case for once!

The man who can produce indisputable evidence wins public favor. I had an interview yesterday with the most successful of American advertisers, whose advertising is most successful because always backed by evidence.

"What styles of advertising do you use?" I asked H. H. Warner, Esq.

"Display, reading matter and paragraphs of testimonials."

"Have you many testimonials?"

In answer he showed me a large cabinet chock-full. "We have enough to fill Boston, New York, Chicago, St. Louis and Philadelphia morning papers."

"Do you publish many of them?"

"Not a tithe. Wonderful as are those we do publish, we have thousands like them which we can not use. 'Why not?' Let me tell you. 'Warner's safe cure' has probably been the most successful medicine for female disorders ever discovered. We have testimonials from ladies of the highest rank, but it would be indelicate to publish them. Likewise many statesmen, lawyers, doctors of world-wide fame have been cured but we can only refer to such persons in the most guarded terms, as we do in our reading articles."

"Are these reading articles successful?"

"When read they make such an impression that when the 'evil days' of ill health draw nigh they are remembered, and Warner's safe cure is used."

"No, sir, it is not necessary now, as at first, to do such constant and extensive advertising. A meritorious medicine sells itself after its merits are known. We present just evidence enough to disarm skeptics and to impress the merits of the remedies upon new consumers. We feel it to be our duty to do this. Hence, best to accomplish our mission of healing the sick, we use the reading article style. People won't read plain testimonials."

"Yes, sir, thousands admit that had they not learned of Warner's safe cure through this clever style they would still be ailing and still impoverishing themselves in fees to unsuccessful 'practitioners.' It would do your soul good to read the letters of thanksgiving we get from mothers, grateful for the perfect success which attends Warner's safe cure when used for children, and the surprised gratification with which men and women of older years and impaired vigor, testify to the youthful feelings restored to them by the same means."

"Are these good effects permanent?"

"Of all the cases of kidney, liver, urinary and female diseases we have cured, not two per cent. of them report a return of their disorders. Who else can show such a record?"

"What is the secret of Warner's safe cure permanently reaching so many serious disorders?"

"I will explain by an illustration: The little town of Plymouth, Pa., has been plague-stricken for several months because its water supply was carelessly poisoned. The kidneys and liver are the sources of physical well-being. If polluted by disease, all the blood becomes poisoned and every organ is affected, *and this great danger threatens every one who neglects to treat himself promptly.* I was nearly dead myself of extreme kidney disease, but what is now Warner's safe cure cured me, and I know it is the *only remedy in the world that can cure such disorders*, for I tried everything else in vain. Cured by it myself, I bought it and, from a sense of duty, presented it to the world. Only by restoring the kidneys and liver can disease leave the blood and the system."

A celebrated sanitarian physician once said to me "The secret of the wonderful success of Warner's safe cure is that it is sovereign over all kidney, liver and urinary diseases, which primarily or secondarily make up the majority of human ailments. Like all great discoveries it is remarkably simple."

The house of H. H. Warner & Co. stands deservedly high in Rochester, and it is certainly matter of congratulation that merit has been recognized all over the world, and that this success has been unqualifiedly deserved. Pen Point.

"Why did you work out Rhoda's lesson?" demanded the teacher sternly. "To lessen her work," said the witty culprit.—*Golden Days.*

Young men or middle-aged ones, suffering from nervous debility and kindred weaknesses should send three letter stamps for illustrated book suggesting sure means of cure. Address World's Medical Association, Buffalo, N. Y.

When a man sees double, it is evident that his glasses are too strong for him.—*Boston Transcript.*

Young Men, Read This.

The Voltaic Belt Co., of Marshall, Mich., offer to send their celebrated Electro-Voltaic Belt and other Electric Appliances on trial for 30 days, to men (young or old) afflicted with nervous debility, loss of vitality and all kindred troubles. Also for rheumatism, neuralgia, paralysis, and many other diseases. Complete restoration to health, vigor, and manhood guaranteed. No risk incurred, as 30 days' trial is allowed. Write them at once for illustrated pamphlet, free.

History tells us that one of the most learned of Scotch clergymen was born in the parish of Dull, educated at Dunse and first stationed at Drone.

ECZEMA!

My wife has been sorely afflicted with Eczema or Salt Rheum from infancy. We tried every known remedy, but to no avail. She was also afflicted with a periodical nervous headache, sometimes followed by an intermittent fever, so that her life became a burden to her. Finally I determined to try S. S. S. She commenced seven weeks ago. After the third bottle the inflammation disappeared, and sore spots dried up and turned white and scaly, and finally she brushed them off in an impalpable white powder resembling pure salt. She is now taking the sixth bottle; every appearance of the disease is gone and her flesh is soft and white as a child's. Her headaches have disappeared and she enjoys the only good health she has known in 40 years. No wonder she deems every bottle of S. S. S. is worth a thousand times its weight in gold. JOHN F. BRADLEY,
Detroit, Mich., May 16, 1885. 44 Griswold St.

PARSONS' PURGATIVE PILLS

MAKE NEW RICH BLOOD.

Positively cure SICK-HEADACHE, Biliousness, and all LIVER and BOWEL Complaints, MALARIA, BLOOD POISON, and Skin Diseases (ONE PILL A DOSE). For Female Complaints these Pills have no equal. "I find them a valuable Cathartic and Liver Pill.—Dr. T. M. Palmer, Monticello, Fla." "In my practice I use no other.—J. Dennison, M.D., DeWitt, Iowa." Sold everywhere, or sent by mail for 25 cts. in stamps. Valuable information FREE. I. S. JOHNSON & CO., BOSTON, MASS.

Copyrighted.

Interview Your Druggist,

As this reporter is doing, and he will tell you some curious things. For instance,

Ayer's Sarsaparilla

is a perfectly genuine medicine; but there are plenty of so-called Sarsaparillas in the market that have no Sarsaparilla about them except the name.

I have been in the Drug business, in Lowell, for thirty years, and sell more of Ayer's Sarsaparilla than of all other Sarsaparillas combined. Being thoroughly familiar with the analysis, of this medicine, and knowing the care and skill employed in its composition, I am certain it contains nothing that could not be recommended by the most scrupulous physician. It is made of the true Honduras Sarsaparilla, and of other blood purifiers, the best known to medical science, and is a grand specific in chronic cases, such as Scrofula, Salt-Rheum, Erysipelas, Kidney Diseases, and troubles of the Stomach and Liver. Many so-called Sarsaparillas are such only in name: they do not contain a particle of the real medicinal Sarsaparilla root.—Geo. C. Osgood, M. D., Druggist, Merrimack, cor. Suffolk sts., Lowell, Mass.

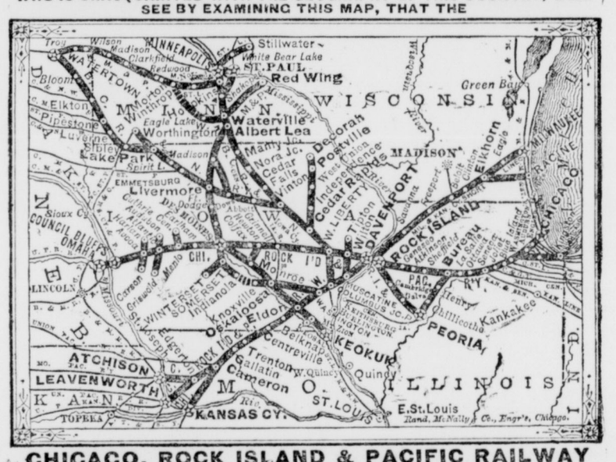
For all disorders of the Blood, use

Ayer's Sarsaparilla.

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists. Price $1; six bottles, $5.

A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC RAILWAY

By reason of its central position and close relation to all principal lines East and West, at initial and terminal points, constitutes the most important mid-continental link in that system of through transportation which invites and facilitates travel and traffic between cities of the Atlantic and Pacific Coasts. It is also the favorite and best route to and from points East, Northeast and Southeast, and corresponding points West, Northwest and Southwest.

The Rock Island system includes in its main line and branches, Chicago, Joliet, Ottawa, La Salle, Peoria, Geneseo, Moline and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Watertown in Dakota, and hundreds of intermediate cities, towns, villages and stations.

THE GREAT ROCK ISLAND ROUTE

Guarantees its patrons that sense of personal security afforded by a solid, thoroughly ballasted road-bed; smooth tracks of continuous steel rail; substantially built culverts and bridges; rolling stock as near perfection as human skill can make it; the safety appliances of patent buffers, platforms and air-brakes; and that exacting discipline which governs the practical operation of all its trains. Other specialties of this route are Transfers at all connecting points in Union Depots, and the unsurpassed comforts and luxuries of its Passenger Equipment.

The Fast Express Trains between Chicago and the Missouri River are composed of well ventilated, finely upholstered Day Coaches, Magnificent Pullman Palace Sleepers of the latest design, and sumptuous Dining Cars, in which elaborately cooked meals are leisurely eaten, "good Digestion waiting on Appetite, and Health on both." Between Chicago and Kansas City and Atchison, are also run the Celebrated Reclining Chair Cars.

THE FAMOUS ALBERT LEA ROUTE

Is the direct and favorite line between Chicago and Minneapolis and St. Paul, where connections are made in Union Depots for all points in the Territories and British Provinces. Over this route, Fast Express Trains are run to the watering places, summer resorts, picturesque localities, and hunting and fishing grounds of Iowa and Minnesota. It is also the most desirable route to the rich wheat fields and pastoral lands of interior Dakota.

Still another DIRECT LINE, via Seneca and Kankakee, has been opened between Newport News, Richmond, Cincinnati, Indianapolis, and Lafayette and Council Bluffs, Kansas City, Minneapolis and St. Paul and intermediate points.

For detailed information see Maps and Folders, obtainable, as well as Tickets, at all principal Ticket Offices in the United States and Canada; or by addressing

R. R. CABLE, President and General Manager, Chicago.
E. ST. JOHN, General Ticket and Passenger Agent, Chicago.

WILHOFT'S FEVER AND AGUE TONIC

A warranted cure for all diseases caused by malarial poisoning of the blood, such as Chills and Fever, Fever and Ague, Sun Pains, Dumb Chills, Intermittent, Remittent, Bilious and all other Fevers caused by malaria. It is also the safest and best cure for enlarged Spleen ("Fever Cake"). General Debility and Periodic Neuralgia. For Sale by all Druggists.

Anecdote of Queen Victoria.

The following admirable trait in the character of the highest personage in the British realm is not generally known. When Princess Victoria, she is said to have frequently amused herself by going *incognito* in a carriage to different shops, and derived a great entertainment, when divested of the appendages which are attended upon royalty, in observing as a passive spectator the infinite variety of incidents and occupations with which London abounded. Being one day at the shops, she observed, among many objects that attracted her attention, one that fixed it. This was a young and intelligent lady, who was most sedulously employed in looking over different gold chains for the neck, which were presented to her for inspection. After she had admired several, she asked the price of one which seemed to have peculiarly struck her fancy. The price was named. It was more than she imagined it would have been.

"Can it not be offered cheaper?"

"Impossible was the reply."

The young lady seemed disconcerted, examined the chain again, and when she laid it down the second time appeared to part from it with reluctance. However, at length she admitted that the price was far too high, chose a much cheaper, which was ordered to be sent home, and went away. The young Princess Victoria, who had silently observed the silent workings in the mind of the lady, as displayed in her countenance, inquired who she was, and upon receiving satisfactory information ordered the firm to pack the gold chain which had so attracted her attention, with the one she had purchased, and sent it with a card, signifying that the Princess Victoria was so well pleased with observing that the young lady, who had been so much taken with the beauty and workmanship of the chain, had yet so much the command of her passions as not to suffer these to overcome her prudence, that she, therefore, in token of her approval, desired her to accept the chain she so much admired, in the hope that she would always persevere in that laudable line of conduct upon which female happiness so much depended.

A Missouri Colonel sees Mr. Cleveland.

Chicago Herald.

Colonel Veazy, of Pike county, Mo. passed through the city on his way home from Washington. He was in an unhappy frame of mind. "Yes, I saw the President, I saw him. I wanted the postoffice in my town, and he wouldn't give it to me because he said I had made no charges against the incumbent, who is a good man. Then I struck him for a consulship for my son, and he said there would be no more consuls appointed until 1886. Then I told him Major Ward, of my town, wanted a clerkship at Washington so as to be near his daughter, who is married and lives there, but he said he would have to pass an examination, which Major Ward can't do. Finally, I says: 'Well, I don't seem to have much luck here, and I guess I'll go home,' and he was bidding me good-bye so cordially that I thought I'd try him once again, 'Won't you give me that postoffice, eh?' says I. 'No, says he. 'Nor my son the consulship?' says I. 'No,' says he. 'Nor Major Ward the clerkship?' says I. 'No,' says he. Well, by cripes old man,' says I, 'will you come out to our county fair next fall?' 'No, says he. 'There's where your head's level,' says I, and I left. Oh, it's a good enough Democratic administration. Nobody's a kicking out my way."

One Thing that she Forgot.

A good story is told of a prominent member of society who has a habit of tying a knot in her pocket handkerchief when she wished to fix anything in her mind to be attended to. She was engaged in a desperate flirtation on a certain occasion and in her abstraction dropped the handkerchief on the floor. This was noticed by her hostess, who endeavored to break up her flirtation by inviting her guest into another part of the house. As the latter rose from the chair she stopped and picked up her handkerchief, noticing, as she did so, the knot in one corner. "What have I forgotten to-day?" she asked audibly. "That you have a husband," replied her hostess. The story was repeated, and the lady, who is a well-known member of the diplomatic circle, always keeps her handkerchief free from knots now.—*Washington Post.*

The holy teachers of all nations have invariably concurred in showing that faithful prayers implies always correlative exertion; and that no man can ask honestly or hopefully to be delivered from temptation unless he has himself honestly and firmly determined to do the best he can to keep out of it.

Bananas.

It is astonishing how little is known of bananas, considering the extent to which they are eaten. New York gets every week an average of 30,000 bunches. From Florida? Not a single one. Florida only raises enough bananas for home consumption. All these yellow ones we get from Central America, principally from Aspinwall. Those big, fat, red fellows are from Cuba. Plantains? Oh! no; that's a general mistake, plantains are only edible when cooked; they are more vegetable than fruit. You didn't know there were 150 distinct varieties of bananas, did you? The fruit comes to us quite green, but in the summer will ripen in one or two days. Cool weather compels us to use artificial treatment and we hang them in a close room and apply heat. A green bunch will not be ripe under four days. With the bananas we import, duty free, are a good many foreign inhabitants. See that snake a yard long, it was taken alive from a bunch. And a spider came in another, bringing her nest with her. It contains a hundred eggs. She has come to a cold climate to hatch. Tarantulus are frequently found and the accompaniments are by no means rare.

The Desire to be Gulled.

Detroit Free Press.

Let a long-haired individual with a broad-brimmed hat, an Indian name a brass band and a peddler's wagon set himself up at the street corner and proclaim himself a wondeaful physician, with a panacea for all the ills that flesh is heir to, and he will attract hundreds of intelligent persons, who will pay their money to a man they never saw before for a compound concerning which they know nothing beyond his boastful assertions. The same person who put no trust in the advice of a physician whom they have known for years, and whose interest it is to advise them fairly and for the best, will swallow with avidity the advice and the nostrum of any loud-voiced quack who forces himself upon their attention. In some cases, no doubt, it is because the quack promises, having no responsibility, what the educated physician with a reputation at stake does not promise. But in the vast majority of cases it seems as if the impelling motive—the ruling passion on which the quack plays so successfully—is the desire to be gulled.

Contrary to orders, Bobby had taken the family Bible from the parlor table, where it was very carefully kept, and by the time he got through with it the signs of wear and tear were painfully apparent. For this act of disobedience he received a severe whipping and was sent supperless to bed. "It is a source of great gratification to me," said the minister, who was making a call that same evening, as he lifted the book from the table and discovered its condition, "to find that in this household, at least, the Bible is not neglected. It is too often the case, I regret to say, that the contents of the Good Book remain unsought. But I am pleased, Mr. Smith, to know," he continued, "that you find daily consolation in its pages." Mr. Smith devoutly acknowledged the pleasure and profit he derived from his frequent study, and after the minister left he took up to Bobby a glass of milk and a large slice of bread and butter with jam on it.

Words of Wisdom.

He that gets out of debt grows rich.

A hovel well kept is a palace to the inmates.

Much learning shows how little mortal knows.

Better go round about than fall into the ditch.

A pleasant tone and a sweet smile costs nothing.

Virtue and a trade are the best portions for children.

Any one may do a casual act of good nature, but a continuation of them shows it to be a part of the temperament.

Useful knowledge can have no enemies except the ignorant; it cherishes youth, delights the aged, is an ornament in prosperity, and yields comfort in adversity.

As they who for every slight infirmity take physic to repair their health, do rather impair it; so they who, for every trifle, are eager to vindicate their character, do rather weaken it.

Swedenborg says, "Words are things," They are more; they are spiritual forces—angels of blessing or of cursing. Unuttered, we control them; uttered, they control us.

If your hair is getting thin, the application of Hall's Vegetable Sicilian Hair Renewer will promote a thick, new growth.

He that seeketh forgetfulness of God in this life will reap the reward of being forgotten by Him in the world to come.

NEW ADVERTISEMENTS.

She Had Confidence.

Mrs. H. C. Harshbarger, Manor Hill, Huntingdon County, Pa., writes: "Dr. J. B. HARTMAN & Co., Columbus, O.: I have been afflicted for three years, caused by over-work too soon after confinement. My kidneys became seriously affected, could not retain my urine day nor night. It was high colored, thick and bloody. My monthlies had left altogether for fourteen months, during which time I was confined to my bed with a beating in right ovaries. The discharge from the womb was so offensive no one could stay in the room. The urine continued bloody, with pain in voiding it, and when in bed would pass from me in my sleep. I have had three doctors attending me regularly, one for four months, one of the others one whole summer, and the third all winter. We had two others in consultation with them, and used twenty bottles of different kinds of patent medicines, all to no good. I then got a bottle of PERUNA, and before I had three-fourths of the bottle taken I quit wetting the bed and could retain the urine sufficient to attend church, which I had not done for three years, and my monthlies came back as natural as ever; indeed, I considered myself a well woman again. Since that time I have had pneumonia. My confidence in PERUNA was so great that I did not send for a doctor. I followed the directions in your "Ills of Life" and am over it, as well as can be expected of one so delicate as I have been. Others in my neighborhood had the same disease, and among them were strong men, and had the best physicians, and yet died, while I sailed through in safety on PERUNA and MANALIN. I sincerely believe, and would say to all the afflicted in the wide world, that PERUNA and MANALIN are the only two medicines that any one needs in any disease, if used as directed in your book entitled "The Ills of Life."

J. E. Fleming, publisher of the New Dominion, Morgantown, W.Va. writes: "Some months since, I received some of your medicine in exchange for advertising. My wife has taken five bottles of it, and has derived great benefit from it."

Mr. M. C. Pershing, Bradenville, Pa., writes: "My wife has been using PERUNA for some time for weak lungs and liver and kidney complaint, and thinks it is doing her great good. Has used only one bottle as yet. Please send your book on the 'Ills of Life,' as we can't get any from our druggist."

Mr. John Denny, Mt. Vernon, O., writes: "We have a large sale in PERUNA. It gives satisfaction."

To Dyspeptics.

The most common signs of **Dyspepsia,** or **Indigestion,** are an oppression at the stomach, nausea, flatulency, water-brash, heart-burn, vomiting, loss of appetite, and constipation. Dyspeptic patients suffer untold miseries, bodily and mental. They should stimulate the digestion, and secure regular daily action of the bowels, by the use of moderate doses of

Ayer's Pills.

After the bowels are regulated, one of these Pills, taken each day after dinner, is usually all that is required to complete the cure.

AYER'S PILLS are sugar-coated and purely vegetable—a pleasant, entirely safe, and reliable medicine for the cure of **all disorders of the stomach and bowels.** They are the best of all purgatives for family use.

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.

GOLD for the working class. Send 10 cents for postage, and we will mail you free, a royal, valuable box of sample goods that will put you in the way of making more money in a few days than you thought possible at any business. Capital not required. We will start you. You can work all the time or in spare time only. The work is universally adapted to both sexes, young and old. You can easily earn from 50 cents to $5 every evening. That all who want work may test the business, we make this unparalleled offer; to all who are not well satisfied we will send $1 to pay for the trouble of writing us. Full particulars, direction, etc., sent free. Fortunes will be made by those who give their time to the work. Great success absolutely sure. Don't delay. Start now. Address STINSON, & Co., Portland, Maine.

PENSIONS For wound, disease or other disability. Widows, minor children and dependent parents entitled when death resulted. Claims reopened, restoration, increases, bounty, back pay and discharges obtained. Apply at once, delay prejudices your rights. Fees fixed by law. Address, with stamp, the old established firm of EDSON & CO., Attorneys and Claim Agents, 517 F. St., Washington, D. C.

A RARE CHANCE!

I will offer at private sale my entire property known as the

BOSLEY BOARDING HOUSE,

containing thirty-one rooms. One-half acre lot, with good cellar, well of good water, large ice house, coal and plunder house large water tank, and everything complete for a boarding house. Also a house and lot opposite the above property. Also a lot on corner Alder and Sixth streets. Reason for selling—California fever.

For further particulars inquire of the owner on the premises, or address

G. L. BOSLEY,
15m 3 Oakland, Md.

Valuable Real Estate FOR SALE.

I offer for sale a tract of land, called

"DUNDALK,"

containing 137 acres, owned and possessed by Mrs. Amelia Berrian. Said tract lies in mineral region of Garrett county, a short distance from Bloomington, and runs a long distance along the North Branch of the Potomac River, and commands or controls the river frontage of

Valuable Coal and Woods Land

back of it. Said tract is also underlaid with coal, and contains some valuable timber.

W. H. TOWER.
For Mrs. Amelia Berrian.

NOTICE.

All persons are hereby notified not to trespass on said above land by cutting of timber or otherwise. As I shall enforce the law against any one so trespassing on said premises.

AMELIA BERRIAN.
Nov 20 1880. 1 y

NEW ADVERTISEMENTS.

REAL ESTATE FOR SALE.

NO. 1.

Militar Lot No. 219,

lying near Chisholm's Mill, in Ryans Glade, Garrett county. Well timbered and underlaid with coal. Unimproved. Will be sold cheap.

NO. 2.

Military Lots Nos. 2305 & 2307,

Unimproved timber lots, lying near Grantsville, part of the estate of the late Holmes Wiley.

NO. 3.

An Elegant New Residence

on Oak street, Oakland, Md., containing 8 rooms. Large lot improved by stable, carriage house, ice house, &c. Well of good water. Terms easy. Price, $2200.00.

NO. 4.

The "Wooland Farm,"

situated on the road leading from Oakland to Accident, two miles from Oakland, containing 97 acres, well fenced and cultivated. Improved by a large first-class mansion house, suitable for a summer resort. The farm would suit for a first-class market garden or general farming.

NO. 5.

House and Lot

On Oak street, Oakland, Md., comfortable dwelling. Well of good water and convenient outbuildings. Will sell at a bargain.

NO. 6.

600 Acres of Land,

covered with white pine, spruce and white oak timber, and underlaid with coal, iron ore and fire clay. Water fall 71 feet. Steam saw mill on the premises doing a good business. Will be sold at a bargain.

NO. 8.

House and Lot

On Liberty street in Oakland, 8 rooms. Good property.

In all cases we will furnish purchasers with an abstract of title and prepare deed without cost to them.

Full discription of the property contained in the above list will be given upon application.

NO. 9.

NEW DWELLING HOUSE

On Oak Street, 8 rooms and good cellar. Large livery stable attached; room for 18 horses and 15 vehicles. Good stand for business. Excellent opportunity for any desiring to go into livery business.

NO. 10.

100 ACRES EXCELLENT LAND

Near Oakland. Well timbered. Title indisputable. Price, $8 per acre.

NO. 11.

GOOD DWELLING & LARGE LOT

Near Court House. 10 rooms and out-buildings. Good well of soft water. Terms easy.

No. 13.

A Small Desirable Farm

Near Deer Park, improved by dwelling house, stable, dairy, and other necessary outbuildings. Never-failing spring of water. This property adjoins the corporating limits of the village of Deer Park, and is in full view of the Deer Park Hotel. Price, $1500.00.

PEDDICORD & THAYER,
Atty's at Law, Oakland, Md.

A Rare Chance to Secure a Home.

FOR SALE,

Several Tracts of Land on the Hooppole Road, 3 miles from Deer Park and 6 miles from Oakland, Md.

These lands are of excellent quality, each tract has a stream of water running through for cattle, and springs of excellent water, and a quantity of valuable timber. The Hooppole road passes through the lands and the Deer Park road quite near them. They adjoin the farms of John L. Browning, Frank R. Nethkin, Wm. Schooley, Joseph Spiker, Ralph Browning, Jacob Sell, W. M. Rhodeheaver and others.

These lands will be sold CHEAP and on the MOST FAVORABLE TERMS: One fourth cash and the balance in three or four equal yearly payments, with interest and security to the satisfaction of the owner.

For further information apply to.

JAS. A. HAYDEN,
Republican Office, Oakland, Md.

BLACKSMITHING.

I am prepared to do all kinds of blacksmithing. Farmers' work a specialty. Prices as low as can be had for first class work. Shop near "Browning House."

tf 24 DAVID LITTLE.

AYER'S Ague Cure

contains an antidote for all malarial disorders which, so far as known, is used in no other remedy. It contains no Quinine, nor any mineral nor deleterious substance whatever, and consequently produces no injurious effect upon the constitution, but leaves the system as healthy as it was before the attack.

WE WARRANT AYER'S AGUE CURE to cure every case of Fever and Ague, Intermittent or Chill Fever, Remittent Fever, Dumb Ague, Bilious Fever, and Liver Complaint caused by malaria. In case of failure, after due trial, dealers are authorized, by our circular dated July 1st, 1882, to **refund the money.**

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

NEW ADVERTISEMENTR.

A HOME DRUGGIST TESTIFIES.

Popularity at home is not always the best test of merit, but we point proudly to the fact that no other medicine has won for itself such universal approbation in its own city, state, and country, and among all people, as

Ayer's Sarsaparilla.

The following letter from one of our best-known Massachusetts Druggists should be of interest to every sufferer:—

RHEUMATISM. "Eight years ago I had an attack of Rheumatism, so severe that I could not move from the bed, or dress, without help. I tried several remedies without much if any relief, until I took AYER'S SARSAPARILLA, by the use of two bottles of which I was completely cured. Have sold large quantities of your SARSAPARILLA, and it still retains its wonderful popularity. The many notable cures it has effected in this vicinity convince me that it is the best blood medicine ever offered to the public. E. F. HARRIS."
River St., Buckland, Mass., May 13, 1882.

SALT RHEUM. GEORGE ANDREWS, overseer in the Lowell Carpet Corporation, was for over twenty years before his removal to Lowell afflicted with Salt Rheum in its worst form. Its ulcerations actually covered more than half the surface of his body and limbs. He was entirely cured by AYER'S SARSAPARILLA. See certificate in Ayer's Almanac for 1883.

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.

Sold by all Druggists; $1, six bottles for $5.

DR. JOHN BULL'S Smith's Tonic Syrup

FOR THE CURE OF

FEVER and AGUE

Or CHILLS and FEVER,

AND ALL MALARIAL DISEASES.

The proprietor of this celebrated medicine justly claims for it a superiority over all remedies ever offered to the public for the SAFE, CERTAIN, SPEEDY and PERMANENT cure of Ague and Fever, or Chills and Fever, whether of short or long standing. He refers to the entire Western and Southern country to bear him testimony to the truth of the assertion that in no case whatever will it fail to cure if the directions are strictly followed and carried out. In a great many cases a single dose has been sufficient for a cure, and whole families have been cured by a single bottle, with a perfect restoration of the general health. It is, however, prudent, and in every case more certain to cure, if the use is continued in smaller doses for a week or two after the disease has been checked, more especially in difficult and long-standing cases. Usually this medicine will not require any aid to keep the bowels in good order. Should the patient, however, require a cathartic medicine, after having taken three or four doses of the Tonic, a single dose of BULL'S VEGETABLE FAMILY PILLS will be sufficient.

BULL'S SARSAPARILLA is the old and reliable remedy for impurities of the blood and Scrofulous affections.

EAST END OAK STREET, OAKLAND.

Furniture repaired. Will also take orders for new furniture. Rustic work on hand and manufactured to order. Give him a call

In the Wilds.

From the Editor of Wheeling Intelligencer.

DAVIS, TUCKER Co., W. VA., July 18.—"This is the forest primeval." I am quite certain of it. If it were not that a railroad affords connection with the outside world the few of us who are here to-night would be literally inhabiting "a lodge in some vast wilderness, some boundless contiguity of shade." The ax of civilization has but blazed the rugged face of nature. Believe me, nature, grand, glorious and untamed, is doomed. The jockeys of trade have taken her in hand and will break her in—are breaking her in now. What are we going to do when there is no longer wilderness to flee to—no refuge of solitude from the ceaseless hum and strain of business, business, business, always business! As we were climbing the mountain by steam to-day, comparing this with that—what I saw with what I had left far behind—I was thinking how hard a man works, how much he frets, to buy a coffin.

At 7:25 this morning we left Deer Park—ex-Senator Henry G. Davis and his son-in-law, Stephen B. Elkins, the big Blaine chief, the President and Vice President of the West Virginia, Central & Pittsburgh Railway; Prof. I. C. White, who comes to make a geological survey for the government; three Messrs. Ledeau, who are prospecting with a view to locate a large tannery in this region of abundant bark. At 8 o'clock we were on board a West Virginia Central train at Piedmont, bound hither. At Piedmont we were joined by Col. Thomas B. Davis, General Manager of the road, and Superintendent W. E. Porter, an old Baltimore & Ohio official who is well remembered along that line. Capt. G. W. Harrison, agent at Piedmont, was at the train to shake hands all around. We caught sight of Auditor Woodrow and his father, Major Simeon D. Woodrow, who had inquires to make of old Wheeling friends and kindly messages to send. Cashier McCandlish, of the Piedmont National Bank (Davis) was good enough to say that if any one in the party ran short of ready money he would be glad to cash a check—well endorsed. My good friend Jimmy Little, who manages the Elk Garden mine and is proud of it, who fought for Blaine at Martinsburg and howled himself hoarse with the rest of us, gets on to offer us all free passes for a round trip over his incline up the sheer mountain side. Tempting as such offers always are, the angle of inclination was greater than the temptation. It was some consolation to know that the gallant old hero of Appomattox had declined a like tender from Brother Little. Therefore we were all able to conclude that it was not fear, but lack of time, that controlled our movements. Exploration of the big fourteen-foot vein we left for another time, and went on with our mountain climbing.

As we ascended the heavy grade, sometimes more than seventy feet to the mile, the gorge became narrow, the enclosing heights loftier, and I turned from the receding view to a seat in the locomotive cab beside Engineer Doughty, where I might come face to face with the wild grandeur of the wilderness as we dashed further into its wooded depths. As the conductor called out the stations it seemed that we must be in a mixed caucus of statesman, the conductor being in fact chairman of the caucus "recognizing" gentlemen as one after another they claimed the floor to speak to "the State of the Union," or something of that sort. For example, Barnum, Windom, Chaffee, Blaine, Schell, Elkins, Bayard, Camden, Davis. Perhaps I ought to include Fairfax, but that takes us too far back. At Elkins I saw the Blaine pole, the first one raised anywhere in this region and still pointed to with pride, notwithstanding "circumstances over which we had no control." Elkins' railway station and postoffice, lies on the Maryland side in Garrett county, though much of the settlement is on the West Virginia side, the two parts being connected by an excellent bridge. The friends at home will be the better able to locate Elkins when they are told that it lies at the foot of Fort Pendleton, where the Northwestern Pike crosses the North Branch of the Potomac into Maryland.

As we stopped at Elkins for a moment I recalled a conversation with the venerable father of Mr. S. B. Elkins. Seated on the piazza of his son's Deer Park cottage, last summer, Mr. Elkins told me how he emigrated from the Old Dominion to Missouri more than half a century before, going by way of the Northwestern road. Now in this later day of steam transportation his son is one of the leading spirits in building a railroad which crosses his father's path of the long ago, and the spot where his father may have rested on the further boundary of his native State bears the family name and a town rises as a monument to the energy of the son. In the new West the father devoted much of his time to staging across the plains. Now the son comes back to take an enthusiastic and sagacious interest in the development by railroad of a richly endowed part of the State which gave his father birth. This personifies the reflux of the tide of development which rolled over the middle country to the easier but not richer fields beyond. This backward flow is the hope of West Virginia. Good health to Elkins and to the Davises, and to Blaine and to Camden, and to every man who puts a dollar or a thought into the development of our West Virginia! A bumper, and no heel taps! The unregenerate who play at politics on the dead level of Bourbonism won't join me in this sentiment. Well, bless their benighted souls, their is small choice left to them—if they don't get on board they'll be run over, for the train moves fast and the way is narrow, and when a stone is flung off the track you can hear it splashing in the pool a thousand feet below.

"This is the big horse-shoe I was telling you about," said Engineer Doughty. I thought we had been seeing something of horse-shoe bends, but now we were making the first curve of one worth the journey to see. The station at this great bend is Hambleton. The road hugs the mountain side, and in the valley below lies a large saw mill busily ripping big logs into merchantable lumber. We are pulling up a heavy grade, leaving the saw mill behind. Now we take a sharp but easy turn and half a mile on, by a slight cleft in the dense foilage—perhaps a path down the mountain side—there is Hambleton again, still sawing logs. We have doubled back on the sawmill and are less than two hundred yards from the station we left behind. We could have reached this point ahead of the train by walking across from the station, if there is a path. We are not to take paths for granted in this region. Beyond, as below, we come upon some straight and level stretches, but they are "like angel's visits."

"See how she makes steam," says my entertaining friend, the engineer. "We are pulling up a steep grade, but I have to let her off. This coal is from our eleven-foot vein, and it is the best steam coal I ever saw."

"Best I ever fired with," says the fireman, "and I don't believe there is the equal of it anywhere."

"That vein," adds the engineer, "is almost a solid vein of pure coal without a flaw. There's no telling now much there is of it, but we know there is enough in sight to keep this road busy for years. See there," pointing to the gauge, "got to let her off again."

Here we are at Davis, at the junction of Black Water and Beaver, 3,100 feet above sea level, 700 feet higher than Oakland. It is 1 o'clock, and with a mixed train, freight and passenger, we have climbed 2,000 feet from Piedmont since 8 o'clock. We have come over 57½ miles of first-class road, well graded, splendidly ballasted, "ironed" with steel, iron bridges and trestle work built to last. I look on all this in admiration of the courage that has driven this probe of steel into the heart of the wilderness. That took nerve of high order. The Davises had lumbered on the Potomac. They knew of the coal and timber beyond. They concluded that the only way to open this wilderness was to split it open with a railroad. They induced other capitalists to join them. They put in the sparp point of the wedge and mauled away at it, As the forest parted coal veins opened, sawmills came into existence, human habitations sprung up. There was the life of productive industry. From the beginning to Davis is four years, and every year shows a profit on the venture,

Davis has only begun to be. There is a railway station house, and Bob Eastham has a hotel and grocery store and a good wife who makes the sojourner comfortable while the host spins "bar" tales. The company is building five five-roomed frame dwelling houses for its employees, who are now camped in box cars. Besides this, Davis is forty acres of birch and hemlock logs and roots and big stumps blackened from the burning of the laurel brush. It looks as though there might have been a big rise in the waters that flooded in and piled up helter skelter all the felled timber in creation, after which the whole thing was charred with fire. From all which you will infer that save for the bran new frame houses there is something like a scene of utter desolation. But wonders have been accomplished here in a short time. Up to May 15 there was nothing here but virgin forest and impenetrable jungle. Engineer James Parsons tells me that in this upper country the engineers had to chop their way to locate the line to Davis and beyond, cutting their path through an undergrowth so dense that human foot, of a white man or red, never could have trod it.

To-night we are having a mountain storm, The forest that shuts us in is a protection from the wind, but the thunder peals and roars and rumbles, and the lightening seems to be playing about every tree in the wilderness. The rain falls a continuous sheet, pelting and banging on the iron roof of the Hotel Eastham as though it would break its way through in mad determination to find refuge from the storm and dry itself before the blazing fire in the sitting room, where we are smoking and swapping lies and trying to keep up with the landlord. I rather enjoy all this, for I am going to sleep by and by with a good conscience and a fair lining of trout caught to order in Black Water and smoking on the platter before us scarcely an hour out of water. Such trout! This is what I call living.

I have something more in mind about this wild country and the railroad, and I think I can shake it out to follow hard upon this.

C. B. H.

Employment and Education.

"A good education," says Dr. McCosh, "qualifies a man to do a dozen different things, where an ignorant man could do only one. Education also enables a man to rise in any sphere of labor in which he is employed." The truth of this is especially valuable in these days of change in vocations. Science is specializing every employment; mechanicism is taking the place of manual labor, and in this approaching readjustment of vocations, will prove the only individual safeguard. What industrial future is there for the man who can use his hands only when a machine is invented that takes the place of a thousand pair of hands? Obviously, the practical need of intellectual qualification is far greater in this age, and will continue to increase with the progress of humanity. It is the tendency of every trade to become an art, and of every artisan to become an artist in his specialty. And in this lies the true secret of the great need of industrial education.—*Lilian Whiting.*

An Important Discovery.

The most important Discovery is that which brings the most good to the greatest number. Dr. King's New Discovery for Consumption, Cough's, and Colds, will preserve the health and save life, and is a priceless boon to the afflicted. Not only does it possitively cure Consumption, but Coughs, Colds, Bronchitis, Asthma, Hoarseness, and all affections of the Throat, Chest, and Lungs, yield at once to its wonderful curative powers. If you doubt this, get a Trial Bottle Free, at Nydegger's Drug store

A bird upon the wing may carry a seed that shall add a new species to the vegetable family of a continent; and just so a word, a thought, from a living soul, may have results immeasurable, eternal.

There is one sure way of attaining what we may term, if not utter, at least mortal happiness; it is this—a sincere and unrelaxing activity for the happiness of others.

Ayer's Cathartic Pills promptly relieve the stomach, correct foul breath and an unpleasant taste, and cure constipation.

In giving, a man receives more than he gives, and the more in proportion to the worth of the thing given.

Though the presence of imaginary good cannot make us happy, the absence of it may make us miserable.

Associate with the wise, and their knowledge will cling to thy skirts.

The Republican.

OAKLAND, GARRETT CO., MD.

ELIZABETH ZANE.

This dauntless pioneer maiden's name
Is inscribed in gold on the scroll of Fame;
She was the lassie who knew no fear
When the tomahawk gleamed on the far frontier,
If deeds of daring should win renown,
Let us honor this damsel of Wheeling town,
Who braved the savage with deep disdain—
Bright-eyed, buxom, Elizabeth Zane.

'T was more than a hundred years ago,
They were close beset by the dusky foe;
They had spent of powder their scanty store,
And who the gauntlet should run for more?
She sprang to the portal and shouted: "I;
'T is better a girl than a man should die!
My loss would be but the garrison's gain.
Unbar the gate!" said Elizabeth Zane.

The powder was sixty yards away,
Around her the foemen in ambush lay;
As she darted from shelter they gazed with awe,
Then wildly shouted: "A squaw!" "a squaw!"
She neither swerved to the left or right,
Swift as an antelope's was her flight.
"Quick! Open the door!" she cried, amain,
"For a hope forlorn? 'Tis Elizabeth Zane!"

No time had she to waver or wait,
Back she must go ere it be too late;
She snatched from the table its cloth in haste
And knotted it deftly about her waist,
Then filled it with powder—never, I ween,
Had powder so lovely a magazine;
Then, scorning the bullets, a deadly rain,
Like a startled fawn fled Elizabeth Zane.

She gained the fort with her precious freight;
Strong hands fastened the oaken gate;
Brave men's eyes were suffused with tears
That had there been strangers for many years.
From flint-lock rifles again there sped
'Gainst the skulking redskins a storm of lead,
And the war-whoop sounded that day in vain,
Thanks to the deed of Elizabeth Zane.

Talk not to me of Paul Revere,
A man, on horseback, with naught to fear;
Nor of old John Burns, with his bell-crowned hat—
He'd an army to back him, so what of that?
Here's to the heroine, plump and brown,
Who ran the gauntlet in Wheeling town!
Hers is a record without a stain—
Beautiful, buxom, Elizabeth Zane.

—*John S. Adams, in St. Nicholas.*

AUNT POWELL'S WILL.

The Game Which Was "Kind of Played" on Attentive "Relatives."

You wouldn't believe me if I told you what an excitement it raised when Abner got Aunt Powell's letter saying how the doctor had ordered her away from the New England climate, and that she was coming to Pennsylvania and wanted him to look up a quiet little country house for her near by to Gloster. Nothing extravagant, she said: just a little home where she could end her days within call of her brother's children, and feel that she wasn't alone in the world. She wouldn't want to pay over $20,000, she said.

Law me! the buzzing there was in the family when we all learned the news! And it was nearly a whole day before we knew anything about it. Jennie Powell always was mercenary and selfish. I saw that, and said so, too, long before Abner married her, and she persuaded her husband to keep that letter a secret, so as to have Aunt Powell's affairs in their own hands. Just as though Aunt Powell wasn't as dear to the other children as she could be to a woman who never so much as heard of her until she married into our family. But Jennie was just as gossipy and talkative as she was mercenary, and more too, and she couldn't go to bed with such news as that and live through the night, and she knew it. So, before sunset, out it all came, in solemn confidence to half a dozen acquaintances and three or four relatives.

And then how we raced from house to house, and how our tongues run and run, and how we tried to find out everything and tell nothing! And the family consultations held in every Powell house that night after the children were put to bed! And the shower of letters that fell into the Gloster postoffice that night after all the town was asleep, addressed to Miss Lucinda Powell, Skenadoquonooksis, Maine! Lem said he was too sleepy to write for me, but I made him do it, and posted him off with it. And what should he do but go over to Abner Powell's and tell Abner he was going to the postoffice, and ask Abner if he had any letters to carry down and post for him!

Abner sat there at the table, up to his eyes in ink and paper. He stared at Lem, and then began to stammer, and finally looked at Jennie.

"No," snapped Jennie, "we haven't any letters you can post for us. What did you want to know for?"

And Lem laughed, and said he only wanted to be neighborly, and went on. And if that aggravating man didn't sit down on the office steps, and stay there in the dark till past midnight, waiting for the others to come! And they came right along, Abner Powell first one, and Jasper Blake and Hamer Powell and 'Siah Bradley and Warder Martin. And every time one of them men come along and began fumbling and feeling in the dark for the box, Lem would call him by name and say: "Good evening. You'll find the letter-box in the lower right-hand panel of the door."

Abner Powell jumped so when he called to him that he knocked off his hat and broke his spectacles against the door. Abner's a little near-sighted, and none of 'em thanked Lem for making them look so ridiculous; but when I told him I didn't think it was just the thing to aggravate the rest of them and get them down on us he said he was only a brother-in-law to this family anyhow, and he was willing to take his thirds out in fun. And next morning if old Bert Cramer, the postmaster, didn't asked Hamer, right before all the loungers in the store, if the Powell family had got special rates on letters to Skenadoquonooksis! As though it was any of his business how many letters people wrote to their own father's only sister.

To tell the truth, we hadn't none of us corresponded much with Aunt Powell, only for some five or six years back. She and father, you see, were only children, and were left orphans at an early age. Father came to Pennsylvania when he was quite a young man, married here, and settled down in Gloster. He didn't accumulate much of anything but a family, and he never felt able to go back to see the sister he left teaching school down in Maine. After mother died he wrote to Aunt Powell, offering her a home with him. It was very generous in father, for he was not a rich man—far from it. But Aunt Powell wrote a very sympathetic letter, and kind of incidentally asked how many children he had; and when he told her six, her next letter was just as kind as it could be, and she thanked him for finding time, in the midst of his numerous household and business cares, to remember her, and think of her so kindly in connection with his dear ones, but she was very comfortable, she said; she needed nothing; she preferred school-teaching to housekeeping, and was too busy to take the time for such a long journey. So we never saw her; but I don't think anybody was very much disappointed at the time, except father.

But by-and-by came stories of a very romantic chapter in Aunt Powell's history. We didn't hear anything about it until long after father died.

She was engaged to a young sea-captain, and that was before our mother died. One day he came to bid Aunt Powell good-by. He was going to India and Australia before he returned, and when he came back they were to be married. As he walked away down the little garden path that led from the cottage door he turned, and loosing the blue kerchief from about his neck, tossed it back toward her, where she stood trying in vain to fight back her tears, and called: "Dry your blue eyes with this while I'm gone, sweet-heart."

But a breath of wind caught the drifting bit of silk away from her outstretched hands and tossed it into the climbing branches of a rose-tree that arched above the window.

"O, my love-token!" cried Aunt Powell. "The wind takes away my lover, and then snatches his keepsake away from me!"

"Never mind," he called back, in his cheery way—"never mind, heart of mine; let it flutter aloft there till I come back."

And Aunt Powell threw him a kiss, and then the tears in her blue eyes shut out her lover like a mist, and the mist never cleared away. For summer and winter came and went, and the blue kerchief in the rose-tree paled in the sun and faded in the rain. The winds rent and tattered it, the roses came and hid it, and the winter days showed it a ragged signal of faded blue fluttering like a flag of distress from some storm beaten ship; but the hand that set the signal was gleaming white down in the red coral. The angry winds that had driven her lover's ship upon the pitiless rocks came in the June days and kissed the faded kerchief softly, and caressed it tenderly, as though in sorrow for what they had done; and in December they snatched and tore at it angrily, as though they would destroy every trace of the sailor from off the face of the earth.

But Aunt Powell never touched it. "Let it wave there till he comes back," she said: "he may see it yet, some day, and know that I am waiting for him."

And so it fluttered and faded, and little by little the winds tore it away, and the blue in her eyes faded with the silken token, and their light grew dim as the hope in her heart went out.

All that her sailor had in the world he had left to his sweetheart. He was an only child, and when his heart-broken old father followed him, in a few years, he, too, left his fortune, which was an ample one, to the girl he lovingly called his daughter, in his will. And so our dear Aunt Powell was very rich. But she never married. Lovers knelt at her feet, for she was still beautiful, but there was only one image in her heart. And so she grew old and rich and lonely.

But when, little by little, this story came to us, our hearts warmed to our father's only sister. We wrote to her often and most affectionately. We learned her birthday, and always remembered her with loving messages and such little presents as we could afford. I encouraged the children to write to her, and Lem went and told Abner about it, and if Jennie didn't keep every one of her four children away from Sunday-school, the very next Sunday afternoon, to make them write to Aunt Powell! I told Mrs. Roberts I thought she ought to be disciplined for it, if she was my own brother's wife. The idea that any woman should imperil the souls of her own children for her own mercenary schemes! For my own part, I loved Aunt Powell honestly and disinterestedly. Jennie, I know, was mercenary from the very start, and so was Hamer's wife, but they wasn't neither of them Powells. When Jasper Blake built his new house on Wayne Street Maria wrote to Aunt Powell that they had built the largest room in the house with a big bay-window especially for her; it would always be called "Aunt Powell's room," and whether she ever came to stay in it or not, no one else would ever occupy it. And for a very good reason, too; they weren't able to furnish it; and they didn't even paint it, for that matter, for nearly two years after they had lived in that house, and they used it for a general lumber-room. A nice time Aunt Powell, or anybody else, except the rats, would have living in that "nice large room!"

Well, at last Aunt Powell came, with seven trunks and a French maid. Abner drove over to the station to bring her home. He and Jennie had it all fixed up to take her right to their house, and shut all the rest of us out on the plea that Aunt Powell was fatigued and needed rest. But Jennie, as usual, confided her little plan to three or four confidential friends outside the family. She seemed more surprised than delighted to see us as we came dropping in about fifteen or twenty minutes before stage time, and when Abner came, leading Aunt Powell into a parlor just full to the windows with his brothers and sisters and their children, his face was a study for a photographer. He didn't even have the pleasure of being master of ceremonies in his own house, either, for before he could recover from his amazement we had captured Aunt Powell, introduced ourselves, and made the most of our first opportunity.

If ever Aunt Powell had been beautiful, it was a long time before we saw her. Her eyes were bright as diamonds, but one of them was a little "set," and she could pin you with that eye like a gimlet. She was tall and angular; dressed like a lady, but very quietly, and wore no jewelry save an elegant pearl pin at her throat. Her maid was the ugliest and crossest creature in all this world, I do believe, and as none of us understood a word of French, the bits of conversation those two used to have when we were with them were fairly maddening, especially if Aunt Powell happened to transfix you with her "set" eye, while she looked at her maid with the other.

In about a month Aunt Powell felt strong enough to look at the places Abner had selected for her. But none of them suited, and at last she grew weary of lawyers and agents and began to talk mournfully about going back to her home in Maine.

"Where I know I will die of home-sickness," she said, "because I have, for the first time in my life, learned how sweet it is to live among those of your own blood."

"Aunt Powell," I spoke up, quick as a flash, "why should you wear yourself out looking for a home when you always seem so contented in the little blue room at our house? It isn't what you've been accustomed to, I know, but if you like it, or will endure it, I can't tell you how glad we will all be to call it yours, and all the rest of your days you can——"

With that Aunt Powell stopped my words with kisses, and began to cry. When she could command her voice she blessed me, and said my home should be hers "for the little time," she faltered, "that I want a home."

And that very afternoon Aunt Powell and the seven trunks and the French maid were moved to our house, and I was hated most cordially and politely by all the sisters and brothers in the Powell family.

Once settled, I am free to say Aunt Powell was anything but a pleasant companion. She had her breakfast at all hours of the morning, sometimes in the dining-room, sometimes in her own room and sometimes in my sitting-room. She was generally irritable and imperious, and acted as though the house belonged to her. At other times she had a wonderfully sweet, winning way with her that charmed you in spite of herself. The children never liked her, however, and as she detested tobacco, Lem's one little weakness, his after-supper cigar was reformed in short order.

"Mark the perfect man," said Lem; but I caught him once or twice puffing away at a great black pipe out in the wood-shed, so I wasn't much afraid that his reformation was going to strike in on him. And Aunt Powell "couldn't abide a great blinding glare of light," so our cheery little home was shut up until it was as dismal as a spare room. She slept the greater part of the morning, and we had to sit up and entertain her late every night, so that we who had to rise with the lark nearly died of sleepiness. It was very wearing, but we bore it bravely.

"We can work a great deal harder than this for $50,000," Lem used to groan as he fell into bed at night, and the unmeasured envy of my brothers and sisters kept us bravely up.

After we had endured this for two full years, if Aunt Powell didn't up and go to Abner's! I was so mad I broke down and cried.

"Don't be so heart-broken about it, my dear child," said Aunt Powell, tenderly. And then she put her arms about me, and told me how sorry she was to go away from the little blue room that had become so dear to her; but some talk had reached her ears, she said, that convinced her the other children were jealous of her staying so long with me, and she could not bear to be the cause of any contention. She was going to stay with Abner for a little while to pacify Jennie (Jennie, I knew myself, was really outrageous, and talking dreadfully). "But it's only for a little while," Aunt Powell said. "Keep the little blue room for me."

And away went Aunt Powell, French maid, and the seven trunks—"the Pleiades," Lem called them. And vexed as I was about it all, the children were so delighted, Lem looked so comfortable with his cigar—for he fell from grace the minute the restraining cause was gone—and the house was so bright and cheery, that I felt half reconciled to it.

"Let's go to bed before supper," said Lem. "I haven't had a square ration of sleep in two years."

Aunt Powell led Jennie a dance and I was glad of it. Jennie, whatever other faults she had, and I do not screen her, even though she is my own brother's wife, is a model housekeeper. Everything goes by clock-work in that house. The very cat goes to bed at nine o'clock, and knows better than to get up before the alarm-clock rings at half past five in the morning. Jennie wouldn't put off her regular sweeping days not for a funeral in the house. But Aunt Powell, as soon as she found what were the sweeping days, settled upon those very days for taking her morning nap in the parlor. Abner Powell was afraid of a horse as a cat is of water, and Aunt Powell made him drive her out twice a week. I wonder the man didn't turn gray. I don't believe a single wash-day passed while she was living with Abner that she didn't insist on having some of us to dinner, although that was nearly as hard on the rest of us as it was on Jennie.

I think she lived at Abner's for two years, and then went to Warder Martin's, Sarah's husband. They refurnished the parlor for her, and gave up their own room to that hateful French maid. Aunt Powell ruled them with a rod of iron for ten months, and then actually quarreled with Sarah Martin, the sweetest, best-tempered woman in the world! It was the first quarrel, I believe, Sarah ever had in her life. None of us ever thought she knew how to quarrel, but Aunt Powell managed to goad her into it somehow, and then went off in a huff to Hamer Powell's, leaving poor Sarah heart-broken, and Ward Martin so mad that he tumbled the seven trunks out into the middle of the street in broad day-light, and let them stand there, a spectacle for the gossipingest street in Gloster, until Homer Powell heard of it, and came with a dray to get them. Hamer went to Ward while the man was loading on the trunks, and began to talk to him, a little severely, I guess, about the way he had acted; but Ward roared out that if he said a word to him he'd stand him and the whole Powell family on their heads alongside the trunks, to the great delight of the whole street, and the unbounded wrath of Aunt Powell, who heard of it.

That very night she sent for a lawyer, and before she went to bed we knew that a new will had been made, and Sarah and Ward were left out of it. Of course Aunt Powell felt so strongly in the matter we couldn't well go against her. She refused to see Sarah or her husband, or go where they were, and so we had to leave them out of the family gatherings, and cut them dead on the street if we met them when Aunt Powell was with us. They acted very unreasonable about it, and ignored the rest of us everywhere; all except Lem. Lem visited there just as usual, and told Ward he intended to divide his portion of the Powell fortune with him.

Well, our aunt lived with Hamer Powell a year. Hamer was a teller in the Gloster bank, and it was through him we learned that Aunt Powell had a big tin box, locked and sealed, deposited in the vault of the bank. She got along pretty well that year, for Hamer and Alice were young people, very lively, and had lots of young company, and didn't mind Aunt Powell's ways very much. They had no settled ways of their own to be rooted out of, and no children for Aunt Powell to train, and on the whole they seemed to have an easy time with her. From Hamer's she went to Ellen Bradley's, quarreled with Ellen straight along every day for two months, and then lived quietly enough for the rest of the year; and then went to Maria Blake's, revolutionized everything about the house, scolded the children, quarreled with Maria, and bullied Jasper, and just as I was beginning to hope she was coming back to us, she melted into her very sweetest temper, lived like an angel for a few months, and died one morning with her head pillowed in Maria's arms.

Well, the day after the funeral we all gathered at Abner Powell's to hear the will read. I know my heart was full of real sorrow, but if there was one throb of genuine grief in another heart in that room, their faces didn't show it. Jennie Powell's countenance was the very impersonation of greedy eagerness, and I thought 'Siah Bradley was going to snatch the will outo f the lawyer's hands. Lem sat with his face buried in his handkerchief, and I was really delighted with the way he was behaving until I saw him wink at Ward Martin—for Ward and Sarah were both with us now—over the top of his handkerchief. For my part, I think such an occasion as that is fully as solemn as the funeral.

Ward and Sarah, as we all knew, got one dollar apiece. The seven trunks, with all their contents, were left to the French maid. The rest of the will devised all her property in Maine. Abner Powell got some pine lands, her close carriage and black horses, and Jennie got a pearl necklace and $10,000 in bank stock. Hamer got 180 acres of land on the St. Croix River and $4,000 in mining stock, and Alice was left two houses in Bangor and $500. She gave to myself and Lem $40,000, $15,000 in money and the rest in Boston & Maine Railroad stock. Ellen Bradley and 'Siah got the manor house and grounds at Skenadoquonooksis, with all the contents and appurtenances thereunto appertaining, save a few trinkets and some bits of furniture especially bequeathed to old servants. Maria Blake got $10,000, and Jasper got the yacht and four town lots in Bangor.

It did seem too good to be true. I cried as I thought of the dear, loving soul who had planned all this happiness for us, and wished I could have known her and loved her in the earliest years of her lonely life. The rest of them were to cry, but it was easy to see that it was a false, strained effort, and none of them succeeded very well except Sarah. Poor Sarah! we were all so sorry for her. They all seemed to think I should do something for her, but I didn't see how I could spare $10,000 from what we got, when we had such a family on our hands. Our first duty was to our children, of course. Hamer said he couldn't say what he could do until he found what his pine lands and mining stock were worth. Ellen and 'Siah had no ready money, and they couldn't tell yet whether they would sell the manor-house or live in it; Jasper said he could let them have one of his town lots in Bangor for a reasonable price and on long time, if they wanted to go there and build on it. And so Ward got up, by and by, and took Sarah home with him, and Lem stepped to the front window and fired a wink at them as they went down the steps that brought a grateful smile through Sarah's tears and a grimace to Ward Martin's rough face. All the same, I made up my mind that Lem Wasson wasn't going to rob my children so long as they had a mother to love and care for them. And, after all, it was Ward Martin's own fault; we all agreed that if he hadn't acted the way he did about the trunks, Aunt Powell could have been reconciled.

Then, after Ward and Sarah went away, the French maid came in. She protested and stormed and vowed she would contest the will, and threatened all sorts of dreadful things, and at last she became hysterical, and screamed until the neighbors began to run out into the street. Finally the boys had us pack all Aunt Powell's trunks, and then they gave the maid fifty dollars to take them away and be satisfied, and so they sent the hateful thing away, and we saw her no more.

In due time Abner Powell and Lawyer Bonney started away for Maine to take possession of things. I wanted Lem to go, too, but he said it wasn't the thing for recruits to be too fresh, and he would stay home and sit up with Ward. The rest of us whiled away the long days of Abner's absence by planning and quarreling in the most excited manner, now and then tormented by the sight of Sarah's disappointed face, although she seldom met us now. Before Abner went away he resigned his place as superintendent in the paper mills, and Ward, who needed it so much, was appointed in his place.

"So that, after all," said Sarah, "we have got something out of Aunt Powell's will."

Seven long, long, weary days, eight days, nine days, and no Abner. We began to speak darkly in separate groups, and watch Jennie closely, for we suspected that Abner had embezzled all the property and run away to Europe, where Jennie and the children would join him. But on the tenth day, when most of the family was assembled in Abner's house, the stage drove up from the station and Abner staggered into the house.

Haggard, pale as a ghost, his beard unshaven, his eyes sunk in his head and glaring like a maniac's, his hair tangled, his clothing rumpled and awry, and his whole appearance rough and unkempt, the man looked so gray and ghastly we were afraid of him.

"What is it?" I screamed, seized with a horrible fear. "Abner Powell, what have you done with my forty thousand dollars?"

"Where is my bank stock?" shrieked Maria.

"Where is my wife's dollar?" roared Ward Martin.

"Man!" shouted Hamer Powell, seizing him by the collar, "don't tell me you have been gambling on the cars, for I'll strike you dead if you do!"

"Where is our aunt's legacy?" roared 'Siah Bradley, collaring the haggard man on the other side.

The wretched creature gasped twice or thrice, and said, in a hoarse, strange voice: "There ain't none."

"Then what have you done with it, you wretch?" we all screamed, gathering close around him.

The very life seemed to die out of his face, and only the glaring eyes turned toward us as he groaned: "There never was any."

"Liar!" everybody shouted. "O, you awful liar! You robber! You thief! O, you miserable scoundrel! You dreadful thief!"

And Hamer Powell started Alice's boy off on the run to bring a policeman and the burgess and the bank watchman to arrest the brazen-faced embezzler.

But just before the policeman made the arrest, Lawyer Bonney, who had stopped at the bank on the way to get Aunt Powell's tin box, came in and told us everything, for Abner was now incapable of coherent speech.

Aunt Powell's "manor-house" at Skenadoquonooksis was a little four-room cottage, swallowed up clear out of sight, Lawyer Bonney said, by two mortgages and a tax-title, and that was all. She never had a dollar in the world beyond her savings from her salary as a school-teacher, and those were all spent since she came to Gloster. The pine lands on the St. Croix, the railroad and mining stock and Bangor town lots described in the will, were pleasant fictions of Aunt Powell's brain.

There was one hope left. The sealed and brass-locked tin box. While we sat, stunned and dumb, staring at each other, the box was opened. It contained all our letters of years past, written to her when we thought she was very wealthy. Only these and nothing more.

There was a hollow groan run all around the room. "For mercy's sake," said Alice, "do pull down the blinds, somebody!"

And then the boys and Lawyer Bonney counted up all the expenses of the funeral and Abner's trip and the lawyer's expenses and fees, and we had to throw in and make up the amount. All but Sarah's husband, he only grinned when Hamer told him what his share would be.

"Not a cent," he protested shaking his resolute head. "Aunt Powell didn't leave me anything in her will."

"It seems to me," says Lem, by and by, breaking an awful silence with the welcome sound of the human voice, "that our Aunt Powell kind of played it on us."

"That ain't the worst of it," groaned Abner, rolling his hollow eyes up toward us—"that ain't the worst of it."

We caught our breath and waited.

"Tell us the worst, man," said Hamer.

"She ain't our Aunt Powell, and never was," said Abner, speaking like a dying man. "Father's sister Lucy married a ship-builder and moved down to Bath fifteen years ago, and she's living there now. This woman was her housekeeper when she lived in——"

If he finished the sentence nobody heard him. When four women faint and one goes into hysterics at the same time, nobody in that room pays much attention to conversation.

Well, Lem was tender as a mother to me that night. Once only, after he had put me to bed and got me quieted down, and was smoothing away my headache, he said, "Well, I'm only a Powell by brevet, and I never can take full rank, but——"

But I guess I looked too miserable to be teased, for he smiled, stooped to kiss me, and suddenly changed his tone.

"And, after all," he said, "Ward and Sarah are the only ones who got anything out of Aunt Powell's will. The guerillas are in luck."—*R. J. Burdette, in Harper's Magazine.*

CROCKFORD'S.

The Famous Gambling Establishment in St. James Street, London.

Among the witnesses examined before the Committee of the House of Commons was Mr. Crockford, the proprietor of the famous gambling club in St. James Street. Such an establishment would be an impossibility in New York, or indeed in London of the present day, but at that time the magnificent salons and gambling-rooms were crowded every night by the most distinguished men of London. The Duke of Wellington, Disraeli, Talleyrand, Prince Esterhazy, Lord Lyndhurst, the Lord Chancellor and Lord Raglan, afterward of Crimean renown, were among its constant habitues. Millions changed hands there every night. Lord Sefton lost $1,000,000 on one occasion. At another time, playing hazard from midnight until seven a. m., four noblemen lost $500,000 apiece, and half the best families in England came near being ruined. There was a costly supper served every night; the famous French cook, Ude, was chef of the establishment. As Theodore Hook somewhat blasphemously remarked of Crockford, "He filleth the hungry with good things, but the rich he doth send empty away." The large number of rich men addicted to sport who frequented his house enabled Crockford to make enormous books on the races, and it is said that he never was without $1,000,000 owing to him on bets.—*N. Y. Sun.*

—The Governor of California has recently selected a sight for the State Hotel at Yosemite Falls. It is to be built by the State, and will cost $75,000.

INDIAN WIDOWS.

A Remarkable Social Advance in Hindostan.

English papers, which come to us with several columns of extracts from the Indian press, tell of a very remarkable social advance effected under English rule in Hindostan. This is especially noticeable in regard to the condition of woman in India to-day, compared to her situation at the beginning of this century. It was only in 1831 that the practice of burning widows was abolished by the Government; and up to that time, as Max Muller observes, "women were burned wholesale, even in the immediate neighborhood of Calcutta." During 1823, in the Bengal Presidency alone, 575 widows were burned; in the very limits of the Calcutta Court of Circuit 310 were burned. Numbers of these were beautiful young girls under twenty; and yet the first effort to secure the abolition of the hideous custom was made, not by a European but an enlightened Hindoo, Rammohun Roy. He held, with good reason, that the practice of suttee was not ordained by the great teachers of Hindoo religion, and not justified by the ancient Sanscrit texts. In the controversy which he provoked he invariably came out conqueror; but controversy alone will not suffice to exterminate a national curse or to uproot an ancient superstition. Therefore it was that he established, about 1818, the "Society of Believers in the Supreme," or Brahma-Somaj. Immediately the orthodox Brahminical party founded an opposition society, called the "Society of the Law," or Dharma-Somaj, and this society at once petitioned the English Government against the abolition of suttee.

One would have thought that such a question could not have been long discussed in vain before enlightened English rulers—that the cause of humanity would only have had to plead once in order to triumph. But such was not the case. Governments act upon policy; and the abolition of suttee involved some social problems of the gravest character. It was only in 1831, when Rammohun Roy himself went to London, that the Government finally rejected the prayers of the orthodox party and decided to abolish the abominable and monstrous custom of burning women alive.

The new decree did not, however, do so much for women in India as had been expected. While the practice of widow-burning was indeed put an end to the unfortunate young woman who lost her husband was not protected against the cruelties of prejudice and superstition. Her very existence was considered an indecent fact; she was universally treated with contempt, deprived of whatever property she possessed, condemned to perform menial labor and often driven to commit suicide. Gradually this state of affairs ameliorated; but the idea of a widow remarrying was still considered shocking in the extreme. The next reform to be attempted was to make a second marriage popular, and a new society was founded for that purpose, which has already accomplished much good. It publishes a periodical devoted to its object, and this paper, entitled the *Social Reformer*, is full of matrimonial advertisements of a very sincere and decorous description. We cite some examples:

A WIDOW OF BENGALI BRAHMIN caste, 13 years of age, lost her husband six months after marriage. Her father wishes to give her in marriage to a Bengali Brahmin of high clan.

A BENGALI LADY, OF BRAHMIN CASTE, who became a widow when she was 11 years of age, and who possesses a fair complexion and long, beautiful hair, and whose moral character is most unexceptionable, is prepared to marry a gentleman of her own caste according to orthodox rites.

THE GUARDIANS OF A KHATRI (CASTE) lad of Kapur clan, aged 17, who is the scion of highly respected family, and is receiving education in English and Persian, are willing to encourage the system of widow marriage by marrying him with a widow of the same caste.

REQUIRED, A MATCH FOR A BENGALI widow of a Vaidya caste, aged 14, who had been married at her 11th, and lost her husband at her 18th. She is of wheat complexion, of good features, and can read and write Bengali tolerably well, knows the alphabet of English, and is very intelligent; can knit comforters, stockings, etc., pretty well, and is very willing to work. The candidate must be a member of the Vaidya caste, and of respectable family. He must be well educated and of good moral character.

REQUIRED, AN EDUCATED WIDOW, 12 to 15 years of age. She should be of good shape, feature, complexion, temper and health, and not suffering from any hereditary disease, daughter of a well-to-do gentleman and of respectable caste—for an enlightened young Bengal Zamindar (landlord) of respectable caste and family, accomplished, well-built, and free from every present and idiopathic malady. He is prepared to meet agreeable demands, and in order to encourage widow marriages amongst the nobles and gentries, he is desirous of presenting the bride at the wedding with jewels worth 10,000 rupees.

In England or America this sort of advertising is generally deemed either farcical or worse; but in India it is not so; and accomplishes much good for the cause of reform.—*Calcutta Cor. N. O. Times-Democrat.*

A Good Idea.

A Griswold Street lawyer lately posted on his door a notice reading as follows:

"Yes, I'm going away this summer."

"O, for about two weeks."

"Yes, I shall take along my fishing-tackle."

"Well, I've caught 'em that weighed twenty pounds."

"Yes, I feel that the trip will do me good."

"I shall publish any gain in weight in all the papers as soon as I return."

"O, of course. I never go off on these trips without taking at least twenty sure mosquito remedies along."

"No, my wife isn't going."

"I generally bait with minnows, but have used flies and bugs."

"No; I never try to sell 'em to the hotel. I always send 'em home in a refrigerator car."

"Of course. Don't think I'd go to a summer resort which doesn't boast of a mineral spring, do you."

"Well, mostly pickerel and bass, though I don't object to a whale now and then."

"For further particulars see small bills, or call on me as soon as I return."—*Detroit Free Press.*

AN INTERESTING MUSEUM.

A Berlin Establishment Where the History of Postal Intercommunication May Be Studied.

It is quite in keeping with the paternal character of state management in Germany that the postoffice should have established a museum showing the historical development of every appliance used in postal business. The Berlin postoffice museum is in charge of an officer of the chief secretary's department, and a skilled mechanic waits on visitors to furnish explanations and show the apparatus at work. Here one may trace the evolution of the means of letter conveyance, from the runner on stilts to the highly-developed railway sorting carriage. All nations are represented; we see the dashing royal mail of England, the dome on wheels which carried the mails of Denmark till 1842, and the primitive means of India and Japan. The moving adventures of the mails by flood and field are depicted in old prints and photographs. No detail is overlooked. Wagon-building is illustrated down to the spokes of the wheels; there are specimens of horseshoes and models of the pastern; there are saddles, lamps, horns, stamps, locks, letter-boxes, and weights of every period. Everything illustrates growth, and also, it may be said, the immense German capacity of borrowing and improving upon the ideas of others. A large amount of space is given up to models of the principal postoffices of the empire, some being accompanied by photographs and plans in section and elevation, so that the department, in setting about the building of a new postoffice, has a great wealth of experience and suggestion at hand. Field-post and field-telegraphy have a section, and a corridor is devoted to a complete Rohrpost line, which is shown at work, with post-cards of a reduced size specially printed for illustration. On the electrical side the museum is equally complete. The electric light, the telephone, the phonograph, are exhibited, and the interested visitors are presented with strips of the platinum sheet which has just given off several bars of a well-known volkslied. Telegraphy is fairly represented, and there is perhaps the greatest practical value in this section, which shows, for example, forms of insulators and house-top fixtures; the manufacture of wire and its common faults; the construction of telegraph lines and the tools used. The various stages of decay in poles are illustrated with the same fidelity. One pole is shown tunneled by the woodpecker; another contains a nest of the feathered depredator in situ. It would, indeed, be unsafe to assert that the museum omits anything, not even screw nails. Criticism is paralyzed before such a perfectly realized conception.—*Pall Mall Gazette.*

FRENCH DIVORCES.

Something More Than the Decree of a Court Necessary.

One of the peculiarities of the new divorce law is that the bonds of wedlock are not completely severed even when the court has granted the divorce. To be entirely rid of his or her chains the party in whose favor the divorce is pronounced is required, within the period of two months, to cite the other one before the same official who performed the civil marriage between them. Attendance, of course, is not compulsory, but in most cases the citation is obeyed, and monsieur and madame appear once more before Monsieur le Maire in the same Salle des Marriages where they were once pronounced *au nom de la loi*, man and wife. It is not unusual nowadays to witness at the large Parisian mairies wedding and divorce parties at the same time, each waiting their turn, and sometimes there are two or three of each. The former are always in full dress, the brides in white and with orange blossoms in their hair, and everybody is evidently bent on having a good time—the word *noce* in French is synonymous for a wedding and a spree. The "divorces" also make it a point to put on their best clothes on such an occasion, but black is *de rigeur* for the lady, and the ex-husband eschews white gloves. Each comes accompanied by two *temoins* and their friends and relations. But it is not good form to laugh or cut jokes. And they divide into two groups which take places as far apart as possible at opposite ends of the room. After a few minutes of waiting, during which the "divorces" remain lugubriously silent, Monsieur le Maire makes his appearance. He wears a tri-colored scarf, with tassels around his waist, and the usher shouts out, "Stand up!" an order which all obey. The Mayor takes up his stand behind a long, green table and begins with the marriages. These do not take long, and then comes the turn of the "divorces." The party draw up in line in front of the table, the four witnesses in the middle, the wife to the right and the husband to the left of the line. The clerk reads the decree of the court as rapidly as he possibly can, and then takes up a collection, just as he had previously done in the marriages, "for the poor of the ward." This done, the Mayor says: "In the name of the law we declare your marriage dissolved by reason of the divorce pronounced between you." This ends the comedy, and after exchanging ceremonious bows each go their own way, accompanied by their friends.—*Paris Cor. N. O. Picayune.*

—A Pittsburgh chiropodist says ladies are bothered with corns on their toes just as well as gentlemen, but they bear the pain more heroically. It is a mistake, however, to suppose that tight boots and shoes always cause corns. If that were so a lady's foot would be covered with these excrescences. It is the loose shoe which rubs against the protuberances that brings on corns. Some ladies do not get boots that fit their feet exactly, and the result is the same as for gentlemen. They do not, however, shriek and yell as the male sex. Years ago a lady would not think of consulting a chiropodist. Now, however, they seek relief from them just as the sterner portion of humanity. —*Pittsburgh Post.*

FOR OUR YOUNG FOLKS.

VACATION.

Vacation! I fancy, if you were a child,
And rules and examples had driven you wild,
You'd just be as joyful as I am to-day
At the thought of vacation and freedom and play.

Not a lesson to look at for ever so long,
Not a dull, puzzling sum, with the answer all wrong,
No dreadful dictation to write on your slate,
No teacher to frown if a second you're late;

But fun in the morning and frolic at night,
And the hours between full of mirth and delight.
Such races and chases, such laughter and glee,
You'd know if you only were little, like me.

There's only one trouble: you look very kind;
Perhaps you'll tell mother (you're sure you won't mind?),
If she wouldn't insist so on bed-time at eight,
She'd make it more jolly for Freddie and Kate.

Vacation! We're off with the birds and the bees,
We'll picnic in woods and have swings on the trees,
We'll fish in the brook and we'll ride on the hay,
And weeks upon weeks we'll do nothing but play.

Perhaps you are right—it don't seem so to me;
But we may by and by, having had so much glee,
Be pleased to return to the teacher's kind rule,
And willingly answer the summons to school.
—*Margaret E. Sangster, in Harper's Young People.*

BAD HABITS.

These and Bad Companions Are Ruining Many of the Youth of the Present Day.

I was waiting in a carriage for a friend one day last summer. It was a quiet street, and near by were a number of boys having a game of ball. I was intently watching the sport, when one of the boys said: "See, boys, there comes 'Old John.'" Looking down the sidewalk, we saw a man approaching. The game was stopped for a minute, and the boys watched him as he passed by.

"Ugh!" said one, shrugging his shoulders, "isn't he horrid-looking?" And horrid-looking indeed the man was. The tobacco juice oozed from the corners of his mouth; his face was red and bloated, and wore a hard, wicked expression. His walk was unsteady, his clothes shabby, and altogether, a more debased, disgusting looking creature would be hard to find. I knew "Old John's" history well. We had heard it many times from those who had known him in his boyhood. He was once a bright, happy, cheerful boy, in a happy home.

I wish it were in my power, boys, to place that man before each one of you, and tell you that he was once young and pure like yourselves, and that the cause of the change in him was due to *bad habits and bad companions.* I think he would be the strongest warning against these evils that you could have. Those first little indulgences in bad habits when a boy seemed such a little thing. The first smoke, the first glass of strong drink, the first profane language, that were indulged in "just for fun," and to please his bad associates, was the commencement of his ruin. He had no fears from them then. He would have laughed at the idea that he would ever be ruined by such little habits.

Ah, but that tyrant, habit! Little by little it binds its chains closer and closer around its victims. Little by little a young man enslaves himself to impure and debasing habits, until almost before he is aware, he finds himself bound tighter than any prisoner in his cell.

Not long since a young man made his home with us for awhile. He was fast failing in health from diseased stomach and throat. When at the age of fourteen years, like many other boys who consider it manly and smart, he learned to smoke and chew; and by the time he was twenty he was much addicted to the use of tobacco. While staying at our home he was examined by several physicians, and all concurred in the opinion that he must give up the use of tobacco if he would get well. One day after telling of the physician's advice he said: "I don't believe I can do it. I believe it impossible for me to break off using tobacco."

"Do you know," I said, "when we used to talk to you years ago when you were a boy, about using tobacco, you used to say you were not afraid but that you could stop the use of it whenever you wanted to. That you just learned to smoke so that you could smoke with other boys occasionally. Where is that strength of will gone to?"

He sat for a long while in silence. Finally, he said: "I *will* do it now. I *will* leave it off. I should be ashamed of myself if I did not have manhood enough for that." And going to the mantel he took down a number of cigars and threw them into the fire. Two or three days passed by. We could not fail to notice the struggle he was having. He was pale and restless, and hardly knew what to do with himself. About the fourth morning he came very early from his room. His face was exceedingly pale and haggard looking. "My head is almost bursting," he said. "I've not slept a minute all night. I believe I shall die if I have to endure this two days longer. I know it will kill me, and I might as well die from the use of tobacco as from this terrible suffering."

I knew then that it was all over. "What do you think now," I asked, "of boys forming bad habits, trusting to their strength of will to break from them at their pleasure?"

"I think," he said, "that it is the merest idle talk for them to say such things. And my advice to every boy living is to abstain from every impure and injurious habit—to grow up a free, pure man, and not a slave such as I am to-day."

You see, boys, what a strong tyrant habit was in that case. He had been doing his work slowly, but oh! so well.

Would that I could impress upon your minds, boys, the true beauty of a pure character! Would that I could make you believe how much nobler a man may become whose life is untainted by vitiating habits! But it is a strange and sad fact that custom is not so careful in guarding the purity of a boy's character as a girl's. Actions that would be strongly condemned in a girl, can be indulged in by a boy with but little reproach. A boy can lounge around stores and street corners, listening to profane and vulgar language, and but little be said about it. But such acts in a girl must not be tolerated. This should not be so. The purity of a boy's character should be considered of just as much importance in a home as that of a girl's, and any habit that a boy would think a disgrace to his sister should be shunned by himself.

I have heard it said, that if a boy can be kept free from all evil habits until he is twenty, he will be apt to abstain from them through life. He will by that time have seen enough to know the great injury done to both body and mind by evil indulgences, and his strength of will for resisting temptation is stronger than when younger. So you see it is while boys are young, so young that but few of them have the strength of will to say *no*, when tempted, that the purity of their characters is destroyed.

The good character of many a boy has been ruined by the influance of bad companions. It is strange what a fascination a bad boy has for his associates. We once heard a man, in speaking of a bad boy, say: "That boy has done more harm among the boys of this community than the good influence of the whole neighborhood can counteract. He makes his evil ways appear smart and manly to the boys; and many of them, good and pure in character, have fallen into bad habits just through his influence." Boys, beware of such companions. Do not be afraid to say *no*, when they tempt you to do wrong. The boy who can withstand the temptations offered by his boy associates and abstains from bad habits, has in him far more true manhood than the boy who yields, however much the appearance of a man his indulgences may give him.—*Nellie Burns in Country Gentleman.*

A BOOK TO BE ASHAMED OF.

Tommy Tucker's Conscience and the Good Resolution Which He Made.

As I went down to the meadow this morning, whom should I see but Tommy Tucker half buried in a cozy heap of Farmer Brown's new hay. He was reading out of a book with yellow-paper covers; but when I came near he gave a little start, closed the book, and slipped it out of sight. Tommy and I are quite good friends, so I knew, when he put the book away so quickly, that it was something that he was a little ashamed of.

"A bright day to you, Tommy Tucker," I said. "Don't let me stop your reading. Indeed, if your book is so interesting as it seemed to be a minute ago, and if you don't object, I wish you would read aloud."

Tommy's face flushed crimson.

"I—I don't think you would care for the story, Mr. Earlston; and I'd—I'd rather talk."

Now, this was so unlike the straightforward Tommy Tucker, who tells me all his little secrets, that I said right out:

"Surely, Tommy Tucker dosen't read books that he is ashamed to let his friends see."

The blush which had begun to die out of Tommy Tucker's face came back with a deeper glow.

"I don't know that it's very wrong," he said. "It's only a book about a boy who went off to kill Indians, who fought six highwaymen single-handed and beat them all, and rescued a lot of soldiers who had been captured, and had a great many other wonderful adventures. I'll show you the book," continued Tommy.

"No, don't," I said. "I don't want to read any book that you think bad enough to hide from me."

Tommy looked hurt, but did not say anything; so I went on:

"You see, Tommy, I am just taking your own judgment on the book. It isn't so very wrong, you say; and yet it is so wrong that you would rather I hadn't seen it, neither would you like to go home and read it to your little brothers. If it isn't a wicked book, it is a foolish book. Who ever heard of a boy who did the wonderful things that your hero does in the story every day? It isn't likely that you'll ever be called upon to fight a band of highwaymen, and it isn't likely that you'll whip them single-handed if you have to fight them."

Tommy was still silent.

"May I ask you a question, Tommy? Does the reading of that book make you study your lessons better, or make you more content at home, or fit you better for the every-day work you have to do? Or does it take you away from your lessons, make you discontented with home, make you want to do impossible things, instead of the plain things that God gives you to do?"

"You are right, Mr. Earlston," said Tommy, forgetting that I had only asked some questions, and that he was really answering the accusation of his own conscience. "You are right. It is a foolish book; and if it isn't wicked, it was making me wicked. It was making me careless in everything. Mother doesn't know why my school averages were lower last week, and why I forgot some errands I had to do. She didn't know about the book. I didn't want her to know. I'll never read a book again that I don't want her to know of."

He took the yellow book from his pocket, and tore it to pieces.

"Tommy Tucker," I said, "you will never go far wrong if you don't hide anything from your mother."—*S. S. Times.*

—Admirers of the modest but intellectual codfish ball will rejoice to hear Lieutenant Schwatka affirm that codfishing banks exist along Alaska's shores so great in extent that they never have been completely outlined, and that they must exceed those in extent of the Atlantic banks probably in proportionate extent to the size of the two oceans. It will be an enterprise, he says, that will pay as much better to those engaging over the Eastern codfisheries, as average enterprises in the West, are better than those of the same kind among us. —*Boston Herald.*

—The signal officer on the summit of Pike's Peak says the highest velocity of the wind ever recorded there was one hundred and ten miles per hour, when the instruments broke and cord wood began flying down the mountain.

FASHION NOTES.

The Trifling Things That Please Those Who Would be Well Dressed.

The jersey is worn only for demi-toilet.

Canvas and lace-woven stuffs are all the rage.

Tucked skirts are much worn here and in Europe.

Jersey webbing cloth is used for many bathing suits.

Bathing suits grow more fanciful from season to season.

Copper, steel and lead tinsel braids trim many seaside ramble suits.

The scarf of gold shot etamine is the favorite seaside hat trimming.

The pretty Gretchen dress for little girls is as popular this as last season.

There is a steady tendency to return to the style of dress of fifty years ago.

Tinsel cord is to take the place of tinsel braid in dress and millinery next fall.

Fancy red bathing suits brought from Paris are occasionally seen on our beaches.

There is a tendency to retain the pouf and looped skirt drapery by Paris dressmakers.

Short jackets, opening over full baby waists, are worn at seaside and country resorts.

Mitts are not worn with dressy costumes this summer. They are relegated to the house and negligee toilet.

The Princess or Gabrielle form of dress for little girls is moribund. It can not survive another season.

Double folds of canvas etamipe, instead of linen collars, are worn as neck lingerie with traveling suits.

Fashions in dress are more various and individualized in Washington than in any fashionable city in the world.

Red and blue remain the favorite colors for combination in seaside wraps and frocks for ordinary wear along the beach.

Color on the edge is considered the proper and desirable thing in percale, linen, or lace collars and cuffs, for traveling wear.

Some ladies prefer a red silk bandanna kerchief, or one of plain Turkey red cotton, to any other covering for the head when bathing.

Sashes of moire, surah, and all sorts of soft, crapy silken and woolen stuffs are in high favor, and are worn in almost every style preferred.

Colored and white lawn collars, pleated and soft laundered, not stiff with starch, are taking the place of white linen bands for traveling and morning wear.

Bathing caps and hats are in fanciful shapes, and are variously of red and white-striped wool, gossamer rubber cloth, gray or black, and red or yellow oiled silk and coarse straw.

The latest fancy in bead ornamentation is to put pendant strands of copper or lead beads or porcelain imitations of the same on red serge and red flannel jackets for seaside wear.

Baby waists gathered on to yokes and belts at the waist line, worn with full gathered or pleated skirts, which may be tucked and trimmed with embroidery, but not flounced, are the features of little girls' dresses.

American bathing suits are very plain blouses with medium length skirts and half-long trousers; dark blue and gray are the preferred colors, with white or red braid for trimming. Serge flannel is the material.

The dress skirt, when not draped, is now generally sewed on the bottom of the bodice, whether it is round or pointed, and pleated are less fashionable on the other side than those that are shirred or gauges on to the waist.

Undressed kid or Suede gloves in tan shade remain the favorite wear for dressy toilets, but fine silk gloves in tan shades are also worn with such dresses, while fine lisle thread gloves are considered the correct wear with wash fabric frocks, no matter how handsome the make or material.

As a rule, hats for the seaside are fantastic and eccentric to the last degree, but some are seen in simple round shapes of white, soft Japanese straw, trimmed with only a scarf and bow of white or tinted mull or lace and fastened with gilt pins.—*N. Y. Sun.*

E. ST. JOHN.

The Well-Deserved Promotion of a Prominent, Faithful and Efficient Railroad Official.

President R. R. Cable, of the Chicago, Rock Island & Pacific Railroad, has issued the following important notice: "Mr. E. St. John is hereby appointed assistant to the General Manager. The General Ticket and Passenger Departments will remain under the jurisdiction of Mr. St. John as formerly, and all communications in connection with those departments should be addressed to him as General Ticket and Passenger Agent."

The above announcement of Mr. St. John's promotion will be read with interest and pleasure by the many who have become intimate with him during a very long career. He has been associated with the road so long that he is always considered a part of the system, good, reliable, and ever on time. Mr. St. John entered the railway service in 1862; was clerk in the General Ticket Office and Depot Ticket Agent of the Quincy & Toledo Railroad at Quincy, Ill., until its consolidation with the Great Western Railroad, when he assumed a clerkship with that company in its General Ticket Department at Springfield, Ill., remaining in its service until July 3, 1863; on July 4, 1863, and until November, 1864, he was employed as clerk in the General Ticket office of the Chicago & Rock Island Railway. November 1, 1864, to September 1, 1869, he was chief clerk in charge of the General Ticket Department; September 1, 1869, he was appointed General Ticket Agent, and January 1, 1879, he was appointed General Ticket and Passenger Agent, which position he continues to fill. On Saturday, July 4, Mr. St. John celebrated the twenty-second anniversary of his connection with the Rock Island Road. Mr. St. John's promotion is another illustration of the well-known fact that the Rock Island Road appreciates the merits of its officials, and gives tangible evidence of its appreciation.

—Switzerland abolished capital punishment a few years ago, but the effect was bad, and the penalty was restored.

SOME THRIFTY PEOPLE.

Millions of Dollars Accumulated—The Career and Business Operations of the Harmonists.

There has always centered about the sect of Harmonists a halo of interest because of their peculiarities and seclusive tendencies. The founder of this rich colony, located at Economy, on the banks of the Beaver River, was George Ray, who was born in Wurtemburg in 1870. Believing he had a divine call and was charged with a restoration of the Christian religion to its original purity, he organized a colony on the model of the primitive church, with goods and chattels in common. This soon involved him and his followers in trouble with his Government, and compelled him to transplant the community, in 1803, to the United States. They settled first on the Connequenessing Creek, in Butler County, where they founded the village of Harmony and employed themselves in agriculture and manufacture. By industry and thrift they acquired considerable wealth and in 1815 they removed in a body to Indiana, where they purchased and located upon 27,000 acres of land along the banks of the Wabash River. The settlement of New Harmony was even more prosperous than the first had been, but the climate was not satisfactory, and in 1824, after numerous councils, they sold out and moved back to Pennsylvania, this time locating in Beaver County, on the right bank of the Ohio River, where they purchased 3,500 acres of beautiful farming lands and where they soon afterward laid out the town of Economy. Here is where they are located at present, surrounded by peace and plenty.

They are a strange people—do not believe in marriage, but all live together as brothers and sisters and practice the strictest morality.

In 1835 the question of marriage was the leading one in the community and about two hundred members withdrew because they favored marriages and established the town of Phillipsburg; but the new colony did not prosper, and after a few years of struggling they sold out and disbanded, dividing the proceeds of their sales equally among all the members.

In the meantime the Harmonists were gradually becoming more and more wealthy, until at present they own jointly and in common lands, stocks, bonds and herds, the value of which is estimated at $75,000,000. Besides owning all of Economy and a large part Beaver, they own an entire county in Dakota, in the valley of the Red River of the North.

Out of their surplus moneys they built and equipped the Pittsburgh & Lake Erie Railroad, running through a rich and fertile country from Pittsburgh to Youngstown, and owned the controlling interest in it until the road was sold to the Vanderbilts. It is said that on this deal alone they made seventy-five per cent. on their investment, as the road turned out to be one of the best paying lines in the country. It is a matter of history that at the time the war broke out, in 1861, they converted all their bonds and available property into money and buried it, using the treasure afterwards in paying for the building of the railroad. The payments thus made put in circulation an immense amount of silver, many of the pieces dating back to 1800.

Owing to the law prohibiting marriage the sect has gradually diminished until at present it consists of only thirteen men and forty women, all of them well advanced in years. They employ over three hundred servants and farm hands, and these, with their families, make quite a village. Everything is owned in common. The grocer, the baker, the butcher, and the milkman go the rounds every day and supply the different families with the necessaries and a few of the luxuries of life. Nothing can be purchased in the village of Economy, and it is probably the only town in the world where a man can not, even if he desires, spend money. They are extremely liberal and philanthropic, and are constantly doing acts of benevolence. Their houses, which are all exactly alike, are an equal distance apart and are at uniform distance from the village street. They are painted pure white and have no front doors, claiming that if they had these conveniences the women folks would spend too much time looking at and gossiping with passers-by. A good story is related in this connection that the president of the community a score of years ago imagined that there was too much familiarity between the young men and maidens, and so promulgated an order that all females appearing on the streets after dark must carry lanterns, but still the merry-making continued, although no lanterns appeared. This caused an investigation, which developed the fact that the worthy old gentleman had neglected to order that the lanterns should be lighted.

As stated, there are now only thirteen men and forty women left of the once large colony, and they being old it is likely that the law against celibacy will cause the extermination of the colony in a few years more. According to their laws, as long as three of them hold together the property is to remain intact, but when one of the final trio dies the other two lose all right to the property and must leave. As there are no heirs, the $75,000,000 which they possess in real and personal property will come into the possession of the State of Pennsylvania, and will form a handsome legacy.—*Cor. Chicago Herald.*

—Agricultural Item. A few days ago Gilhooly was talking with four or five lawyers, when, during the conversation, he remarked that lawyers did more to cultivate the soil than any other class. "How is that?" asked one of the lawyers, somewhat mystified. "All I know is, that an Austin lawyer made my father fork over 320 acres of land in mighty short order. My father was holding it under a forged title. You bet he forked over that land. If he hadn't forked it over, he would have been in the penitentiary right now."—*Texas Siftings.*

—In Mexico they eat salt with their oranges, both because they prefer the latter so seasoned and because they are considered to be more wholesome with salt.

HE WAS WANTED AT HOME.

The Government Not Needing Recruits to Clean Out Indians.

He called himself Colorado Jack, and he looked as if he might be a bad man to handle. He was up for drunkenness.

"Do you plead guilty or not guilty?" asked the Recorder of the Dallas Police Court.

"You don't try a man for murder before the inquests are held, do you? Don't you take me around first to the undertaker's shop to identify the remains? That is what I have been accustomed to in Colorado. I am always asked to identify my corpses."

"What remains? What inquest?" asked the Recorder.

"The corpses of the policemen who tried to arrest me," said the desperado.

"You are laboring under some hallucination, my friend," remarked the Recorder. "You didn't kill any policeman last night."

"Then he isn't dead yet. Take me to the hospital where his life is ebbing away. In Colorado they always take me to the bedside of the dying policeman who has tried to arrest me, so he can identify me as the cyclone that devastated him. Have you taken the *ante mortem* of the policeman I partially destroyed last night?"

"I don't know what you are talking about," said the Recorder; "you were arrested and brought to the lock-up by a little sick tailor who couldn't sleep on account of the racket you made."

"So I was arrested by a civilian, was I? O, well, that's all right. At first I was afraid I had disgraced myself. I was afraid I had allowed a squad of policemen to take me. Any citizen can arrest me with impunity. Civilians are beneath my resentment. A civilian can kick me and I'll not lay my hand on him. You can't make me destroy one. When I want a fight I want some two or three policemen to tackle me as an inducement. It takes five able-bodied policemen to make it interesting enough for me to let myself out. I never fish for sardines. In Colorado they usually bring out a battery on me and a company of infantry, and then the carnage begins, but here in Texas, as long as you keep your police force out of my way when I am drunk, they are safe. If a squad of policemen had tried to arrest me last night they would now be nestling in some silent tomb, but when a civilian, and particularly a tailor, comes at me I weaken right off. Let me off this time, Judge, I want to leave town right away. I want to offer my services to the United States Government to clean up those Apaches in New Mexico. I am the kind of a man they need."

"No," replied the Recorder, "Uncle Sam has got lots of just such officers as you after those Indians. You will stay here in Dallas, and help clean up the streets."

"Judge, please let me help the Government to kill off Geronimo and his band first.

His Honor refused to relent, and now the would-be Apache destroyer is chopping down weeds with a hoe in the streets of Dallas.—*Texas Siftings.*

A BURGLAR'S BACK-DOWN.

How He Began by Demanding Much and Ended by Accepting Little.

It was night—midnight. This indicates that there is going to be something goreful about this story. But there isn't. Wait.

The soft murmur of a sou'-sou'west zephyr was audible in the interstices of the darkness. Mr. Bucephalus K. Smock did not hear it. He was wrapped in the arms of slumber.

Beside the bed stood a solemn figure. It was a man clad in mystery, a paper mask, and a ten-dollar suit of clothes. The man was a burglar.

He had entered the palatial residence of B. K. Smock by means of a skeleton-key, and he carried in his hand a glittering stiletto.

While he was preparing to toss up a cent to see whether he should murder B. K. Smock or not, B. K. awoke.

"What do you want?" he asked.

"Your money or your life!" replied the burglar, in a ghastly, corpse-like, Tombstone, Arizona, whisper.

"Well," said B. K. Smock: "this is where you don't get either."

And he drew a forty-four caliber navy revolver from beneath his pillow and pointed it at the burglar's soul.

"Hold on!" exclaimed the burglar; "I don't want all your money. I'll take three dollars, and let it go at that."

"No three," said Smock.

"Make it two-fifty."

"No."

"I'll take thirty-seven cents," said the burglar, desperately.

"Not a thirty-seven," said Smock.

"Now, see here," said the burglar, persuasively; "you aren't going to send me away without anything, are you?"

"Yes, sir; I am."

"Well, hold on; let's talk this thing over. I've come all the way down here from Saratoga County to get something or other, and I don't want to go back empty-handed. I should die of mortification. My mother and sister would blush at my want of success, and my little brother would call me a blamed big chump. I've got a girl up there, and she'd marry the other fellow, sure, if I went back without anything. Don't send me away like that. Think of my future. I'm new in this business. I want to get a fair start. There's no hope of success for a man in any calling if he doesn't get a fair start. You don't want to ruin my prospects now, do you?"

B. K. Smock was touched. He disliked to admit it, but his sympathy was aroused.

"What will you take?" he asked.

"I'll take a sheet of paper with your autograph on it," said the burglar.

"All right," said B. K.; "but tell me first how it is that you can begin by demanding so much, and then go away contented with so little."

"Well," said the burglar, wiping away a warm, salt tear; "I began life as an office-seeker."—*Puck.*

—It is said that there can be found people in this country who never saw a postage stamp. This may be true, but no one ever saw a woman who could not tell how another made her new basque.—*Boston Transcript.*

SACRIFICE OF LIFE.

The Cost in Human Life of the War of the Rebellion.

The results obtained by Mr. Kirkley, a statistician of the Adjutant General's office, compiling from all attainable sources a list of the deaths on the Union side during the war, possess a melancholy but very strong interest at this time. It has been a very difficult task to gather names for this roll. So many perished unseen and unknown; so many rotted away in Southern prisons of whom every trace is lost, that the compiler might well despair of ever completing his task with anything like an approach to accuracy.

Patience and perseverance have at last accomplished the difficult task, however, and we have in Mr. Kirkley's tables what is at least the most accurate and complete death roll yet published, if not one that is absolutely without error. The registers of a dozen Southern prisons have not been secured—those at Americus, Atlanta, Augusta, Charleston, Lynchburg, Macon, Marietta, Mobile, Montgomery, Savannah, Shreveport and Tyler—and only partial records were obtained from Cahawba, Columbia, Florence, Millen and Salisbury; but with these exceptions the roll is substantially complete.

One of the most remarkable results arrived at, at least to the reader who knows nothing practically of war, is that more than twice as many men died from disease in the army as from the shot, shell, bayonet and sword of the enemy. One hundred and ten thousand and thirty-eight officers and men were killed outright or died of their wounds; but 224,586 died of disease. The number of those who are known to have died in captivity reaches the appalling total of 29,498.

Another remarkable fact is that over fifty per cent. more men were killed in action than died of wounds, the respective numbers being 62,896 and 40,777. At least three-fourths of the wounded must have recovered, partially at least, so that they did not die during the period covered by the inquiry, which ceases with the mustering out at the end of the war. How many veterans there are still among us who carry about their bodies the marks of violence suffered during the war, let the long pension rolls testify.

Mr. Kirkley's tables are arranged by States, so that we can tell just how many lives each one contributed to the cause. New York, of course, heads the list, with a total of 46,534; Ohio comes next, with 35,475; then Illinois, with 34,384; then Pennsylvania, with 33,183, and Indiana, with 26,672. Michigan, Missouri, Massachusetts, Wisconsin, Iowa and Kentucky contributed between 10,000 and 15,000 each; all the rest less than 7,000 each.

It is worthy of remark that every State now in the Union, except South Carolina, is represented on the list, and every Territory except Utah. There are only 15 from Georgia, 42 from Virginia, 78 from Mississippi, 141 from Texas, 215 from Florida, 345 from Alabama, and 360 from North Carolina. Arkansas contributed 1,713 and Tennessee 6,777. This is exclusive of colored troops, of whom 36,847 died, and does not take in non-combatants of either color.

The grand total of known deaths in the Union army was nearly 360,000. Adding as many more for the rebel losses—probably not an overestimate—and taking into account the navies on both sides, and the prisoners who died unaccounted, we reach a total of at least 800,000 men as the cost of the war to this country—nearly one-eighth of its entire voting population.—*N. Y. Mail and Express.*

MEXICO.

Some Incidents of Life in the Neighboring Republic.

A Pittsburgh gentleman, who visited the "Land of the Montezumas" a few years ago, related to the writer in a recent conversation some of the strange scenes and incidents which he witnessed while there. The Mexican cart, as he described it, is, or was, probably, the most singular vehicle that ever was evolved since the barbarous ages. Neither iron nor steel enters into its composition, nor does the workman use spokeshave, plane, or augur in its construction. The only materials he requires are cottonwood and rawhide, and the only tool an axe. Two blocks, round or oblong, it makes but little difference which, form the wheels. Through these he burns holes for the axletree. The body of the cart consists of poles or flat strips of timber, fastened together with rawhide. A rough pole serves for a tongue. When in motion the wheels wabble in every direction but the right one, and for want of grease groan so as to be heard for miles. Breakdowns are so frequent that the roads are lined with the wrecks of these primitive vehicles.

Near a spring or water-hole in the State of Durango, many years ago, was found a large stone, the only one in the vicinity. It was very heavy, but a muleteer came along who had strength enough to lift it and throw it over his head. It fell in the direction of the City of Mexico. Since then every able-bodied native regards it a religious duty to give the stone a toss toward the capital. When our informant was there he was told that the stone had been advanced forty or fifty miles on its journey. If the same rate of progression is maintained, the stone may reach its journey's end by the beginning of the next century.

Hoop poles were a legal tender in one or two of the southern counties of Indiana—Posey County for one—before the war. Soap served a like purpose in Queretaro when our informant was there. He bought some fruit from a little girl, and handed her a dollar from which to take her pay. She counted out a number of cakes of soap, wrapped them in brown paper, and passed them over as change for the dollar. Protest was useless. It was the recognized currency of the place. The cakes were probably two inches long by one and a half wide, bore the official stamp of the town where issued, and also the name of the manufacturer. They were good for their face value as long as the stamp was visible.—*Pittsburgh Dispatch.*

—Eight hundred short-horn cattle, bred in the province of Ontario, Canada, were recently shipped from Montreal to Great Britain.

SATURDAY, JULY 25, 1885.

Gen. Grant failed to rally from the exhaustion caused by his ride on Monday, and exhibited during the day Tuesday all the symptoms of approaching dissolution. The members of the family not present were hastily summoned by telegraph, and preparations made for the end. Tuesday night he rallied slightly, but not sufficient to give hope of a prolongation of life.

—As we go to press we learn that General Grant died at 8 o'clock Thursday morning.

We notice in the *would-be-if-it-could* organ of the Democratic party in Garrett county an inquiry as to the meaning of the word "cold" following the name of Handy Gipson in the list of jurors printed in this paper last week. The said word "cold" was intended for an abbreviation of colored, and should have been written col'd. Although the apostrophe was left out by mistake the *Democrat* knew what was meant and so did every reader of the jury list. The attempt of the *Democrat* to make Handy Gipson believe that it or the party it represents is his friend or the friend of his race, is rediculously absurd. It will require a journal with more brains than the *Democrat* to convince Handy Gipson that he would have been permitted to sit on a jury if the Democratic party could have prevented it. Of course the *Democrat* and its party fought to liberate the *cold* (beg pardon) the col'd race from the chains of slavery. Why certainly the *Democrat* and its party supported the civil rights bill and aided the colored people in obtaining their right of suffrage and in elevating them to the position of citizens. Of course the *Democrat* and its party has been fighting in every session of the Legislature of Maryland for years to strike the word "colored" from our statutes, and thus make all citizens equal before the law.

Why bless your dear soul, reader, it was not the Democratic party (was it) that made the law requiring the word "col'd" to be placed after the name of every colored voter whose name goes into the jury box. *It will be a cold day, indeed it will*, when the *Democrat* makes Handy Gipson believe that he or his race owes the Democratic party anything.

Give us something colder, Mr. *Democrat.*

"Why don't you give such and such an one thunder through the paper" is a question frequently addressed to newspaper men; but when the scribe answers it by asking: "Will you stand responsible by allowing us to bring your name in connection with the blood and thunder article that you request us to write?" they quickly answer, "No!" They are brave when they can vent their spleen on others by getting a newspaper to take up their cue and fight their battle while they are standing in the background safely concealed from sight, but when danger appears in the distance, and they are liable to be brought forward and take part in the contest, their courage oozes out at their finger ends.

No sign of those promised good times talked so much about by Democratic papers and orators before the late Presidential election! Instead of those promised good times we have discontent, low wages, and strikes among working men all over the country, and the end is not yet and no one can tell when it will be. The Administration is too busy reforming the country by turning out "offensive partisans" and putting in Democrats, to think of the financial condition of the country.

John Roach employed 2,500 men in his own iron works and shipyard, Many more were employed to furnish him with his raw material. From the mine and the forest to the completed ship there was an army of toilers disbanded by a stroke of the pen of the Attorney-General of the United States. John Roach gave work—the administration of President Cleveland has taken it away. It is a clear case of Democratic reform.—*Wheeling Intelligencer.*

Riches are less wealth than is learning, for wisdom cannot be stolen or lost; it is therefore thy best friend.

The John Roach Failure.

There can be very little doubt that the action of the Navy Department in the matter of the Dolphin has caused the failure of the firm of Roach & Son, and has thereby dealt a staggering blow to this branch of the iron trade. It should be a matter of regret to all right thinking people that the shipping interests of the country should have been so fatally damaged just at the time when the hopes of all were turned toward the creation of a navy worthy of this republic, and worthy to bear its flag upon the seas. But the administration seems to have gone into this question with its mind already made up to crush the John Roach shipyard. The rejection of the Dolphin was a foregone conclusion. It mattered not what might have been the performances of that ship, severer tests would constantly have been demanded. John Roach has been the chosen target of all the abuse and villification of the Democratic mud-slingers. He has been lampooned and caricatured, and assailed with coarse brutality and bitter innuendo, until there are many Democrats who consider that no treatment can be too cruel for him. The administration has fostered this feeling. Its every action in its relations to this shipbuilder has been a covert of open accusation. Its object has been to disgrace the preceding Republican administration by assailing it through John Roach. Its Naval Board was organized to reject the Dolphin, not to test her. It is not to be understood by this that any instructions were given, nor that any corrupt motive is ascribed to any member of the board. But we do mean to be understood that the members of that board knew that the rejection of the Dolphin would be more agreeable to the Secretary of the Navy than her acceptance; and rejected she accordingly was, and rejected she would have been if the objections they made to her had been removed.

What now is the outcome of this insidious attack upon the Republican administration over the shoulders of John Roach? It is this; The giving out of contract work by the government has become so unsafe to the contractors that hereafter the government will be the loser, as bidders will—since the opinion of Attorney General Garland has become the law of the administration—be very wary of placing their business under the blighting hand of the government. That is a serious loss to the whole people. Contract work will, at least, be more expensive, for contractors will have to indemnify themselves against government tyranny, and make their bids proportionately higher. A second loss is that the business of iron ship building has been seriously damaged and will not recover for years. A third loss is that the government has broken the heart of an old man and driven him into ruin. This is a loss not to John Roach alone, but to the country. Our republic cannot afford to be unjust and despotic in its cruelty to an aged mechanic who had built up a great business that employed twenty-eight hundred men. John Roach is over seventy years old. He began life as a common laborer. He worked his way up in life by his intelligence, his force of will and his solidity of character. He is one of the proofs of the worth of our political institutions. Americans have reason to be proud of a civilization in which such a career as his has been should be possible, and they have reason to blush for those of this administrrtion who could make the ruin of such a man a direct and immediate object.—*Balto. American.*

The Civil Service Reform Association of Maryland now has in course of preparation, and will shortly make public, a State Civil Service Reform bill, which will be duly presented to the next General Assembly of Maryland, and which is directed to the application of the principles and machinery of the competitive system to the selection of officers to conduct our local political business. "There is no State in the Union," to use the forcible words of Mr. Pleasants' address, "whose political condition calls more loudly for the use of this unrivaled moral and political disinfectant. Its government is a usurpation, begotten of the spoils system and sustained by it." The election for members of the State Legislature will shortly be upon us, and it is the earnest desire of the Association by all the means in its power to make its influence felt in the constitution of that body. We do not believe that any occasion will arise which will make it proper for the Association to put candidates of its own in the field, but it is thought that its large membership will act with unity and directness.

Sheep men should make an attempt to realize a profit from the feeding and fattening of mutton sheep this coming winter; and if sheep can be bought as low in the fall as now there will be money in it.

Roach's Failure.

NEW YORK, July 18.—John Roach, of the firm of John Roach & Sons, the famous ship-builders, has assigned to George W. Quintard and George E. Weed. The failure is ascribed to the refusal of Secretary Whitney to accept the dispatch boat Dolphin, constructed by direction of the U. S. Government.

He assignes all his property to George W Quintard and George E. Weed, with certain preferences. He first directs the payment of his laborers and other employes, as the law provides shall be done, and prefers William Rowland, of New Brunswick, N. J., to the amount of $62,-217.98, for money loaned and work done and materials furnished for shipbuilding operations. For a portion of this debt Mr. Rowland holds four promissory notes, made by Mr. Roach. He also prefers a promissory note made to him for $20,000, discounted by the Mechanics' and Traders' National Bank, date June 10, 1885, and payable in three months. P. W. Gallaudet & Co., of No. 2 Wall street, are also preferred, for money advanced as follows: $20,000 loaned June 27, 1885; $10,000 loaned July 2, 1885; $10,000 loaned July 11, 1885; total, $40,000.

CHESTER, PA., July 19.—The news of the failure of John Roach caused considerable excitement here, where his solvency had never been questioned. Up to within a year ago his weekly payroll was more than $15,000 distributed among 1,500 men and boys. Now the pay roll is over $70,-000, but this will be reduced to-morrow, as it is the intention of the firm to lay off about 400 in the morning. They will be paid all that is coming them. Only enough workmen will be kept to finish the ship Comal lying in the New Jersey channel. Workmen and material will be taken to her in a tug and the vessel will doubtless be completed where she lies. Her removal from the wharf was due to the assignment.

Representatives of the Chester Company say the ship yard is a separate corporation and was not included in the assignment. The yard will be affected, however, and as Mr. Roach is a large stockholder in the Chester rolling mills, blast furnace and Combination Iron & Steel Company located here, it is difficult to foretell the result on these places, each of which employs a great many men. Work on the cruisers Boston and Chicago and the Monitor Puritan will virtually be suspended and the heretofore busy yards will present a deserted and dull look. None but the kindest and most sympathetic expressions are heard for Mr. Roach, and the hope is that he will come through all right, as the city depends largely on the ship yard and other enterprises in which Mr. Roach is interested. The outlook for the coming winter is very gloomy and nothing but idleness and poverty stare many in the face.

NEW YORK, July 20.—Mr. John Roach, last night, in speaking of his assignment, said: "Now as to the causes which have led up to my assignment, strictly speaking, it is not a failure; that is to say my assignees will be able to pay two dollars for every one dollar of liabilities, if they realize anything like the real value of my property. I cannot now say what the exact amount of my liabilities are, nor what the sum of my assets will be to meet it, but if I were not so old a man, and if I had health awhile longer, I could pull things straight again. It was my great ambition, that our nation should recover its glory and prosperity on the seas. I wanted to prove that we could do business on our own bottoms, and that other nations with less resources were not more sagacious and enterprising on the seas. I have given my life and my fortune to that end, and even in the presence of the calamity, I am proud of what John Roach has accomplished."

In regard to his contracts with the Government, Mr. Roach said:

"I tell you, my friend, that those boats were condemned before their keels were laid. They were condemned in Congress. The Democracy dared not oppose the plan of a new navy, because it had become a very popular notion. The people as a mass wanted a navy. But they (the Democrats,) opposed the appropriation because, as they claimed in their Congressional speeches, the money would not be honestly spent. The appropriation was made against this clamor, and bids for the work were asked for. Mine was the lowest bid, because I had far greater facilities for the work than any other ship-builder. I secured the contracts, and began the work of construction. In the meantime, the Democracy had come into power, and prepared to prove their prophecy that the appropriation was not honestly spent. The Dolphin, a strong, substancial, excellent vessel, was condemned on the most puerile technicalities, and, to add to this injustice, Mr. Garland has repudiated the contract and practically said that there exists no binding agreement between me and the Government. That capped the climax. Consequently, in the best interests of my creditors and the Government, I judged it best to call a halt, pay off my men and surrender my property to trustees, who could pay my debts and leave me what balance there might be for my last days."

A Party of Cranks.

Mr. St. John has put on his warpaint and proposes to give battle on the prohibition issue in Ohio, where he thinks his friends can draw off enough votes to secure the defeat of Foraker, the Republican candidate for governor. He is said to be inspired not only by zeal for the cause which he professes to espouse, but also by hope of revenge upon his Republican critics, who charged him with selling out in the last Presidential contest to the Democrats.

It is also said that the campaign in New York State, which already promises to be picturesque, will be made more so by the Prohibitionists, who polled about 25,000 votes last November.

St. John has a grievance and is determined to make the most of it, and it is not unlikely that he will find a goodly number of cranks to assist him in wreaking his vengeance.

The term "crank" applies fitly to St. John and his followers because they subordinate the highest duty of the citizen to the pursuit of a theory which at best has but a slight foundation. Under our government, and in the presence of the two great parties which differ on fundamental principles of constitutional construction, the intelligent citizen must join one or the other. Otherwise he fritters away his influence. A man who favors woman suffrage might just as well subordinate all other questions to his hobby as the man refuses to vote the Republican or Democratic ticket because he believed that the suppression of the liquor traffic is the one great question before the people.

Prohibition, whether wise or unwise in theory, cannot be tested locally or generally save by the consent of either or both of the two great parties. Republicanism and Democracy divide the belief of the masses of the people, and it is folly to take neither side as a voter. The Republican party has, as a rule, given encouragement to the temperance people, when their claims were properly presented, and the cause of temperance can but suffer a reverse when its advocates seek to win without assistance. In the State of Georgia there is perhaps the most earnest, sincere and honest temperance sentiment that can be found in the country, and yet, with perhaps five sevenths of its population wedded to temperance, St. John and Daniel received the support of but a corporal's guard of the voters of Georgia. There is neither reason nor necessity for a Prohibition party while the right of local self-government is exercised by the people of every country in the Union. The party is a party of cranks.—*Balto. Herald.*

Her Hard Lines.

A young girl is under arrest at Lima, Ohio, charged with drowning her illegitimate child. —*Associated Press dispatch.*

In other words, this young girl is in jail on the terrible charge of murder. She has broken the law of her country and the law of God. Unless she can command shrewd counsel and make good use of the insanity plea, the case will go hard with her.

Brief as is the press dispatch it tells all that need be told of the young girl. Only the sentence of the court is wanting, and in good time that will come along. Yet the recital of this crime against the law and against nature is glaringly incomplete. There was an accessory before the fact,—Where is he?—Who is he? No word about him. He is not lying in jail charged with anything. He may be walking the streets of Lima, or of some other town, holding his head as high as the highest. He may be one of the bright lights of the first social circle in his community. If not already married there is nothing in this affair to keep him out of a desirable alliance. The probability is that his part in the crime will not be revealed. There is a kind of chivalry among women who suffer as this young girl has suffered. They make it a point of honor not to drag in the authors of their misfortunes. Drag them down they cannot, for society has decreed that the man does not sin when the woman falls.

Good men and good women will look with horror on the young girl's drowning of her child. Thoughtful men and thoughtful women will appreciate in some degree how strong must have been a woman's sense of shame to overcome a mother's love. Without a friend, without a refuge, no chance to get a foothold for herself and her child, is it strange that she had no courage to face the world with the evidence of her guilt in her arms? Who could have wondered if she had thrown herself with her babe off the bridge of Sighs, as thousands had done before.

Men and brethren, society has got to stop shamming. It cannot affect to be blind to what is going on under its eyes It cannot stuff its ears against the shrieks of despair. It cannot refuse to address itself to wrongs because they are unclean wrongs. It cannot refuse to talk about these things and to do something about them. They exist; everybody knows it—how many are doing anything to flush out with a pure stream of practical philanthropy the polluted sewers that flow past their own doors?

What are we doing in Wheeling? If a woman slips she breaks her neck—that is the end of all for her. She is too foul to touch with the helping hand. If she has already found her way into the house of woeful revelry society never meets her again except in the strict line of her degraded business, in the police court, in prison, or in the almshouse. Such a city as Wheeling ought to do something better than this. Wheeling has made a good record in the foreign missionary field.—*Wheeling Intelligencer.*

State of Trade.

NEW YORK, July 18.—*Bradstreet's Journal*, in its commercial summary, says: The general trade situation, as reported by special telegrams to *Bradstreet's* is characterized by the customary dullness observable at this season of the year. The plethora of money reported from the leading financial centers is as heavy as ever, and the late conference between the United States Treasurer and Comptroller of the Currency and the president of the banks belonging to the New York Clearing House, does not lend confidence to the future, so far as the condition of the National finances is concerned, except in so far as the growth of sentiment in favor of repealing the act compelling the coinage of silver promises early action after the meeting of Congress.

The industrial situation is less satisfactory, and strikes and industrial suspensions have increased. Mercantile collections are less prompt. There is a slight gain in the movement of general merchandise reported from Chicago, and leading dealers in various lines there look confidently forward to a good fall trade. At Boston general trade is very dull, and the prospect for the coming autumn is considered doubtful. There is a partial exception so far as dry goods are concerned. The lines of samples out are said to be extensive and already active, and some dealers look ahead to a good trade in the autumn.

BOSTON, MASS., July 18.—The *Advertiser* in its weekly review of the wool market says: The market has been more active, but the tenor is a little uneven, for while some houses have been very free sellers others have declined offers of the old prices. The tone is, however, fairly strong. The receipts are piling in upon dealers and commission men very heavy, so that storage facilities are in great demand, and the free sellers take the position that, with such, an advance cannot be readily established, and, even if it were, a run of a few dull days would effectually curtail the demands of the trade and create also a decline in prices. They point to the number of times that, within the past two years, higher prices have been hoped for and expected that the bottom had been reached, but each time something had occured to show that the bottom has not been touched.

Died in his Coffin.

EMMITSBURG, MD., July 14.—Forty years ago Mr. David Gamble, a wealthy farmer near here, made a coffin in which he slept every night without failure. His novel bed was chosen, he said, as a constant reminder that death is always near. His desire to impress this fact upon himself was owing to the sudden death of his wife, at the age of 30 years, by heart disease. Just before he made the coffin they had been to a ball, and after returning home retired to bed. Fifteen minutes later Mr. Gamble found that his wife had died in his arms. The shock was believed by many to have unsettled his reason. He always kept his coffin thereafter in the corner of his dining room. He would get into it every night and pull the lip up until only his face was exposed to view. One day he had a travelling photographer take a view of him as he lay in the coffin. This picture he had framed and hung over the dining room mantiepiece. Last night he retired to his coffin at the usual hour, but when the servant called him this morning it was found that he was dead. The body was not disturbed, and will be buried as it was found. Mr. Gamble was a charitable man and much liked.

Every man needs a true inward manhood. All the elements that are in us are insignificant except as they stand related to that.

Horrible Tragedy.

PITTSBURGH, July 20.—At 1:30 o'clock yesterday morning Patrick Flaherty, residing on Diamond St., McKeesport, after drinking to excess with several companions, started for home.

On entering the house he took a lighted lamp from a table and started up-stairs. In some manner the lamp was knocked from his hand and exploded, saturating his clothes with oil, and setting them on fire. He started out of the house and ran up the street for several blocks, when he fell exhausted, and slowly roasted to death, his screams for help being unheard, owing to the quiet neighborhood.

His body was found at daylight this morning, and presented a horrible sight, his flesh being burned to a crisp, and pieces of it, literally roasted, were found at his side.

The news of his death was sent to Mrs. Flaherty and her five children, and they immediately ran to the spot where he was lying. When Mrs. Flaherty beheld her husband's body she gave one piercing scream and fell prostrate across the body. When lifted up life had fled. The scene presented by the five orphan children weeping at the side of their dead parents was heartrending.

Swindling Wool Buyers.

The buyers of wool are operating extensively just now, and among a good many honorable agents of responsible houses, there are a few rascals who represent only themselves. One of these gentry, wearing kid gloves and gold eye-glasses, has been buying wool in Pennsylvania, and giving drafts at thirty days' sight. That means, thirty days after the draft has been presented for acceptance. The wool is ordered to be shipped immediately, and long before the thirty days have elapsed, it may have been sold a dozen times, and can not be recovered, Cash on delivery should be the terms on which business in produce is done with strangers, and any receipt, signed for a small payment, to bind the bargain, should be examined, to see that it does not cover a promisory note. —*American Agriculturist for August.*

The Buffalo, N. Y., *Commercial* has a level head when it says that, "in view of all the conditions of the case, the *Commercial* is of the opinion that the only wise course for the Republican party this fall is to get its face squarely and resolutely in opposition to every movement looking to tariff reductions. If there is to be any change let it be in the direction of an increase rather than a decrease, so that some life may be breathed into our languishing industries."

Baltimore Live Stock Market.

[From Baltimore American.]

MONDAY, July 20, 1885.

PRICES OF BEEF CATTLE AT THE MARKET TO-DAY.

Very best on sale to-day 5¾@5 4-5c., that generally rated first quality 4@5 cts; medium or good fair quality 3½@3¾ cts; ordinary thin steers, oxen and cows 2½@3¾ cts; extreme range of prices 2½@5 4-5 cts; most of the sales were from 3@5¼.

REMARKS ON BEEF CATTLE.

The arrivals of Cattle during the week amounted to 1,828 head, against 1,315 last week and 3,059 head the corresponding week of last year, and the sales were 939 head, against 894 last week, and 1,595 head the corresponding week of last year.

The continued warm weather has had a very depressing effect on trade to-day, and dullness has ruled accordingly on the Hill. The effects of the drouth are further seen in the character of the offerings, which consisted very largely—and entirely too much—of thin stock, which dealers advise those who have it to hold longer if they have any way of doing so, as the market is overstocked and ruinous prices have to be accepted. Quotations of the best cattle, of which there were few offered, show little change, quality considered; but other grades are off ¼@½c., and in some instances ¾c., as compared with quotations last week. Prices 2½@5 4-5c., with few at either extreme, the most sales ranging from 3 to 5¼c.

THE SWINE MARKET.

The offerings number only a few less than those recorded last Monday. The quality is fully as good as it was then. Trade is fairly active, with the comparatively light run at an advance on last week's prices of fully ½c., and they range now at 5½@6½c., for rough hogs, sows and stags, to 6½@6¾c., for fair to good hogs. Same time last year the quotations ranged from 7@7½c., for common hogs, to 7¾@8c. for the better grades, with full sales at and near 8.

THE SHEEP MARKET.

The offerings number about 1,000 head less than they did last week, and their quality is not as good as it was last Monday. Trade is slow for common stock and fair for the better grades, which have been mostly taken by Eastern buyers. We quote all the way from 2 to 3c., for common to fair sheep and 3½@4 for fair to good. Lambs 3@6c.; few selling at either extreme. Same time last year sheep sold at 3@4½c., and lambs 4@6¼c., gross.

LOCAL NEWS.

LODGE MEETINGS.

OAKLAND LODGE, I. O. G. T., meets in Sturgiss' Hall every Tuesday night.

LOCAL BRANCH, No. 85, of the Iron Hall, meets in same Hall 1st and 3d Saturday nights of each month.

ALTA LODGE, No. 574, K. of H., meets in same Hall 2d and 4th Thursday nights of each month.

SHEALTIEL LODGE, No. 122, I. O. O. F., meets in Legge's Hall every Monday night.

PATMOS COUNCIL, No. 386, A. L. of H., meets in same Hall 2d and 4th Friday ntghts of each month.

ANNOUNCEMENTS.

[Advertisements under this heading will be inserted at the following rates: For Members of the Legislature, Clerk of the Circuit Court and Sheriff, $4.00; Surveyor and County Commissioners, $3.00, and for Register of Wills, $2.00. Advertisements to run till the meeting of the Nominating Convention. The space allowed will be six lines or less, and 50 cents per line will be charged for each line in excess of that number. No name will be announced until the fee is paid.]

FOR SHERIFF.

At the solicitation of many friends I hereby announce myself as a candidate for Sheriff of Garrett county, subject to the action of the Republican County Convention.

JOHN H. RILEY.

July 7, 1885.

--Our hotels and boarding houses are rapidly filling up.

—Mr. Wm. McSherry, of Gettysburg, Pa., is stopping at Miss Della Edward's.

—Mr. M. E. Howe and family removed from Oakland to Mountain Lake Park Monday.

—At least one thousand persons attended religious service at Mountain Lake Park last Sunday.

—The funeral of Mary Catharine, daughter of J. A. and M. A. Sowers, will be preached at the Bray Schoolhouse Sunday, Aug. 2nd, at 3 o'clock P. M.

—Mrs. Stahl, widow of the late John Stahl, desires to dispose of her house and lot in Oakland. Persons desiring a cheap property should make a note of this. 7 18 tf

—The article in our last week's issue--"A plea for Constitutional Money"--should have been credited to the Cumberland *Independent*, instead of the Cumberland *Civilian*.

—Died, at the residence of her mother, Mary Jane Arendt, in Shipman, Ill., Ida J. Arendt, aged 26 years, 11 months and 3 days. Deceased formerly resided in Grantsville, this county.

—Quite an exciting game of lawn tennis was played at the Oakland Hotel last Saturday afternoon. The champion players were Mr. Harry Buck, of Baltimore, and Mr. George D. Howell, of Uniontown, Pa., both guests of the hotel.

—A party composed of Messrs. Alexander Fleckenstein, John A. Wolf, Joseph Smithman, A. Leowenstein and John and Andy Helbig spent last week in the Black Water region trout fishing. They caught over two thousand trout, taking nine hundred on Friday. Their camp was located near Davis City.

Church Services--Sunday.

Garrett Memorial (Pres.) Church—Preaching at 8 P. M. by Rev. John S. Foulk.

Preaching at the Deer Park Chapel at 4 P. M. by Rev. J. S. Foulk.

Preaching at Terra Alta, by Rev. John S. Foulk, at 11 A. M.

Lutheran Church—Preaching at 10½ A. M. and 8 P. M. by Rev. C. W. Sechrist.

Preaching at Deer Park, by Rev. C. W. Sechrist, at 2½ P. M.

M. E. Church—Preaching at 10½ A. M., and 8 P. M.

St. Peter's, Catholic— Preaching every Sunday at 10½ o'clock A. M., except the second Sunday of each month.

Notice!

All persons knowing themselves indebted to me will please call and settle by cash or note. All claims not settled by the 1st of June next will be given out for collection.

H. A. RASCHE.

Chance for Investment.

For sale or rent, two cottages, furnished, with use of horses and carriages.

MRS. E. A. KILBOURN,
4 11 Oakland, Md.

For Sale Cheap.

A second hand Smutt Machine in good running order, will clean from 15 to 20 bushels per hour. Call on, or address,

H. A. RASCHE.
Oakland, Md.

Bucklen's Arnica Salve.

The best Salve in the world for Cuts, Bruises, Sores, Ulcers, Salt Rheum, Fever Sores, Tetter, Chapped Hands, Chilblains Corns, and all Skin Eruptions, and positively cures Piles, or no pay required. It is guaranteed to give perfect satisfaction, or money refunded. Price 25 cents per box. For sale by W. D. Nydegger, Druggist, Oakland, Md.

Concert at Swanton.

In the interest of Anderson Chapel, in Swanton, the ladies will hold a "Pink Festival" on Wednesday evening, July 29th. Among refreshments will be ample supplies of the delicacies of the season. Pleasures of the concert will be heightened by the attendance of a Piedmont band of fifteen pieces. Midnight train east will stop at Swanton for visitors returning to Piedmont.

Bailiff Elected.

At a special meeting of the Town Commissioners Friday evening of last week, Mr. Thomas R. White was elected Bailiff, *vice* C. E. Boyer, resigned. Mr. White is to receive for his services—$15 per month for lighting and keeping the lamps in order, 5 per cent. for collection of taxes, one-half the fines, and $1.25 per day for every full day's work done upon the streets.

Base Ball.

The second of a series of games between the Oakland and Terra Alta clubs, was played at the latter place on Thursday of last week. As the Oakland boys had beaten the West Virginians on the 4th of July, considerable interest attached to this contest, evidenced by the number of people from the two places, who witnessed it. Notwithstanding the hot weather, a large crowd of ladies and gentlemen went out to the ground, and were rewarded by seeing a good game. It was chiefly a battle between the pitchers, and as it was the first time the Oakland boys had ever faced a "curve" pitcher, the visiting club was vanquished. It is but fair to say that the winning of the game was due to an imported pitcher, and had the Terra Alta club played their own men, they would have again fallen the victims, instead of winning.

The score by innings is as follows:

Oakland, ...1 1 0 0 0 0 0 0 0—2
Terra Alta,.....1 0 0 2 3 1 0 0 x—11

Umpire—Allen Ison. Scorer—Eli. Townshend. Time of game 2 hours.

[For THE REPUBLICAN.]

An Aged Pilgrim at Rest

Died, at Accident, Md., on the 16th of July, 1885, Margaret, wife of J. E. Stauffer, at the age of 78 years, 3 months and 24 days.

Mrs. Stauffer was a native of Lancaster county, Pa., and was born at Maytown, on the 23d day of March, 1807. Her maiden name was Geppfest, and she was the seventh among a family of eight sisters and one brother, all forming "a family of singers and players on instruments of music." Her only brother was a teacher of music, of the old school, and Margaret entered upon the profession of vocal instruction at the early age of sixteen years. She was confirmed a member of the Lutheran church in her native place at about fourteen years of age, and she loved the people of her choice, and the church of her fathers. It is remembered of her, that at a meeting of the old Pennsylvania Synod at Maryetta about the year 1827 she created a sensation by successfully leading a vocal voluntary, on which the leader of the choir, a certain Prof. St. John, of Mass., had twice "stuck" at the fourth note.

Margaret was married to J. E. Stauffer, also a native of Lancaster county, in the Spring of 1828. After her marriage she resided and taught vocal music, for some eight years, in Middletown, Dauphin county, Pa., subsequently she lived and was similarly engaged at Berlin, Somerset county, same state. During her residence at Berlin, Rev. Reese, her brother-in-law, was pastor of the Lutheran church there. In part through her sister's marriage to a Lutheran minister, and more through her work as teacher of vocal music among the children of our churches and Sunday schools, Mrs. Stauffer enjoyed a more or less intimate acquaintance with a large number of ministers in the Lutheran church, of a preceeding generation. Among those she delighted to speak of were, Drs. Hazelius, J. G. and S. S. Shumucker, A. Lochman, Oswald Sahm and Revs. Gotwald, Sr., P. Schindel and many others.

Forty years ago, Mother Stauffer came with her husband, to reside in the village of Accident, where she has continued to the day of her death.

As a resident of this place, she has been as well, as widely and as favorably known as any one among us, of her age. That her life was exemplary and useful, all gladly testify; that it was full of trials, hardships, losses and crosses, is recorded in heaven, and in the hearts of her dearest remaining friends on earth. No one in this community has exercised a more hearty charity, or shown a fairer example of neighborliness than she. And, in turn, it can be truthfully said, that no one has received freer and more frequent testimonies of chartiable remembrance. For this woman saw years of *want* as well as years of *plenty*. During some twenty years she was left to fight life's battle alone, and only during the last three years of her life has she again known the comforts of a competence. Happily, her last few years were free from care; yet her sufferings were many, varied and painful, but her patience was heroic and her complaints moderate. Of human kindness, Mrs. Stauffer, in her day, received freely; yet not always according to her need and deserving; but she knew a "Friend that sticketh closer than a brother," and from Him she never failed to receive needed help and comfort. Indeed, it it was in that life "hid with Christ," that her strength lay, and thence, as from an unfailing well, she drew and drank refresing draughts of oft-needed consolation.

Mrs. Stauffer was the mother of eight children, five of whom never looked on the blue heavens, ere the "Good Shepherd" carried them thither in his arms. Another was taken at six months, and two daughters remain. These, with the aged husband, we commend to the tender care and unfailing comfort of a covenant-keeping God.

Though long in feeble health, and waiting death's coming, her departure was hastened by a fall on her kitchen floor, ten days before her decease, in which fall a limb was broken.

After suitable religious services by her pastor on the afternoon of the 17th, near the setting of the sun, and in the presence of a host of loving and sympathizing neighbors and friends, we laid her mortal remains to rest, quietly and peacefully, 'till God shall call His sleeping saints arise, to reign with Him in happy and immortal youth.

J. B. SHOUP.

Davis City.

The contract for four more company houses has been let, and work on them has been commenced.

There will be an excursion from Piedmont to this place next Sunday. Come over, ye Oakland lads and lassies.

The engine house will be erected immediately. Size, 60 by 120.

It is estimated that 100,000 trout have been taken from Blackwater this season.

The coal trade is dull.

August 3d, there will be an excursion from Davis to Piedmont.

Frankville.

Mr. and Mrs. Michael Wolf, of Chillicothe, Ohio, are here visiting.

We are sorry to announce the illness of Mr. Daniel O'Connell of this place.

The weather here is very hot and dry.

Mr. James Beard, our enterprising merchant is doing a good business.

Mountain Lake Park.

Our Camp Meeting closed last (Monday) night at about eleven o'clock. It proved to be one of the best, if not the best, ever held in this part of the country. Instead of it being confined to one or two demoninations, quite a number were represented, and they all spake with one accord as the spirit gave them utterance. There were hundreds who testified to full salvation in Christ Jesus. Even the young Japanese who are stopping with Miss Jennie Smith, under the tutorage of Mrs. Hart, gave unmistakeable evidence in their best possible use of the English language, that they were fully given up to Christ. The children were carefully looked after. Three or four special meetings were held for them, in which there were from one to two hundred each time. These were grand meetings. They sang very sweetly, and nearly all repeated verses of scripture. But the most successful and gratifying one was held last Sabbath afternoon, when about fifty or sixty of these dear children knelt at the altar to give their young hearts to Jesus. This they can do so readily "before the evil days come." I would just delight to give to your patrons, in detail, all the proceedings of this meeting, but as I cannot do this, I will say that it was far better enjoyed than heard of, to associate with the grand workers and listen to their burning words and almost irresistible appeals. Although the burden of the care of the meeting fell on Bro. Thompson, if one could be more happy than another I would say that he bore away the laurels. No doubt many will be greatly disappointed not to have been here, but we hope and believe they will have a like opportunity next year.

Improvements are yet going on. Judge Hamill has put up a back building. Mrs. Mills is having one put up now, Mr. Bardall has had the Fullerton cottage completed and re-painted and a handsome porch added to it. Mr. M. E. Howe's cottage is completed and he is now moving into it. Mr. Lafetra's is completed, also, and is being occupied by guests from Grace cottage.

Starbuck & Bundy are here with their engine sinking wells. They have just completed one for Rev. Joseph Lee and are now sinking one for Weaver & Bardall.

I am glad to state that Dr. Logan and family are with us again. Mr. D. C. List has returned to his cottage.

Rev. N. L. Reynolds, of Homestead, Pa., might not be inappropriately called the patriarch of a goodly company dwelling in tents on the beautiful rise of ground just north of P. T. Garthright's store

Prof. C. F. Himes, of Dickinson College, is with us again and will open the second session of the Summer School of Amateur Photography on the 22d inst.

The Y. M. C. A. Convention opens Thursday, and will likely continue over next Sabbath. From the past I can bespeak for the success, and profit to all who may attend.

The Mt. Lake Park Assembly begins August 6th, which promises many rare treats. J. A. E.

Somebody tells the Lonaconing *Review* that we have two live A. M's among the teachers of Allegany county.

It is news of this character that makes us proud of the community in which we dwell.

Had we our say, however, there would be more A. M's among the men and more M. A's among the women.

Thus would popular education be magnified and the multiplication table extended according to the rule laid down in Genesis.—*Frostburg Journal.*

Small versus Large Farms.

Our own notion is that small farms, well cultivated, are almost invariably the most profitable; and hence, we firmly believe (what has so often been asserted,) that if many a farmer would sell half or two-thirds of the acres he now occupies, and poorly tills and manages, and devote his entire time and energies to the care and cultivation of the remainder, he would derive far more profit from his labor and inyestment, with much less yexation of spirit. The fact is, as somebody truly asserts, we have too many farmers who are "land poor"—who have so much land they cannot make a living. Paradoxical as this may appear, it applies truthfully to many a naturally fertile and productive locality. When such farmers have learned that it is not economy to own more land than they can till in the most profitable manner, so that it will pay for the money expended in keeping it free from taxes, weeds, and other encumbrances, they will have solved the problem of ease in practical rural life. The happiest and thriftiest farmers we have ever known lived on farms of only ten to one hundred acres, every foot of which was made to count. On the other hand, the farmer who has so many broad acres that he cannot walk over them daily—where rods of fence corners are never cultivated or otherwise utilized—lives a life of anxiety and worry. Instead of working like slaves and living in a miserly manner, in order to "run a big farm," or purchase "all the land that joins them," it would be wise for hosts of farmers to sell some of their broad acres, concentrate their efforts upon limited areas, and look more to the comfort and happiness of their households, and the proper education of their children. Even if large farms were the most profitable—which we deny—small ones are to be preferred for many and cogent reasons, not the least of which are the comfort, peace, and general welfare of the owners and their families.—*D. D. T. Moore in American Agriculturist for Aug.*

Notes About Horses.

A collar should never be placed on a horse without first being thoroughly cleaned. Dirty collars are a fruitful source of sore shoulders.

If your horses have sore shoulders, cure them up as soon as possible. A day or two off duty may prevent a sore that would be annoying all season.

Don't attempt to go through the summer without fly nets. The satisfaction they afford the horses will more than repay for the trouble and expense of getting them.

Give the horses the best pastures on the farm. They will be refreshed but little in the morning if they are obliged to hunt all night in order to get all they want to eat.

Never drive a horse, no matter how quiet he may be, with a flexible rubber bit. If his mouth is tender and a soft bit is required, use the rubber bit, or a leather-covered one.

To break a horse of the habit of cribbing, nail a strip of long woolen sheep-skin some eight inches wide along the entire length of the manger and sprinkle it with cayenne pepper.

It is useless to try to teach as intelligent an animal as a horse kindness by beating it, yet there are fools enough in the country who think it can be done, and try it at every opportunity.

In cleaning stables give the mangers and troughs a thorough cleaning as well as the stalls. A little water and a scrubbing brush can be used to advantage in the feeding boxes occasionally.

A wet sponge on the top of the horse's head may save a sunstroke this hot weather. If your horses are expected to do much hard work when the weather is sultry they must have the best of care.

The lighter the harness the cooler it will be for the horses. There is no use in loading horses down with harness for farm work. All unnecessary trappings should be dispensed with in warm weather.

Under the shade of a tree where the air cannot reach them is a warmer place for horses than in the sun where a good breeze is stirring. When resting your teams give them all the benefits you can. They need it.

In changing from old to new hay care should be taken not to feed too plentifully. Horses will eat more than they should because it tastes good, and are thus likely to become injured. It is not best to give them all they will eat.—*Exchange.*

Wool and Sheep Notes.

It is claimed that the Texas clip is 25 percent short of last year.

When everybody wants to sell is an unusually good time for somebody to buy. Then buy sheep.

Another drought is reported in Australia, calculated to still further deplete the wool industry there.

A single commission house in Chicago sold over 100,000 pounds of pulled wool the last week in June.

A car load of Omaha slaughtered sheep is reported as having arrived in Boston, only six days on the 2,000 mile journey, and in good condition.

Good young sheep are a good investment for those farmers who have plenty of feed and pasture—one of the best in the line of live stock.

Do not forget to clean out the springs and watering places in the sheep pastures often enough to keep the green scum off, which collects on water during hot weather.

In breeding, aim entirely at one type or class of sheep, if the best results are to be reached, and do not change from one class or breed every year or two. By continually changing no one can build up a fine flock, as that requires years of careful breeding.

The State of Missouri in 1882 had 1,798,925 head of sheep; in 1884 the number was only 1,542,514 head, a difference of 256,111, and no doubt 1885 will show a much greater decrease in the number of sheep in that wool-growing State.

A Kansas shepherd has a flock of 17 head of Cotswool sheep that clipped an average of 17½ pounds to the head. These are good sheep. A flock of their merits on every sheep farm would make sheep husbandry profitable in spite of low tariff and hard times.

Those handling wool in the London market assert that there is too much of a tendency at this time towards producing wools of an inferior grade—from which it is inferable that when a reaction in sheep husbandry occurs high-class wools will get the best of it.

The *Michigan Farmer* says: In answer to a number of inquiries we report that Diamond the champion shearing ram of Michigan or any other State, this year cut a fleece of 38 pounds 8 ounces, eighteen days less than a year's growth, making an aggregate of 148 pounds 3 ounces for his four fleeces.

The best means of insuring a profi from any kind of stock is to make that stock the object of special attention and care, and the avoidance of frequent changes from one kind of stock to another as the markets go up and down. This is very applicable to the sheep business at the present time.—*Pittsburgh Stockman.*

Religion Imperishable.

Religion is reproached with not being progressive; it makes amends by being imperishable. The enduring element in our humanity is not in the doctrines which we consciously elaborate, but the faiths, which unconsciously dispose of us, and never slumber to wake again. What treatise on sin, what philosophy of retribution is as fresh as the fifty-first Psalm? What scientific theory has lasted like the Lord's prayer? It is an evidence of movement that in a library no books become sooner obsolete than books of science. It is no less a mark of stability that poetry and religious literature survive, and even ultimate philosophies seldom die but to rise again. These, and with them the kindred services of devotion, are the expression of aspiration and faith which forever cry out for interpreters and guides. And in proportion as you carry your appeal to those deepest seats of our nature you not only reach the firmest ground, but touch accordant notes in every heart, so that the response turns out a harmony.

Ayer's Sarsaparilla cures Liver Complaints, Female Disorders, Rheumatism, and all diseases of the blood.

NEW ADVERTISEMENTS.

TRESPASS NOTICE.

All persons are warned not to trespass on any of my lands in any way, one tract called "Maryland," and part of a tract called "Wm. Ashby's Survey," adjoining "Maryland," as I will prosecute all such offenders to the extent of the law.

July 25, 4t. THOMAS W. ASHBY, SR.

COMMISSIONERS' MEETING.

OFFICE OF THE GARRETT COUNTY COMMISSIONERS, OAKLAND, MD., July 22d, 1885.

The County Commissioners of Garrett county will meet in their office at Oakland, on

Monday, August 3d, 1885,

for the purpose of transacting business.

By order
G. W. MERRILL,
7 25 2t Clerk.

FOR RENT!

50 acres desirable land, fenced; easily cultivated, on Pond Run, 2½ miles Northeast of Deer Park, between the farms of Ramsey Browning and L. A. Stemple.

Apply to
EDWARD A. OSSE.
37 N. Calvert St., Baltimore, Md.
July 22d, 1885.—tf.

Have you read our advertisements
And have you profited by them?
Remember we are selling very cheap
Now for the cash, and
Each article is guaranteed.

And if you have not found it out
Now is the time to do so.
Don't put it off any longer.

Last week we sold apples at 5 cents a can;
And this week best corn at 10 cents a can.
What is cheaper than this?
To live and let live, is our motto.
Our goods are the best in the market; we
Never buy any but the best goods and
Sell them at a close profit, and

Give our customers the benefit of the
Reduction, and thereby insure them
Only first-class goods.
Call and be convinced that
Every article is just what we
Represent it to be, and
You will be pleased with your purchases.

OAKLAND, GARRETT CO., MD.

NEBULOUS PHILOSOPHY.

She came from Concord's classic shades, on Reason's throne she sat,
And wove intricate arguments to prove, in language pat,
The Whichness of the Wherefore, and the Thusness of the That.

She scorned ignoble subjects—each groveling household care—
But turned her lofty soul to prove the Airiness of Air,
And twisted skeins of logic 'round the Whatness of the Where.

To lower natures leaving the dollars, and the sense,
She soared above the level of commonplace pretense,
And moulded treatises which prove the Thatness of the Thence.

Her glorious purpose to reveal the Thinkfulness of Thought,
To trace each line by Somewhat on the Somehow's surface wrought,
To picture forms of Whynot's from the Whatnot's meaning caught;

To cultivate our spirits with the Whyfore's classic flow,
To benefit the Thereness with the Highness of the How,
To flood the dark with radiance from the Thisness of the Now.

"What good has she accomplished?" O, never doubt her thus!
It *must* be useful to reveal the Plusness of the Plus,
To illustrate with corkscrew words the Whichness of the Us.

Mock not, poor common mortal, when thoughts like these appear,
Illuminating our labor with the Howness of the Here,
And blazing like a comet through the Nowness of the Near.

Some day in Realms Eternal such grand mist-haunted souls
Inscribe their words of Whichness on Wherefore antic scrolls,
In that great world of Muchness which through the May be rolls.

Then shall we each acknowledge the Whyness of the Whence—
Each understand completely with Sensefulness of Sense—
The Thusness of the Therefore, the Thatness of the Thence.

—*I. Edgar Jones, in Chicago Current.*

FORESTS OF STONE.

Probing for Logs Beneath the Surface in New Jersey.

Trying to Chop a Tree of Rock—Trunks, Boughs and Leaves Turned to Stone—A Description of Some of Nature's Wonders.

"If you want to see something curious," said a friend who was a member of a Government survey, "go down with me to Woodbine." Four miles beyond Woodbine, out on the sandy stretch of old sea bottom or beach that is termed the Cape May Peninsula, we came upon Dennisville, where all the Dennises of all time had evidently settled. A local Dennis said there were twenty-five hundred of them and nine-tenths were evidently children. They lived in scattered shanties or houses on a long narrow street, on each side of which malaria stalks abroad from the great swamps that constitute their boundary. The latter, however, that are perhaps over twelve square miles in extent, are the means of providing a living to nearly all the inhabitants of Dennisville, though the nature of their occupation would never be suspected from external observation.

"We're all in the loggin' business," said a tall, thin Dennis, yet as far as the eye could reach not a tree could be seen standing that would make even the ghost of a fair log. "They ain't a-growin'," continued the man. "They're underground. We dig for them, or spear them, as you might say. Here's the tool," and stepping into a low hut he brought out a crowbar that, like everything else, seemed attenuated and was stretched out into a long, slender-pointed rod. "We wade along," continued the man, "and probe with this feeler, and when we strike a log we feel around, and if it's a good one we dig her up, and if it ain't we let her soak; that's about the way of it."

"So down in Jersey you burrow for your logs?"

"That's about it," replied the man. "You know we're obliged to be a whit odd or so; we've got the name of it, onnyhow."

"The secret of this business," said my friend, the geologist, "is that ages ago all this area was covered with a fine growth of large trees, and the same are found growing in some parts of the swamp yet, but they have died out and fallen down and sunk into the soft mud, and so been covered up by mould and mud, until many other layers have grown over them; but in some remarkable way the wood is preserved and these sunken ancient logs are just as good for shingles and other articles as they were when alive; hence, for many years there has been a steady hunt for them, and Dennisville is a result of the industry. To the botanist the tree is the evergreen white cypress or cypressus thyoides sempervirens, and the numbers that once grew over this swamp and that have been entombed are beyond conception. The trees upon or near the surface are the only ones available, and fortunately are the best, but far below there are probably myriads of others turned to stone and representing the past geological ages of the earth. The logs were worked out by the men who are nicknamed 'Swampoodles,' and who live in the midst of the malarious district all their lives. When a log is found a ditch is made about it, into which the water soon flows. A great saw is then applied and the roots removed, and as a rule the log will rise to the surface and can be cut up and carried off, though in many localities the shingles are made right on the spot and dragged over the swamp on roads in many cases made of boughs and twigs. This curious business is not confined to New Jersey, but over in Delaware and Maryland there are similar swamps, where the shingle business has been carried on for years. One of the swamps in Delaware extends over twenty-five square miles, and hardly a house in Sussex County but what is shingled with the ancient deposit."

"I tell ye," said an old farmer from this region, "that we're a-livin' on a curious kind o' crust round here. In pi'nt of fact, my farm might be said to be perched on a reg'lar wood-pile; there ain't no end to it. I built a foundation to a barn some years ago down in Delaware on the swamp lot, and the further down I dug the more logs I came on to, and I reckon way down it's clean, solid wood, and when a fire breaks out in the swamp you want to keep your eyes peeled, now I'm a-talkin'. How so? Well, I'll jest give you a little of my experience. When I first married my old woman I bought a patch right on the edge of the swamp, and the land ran right into it about half a mile. That summer it was monstrous dry, and after awhile the fires began to break out, and afore we knew it it had crept up to within a thousand feet of the house. But we got at it with brush, and, as we thought, put it out, and did; but that night I was awoke by hearin' a crash so loud that you'd a-thought the hull house had gone down, and when I got out there was a blazing fire right over by my fodder house. I got there in about two minutes, and I tell ye I was scared. There wasn't hide nor hair of the house, but a deep yawnin' hole about fifty feet across, and the Lord knows how deep, and burning red hot, just like a volcany. I tell ye I got my folks out of that diggin's for a while now. Fortunately it came on to rain the next day and soaked it out, and I ain't a drawin' the long bow when I tell you that that hull kentry had been tunneled by the fire. You see, it had crept along under ground for nigh a thousand feet, eating away the wood, and finally when it got under the fodder, the weight of the stuff broke the crust in and down it went into a reg'lar pit of fire. I tell you it was an unsartin place to live on and I was thankful enough that it didn't get under the house. We'd never have known what hurt us; we'd just melted down quick. Yes, there's heaps of places in the swamp district that's eaten out jest the same way. The fire will run along for miles, sometimes, and then crop out where it's least expected. I knew of one case where a party of shinglers left their hut one morning and when they came back it was gone and a fourth of an acre with it. If it had happened twelve hours later they'd have gone in. In the Delaware swamp you will find heaps of such places and green hands when they go down there always think there has been a volcany, and so there has, after a fashion."

"The subject of underground forests," said my geological companion, on our way back, "is an interesting one, and in the west there are some strange sights to be seen. I remember especially one locality about the headwaters of the Lithodendron River; there are thousands of trees lying about, as if some hurricane had swept over the spot and leveled them to the ground, but in every case the tree has turned to stone and the trunks now weigh tons where they formerly could be tossed about by the wind. A miner that I met told me that in one locality that he had visited the trees were standing, and they came to camp there. At first they did not notice it, as it was late in the fall, when all the leaves were off the trees, but he sent a darkey out to chop some wood, and as the fellow struck a tree the axe glanced off and streams of fiery sparks flew off in such numbers that he was frightened half to death, and came rushing into camp shouting that the place was haunted. He finally went out again, but was terrified by finding that even the twigs that he picked up on the ground were as heavy as lead; they had all turned into stone. He described the place as a weird one, the great trunks standing around here and there like monuments, some of them being fifty or sixty feet high. The two most famous localities are at Fort Wingate, New Mexico, and the Lithodendron, about twenty miles from the Navajo Springs, Arizona. From these localities a fine collection has been taken for the National Museum at Washington.

"A detail was sent out under the charge of Lieutenant J. T. C. Hegewald, of the Fifteenth Infantry, and they secured some magnificent specimens. The Navajoes that were tending their sheep in the vicinity believed the fallen trunks to represent the bones of former giants that their ancestors had killed, and could not understand why the 'Great Father' at Washington should want them. In this place they actually covered the ground in some spots, the trunks often being of great size. All through the valley of the Lithodendron they are found, thousands of tons lying scattered along the slopes. The majority were in pieces of twenty or ten feet long, so broken by changes of heat and cold. Other trunks were intact; one measured by the Lieutenant was two hundred feet in length and nearly five feet in diameter, the cores often containing wonderful specimens of quartz. The specimens were hauled to Sana Fe. N. M., and there shipped East by rail; but in a year or go not a specimen will be found, as a company has organized to secure them, as, when cut and polished, they make fine table tops It is said that a house in Washington is to have pillars at the door made of two of these giants of a former age, that, when polished, showing the rich coloring, will make something entirely new in the way of decoration.

"Last summer," continued the geologist, "I took a run up the valley of the east fork of the Yellowstone. There is a country for you, and, fortunately, in the National Park and to be saved from destruction. In going up the valley you have the beautiful Yellowstone Mountains to the north and to the south the famous Amethyst Mountain, that for its fossil or stone forests is extremely remarkable. Directly opposite the valley of the Soda Butte Creek rises the mountain, with an exposed strata at least two thousand feet high. The summit is about nine thousand feet up. As you follow up the trail you will at once be struck with the curious surface of the mountain, and there in one section you can count distinctly at least twenty-five forest levels formed in this way. The first forest, perhaps a million years ago, grew and died down; soil accumulated and then another forest grew on that, until finally the twenty-five have grown. In the meantime strata to the depth of two thousand feet has been deposited—that is, the distance from the present trees growing on top to the first one below is two thousand feet. You can count up to suit yourself how many years it took to accomplish this. For the first four hundred feet the display is not very striking, as the trunks are partially covered, but as your eye rises you are presented with a geological illustration that is a marvel. At 500 feet from the bottom the levels are as distinctly marked as if they had been made by hand, every trunk and the roots standing out in bold relief—the bas-reliefs of nature. Many are thrown out and prostrate, from fifty to sixty feet in length and from five to six feet in diameter. In cases where the roots are seen penetrating the solid rock the sight is an impressive one, showing how many years it must have taken to accomplish such results. Some of the trees imbedded are over twelve feet in diameter and, as only the tops show, they must have rivaled the great sequoias of California. One remarkable feature is that the bark-texture of the wood, grain, etc., are all as distinct and well preserved as if they had been taken from living trees.

"The trees, however, are not conifers; the solid rock about them shows this. Once covered with a soft green matting of grass, it received the falling leaves and seeds, and now they are found just as perfect as in life, only turned to stone. From these the botanist is enabled to determine what they were and how long ago they lived upon the earth. Lesquereux made the first examination, and pronounced them as belonging to the lower pliocene or upper miocene time of geology. They include such species as aralia, magnolia, laurus, tilia, fraxinus, cornus, pteris, alnus, ferns, etc. All around this locality the same old remains of forests could be found, and the fine collections of quartz and calcite that were spread about undoubtedly were all formed in the trunks of trees. On the opposite side of the river the same condition of things was noticed, and the trunks here were, if anything still larger and more certainly higher up, as the range was by actual measurement over eleven thousand feet high and contained the stony trees to the very summit. These forests are found in various parts of the world. In Heard Island there is a cave that contains a number of extremely large trees, and in most all coal mines large trunks are found that date back millions and millions of years. In some mines terrible accidents often occur from the presence of these great trunks, as when the bottom of the trunk is cut off down shoots the stony tree upon the miner without warning. In some mines where the trees are solid they are left to support the ceiling. I have seen a tree taken from a mine at Newcastle (the Jarrow mine) that was forty feet in length and thirteen feet in diameter. It was worked out of the coal as carefully as possible, but it could not be all removed as the trunk divided at the summit into over twenty large branches. The name of this coal giant was Lepidodendron Sternbergii. Some of the ferns of this time were gigantic, and in the Philadelphia Academy of Sciences there is a fine collection, showing many specimens from all over the world.—*Philadelphia Times.*

Composing Under Difficulties.

In October, 1787, after his return to Vienna, Mozart produced his greatest opera, "Don Giovanni." As late as the night before the performance the overture had not been copied. Mozart wrote on until late into the night, and his wife could only keep him awake by telling him the old fairy tales, such as he loved when a child; at times he would break from laughter to tears, until, growing more and more weary, he fell asleep. At seven the next morning, he arose and finished the score, the ink in some parts being scarcely dry when the copies were placed on the musicians' desks. The musicians had to play the overture at sight, but its beauties aroused the greatest enthusiasm both in the players and the audience. Mozart superintended all the rehearsals, and inspired the singers with his own ideas and feeling. He taught the hero to dance a minuet, and when one of the singers failed to conquer his score, Mozart altered it on the spot. At last the Emperor bestowed a court position on Mozart, but the salary was so meager—it was less than $500—that it was of little help to him, while his duty, to compose dance music for the court, was humiliating. Well could he reply, when asked his income by the tax-gatherer, "Too much for what I do;" too little for what I could do."—*Agatha Tunis, in St. Nicholas.*

A Queer Superstition.

Abram Reed, a farmer living in Beaver township, Pa., cut down a large oak tree on his farm, and in cutting it up he found, imbedded in the trunk, seven or eight feet from the ground, a small glass bottle and what had the appearance of a lock of hair. The bottle had been inserted in a hole in the tree made by an auger, then a pine plug was driven into the hole over the bottle, the hair also being held in the hole by the plug. The bottle was corked and contained a colorless liquid. Over the plug had grown six solid rings of wood, besides a thick bark. There was a superstition among the early settlers, and it is held by many of their descendants, that asthma and other affections could be cured by the victim standing against the tree and having a lock of his hair plugged in it while the hair was still attached to his head. It must then be cut off close to his head, and the afflicted person walk away without looking at it or ever passing by the tree again. While the use of a bottle was not included in this treatment, it is believed that the one with the hair discovered in the heart of the oak tree was put there in the early days of the settlement by some believer in the superstition to cure an ailment of some kind.—*Lumber World.*

—Arabs use the expression, "My shoe at you," as a token of contempt. The same thing occurs frequently in this country, only the shoe is used instead of the expression.—*Burlington Free Press.*

SCHOOL AND CHURCH.

—A new county in Dakota, Brown by name, has 109 schools and ninety-seven school houses.

—General Eaton estimated that there are now 18,061 young women students in the colleges of the United States.—*Chicago Journal.*

—The first Protestant Episcopal ordination in America was held by Bishop Seabury, in Christ Church, Middletown, Conn., on August 3, 1785.—*Hartford Post.*

—The Law Department of the University of Virginia has ninety-one students the present session. Last year there were thirty-one graduates.

—During the last nine years France has spent nearly forty-five millions of dollars in increasing and reorganizing her university institutions.

—The pupils of the Sandwich (Mass.) High School recently dedicated two elm trees of their own planting to the honor of Dr. Oliver W. Holmes and John G. Whittier.

—A New Testament, of 1618, containing notes in Baxter's handwriting, was lately presented to the corporation of Kidderminster, England, where Richard Baxter was settled in 1640.

—Despite the approaching publication of the Revised Version, the British Bible Society last year issued no less than 4,161,032 Bibles, Testaments and portions.—*Chicago Current.*

—In a late sermon, Sam Jones, the Southern wonder, said: "A man needn't burn down churches and curse preachers in order to stay out of Heaven. All he has to do is to refuse to go on the gospel train."

—The benediction of the Hospital of St. Barnabas, and the celebration of the one hundredth anniversary of the organization of the Protestant Episcopal Church in the State of New Jersey, took place recently. The Bishop and large numbers of the clergy and laity were in attendance.

—The University of New Mexico has for one of its departments an Indian Industrial School. The American Missionary Association has voted it an annual appropriation of $3,000 for the support of teachers. Congress has voted $25,000 for the erection of buildings. Considerable amounts have been given by private persons.

—In an article in the *Journal of Education* it is stated that the City of Mexico has a system of municipal schools for both sexes, with a course of study extending to preparation for professional study. The schools occupy in great part old convents and other ecclesiastical edifices which have been secularized. The salaries of teachers range from five hundred to two thousand dollars a year. In the highest institution there are eleven hundred pupils.

PUNGENT PARAGRAPHS.

—The log drives on the Mattawaumkeag River, in Maine, aggregate 10,000,000 feet.

—The private path of elopement generally leads to the public highway of the divorce court.—*N. Y. Journal.*

—The Dark Ages:

In those old days when wrangling men
Flung down their clanging gages
There were so many knights, since then,
They have been called dark ages.

—W. F. Andross, of Hartford, Conn., believes that potato bugs do a service for the farmer in pruning the vines, if they are not allowed to go too far. That's just our opinion exactly, but when the bugs get into our potato field we consider that they are going too far. So long as they confine their operations to our neighbor's premises we haven't a word to say against them.—*Boston Transcript.*

DIDN'T KNOW HER.

Reasons Why an Arkansaw Negro Couldn't Swear That He Was Well Acquainted With His Wife.

"Do you know this woman?" asked a lawyer of a negro who had been summoned to testify before court.

"Yas, sah, I knows her."

"Do you know here very intimately?"

"No, sah, kain't say dat I do."

"How long have you known her?"

"Wall, I got er 'quainted wid her er short time before I married her."

"She's your wife, then?"

"Yas, sah, sorter."

"Thought you did not know her intimately?"

"Dat's whut I jackerlated."

"I don't understand, then, how she can be your wife."

"Wall, yer see, sah, she 'longs ter de church, de singin' s'ciety, de Sisters o' de Sacred Broom, de Daughters o' Ham an' two or three little side shows. Er 'oman whut is kep' so busy, sah, ain't got no time ter fool er roun' home."—*Arkansaw Traveler.*

TEMPERANCE.

SONG OF THE DECANTER.

There was an old decanter, and its mouth was gaping wide; the rosy wine had ebbed away and left its crystal side; and the wind went humming, humming, up and down the sides it flew, and through the reed-like, hollow neck the wildest notes it blew. I placed it in the window, where the blast was blowing free, and fancied that its pale mouth sang the queerest strains to me. "They tell me—puny conquerors!—the Plague has slain its ten, and War its hundred thousands of the very best of men; but I"—'twas thus the bottle spoke—"but I have conquered more than all your famous conquerors, so feared and famed of yore. Then come ye youths and maidens, come drink from out my cup, the beverage that dulls the brain and burns the spirit up; that puts to shame the conquerors that slay her scores below; for I have deluged millions with my maya tide of woe. Though in the path of battle darkest waves of blood may roll; yet while I killed the body, I have damned the very soul. The cholera, the sword, such ruin have never wrought, as I, in mirth or malice, on the innocent have brought. And still I breathe upon them, and they shrink before my breath; and year by year my thousands tread the dismal road to death."

—*Exchange.*

TEACHING THE CHILDREN.

Scientific Instruction in the Nursery—Early Comprehension of Physical Laws Relating to Health and Development.

"Temperance is God's law for the body."

Accepting this broad definition, we can not overestimate the value of "Temperance teaching in the schools." But this part of the child's education should not be committed entirely to the public school. The best, though perhaps not the most immediate, result of the Scientific Instruction bill will be the education of mothers. The agitation and discussion necessary to place this law upon the statute books of fourteen States must prove educative; and in those States where the movement has failed the labor is not lost. The seed sown shall soon spring up.

Whatever the child learns grows into his mind, becoming part of it, and forming the grain of his character. The learning of latter years is adventitious—it lies upon the surface. It is the difference between veneer and "real wood." The same current of blood that stamps an impression upon the youthful memory carries building material to the growing brain, and these early impressions enter into the solid masonry upon which manhood is built, while the knowledge acquired in maturity is but paint or whitewash.

If our premises be true, we should teach first that which is most important in the realm of the child's comprehension. Can anything be more important than knowledge of the habits upon which depend health and vigorous physical life? Fortunately the young mind can understand the physical law at a very early age. Teach the child the true value of the body that is not him, but his—the house built of God, which he is to occupy during his earthly life. He will see while very young that a fine house is desirable; and, too, that people are judged somewhat by the houses in which they live, and by the way they keep their houses. Don't let him think you send him to bed early to get rid of his noise; but tell him of the tiny cell-workmen who are building his house; how they do most of their work when he is asleep, and the very best in the first part of the night. He can understand that we need less sleep because our houses are finished, and they have only to keep up repairs for us, while for him they are really building up flesh and bone. His imagination will make these wonderful little laborers more real to him than the microscope makes them to us. Tell him how they have to get building material from the blood, just as the mason has to use brick and mortar for a wall. Each set of cells, or workmen, select the material for their special use. The bone builders use lime and the brain builders phosphorus and many other substances, but all must get supplies from the blood. All use a great deal of water. Alcohol takes the water supply as a great thirsty beast might drink the water from the mason's tank, leaving none to mix the mortar with; then the work stops. Then it saps the water from tissue already formed, leaving it tender and brittle, just as a wall begins to crumble after fire has burned the water out of the cement. Doctors call that "fatty degeneration." A great deal of oxygen is necessary, too. There isn't much oxygen in tobacco smoke! Before this your little philosopher will ask, "what is blood made of?" When he hears it is made from what we eat, he will have interest as well as pleasure in his food, and you will have power over his appetite. He will begin to exercise self-control, that divinest force in human nature. Explain that the tooth builder must have lime phosphate for the enamel of a tooth, as surely as a mason must have plaster-of-paris to hard-finish a wall. The chief source of lime phosphate is the grains, but only a very little is found in the white part of any grain.

He will soon learn to like brown bread, corn bread and the grits, especially if his mother cultivates her taste as well as his. Tell him the meat makes so much waste the builders have to stop work to clear away the rubbish. Milk does not hinder them so. Even pups and little wolves and lion whelps, who eat flesh entirely when grown, eat only milk when they are small and their mothers take care of them. Or you may save him from forming that unnaturally carniverous appetite which leads to the craving for stimulants, and of itself causes some kinds of fatal disease. Four of our teeth are "flesh-tearing." From this we may get a hint of the proper proportion of meat in our dietary.

Tell him coffee and tea hurry and worry the nerve builders so that they can not possibly do their work well, while beer and whisky maze them so dizzy that everything they do is crooked. Thus every fact and law is idealized, or rather materialized and physiology to the imaginative child—and mother, too—is a fairy tale. To do this the mother must acquire the hard scientific facts, and let her imagination play with them till she can give them to the child in pleasing form. Every woman has a touch of Mother Goose in her nature. The trouble is, mothers neither learn nor think of these things. They may understand the movements of the heavenly bodies, but they know very little of human bodies. I do not underrate "higher education" for women, but I do affirm that the highest education for woman is that which makes her the best mother. And if I were talking to men instead of women, I would say: "that is the best culture for you which fits you for the priestly, kingly function of fatherhood."

Inspire the child with ambition for a fine body, and he will do what has to be done to secure it. Show him what is involved in physical culture. The body is the instrument; not the music, but the melody of life largely depends upon the perfection of the instrument. He may make it a noble creature, with every nerve steadied and every muscle trained to do his bidding, or he may neglect and abuse it till it becomes jaded and mean-spirited; or, most disastrous of all, he may allow it to become his master. Then both horse and rider go down in the hot sea of sensualism.

Teach by precept and example that physiological law is God's law, and transgression is sin.—*Dr. Bessie V. Cushman, in Union Signal.*

BEER DRINKING.

A Dangerous Place for Boys—A Few Words of Warning.

Now, my boy, tell me just one thing I want to know. Why should a boy drink beer? You say you don't know? Well, neither do I; though I know a good many reasons why a boy should not drink beer.

I often notice at eating-houses and lunch-counters a thing which has a bad look. There are a great many boys drinking beer with their noonday lunch. They are clerks, errand-boys and boys who are earning their living in various ways. They see men drinking beer, and so they imitate the men. Whether they like the taste of the beer or not I don't know. But they think it looks manly; and you know boys will put themselves to a great deal of trouble and inconvenience to do what men do. You see this in the trouble boys take in learning how to smoke and chew tobacco.

I want to whisper in the ear of every boy who takes a glass of beer at his lunch that he is in danger. I do not say that one glass of beer will make him dangerously drunk or leave him lying insensible in the gutter or on the pavement. But a boy who has an afternoon's work to do is very likely to be unfitted for it by one glass of beer. This beverage makes him stupid and thick and sleepy. It may not put him actually to sleep, nor affect his tongue so that his speech sounds like that of an old toper; but it beclouds his brain just enough to make him a different boy from what he ought to be, either for his own advantage or for that of his employer.

Then think what the beer leads to. There are a great many stronger drinks sold at the lunch-counter, and you know boys are fond of trying experiments. A fifteen-year old boy sees some eighteen-year old who is near him trying a glass of sherry or a pony of brandy. He thinks that what the bigger boy is doing is manly, and therefore he will do it, too. The novel feeling of the stronger drink is a new revelation to him. His stomach is warmed, and presently his head has a curious feeling of lightness, and he wonders if these drinks always make a fellow feel that way. He tries, and tries, and tries again, and finds just how they make a fellow feel. It is easy to see that the lad is in danger of walking in crooked ways.

It is a pity that a boy should have to get his lunch at a place where strong drinks are sold. There are so many of these places in our big cities, and so few of the "dairies" and such places where liquors are not to be had. The boy who eats among drinkers is in danger. He is likely to fall into their ways. Better go to a place where strong drinks are not sold if you possibly can. Or if you are living at home, where you have a good mother or sister, bring a neat lunch in your pocket and keep out of the eating and drinking shops altogether.—*Rev. Alfred Taylor, in Christian at Work.*

TEMPERANCE ITEMS.

AT the recent great anniversary of the Church of England Temperance Society, in London, Temperance sermons were preached in two hundred and eighty Episcopal churches of the city.

A WOMAN that marries a man with whisky on his breath is the biggest fool in the world, except the one who stirs his toddy for him after she marries him. If you don't like that sort of talk you can rack out of here.—*Sam Jones.*

A MODEL Temperance community is to be found in the Parish of Cameron, Louisiana. There is no place where liquor is sold, the jail is utilized for a corn-crib, and the public sentiment is unanimous in favor of prohibition, being a law in itself, and enforcing the law with complete success.

TO THINK of people calling themselves intelligent, at this time of day telling their fellows to drink beer and wine in order to be healthy, happy and sober, is too absurd for anything. I don't question the honesty of those who do so; but, in that case, alas! for the soundness of their judgments, and their knowledge of what beer and wine-drinking has really done.—*Toronto Globe.*

SUPPOSE the liquor traffic could be blotted out of existence and society at once restored to such a condition as is possible with drink eliminated, how vastly would the work of legislation be reduced. As matters now are, nearly one-third of the time paid for out of the people's money is spent in enacting and fighting laws made necessary because of the existence of the drink traffic and the drink habit. A saving at this point is no small item in the tax list, and one not often counted in when we sum up the country's losses through this great sluiceway of waste.—*Union Signal.*

MISCELLANEOUS.

—In Sinaloa, Mexico, a woman is being exhibited who is seven feet high and weighs five hundred pounds. She is as young as she is charming, being only twenty-six years of age. She was born in Pachuca.—*Chicago Times.*

—Chief Chemist Bradley, of the Brooklyn Health Department, has discovered pickle manufacturers who use copper sulphate, or blue vitriol, in coloring pickles. Three small pickles are equivalent to a dose of sulphate of copper.—*Brooklyn Eagle.*

—In the city of Trinidad, Mex., a hen has died which, according to her owner's statement, first saw the light in 1857. Maria Francisco, her owner, has received from her since then 6,371 chickens, of which 2,427 grew up to be hens.

—Big fish swim the waters of the Pacific coast. The Port Townsend *Argus* says that a halibut was recently caught in Scow Bay by an Indian which weighed 202 pounds and was six feet eight inches long, three feet ten inches wide and fourteen inches thick.

—The total annual catch of menhaden in the United States is about 700,000,000. This seems to be a great number, but blue fish alone are said to consume about 3,000,000 menhaden every day of the summer months on the coast of New England alone. As a matter of fact, menhaden are so prolific that they are practically inexhaustible.

—Can one man be a mob? A Yonkers, (N. Y.) man was ordered to "disperse," and upon refusing to do so was arrested. The legal experts decide that the law applying to a mob or riotous gathering does not apply to this individual, who seems to have been justified, therefore, in not dispersing.—*N. Y. Herald.*

—The Chinese regard an attack of epilepsy as the occupancy of a man's body by the spirit of an animal, usually a pig or a sheep. They try to keep such spirit by stuffing the patient's mouth with grass, for if it leaves before the return of the man's own spirit—which must be absent during the fit—the man will die.—*San Francisco Chronicle.*

—There are more subscribers to the telephone system in New York and its neighborhood than in the whole of Great Britain, notwithstanding that the charge in New York is about double what it is there. The number of transmissions by telephone in Great Britain last year was about 41,000,000, and the average cost per message a little over one cent.—*N. Y. Tribune.*

—Little five-year-old had been watching the flag for celebration. Toward evening, as he looked at the sun, he said: "How does the sun set, anyhow, Grandma?" "When you are older you will understand," was the reply. "O, I know," said the irrepressible, after a moment's pause, "God pulls the string and the sun goes down."—*Boston Transcript.*

—Harrison Hahn, of Wind Gap, Pa., has a two-year-old daughter whose ears are bent forward and grown fast to the face. The girl was deformed when born. When she became two months old two doctors separated the ears from the face, and tied them back to their proper place, but they returned to their former position and are there to remain undisturbed. Both ears are without the orifice, but deafness is prevented by the girl hearing every sound, no matter how light, through her nose and mouth. —*Philadelphia Times.*

—The two new craters in Mt. Vesuvius, from which lava has issued abundantly, were opened on the southern side at a height of about two hundred meters above the upper station of the funicular railway. The lava flowed in the direction of Pompeii and Torre del Greco. The stream descends in a straight line for about half a kilometer, and then, turning sidewise, is directed toward the crater of 1872. The new craters present the appearance of a great cleft. The lava has not spread beyond the side of the mountain.

—Among librarians and book-publishers no word is more often used than the term, "Cataloguer." John Winter Jones, librarian of the London Museum, uses this word four times on one page. It occurs frequently in the reports of the proceedings of the International Conference of Librarians at London, and yet it is not given in Webster's or Worcester's or the Imperial Dictionary. It has certainly been in use for thirty years among well-educated men, yet every one of the dictionary makers have either missed or ignored it.—*Boston Journal.*

—The Pembina (D. T.) *Express* observes this incident, which can best be understood by one who has seen the half-breeds and their primitive teams: "A novel sight was witnessed here last week. A half-breed living on the mountains came to town for a hog, with his pony and Red River cart. He found his two brothers in town, both rather full of profanity, whisky, and combativeness. After considerable difficulty he loaded the two into the cart, in which they soon fell asleep. He then got the hog and placed it carefully between the other two, and began his journey for home."

—Rhode Island is the smallest State in the Union, but she boasts of being first in respect of manufactured products according to population. Rhode Island makes $373.07 worth of manufactures for every one of her inhabitants, while Mississippi makes only $6.64, or in the ratio of $1 to $56.18. Taking the area instead of the population, the contrast is even greater. Rhode Island produces $79,757.75 per square mile, while Mississippi produces only $159.43—about 500 to 1. Rhode Island may congratulate herself upon being so small that there is no room for waste land within her boundaries.—*Philadelphia Evening Bulletin.*

—The latest theory concerning Bright's disease and other affections of the kidneys is that they are due to the immoderate use of ice-water and other chilled beverages. Thirty or forty years ago, a physician asserts, when people slaked their thirst with fresh water from well or pump, kidney disease was virtually unknown. Now, however, the general use of ice-water in every household and saloon and the multiplication of soda fountains, cause thousands of persons to abruptly shock their heated internal organs with freezing draughts, and kidney troubles have become very prevalent.—*N. Y. Tribune.*

FARM AND FIRESIDE.

—Corns and bunions may be helped and oftimes removed by the constant employment of the oleate of copper, spread as a plaster.—*Chicago Herald.*

—Fowls like newly-cut grass. They should have all they want of it. The clippings from a lawn mower are just the thing for them. Sunflower seed, which can be easily growa without trouble, forms a food of which fowls are extremely fond.—*Chicago Journal.*

—Stones may be made very useful by placing them around plants and trees as a mulch. Thus used under trees, especially evergreens, they are very valuable. One advantage over ordinary mulch in using stones is that weeds are not so likely to spring up among them.—*Prairie Farmer.*

—If your children should get peas, beans or pebbles in their ears, do not use pins, knitting needles or anything of that kind in removing them. The safest way is to use a syringe and warm water. If insects should lodge in the ear, fill the ear with sweet oil, which will kill the animal and float it out.—*Albany Journal.*

—Roll Jelly Cake: Four eggs beaten very light, one cup of sugar, one cup of flour, one teaspoonful of cream of tartar, half-teaspoonful of soda and a pinch of salt. Bake in long tins in thin sheets, spread while warm with jelly and roll and wrap in a towel to keep moist. It is very good.—*The Caterer.*

—Stewed Lamb: Take the neck or breast, cut into small pieces, and put in a stew pan with some thinly sliced salt pork, and enough water to cover it; cover closely and stew until tender, skim off all the scum, and add a quart of green peas, adding more water if necessary; when the peas are tender, season with pepper and butter rolled with flour.—*The Household.*

—To kill bugs in peas pour almost boiling hot water upon them, let it remain about ten seconds and then pour off. This will not hurt the peas—they will sprout all the quicker for it and it will destroy all the bugs at once. We have practiced this method successfully for years, says the *Orange County Farmer.* We should do it just before planting the peas.

—Professor Arnold says a cow holds up her milk because of the involuntary action of the muscles that tighten about the milk reservoirs. The cow is a very nervous creature. It takes but little to excite her, and when she is being milked the utmost care should be exercised by the milker, and her surroundings should be quiet. Permit no unusual noises. Have no dog running or barking about her.—*Troy Times.*

DRAINAGE.

The Need of Thorough Drainage Fully Demonstrated This Year.

The need of thorough drainage on farm lands has been most fully demonstrated the present season, which all through planting time has been rainy, rendering all low lying lands too wet for tillage the greater part of the time. Hundreds of farmers have been compelled to helplessly look on while their teams and workmen lay idle, waiting for the soil to dry out fit for plowing. And doubtless many cornfields to-day have but a meagre "stand" through the soil being wet and cold, which might have been otherwise had the land been thoroughly underdrained, and the consequent higher temperature existed, which that would be certain to bring.

There are to-day many cornfields overgrown with weeds, from which the cultivator has thus far been excluded, only through being too wet for the work to be done, which but for that cause would now be cleaned out, and giving fair promise of a handsome outcome.

It not infrequently happens that the start given in the spring through early planting, and a consequent early growth, determine whether the corn crop shall fully ripen before the advent of an untimely frost. There are few seasons indeed which will not favor corn-planting on well underdrained land in the late days of April, and scarcely one that this work need be deferred later than the first of May, so far as fitness of the soil or seasonable weather are concerned. In many fields the present season planting was compulsorily delayed until into June; the one only cause for such delay being the unfit condition of the soil on account of the rains.

There is at present but slight excuse over the greater portion of the prairie country for the neglect of this needed improvement. Within easy reach of most communities tile factories have been established, where the necessary materials may be obtained at but moderate cost. Men skilled in the business of digging the necessary ditches and laying the line of tile in a workman-like manner are moderately plentiful and do the work at an astonishingly low price.

When understood how important a factor corn has become in keeping the wheels of domestic commerce in motion and how severe is the check on all other industries when the yield of this one grain falls considerably below an average, some sort of conception may be formed of the responsibility that rests upon those who occupy the land as producers, to see that all necessary means shall be employed to insure success.

In any of the several adverse seasons of late years, in which the corn crop fell much below an average, can any one point to a single field of well underdrained land on which, in the season most unfavorable, it was not practicable to grow a full crop of corn? And if this be true, as we verily believe, does not the single word "underdrain" have a talismanic meaning, and become the key to a complete solution of the whole problem?—*Burlington Hawkeye.*

—The action of dynamite in exploding is very simple. It has no preference at all as to the direction in which its force shall be exerted. Its explosive power depends, as in the case of all other explosives, on the sudden formation of a large volume of a gaseous body, whose immediate recondensation causes the air to rush in violently to fill up the vacuum formed. —*Philadelphia Press.*

"Crossest Man in Alabama."

"De crossest man in Alabama lives dar," said the driver as we approached a wayside home, near Selma, Ala., to ask accommodations for the night. At supper, and after it, "mine host" scowled at every one, found fault with every thing earthly, and I was wondering if he would not growl if the heavenly halo didn't fit him, when incidental mention being made of the comet of 1882, he said: "I didn't like its form, its tail should have been fan shaped!"

But, next morning, he appeared half-offended at our offering pay for his hospitality! My companion, however, made him accept as a present a sample from his case of goods.

Six weeks later, I drew up at the same house. The planter stepped lithely from the porch, and greeted me cordially. I could scarcely believe that this clear-complexioned, bright-eyed, animated fellow, and the morose being of a few weeks back, were the same. He inquired after my companion of the former visit and regretted he was not with me. "Yes," said his wife, "we are both much indebted to him."

"How?" I asked in surprise.

"For this wonderful change in my husband. Your friend when leaving, handed him a bottle of Warner's safe cure. He took it and two other bottles, and now—" "And now," he broke in, "from an ill-feeling, growling old bear, I am healthy and so cheerful my wife declares she has fallen in love with me again!"

It has made over again a thousand love matches, and keeps sweet the tempers of the family circle everywhere.—*Copyrighted. Used by permission of American Rural Home.*

—John Bach McMaster, the historian, thus describes the American beau of 1800: "The pantaloons of a beau went up to his armpits; to get into them was a morning's work, and, when in, to sit down was impossible. His hat was too small to contain his handkerchief, and was not expected to stay on his head. His hair was brushed from the crown of his head toward his forehead, and looked, as a satirist of that day truly said, as if he had been fighting on an old-fashioned hurricane backward. About his neck was a spotted linen handkerchief; the skirts of his green coat were cut away to a mathematical point behind."—*N. Y. Herald.*

—A Russian illustrated paper represents a number of young women seated at a table, each examining meat for trichinæ. It is stated that women make efficient microscopists. Last year they thus examined 30,650 carcasses. The diseased meat is at once destroyed.

—There are only three newspapers in Persia, and yet there are persons in this country rash enough to start a paper in a town already supplied with half a dozen journals, instead of going to Persia to fill a long-felt want.—*Norristown Herald.*

—An Erie, (Pa.) base-ballist after seven trials caught and held a ball thrown from the top of the waterworks stand-pipe. The height was 248 feet. He says the ball must have weighed a ton.—*Pittsburgh Post.*

—A double white rose flower on a red crab apple tree is one of the sights of South Farmingham, Mass.—*Boston Post.*

"What is the difference between a newspaper man and a pitcher?" asks a base-ball writer. About $2,000 a year. —*N. Y. Herald.*

Mosquitoes are free from one vice at least. They can't stand smoking.—*Detroit Free Press.*

It Astonished the Public

to hear of the resignation of Dr. Pierce as a Congressman to devote himself solely to his labors as a physician. It was because his true constituents were the sick and afflicted everywhere. They will find Dr. Pierce's "Golden Medical Discovery" a beneficent use of his scientific knowledge in their behalf. Consumption, bronchitis, cough, heart-disease, fever and ague, intermittent fever, dropsy, neuralgia, goitre or thick neck, and all diseases of the blood, are cured by this world-renowned medicine. Its properties are wonderful, its action magical. By druggists.

A rose bush is thought to be exceedingly modest, but yet it wants the earth.—*Boston Transcript.*

How to Reach Colorado.

The Burlington Route (C., B. & Q. R. R.) is the only line with its own tracks from Chicago, Peoria and St. Louis direct to Denver. Every day in the year it runs elegantly equipped through trains between above mentioned points. For tickets and rates via, or general information regarding same, call on any Ticket Agent in the United States or Canada, or address Perceval Lowell, General Passenger Agent, Chicago, Ill.

Wagner composed only eleven operas. It is believed he would have composed more, but he had used up all the noises.—*N. Y. Graphic.*

"A few boarders taken in for the summer" is a sign often seen, but very few seem to realize how much truth there is in it.—*Boston Post.*

Precise young lady to her little brother: "Willie, don't do that way. Don't kick the ankle of the table, you disturb me."—*Chicago Tribune.*

"The Secret of the Brook" is a late poem. The secret of the brook must be the knowledge of what is going on between the banks.

The elephant is a very bad-behaved animal. He turns up his nose at everything that is given him to eat.—*Boston Transcript.*

A household journal prints directions for serving spring chicken. Another good way is to serve it before it celebrates its ninth birthday.—*Norristown Herald.*

"Why are those things on your dress called bugle trimmings?" George wanted to know. "O," Emily replied, lightly, "because pa blows so over the bill."—*Philadelphia Call.*

An umbrella with a pistol at the end of the handle has been invented. The old-fashioned umbrella "goes off" easy enough for us.—*Drake's Travellers' Magazine.*

An anxious inquirer asks: "Where would you advise me to go to learn how to play the piano?" To the woods, dear; to the dark, deep, damp, dangerous woods.—*Boston Post.*

A conductor on an Austin street-car said "fare" to a negress, who was blacker than the ace of spades, and the smile she smole caused her head to appear as if it was all off except a small strip at the back of the neck.—*Texas Siftings.*

A medical journal asserts that the application of hot water will prevent fainting. That's it; that's it exactly! This explains why men seldom faint. Their wives keep them in hot water.—*N. Y. Sun.*

"Say, why is everything
Either at sixes or at sevens?"

Probably, my dear nervous sister, because you are suffering from some of the diseases peculiar to your sex. You have a "dragging-down" feeling, the back-ache, you are debilitated, you have pains of various kinds. Take Dr. R. V. Pierce's "Favorite Prescription" and be cured. Price reduced to one dollar. By druggists.

"Ah, but my lot is hard!" groaned Tom, as he tried, with pick, spade and hoe, to put in order a half-acre of stony land.

The Worst Urethral Strictures
speedily cured by our new radical methods. Pamphlet, references and terms, two letter stamps. World's Dispensary Medical Association, 663 Main Street, Buffalo, N. Y.

A flourishing business—that of the writing master.

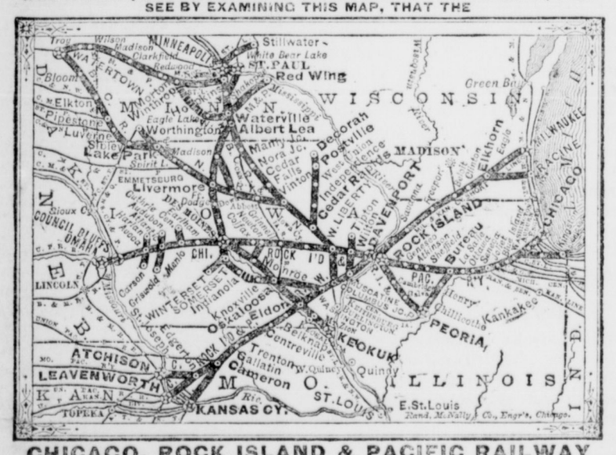
If You are Driven Wild
With itching, take the advice of a friend, (though he calls you aside at an evening party to give it), and rid yourself of the trouble by the use of
Ayer's Sarsaparilla.
A few weeks since I was attacked with a severe and distressing form of Eczema. The eruptions spread very generally over my body, causing an intense itching and burning sensation, especially at night. With great faith in the virtues of Ayer's Sarsaparilla, I commenced taking it, and, after having used less than two bottles of this medicine, am entirely cured.—Henry K. Beardsley, of the Hope "Nine," West Philadelphia, Pa.
Mr. B. W. Ball, the well known journalist, writes from Rochester, N. H.:
Having suffered severely, for some time, with Eczema, and failing to find relief from other remedies, I have made use, during the past three months, of Ayer's Sarsaparilla, which has effected a complete cure. I consider this medicine a magnificent remedy for all blood diseases.
For all disorders of the Blood, use
Ayer's Sarsaparilla,
Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists. Price $1; six bottles, $5.

A MAN
WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC RAILWAY
By reason of its central position and close relation to all principal lines East and West, at initial and terminal points, constitutes the most important mid-continental link in that system of through transportation which invites and facilitates travel and traffic between cities of the Atlantic and Pacific Coasts. It is also the favorite and best route to and from points East, Northeast and Southeast, and corresponding points West, Northwest and Southwest.
The Rock Island system includes in its main line and branches, Chicago, Joliet, Ottawa, La Salle, Peru, Depue, Princeton, Mollne and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Watertown in Dakota, and hundreds of intermediate cities, towns, villages and stations.
THE GREAT ROCK ISLAND ROUTE
Guarantees its patrons that sense of personal security afforded by a solid, thoroughly ballasted road-bed; smooth tracks of continuous steel rail; substantially built culverts and bridges; rolling stock as near perfection as human skill can make it; the safety appliances of patent buffers, platforms and air-brakes; and that exacting discipline which governs the practical operation of all its trains. Other specialties of this route are Transfers at all connecting points in Union Depots, and the unsurpassed comforts and luxuries of its Passenger Equipment.
The Fast Express Trains between Chicago and the Missouri River are composed of well ventilated, finely upholstered Day Coaches, Magnificent Pullman Palace Sleepers of the latest design, and sumptuous Dining Cars, in which elaborately cooked meals are leisurely eaten, "good Digestion waiting on Appetite, and Health on both." Between Chicago and Kansas City and Atchison, are also run the Celebrated Reclining Chair Cars.
THE FAMOUS ALBERT LEA ROUTE
Is the direct and favorite line between Chicago and Minneapolis and St. Paul, where connections are made in Union Depots for all points in the Territories and British Provinces. Over this route, Fast Express Trains are run to the watering places, summer resorts, picturesque localities, and hunting and fishing grounds of Iowa and Minnesota. It is also the most desirable route to the rich wheat fields and pastoral lands of interior Dakota.
Still another DIRECT LINE, via Seneca and Kankakee, has been opened between Newport News, Richmond, Cincinnati, Indianapolis, and Lafayette and Council Bluffs, Kansas City, Minneapolis and St. Paul and intermediate points.
For detailed information see Maps and Folders, obtainable, as well as Tickets, at all principal Ticket Offices in the United States and Canada; or by addressing
R. R. CABLE, President and General Manager, Chicago.
E. ST. JOHN, General Ticket and Passenger Agent, Chicago.

A Typical American.

From a sermon by Dr. M. A. Richards in Green St. M. E. Church, Philadelphia.

"The best example of what true Americanism can do is seen in Jas. A. Garfield. With the exception of the figures in the Old Testament, who now appear more heroic on account of their antiquity, there never has lived a hero of a more ideal Christian character than Garfield. So grand was he that it is necessary for me to consider him to-night from three different standpoints;—first, that of his education and training; second, that of his connection with the Christian Church, and third, that of his political career and final martyrdom.

"According to the old Greek legend, Minerva sprang full-formed from the head of Jupiter. She was the personification of learning—of the arts and sciences, and as such her image was erected in all the libraries and schools of learning. Now I venture to assert that the bust of James A. Garfield should be placed in every school and library and lecture hall in the country as being the personification of the Christian ideal of self-education. Garfield's scholarship did not spring into existence in a moment, as did Minerva. It was the growth of years of hard labor, begun when he was a poor boy and continued until he sat in the presidential chair.

"His connection with the Christian Church was always close. He was never ashamed to rise in any church and testify to his belief in the Lord. One such great man is worth an army of those who refuse to come forward before the world and declare their dependence upon Christ. He belonged to the Church of the Disciples, a religious organization which dispenses with all creeds and doctrines except the Bible, and his life was a proof to all the world that the Bible is still all the guide mankind needs to lead them through a perfect life. Through all his political career he remained unspotted, and when at last came the inevitable revolt of the people against the corruption and demoralization of the National Government he was selected to lead them on to victory But the victory was too easily won, the lesson too easily learned. It needed some startling tragedy to impress upon the national mind that the old diabolical principle of 'to the victors belong the spoils' was not yet dead. And so to the long list of martyrs who have died for the cause of humanity, James A. Garfield's name was added by the Lord. During all that weary Summer in which he lay on the threshhold of death the principles which he had so perfectly represented were burned in upon the popular mind so deeply that they will, I trust, never be effaced."

British Solidity--American Grace.

John Burroughs in the Critic.

When I was in England, whether in lodgings or in a hotel, one of the hardest things to get at table was a teaspoon to eat my dessert or sweetmeats with. They always brought a dessert spoon, which seems large and awkward to the American mouth. Neither were there any small dishes, such as we have at home. They brought you jam, or preserves, or strawberries on a plate as large as a dinner plate. In England nearly all the arts and appliances of life show, to American eyes, a superabundance of material. There is more timber and iron in the wagon, more bulk in the horse that draws the wagon and more leather in the harness the horse wears—yes, and more hair in the horse's coat. Our domestic animals, our tools, our vehicles, our architecture and our women look trim and slim compared with the English. There is probably material enough in an English van to make two of our farm wagons. Easy roads and heavy vehicles are the rule in England and poor roads and light vehicles with us. John Bull does not know the virtues of hickory, a tree native to this country. Hickory gives us the most strength with the least bulk, and this is, no doubt, one reason of the lightness and slenderness of our tools and vehicles. Compare an English axe with an American axe; how crude and awkward the former looks beside the latter; how shapely our tool is! Our tools suggest a more deft and supple and lighter race. The tendency in us to pare down and cut away every superfluous ounce is very marked. We are great whittlers. Did we not whittle away at the hulls of our ships until we made the swiftest sailing vessels in the world? This lightness and airyness is becoming a fixed national trait, and is a keeping with the general tendency of all natural forms of this country. Nearly all organic growths here show greater refinement of form than in the British isles. Our wild flowers are more graceful and delicate. Our climbing plants, the foliage of our trees, the trees themselves, our grasses and wild weedy growths are all more slender and fluent in form than the corresponding English species. English trees, English groves, have a wonderful expression of solidity and repose. The leaves are larger and stiffer and adjust themselves with more ease to the fainter light. Even the British bumblebee is a coarser and more hairy creature than ours, and the fox and the squirrel, as well as the domestic animals, are less sleek and trim than with us.

A Boy Should Have a Trade.

What about the boy who does not take up with a trade or profession? Look around you, the question is speedily answered. He must cast his hook into any sort of pond, and take such fish as may be easily caught. He is a sort of tramp. He may work in a brick-yard to-day, and in the harvest field to-morrow. He does the drudgery, and gets the pay of the drudge. His wages are so small that he finds it impossible to lay up a dollar, and a fortnight of idleness will see him dead broke.

The other evening I saw a man dragging himself wearily along, and carrying a pick on his shoulder. "Tired, John?" "More so than any horse in Detroit." "What do you work at?" "I'm a digger. Sometimes I work for gas companies, but oftener for plumbers." "Get good wages?" "So good that my family never has enough to eat, let alone buying decent clothes. If it wasn't for the wife and children, I'd wish for that street car to run over me." "Why didn't you learn a trade?" "Because nobody had interest enough to argue and reason with me. I might have had a good trade and earned good wages, but here I am, working harder for $8 or $9 a week than many a man does to earn $18.

And now, my boy, if men tell you that the trades are crowded, and that so many carpenters, and blacksmiths, and painters, and shoemakers, and other trades, keep wages down, pay no attention to such talk. Compare the wages of common and skilled workmen. Take the trade which you seem fitted for. Begin with a determination to learn it thoroughly, and to become the best workman in the shop. Don't be satisfied to skin along from one week to another without being discharged, but make your services valuable by being such a thorough workman that your employer cannot afford to let you go.—*Detroit Free Press.*

A Model of Resignation.

There has just died here a cripple whose case has attracted the attention of physicians, scientists, and specialists all over country. This man for twenty-nine years has not moved from his chair by day or night. When he was 6 years old his spine was injured by an accident, and his neck, body, and limbs became paralyzed. He could not move a joint in them. All his fingers became disjointed, and the only movable joint in his frame was in one thumb. He could not turn his head a hair's breadth. He sat in his chair near a window, and by an ingenious contrivance of mirrors he was enabled to see what was going on out of doors and in the room. At night his chair was tipped back a little, and in this position he got his sleep. Any attempt on his part to move his limbs caused him the greatest agony. He suffered pain nearly all the time, and everybody wonders that he lived so long in this horrible condition. Many prominent physicians studied his case and gave it up as unaccountable.

He was so remarkably patient and devout in the midst of his sufferings that he won notoriety by serving as a text from which a large number of sermons have been preached by different clergymen who had visited him. A young sister of his had devoted her life to taking care of him. —*Boston Cor. New York Herald.*

How Disease is Spread.

Every one knows that scarlet fever is infectious, but it is not often one is able to trace the progress of the disease through simple carelessness so easily as in a case which has just come under the notice of the *Sanitary World*. The story is told as follows: A young Scottish lassie, in domestic service not far from the town of Elgin, died from scarlet fever in her "place." Her clothes were carefully packed up, and her "kist" containing them was conscientiously sent home to her native village. On its arrival at the station there was the usual difficulty of getting it conveyed over the hills to the place of its destination, so there it had to remain awaiting a friendly lift. Meanwhile the infected kist formed a happy hunting ground for the station master's children, who, in due time, all fell ill with scarlet fever. At last the friendly lift came, and the box (a large wooden one) was carried home, and the contents generously distributed among the neighbors. Needless to say that an outbreak of scarlet fever in the village was the result; and as to the station, where people do congregate and often have long to wait, it would simply be a center from which many a fever track would radiate, exciting the usual wonder whence and how the fever came.

NEW ADVERTISEMENTS.

Gratefulness.

Mr. H. Sampsel, Ottawa, Kansas, writes: "DR. S. B. HARTMAN & Co., Columbus, O.—Gentlemen: I have suffered for seven years; have tried every thing and many physicians, and all have failed. I went to Pittsburgh, and while there fell on the street, my breath seemed to leave my lungs, and numbness overpower me. I determined to give PERUNA and MANALIN a fair trial. I used four bottles of each, and my trouble left, never, I hope, to return. I left Pittsburgh three weeks ago for Kansas, and thought, as I was going to a new country, I had better take a bottle of MANALIN with me, on account of bad water, etc. I arrived here with one-half bottle. I found one of my friends in a pretty bad condition. The doctors were treating her for chills and fever. I did not know what her trouble was, though I persuaded her to use the MANALIN. She did so, and the first day she was up doing her work. Now this seems strange, but it is, nevertheless, a candid truth. She used it all, and has never had cause to lie down during the day since she took the first three doses."

A Case that was Pronounced Incurable.

Miss C. C. Peck, 714 Jackson street, Milwaukee, Wis., writes: "DR. S. B. HARTMAN & Co.—Gentlemen: I take great pleasure in stating to you the benefit I received from your valuable PERUNA. I have been suffering for about fifteen years with a severe cough and bronchitis (so the doctors call it). I was treated by different physicians, and spent considerable money for different kinds of patent medicines, but received no benefit whatever. Dr. Fox, of this city, claimed I had consumption, and there was no hope for me ever getting better. I was so bad that I coughed almost continually. Mrs. Henry Ellis, a friend of mine, induced me to try your PERUNA. I am happy to say I began to notice a change after I had taken my second bottle. I took eight bottles in all, and now I feel like a new woman. If it hadn't been for PERUNA I think I would be in my grave now. It is a wonderful remedy, and I recommend it to all my friends."

Messrs. Baker Bros., Mt. Vernon, O, write: "Your PERUNA sells well. Customers speak of it as being a good medicine."

Mr. Daniel R. Spry, Portsmouth, O., writes: "I have a good trade in PERUNA, it sells well and gives satisfaction."

LAND! Claims a specialty. Warrants, and ADDITIONAL HOMESTEAD CERTIFICATES and all kinds of LAND SCRIP bought and sold. SUSPENDED ENTRIES, LAND, PATENT and PENSION cases attended to. Correspondence solicited. A. A. Thomas, Attorney at Law, Room 25 St. Cloud Bld'g, Washington, D. C.

Oakland, April 27, 1885.—3m*

FROM THE PRESIDENT

OF BAYLOR UNIVERSITY.

"Independence, Texas, Sept. 26, 1882.

Gentlemen:

Ayer's Hair Vigor

Has been used in my household for three reasons:—

1st. To prevent falling out of the hair.
2d. To prevent too rapid change of color.
3d. As a dressing.

It has given entire satisfaction in every instance. Yours respectfully,

WM. CAREY CRANE."

AYER'S HAIR VIGOR is entirely free from uncleanly, dangerous, or injurious substances. It prevents the hair from turning gray, restores gray hair to its original color, prevents baldness, preserves the hair and promotes its growth, cures dandruff and all diseases of the hair and scalp, and is, at the same time, a very superior and desirable dressing.

AYER'S Ague Cure

contains an **antidote for all malarial disorders** which, so far as known, is used in no other remedy. It contains no Quinine, nor any mineral nor deleterious substance whatever, and consequently produces no injurious effect upon the constitution, but leaves the system as healthy as it was before the attack.

WE WARRANT AYER'S AGUE CURE

to cure every case of Fever and Ague, Intermittent or Chill Fever, Remittent Fever, Dumb Ague, Bilious Fever, and Liver Complaint caused by malaria. In case of failure, after due trial, dealers are authorized, by our circular dated July 1st, 1882, to **refund the money.**

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

NEW ADVERTISEMENTS.

An Old Soldier's EXPERIENCE.

"Calvert, Texas, May 3, 1882.

"I wish to express my appreciation of the valuable qualities of

Ayer's Cherry Pectoral

as a cough remedy.

"While with Churchill's army, just before the battle of Vicksburg, I contracted a severe **cold**, which terminated in a dangerous **cough.** I found no relief till on our march we came to a country store, where, on asking for some remedy, I was urged to try AYER'S CHERRY PECTORAL.

"I did so, and was rapidly cured. Since **then I have kept the PECTORAL constantly by me, for family use, and I have found it to be an invaluable remedy for throat and lung diseases.** J. W. WHITLEY."

Thousands of testimonials certify to the prompt cure of all **bronchial and lung affections,** by the use of AYER'S CHERRY PECTORAL. Being very palatable, the youngest children take it readily.

PREPARED BY

Sold by all Druggists.

DR. JOHN BULL'S

Smith's Tonic Syrup

FOR THE CURE OF

FEVER and AGUE

Or CHILLS and FEVER,

AND ALL MALARIAL DISEASES.

The proprietor of this celebrated medicine justly claims for it a superiority over all remedies ever offered to the public for the SAFE, CERTAIN, SPEEDY and PERMANENT cure of Ague and Fever, or Chills and Fever, whether of short or long standing. He refers to the entire Western and Southern country to bear him testimony to the truth of the assertion that in no case whatever will it fail to cure if the directions are strictly followed and carried out. In a great many cases a single dose has been sufficient for a cure, and whole families have been cured by a single bottle, with a perfect restoration of the general health. It is, however, prudent, and in every case more certain to cure, if its use is continued in smaller doses for a week or two after the disease has been checked, more especially in difficult and long-standing cases. Usually this medicine will not require any aid to keep the bowels in good order. Should the patient, however, require a cathartic medicine, after having taken three or four doses of the Tonic, a single dose of BULL'S VEGETABLE FAMILY PILLS will be sufficient.

BULL'S SARSAPARILLA is the old and reliable remedy for impurities of the blood and Scrofulous affections.

How it Struck Folger.

A story is told of Judge Folger which is said to have happened at one of the Cabinet meetings at the White House. President Arthur, it appears, wanted a certain thing done. I forget what it was. It was not material, anyway. He had laid out his plans, considered the subject carefully, taken the advice of competent persons, was sure that what he was about to do was right and simply wanted to submit the whole to his Cabinet, so as to be able to say, if possible, that he had had their support. When the Cabinet sat down in the little room adjoining the library he presented the subject to them and gave them his views. He spoke frankly and forcibly throughout. He made it appear that he had made up his mind about the matter and was going to act accordingly, whether his Cabinet agreed with him or not. As he was about to reach the close of his remarks he went through the form of asking the advice of his Cabinet and wound up by saying:

"Gentlemen, what is your opinion on the subject?"

Nobody answered. Frelinghuysen looked at Brewster, Lincoln frowned inquiringly at Teller, Chandler wiped his eye-glasses and Gresham stroked his beard. Finally Folger, who had been quietly rubbing his chin in a corner of the room, returned to the table.

"That reminds me of a story," he said. Everybody looked up at him. "That reminds me of a story," repeated Judge Folger. "There was a man in my town once, whom I knew well, who had a collection of pictures of which he was very proud. He was a man of culture and means. He had traveled extensively in Europe. He considered himself a connoisseur of pictures and his collection, which it had taken him years of toil and labor to bring together, was the special object of his care and attention. He delighted in showing it to his acquaintances; in fact, on every possible occasion he invited their criticism of it. One day a friend called whose opinion about the collection he was particularly anxious to know. He had heard that his friend was considered an art critic of the first order. After dinner, then, he led him into the gallery. They passed from picture to picture, the host explaining the merit of each, the time and circumstances under which it was bought and so on. He considered this and that picture very fine; in fact, the whole collection. But he invited his friend to express openly and without reserve his opinion. 'Do you know,' he said, turning suddenly to his visitor, 'that man Brown was here the other day, and, would you believe it, he had the impudence, when I asked him what he thought of my pictures, to tell me they were mere daubs, not worth the canvass they were painted on, and to use similar expressions of appreciation. I felt like kicking him down those stairs and out of the house,' and mopping his excited brow, the host once more asked his visitor, 'Now, what do you think of my collection?"

Here Judge Folger stopped. The members of the Cabinet sat quiet and looked rather embarrassed for a few moments. The President colored slightly, but said nothing. Finally Frelinghuysen smiled in a careful and diplomatic manner; Brewster raised his frilled sleeve to brush the hat behind which he was concealing a horrid grin; Chandler's eyes twinkled with merriment through his glasses; Gresham's mouth twitched; Lincoln relaxed his stern and forbidding features and Teller ran his hand over his laughing countenance. The President joined good naturedly in the laugh at his own expense and the meeting broke up without further business having been transacted. The subject which the President had broached that day was never afterward alluded to at a Cabinet meeting.—*New York Tribune.*

A Great Discovery.

Mr. Wm. Thomas, of Newton, Ia. says: "My wife has been seriously affected with a cough for twenty-five years, and this spring more severely than ever before. She had used many remedies without relief, and being urged to try Dr. King's New Discovery, did so, with most gratifying results. The first bottle relieved her very much, and the second bottle has absolutely cured her. She has not had so good health for thirty years." Trial Bottles free at Nydegger's Drug Store. Large size 50c. and $1.00.

The Cathedral in the city of Mexico is said to be the finest church building on this continent.

Mr. Douglas and the War for the Union.

New York Tribune.

Edward Larned, of Greenfield, Mass., at one time president of the Ohio and Mississippi railroad, gives a new version of the famous Douglas incident of 1861. He was called to Washington by a telegram, from Douglas, sent immediately after the latter had heard of the firing on Fort Sumter. Douglas was sick with diptheria. His physician, his wife and a Catholic priest were there. As the doctor went away he said to Douglas: "Now, no talking or excitement, Senator," But he was no sooner gone than Douglas arose, dressed himself, and began reading to Larned, who had just arrived, a long and carefully written letter. He was discussing its points when a telegraph message was brought in. He read the message and immediately began to use emphatic language in denunciation of the telegraphic system, and the liberties it permitted to be taken with public men. Then he read the message aloud:

"Do you approve and sustain Lincoln's war policy? Missouri will not."

"I said," recounts Mr. Larned, "that I would not answer a dispatch, and he rejoined: 'This is the penalty for being a public man. It is from the editor of the leading paper in St. Louis. I cannot refuse an answer.'

"He wrote a reply, which he read to me. I will not attempt to repeat it. It was a politician's despatch.

"'I wouldn't send it, Senator,' I said. 'The entire Democratic party of the country is waiting to hear from Stephen A. Douglas. Your constituents in Illinois are resting secure in your ability to meet the emergency of the hour. But if you send that despatch the heart of every friend you have in the North will sink. It seems to me impossible that a man born in Vermont should vacilitate or be unsound on this great question.'

"Said he, 'I am as sound as any man in this country.'

"And I replied, 'Yes, Senator, but unfortunately, your despatch is not.' He protested again, and taking up the paper, read his despatch with a punctuation and emphasis that were sufficient to give it the true ring. But I told him plainly that the telegraph wires would not punctuate, or transmit the tones of his voice; but the words he had written might be twisted in a good many ways. I took the despatch and read it with my own emphasis, putting a contrary construction upon it.

"He said: 'That does sound d——d equivocal as you read it.'

"He tore it up and wrote another, which he read aloud. I burst out laughing, and, when he turned on me inquiring, explained that I was laughing at his ability to write a second despatch that was worse than the first. Then he said, somewhat petulantly: 'Well, I am ill; my head is perhaps not clear. Sit down here and write out what you would send.' I sat down and wrote these words:

"'I deprecate war. But if it must come, I am with my country and for my country under all circumstances and in every contingency. Individual policy must be subordinate to public safety.'

"He read it carefully, signed his name to it, and sent it away."

"That is the true history of Douglas' famous St. Louis despatch.

The Soldier's Joke.

We were lying in winter quarters, and had days and days of nothing to do. I did not play cards, but my tent-mate did. He also had three special friends who played, and their special place was in my tent. There they met day after day—in the afternoon, and in the evening until late at night. Our tent was built for permanent quarters. In one end was made a door eighteen inches wide by three feet high. On the opposite side was a fireplace built outside of small sticks, like stonework, and covered inside with clay mortar.

The boys, as usual, were at their cards. I took a friend into my counsels, and we procured a shell which had blown the load out without bursting. We fastened into this shell a long fuse. I then told my friend to go away a few rods to an empty dry goods box, and strike upon it so as to make it sound like the booming of a distant cannon. "Hark!" said one, "d'you hear that? That's from Lee's battery on the left. We may have other business than card playing by daylight."

Just then "boom!" went the old dry goods box, and instantly I dropped the shell, with the burning fuse, down the chimney. The shell fell upon the fire and rolled under the bunk on which the boys were sitting. "Tch—tch—tch" went the burning fuse. The boys thought it a message direct from Lee's battery. Two tried to jump through the door at the same time, and blocked up the narrow door so that neither was able to get out. A full evacuation of the tent was finally affected, and a retreat made—not, however, in good order. No one was killed; but the boys waited behind trees for more than thirty mortal minutes, momentarily expecting to see the tent blown to atoms. After awhile the heroes came together, and in the council of war they held on the field of fright it was decided that they had been the victims of fraud. But there was no more card-playing in my tent.

A Marvelous Millionaire.

Mr. Moses Fraley, the millionaire, is proud of his wife. She is a Mrs. Merdle to him, a living, walking and wondrous illustration of his power of money-getting and money-spending, and with each successive change of toilet, which occurs three, four and five times a day, he beams approval.

Though he seems unconscious of it, Mr. Fraley is regarded as more marvelous than even his wife's clothes, as the millionaire, who, but a short time ago bankrupt, paid his creditors dollar for dollar, though he chose to do it in his own peculiar way.

Soon after he failed, I am told, he sent to Chicago, where most of his creditors resided, asking that three of them be appointed a committee to visit St. Louis and come to terms of agreement. His request was complied with, and the three gentlemen chosen met Mr. Fraley at the Southern hotel, where he put them the unvarnished question:

"How much will you take on the dollar?"

After some debate and argument the gentlemen agreed to accept 50 per cent.

"Holy Moses!" exclaimed their debtor, "50 cets; it is an impossibility; say 20, and I'll listen." More arguing followed, and without much avail, and finally, with a feeling that they were being "done by a little Jew," the sum of 30 cents on the dollar was accepted.

"It's settled, then, 30 cents on the dollar?" chuckled the sharp speculator.

"It is," mournfully echoed the Chicago conferers, thinking of their brethren in grief at home.

"Well, then," said Moses Fraley, having for his amusement indulged in the instincts of race, "I will show you I am an honest man. Fifty cents on the dollar you shall have to-day, and in thirty, sixty and ninety days the other fifty shall be paid in." And he kept his word, and made it honored. Since then, I am told, he has made $3,000,000 in grain speculations.

Daniel Webster's Son.

Col. Fletcher Webster, who is well remembered by many of our old citizens, was in many respects a remarkable man. Inheriting to a great extent the good as well as the reckless qualities of his distinguished father, Daniel Webster, he led a rather erratic life. He lacked the solid dignity of his "illustrious predecessor." "A chip of the old block" in many traits of character, he failed to reproduce the stately manner which so distinguished the parent. He was generous, chivalrous and impulsive, yet his temper was hot and his pugnacity almost uncontrollable.

Shortly after the war of the rebellion commenced he was appointed colonel of the Massachusetts Twelfth regiment, and proceeded to the front. At the second battle of Bull Run his regiment, and that of Col. S. H. Leonard of the Massachusetts Thirteenth, were engaged in the battle of Centreville, in which Col. Webster was killed. Col. Leonard states that in the early part of the day, before the engagement began, he visited the camp of Webster and found him standing before a tree, on which was fastened a small looking-glass, busily engaged in shaving himself. "It appears to me," remarked Leonard, "that you are sticking up a little." "Yes," replied Webster, "I expect to be killed this afternoon, and I wish to make a clean-looking corpse!" He was killed during the first part of the engagement.—*Boston Budget.*

OAKLAND, GARRETT CO., MD.

BOTH WERE WILLING.

"Come, Teddy," said she,
"And listen to me;
I've a little proposal to make;
Talking slang, as you know,
Is just now the go,
And the slangiest captures the cake.

"Now, I think that if we
Should together agree
That we wouldn't sling slang any more,
Every one of the rest
Would pull down his vest,
And would brace up as never before."

"O. K.!" replied Ted;
"Let's go right ahead,
And for penalty I propose this:
The first one that slips
Shall punish his* lips
By giving the other a kiss."

With a blush she replied:
"Kee-rect!" and he tried,
Of course the sweet forfeit to take;
She feigned to resist,
But he wouldn't desist,
Though she threatened the contract to break.

In the very next place
He, too, fell from grace
By declaring "his face he'd relax,"
She shyly advanced—
All around her she glanced—
And for punishment gave him—two smacks.

Well, the scheme was so good;
Try hard as they would,
The punishment urged them to crime,
For the fine was a treat
So deliciously sweet
That they both chattered slang all the time.

*Or, her. —*Somerville Journal.*

LOCKWOOD'S FATE

A Youth Who Knew How to Keep the Secret Intrusted to Him.

In the gloomy winter of 1779 General Putnam, with his army, was stationed in the quaint old town of Reading, Washington, wishing to support West Point in case of attack, and at the same time cover the country that skirted Long Island Sound, commanded the irascible old warrior to choose some place from which both purposes could be easily accomplished and then go into winter quarters. The town of Reading was thus favorably situated, and "Old Put" made his headquarters at the farm house of a patriot, Marvin by name, who was a cousin of the General. The venerable and mossy brown house has been for many years an object of historical interest by reason of this fact. It has stood almost unchanged, save that the rains and snows of a century have obliterated the vivid red which was its color once, excepting under the eaves of the long sloping roof, where dull patches of the tint remain.

One stormy afternoon in March, when the snow and sleet beat fast and furious against the little window panes, weaving thick curtains rapidly thereon, General Putnam sat at his rude table in the front room below. An ugly scowl indicated that he was greatly displeased, probably with the information that he gathered from the reports that he was busily examining. A young man of handsome features, and whose tall and sinewy figure was garbed in a uniform that was faded and sadly worn, stood listlessly at the window. He seemed to be idly waiting the pleasure of his commander, and he found nothing better to do than to look out upon the white-sheathed trees and dreary fields, and upon the rough huts of the soldiers, that stretched away to the edge of the forest. A few sentinels, battling with the storm with bended heads, and the heavily hanging smoke that issued from the roofs of the cabins were the only signs of life. The young man knew that within these huts were discontent and anger that were fast ripening into mutiny, because of the scanty clothing, poor and insufficient food, and long arrearages of pay.

The furious scratching of a quill pen at the General's table was interrupted by a sudden sharp, crackling sound, that indicated that the points had caught in a defect in the paper, and had thereby frescoed the sheet with blotches of ink. An impatient ejaculation, rounced off with a vigorous oath, confirmed the suspicion.

The young man turned to the General:

"Can I not help you now, sir?" he asked, scarcely able to restrain the smile that showed in his eyes, as he saw the great unconquered General overcome by so trivial a thing as the perversity of a quill pen.

"Yes, you can mend my pen and get a light."

"It grows dark early to-day, sir," said the young officer as he mended the pen.

"Not so dark here as it grows over in that camp. This discontent is getting very dark. It threatens mutiny, but I'll have none. I'll crush it, if I have to blow 'em to eternity."

"Do you think the discontent so threatening?" the officer asked.

"Threatening? Yes. It's getting terribly hot, and the worst of it is, the men have reason for it. I don't care so much about their pay; they'll get that some time; but their rations are bad and scarce, very scarce, Whitney, and some of these fellows are doing duty barefooted. It's a deuced disgrace. But they're my soldiers, and by Heaven this mutiny has got to stop. Why, the Connecticut brigade are proposing to march in a body to Hartford and get redress from the Assembly at the point of the bayonet. They ought to have it, too, but there'll be no mutiny here as long as I command these men."

Major Whitney lighted two tallow candles and placed them on the General's desk and was suggesting that he was ready for any further service, when the dull, quick resonance of hoofs upon the frozen earth was heard.

"Dispatches?" said Putnam, interrogatively.

"Yes," replied the young officer from the window, "and the bearer has ridden fast, for the horse steams from the flanks and nostrils."

"See that I have them, quick," said Putnam.

In a moment the dispatches were placed in the General's hands, and the bearer was bidden to shelter his horse and then find such comfort as there was in a big fire, a mug of hot rum, and something to eat, and he joyfully went his way, first to the barn, then to the kitchen.

The old warrior glanced at his messages, and then, with his sandy hair in disheveled fury falling over his eyes and upon his puffy cheeks, his long arms waving with passion, so that ill would it have been had they come in contact with anything, and with stampings that made the oak floor tremble, he foamed and choked, uttering the most emphatic oaths.

"The infernal British have been informed of this threatened mutiny, Whitney, and Washington himself sends me word that he has reason to think they contemplate a sudden attack on us, taking advantage of the discontent. Let 'em come, mutiny or no mutiny. I'll give 'em a skin full of lead. We haven't got much bread, but we've plenty of powder and ball, thank God!"

"Why, then, do you become so furious?" asked Whitney, who was such a firm friend of Putnam's that he feared not at times to check the outbursts of passion, senior member of his staff and secretary as he was.

"Furious! Why, don't you see that there's either a spy or traitor in this camp, who has been taking reports to the enemy in New York? I can fight every mother's son in King George's army in open field and fair fight, but I can't fight spies and deserting traitors."

Here Putnam seated himself with vicious energy at his desk, rapidly wrote a few lines, and then, handing the paper to Whitney, commanded him to see that the order was promulgated that evening. The young officer, as he copied it, saw that it instructed that all sentries should be doubled until further notice, that special pains be taken to apprehend spies or deserters and all suspicious persons, and announced that every deserter or spy would be shot or hanged on the finding of a drum-head court martial, and without an hour's delay.

For a half hour thereafter Putnam and Whitney examined such rough maps of the country as they had, and, with the quick inspiration of a true soldier, the General at the end of that time had, as he believed, fathomed the plans of the enemy.

"They'll come across from White Plains by the Danbury pike, Whitney. They can't get here inside of three days. If it wasn't for this incipient mutiny I'd go out and meet 'em. If I could only hold 'em off for a week I'd put down this trouble of ours and then whip the life out of these confounded red-coats."

"If I might suggest," said Whitney, deferentially, "might it not be a good plan to give them a dose of their own medicine?"

"What's that—bullets?"

"No. They seem to be fond of spies and deserters. Give them one."

"By thunder, that's worth thinking about. It shall be done. I'll give them a deserter who'll send them scurrying off over the Norwalk pike on a false scent, and that'll give me two or three days' more time. But," added Putnam, thoughtfully, "our man is away now, and I don't know another I can trust."

"Shall I try to find one?"

"Yes, but be discreet."

A gentle tap at the door seemingly needed no voice to reveal to Major Whitney who it was that thus begged entrance. He went quickly, and lifted the old brass latch. There on the threshold he beheld a slender, graceful figure, which dropped the quaint recoiling courtesy of the time. But though her body was thus bended, her head was erect, so that Whitney saw the flash of mirth in the brown and mischief-loving eyes, and in the arch, coquettish smile of the full though sensitive lips, upon which emotion vibrated with revealing touch.

"Ah!" said Whitney, returning the courtesy, "the enslaver comes for the hungry captives."

"Nonsense, Major Whitney. Hunger and pride are your only captors, and if one be so easily enslaved as you intimate, why, he has many captors. Therefore I will make no such pretension."

"O, ho!" came forth from the room in a gruff though not unkindly voice. "Is it the maid? Surely she brings, with her own, the fragrance of the kitchen. Come here, my girl."

She went with graceful step to Putnam, and took his great rough hand.

"Do you know, little missy," said he, "that I've a notion to put you on my staff. I've never had such a commissary. What have you been getting for me that tempts me to eat to-day?"

"Something you'll not leave untouched."

"Is it porridge? Come, now."

"Ah, General," said Whitney, "she'll not brave your wrath and her own reputation for kindliness by setting that before you. Have you no nostrils, sir?"

"Aye, but I've eyes now, and the maid is fair. I wish every one of those soldiers out there had a sweetheart like you, missy. There'd be no mutiny then. Come now, what more can the old General say? There's nothing like a sweetheart to spunk up a soldier."

"Then yours must have been a witching one, sir," said the girl. "But come; you know what I've got in the kitchen, and if you dally here they'll soon be like your own cannon balls."

"'Tis dumplings, Whitney, as I'm a rebel. Come here, missy, that I may give you a kiss to pay you," the General said.

"That is cheap payment," said she, archly. "Do you think because you've beaten the red-coats so often that a maid like me prizes such caresses? Humph! But here, your hair's awry, and you've been in a passion, for I did hear you stamping about and using such vigorous language that I put my hands to my ears."

With deft and delicate touch she arranged the warrior's tangled tawny locks, Whitney the while watching with admiring glances, and wondering whether he envied more the General's great fame and abilities, or the modest attention of this girl.

She led them to the table, where the snowy dumplings exuded fragrant steam that, mingled with the aroma of Medford rum, was most bewitching expectancy for the taste as it was exhilarating realization for the nostrils.

"Where is your father, missy?" said the General, as she laid a dumpling upon his plate.

"He's taking supper with General Poor and his officers to-night."

"Ha! ha!" roared Putnam. "Poor's feasting him on porridge while you are starving us on dumplings. By—ahem! By the powers, Whitney, I never ate such fine ones."

"No porridge at all has General Poor. For I placed a dozen or more dumplings in the milk pail, and, with a blanket over them to keep the steam within, sent them with my best compliments, and father has taken a gallon of rum, too," said the girl.

"You're a good and brave girl, missy, but the Lord help Poor and the rest of them if your father makes hot flip for them to-night. 'Tis well there's no business on hand. We know what Marvin's flip is, eh, Whitney?"

The young officer smiled, but as he cast his eyes upon the fair Mary Marvin it seemed as though there were for him greater potency and persuasiveness for intoxication in her glance than in the stiffest mug of flip he ever drank.

Putnam then paid little heed to his companion, for he ate as he did all else, with all his energy absorbed in the occupation at hand. At length, his meal being finished, he said to Whitney: "I wish, Major, that you could make some inquiries at once for this fellow of whom we spoke awhile ago."

Major Whitney glanced about with some abstraction of manner, as though he had already put his wits to work. Then happening to meet the searching and mischief-loving brown eyes that he had grown to regard as the choicest prize in the world for a young soldier, it occurred to him to speak to their owner.

"You know the lads hereabouts," he said, with sudden inspiration. "Is there one who knows the country below, who is brave enough even to be your lover, and therefore brave enough to penetrate the enemy's land?"

"There's no lad brave enough to be my lover, though peradventure worthier a better maid than I."

"Ha! ha! She has you there, Whitney. Bravery alone will not win you, missy. That is right. Bravery isn't such a great thing. It's the lack of it that makes men conspicuous. But, Mary, there's sense in Whitney's nonsense. Is there a brave young lad, with brains to back his bravery who knows this country well enough to take a message within the enemy's outposts? If you will name me such a one it will be well with him, and you, too."

She looked at him curiously for a moment, that she might determine how much of sincerity was concealed beneath this seeming jest.

"Are you trifling with me?" she asked.

"No, missy. There is serious business to be done, and, the Lord knows, I do not know where to look for the man to do it."

"Suppose I find him, will you do what I ask?"

"Aye, a dozen favors if you wish. Put your wits to it, and I'll warrant you'll find him. Here the General quitted the room.

"Tell me, sir, does the General mean it?" she asked Whitney, who was finishing his meal.

"You're too quick-witted not to perceive that he does."

"Is it a dangerous mission?"

"Yes."

"It would not be dangerous for a Tory?"

"It would not, of course. But, surely, you have some one on your mind, or you would not thus question me."

"I'm but curious." Then she added, "Twould help our army?"

"More than you can realize."

"And 'twould injure theirs?"

"We hope so."

Suddenly she broke into a merry laugh, and, when Whitney looked at her in some amazement at this change of manner, she said: "I think I know such a man as you desire. He will do it if I ask, and 'twill punish him a bit, and yet reward him greatly."

"Is he young and handsome?"

"What matters that?" she asked.

"Ah, I have it! 'Tis some fellow who has set his heart on you and you on him, or you would not show such spirit at my question."

"And if I have set my heart on a brave youth 'tis well with me these times, and if he has so considered me 'tis——"

"Far, far better. But this is a dangerous business. If 'tis really your lover, spare him."

"Do you think I'd have a lover who feared danger? But, whether you judge rightly or not, no harm can happen him I have in mind."

"Bid him, then, come to the General in the morning," said Whitney.

"No, he shall not; he can not. Give me your message and instructions, and I'll warrant they'll be carried out."

When the young officer informed the General of her purpose, the bluff old man to Whitney's surprise, seemed encouraged.

"'Tis the maid's way," said Putnam. "She has some fellow, no doubt, that she fancies with a maid's foolishness, and she trusts to win favor and promotion for him. She's a brave girl and a wise one, Whitney, and she has Putnam blood in her veins."

So the General briefly sketched his plan and instructions. The young fellow was to leave as soon as possible, make his way within the enemy's lines as a deserter, and when in their hands declare that Putnam was making preparations to quit Reading and retire to the Sound as speedily as he was able.

"Let her send her sweetheart on this chance, and, to make sure, find some one else to send on a similar errand."

By dawn of the next day Whitney had procured another trustworthy fellow and sent him on his mission, and had also given to the maid the instructions of the General. She demurely received her commission and promised faithfully to execute it.

When the darkness of that evening settled down upon them, Mistress Mary, having muffled her slender figure, sped by the sentinel, who knew her well, and made her way in the direction of the house of her pastor, Mr. Bloss, where, she said, she had made promise to spend an hour that evening. But when she came to the old pasture lot she darted quickly by the little path through the narrow ravine that led to the cleared space beyond, and in a moment went beneath a rough shed that had been erected as a rude shelter for cattle. As she stepped within a tall figure appeared from somewhere in the darkness by her side.

"Mary," it whispered.

"Robert," and the tall figure, bending over her, took her muffled head in both his palms, uplifted it, and kissed her.

"Robert, have you waited long, and are you all safe?" She put out her hand to touch his cloak, seemingly to assure herself.

"But a few moments. I feared the inclement weather or some chance might keep you."

"Keep me, Robert, when you have traveled all these miles, full ten at least, to meet me!"

"Ah, ten miles; twice ten would I come daily if I could but hear you say, 'My Robert!' and receive your sweet kiss of hope and trust."

For a few moments they chatted with the nervous haste of a hurried meeting, and then she said: "Robert, do you hear my good news? After this we need not meet in secret, for I have a way to rid us of all such annoyance hereafter. The General will permit you to come. I shall win his consent."

"Ah, little one, you will be more victorious than others have been if you get him to permit that," he replied.

"But I shall. Robert, is there not a Colonel Bliss of the British army encamped not far from your home?"

"There is."

"Then take this message that I have written and see that it is delivered to him. You pass in and out of their lines easily, do you not?"

"Yes. But what is this?" he said, doubtfully.

"Trust me, Robert. I can not tell you now. Do it for my sake, and come again, say Friday next. After that you will be free to come and go," she said.

"I trust you, Mary, though this is a mysterious thing."

"And, Robert, on no account reveal that you have seen me or received it from me."

"Is it so important as that?"

"For me, yes."

"Then I'll keep it secret with my life."

"Yes, do," she said, with a solemnity that impressed him greatly, though had he been able to see her eyes and smile he would have surmised there was no such great concern about it. Then she bade him go.

"You will wait for me Friday night?" he asked, and she replied yes.

A few moments later Mary was demurely chatting before the parson's fire, and an hour after she sent a message to her father that she should spend the night at the parsonage with Betsy Bloss, her only mate.

General Putnam and his young secretary were preparing to retire for the night, when a commotion without checked such preparations. There was a heavy knock, the trampling of feet, the sound of excited voices, and in a moment an officer with two soldiers and a tall, handsome civilian stood before the General.

The old warrior realized at once what such proceeding meant, but he calmly said:

"Who is this?"

"He was captured by the sentry," said the officer, "as he was leaving the pasture lot below, where he had been in consultation with another whose form the men dimly saw, but who escaped them. When captured, he, by a quick, unsuspected motion, thrust a bit of paper in his mouth and, though the men choked him, he swallowed it."

Putnam's face was like a thunder cloud, but he checked any other manifestation of his passion.

"Who are you?" he asked.

"Robert Lockwood, of Ridgefield township."

"Have you any permit to be within my lines?"

He shook his head, and Whitney, who was watching him closely, was deeply impressed by the grace of his manner and the saddened expression that tempered his manly face.

"What were you doing here?"

"That I can not say, except that it was purely a private matter that brought me, with which neither you nor your army had anything to do?"

"Then why sneak here secretly at night?"

"Because you made that method the only possible way of getting here."

"I suppose you know what that means for you? Tell me, are you a patriot?"

"No," he said sadly. "I do not sympathize with you in rebellion against our King. I am a Royalist—a Tory, you call us—but I have been a man of peace ever since this war begun."

Then up rose General Putnam, setting free the mighty tempest of his wrath. His passion was terrible, and it seemed as though even in his fury he might strike down this man there. With oaths and imprecations he cursed him and all like him, until at length the prisoner said:

"Sir, you are to do with me as you will, but you are too brave a man to insult me."

"I will do nothing more but hang you. Hanged you shall be at sunrise to-morrow."

"Hanged! For what?"

"As a British spy found in my camp, and unable to explain his presence there."

Here Whitney said a few words in a low tone to the General.

"Yes, yes. That is so. See here. There was some one with you. Some of my men giving you information. That's the traitor I want. He gave you some message. Tell me who it was and I'll spare your life, and hang him before the whole army."

The prisoner's head dropped till his chin fell upon his bosom. But he said nothing.

"Come, be quick about it," roared Putnam.

"I have done no wrong. I am not guilty. But I can not tell you what you ask."

"Take him away. Whitney, see that my orders are carried out. Hang him at sunrise."

"Sir," pleaded the prisoner, "you are making a terrible mistake. Suspend your sentence for two days. Let me appeal to Washington, and you will find I have done no wrong."

Putnam's only answer was to eject the man with vigorous thrusts into the custody of the soldiers without.

At sunrise the next morning, while the air was warm with the first breath of spring, they led this prisoner forth to the gallows. Putnam himself was there, and commanded the condemned one to mount the ladder, full twenty rounds.

"Now jump, you spy!" roared the old warrior.

"No, General Putnam, I am innocent of the crime, but I will pray Heaven to forgive you and receive my spirit."

With drawn sword Putnam, raging with anger, commanded the soldiers to pull the ladder from under the condemned, and when they, impressed by the manly, sorrowful bearing of the man, hesitated, the old soldier rushed toward them with his sword. So they executed him.

At noon of that day Mistress Mary returned from her visit at the parsonage, and with blooming cheeks and exultant manner presented herself to Putnam.

"I have come, sir, for you to redeem your promise."

"My promise, missy, what was it?"

"Did you not say that if I found a lad to take your message within their lines you'd grant my request?"

"In truth I did."

"Well, I have fulfilled my part."

"When, missy?"

"Last night."

"And who was the lad?"

"A brave young man," she said, demurely.

"And you met him slyly, that you might take all the credit of this thing yourself?"

"No; but because you would have been furious had you seen him, for he is a Royalist. You perceive, General, that thus I punished him for abiding by the King, by making him take a message whose contents he did not know into their lines; and now I will reward him with your favor."

"You're a brave girl, missy, and, by the powers, your little trick deserves reward. What is it you want?"

"That you give a permit to Robert Lockwood to pass in and out of your lines at pleasure. He will not betray you, General. He will make me happy by coming."

Here Major Whitney, with grave face, spoke: "Mistress Mary, call upon us in a half hour; at this moment the General is busy."

She looked at him wonderingly, for this was an unusual request, but she went away.

"What is the matter, Whitney?"

"Sir, did you hear the name?"

"It escaped me."

"Robert Lockwood!"

"What of that?"

"General, you hanged Robert Lockwood this morning as a spy, when 'twas her message he had, and 'twas to visit her he came in secret, because of your command respecting the Royalists," the officer replied.

"My missy's lover?" The rough old General moaned. "He seemed a brave fellow, too, Whitney. My God, 'twill kill the girl." And the old man's passion was as nothing to the agony which Whitney now saw he suffered.

"My little missy, my little missy, your innocent mischief has killed your lover." He moaned and moaned this over and over again with a piteous wailing. "What shall I do, Whitney? I love that girl as my own."

"Give her the permit and keep her in ignorance of what has happened."

It was small comfort, but it was all that was possible, Putnam, with infinite tenderness, gave the girl the permit, kissing her, and then rushing from her presence, shut himself into his little bedroom for an hour. When he emerged he was quieted, but he never spoke of the affair again.

With exultant heart Mary went to the trysting place to meet her lover. But he came not, and when a few weeks after the army went away, no enemy having attacked, Putnam, as he bade her good-by, seemed to have been stabbed to the heart by the sad, reproachful look that went from her eyes to him. But she said nothing, and Putnam never knew whether she learned why she so wearily waited.

After the war was over Major Whitney sought the fair maid's hand, but she answered him gently: "No, Major Whitney, I am waiting for Robert to come back."—*N. Y. Sun.*

WHY HE FAILED.

A Kentucky Teuton Who Mistook Emotion for Stuttering.

"Mr. Yager," said the young man, "I come to ask you for the hand of your daughter."

"Der 'handt' fon mein tochter. Fur why you say der 'handt' fon mein tochter? You dinks Katrina only vone handt got? You vas peen a fool. Katrina got dwo handts."

"Well—yes—excuse me. I—I—I of course mean two hands."

"'I—I—I!' You peen a schtutter feller, eh? I no schtutter feller in mein family vant. I dinks it vas petter ouf you gone home und learn dot schtutter pisness schtop."

"Excuse me, please; but——"

"Dere don'd vas no oxuse fur dot schtutter pisness. Ouf dot Gott make you dot vay, you don'd gan'd hellup it, dot vas so; aber it vas petter ouf you don'd got marriedt und don't no schillern haf. How you dinks dot look out you a house full schtutter schillern got, goin' all der time 'I—I—I?' I purdy near got schtutter meinsellef dalkin' mit you. Go vay mit yourselluf."

And the young man then went away with himself in great sadness.—*Kentucky State Journal.*

—A stately naval official, glorying in the glittering trappings of his place, jumps onto the front platform of a Charleston car. The abstracted leather merchant, without taking his eyes from the quotations of the evening paper, but seeing by a quick corner glance that a man with brass buttons stands beside him, mechanically pulls a nickel from his pocket and shoves it under the upturned nose of the haughty and horrified patrolman of the seas. "Huh!" snaps the oceanic policeman. The leather merchant's eyes are taken from the figures and turned to his companion. The former indulges in a mild "Oh!" and the latter gives him his back to size up.—*Boston Globe.*

—The Italian coral fisheries employ 4,200 fishermen, who annually secure 56,000 kilograms of coral, valued at $840,000. The manufacture of this coral into beads and crosses, in which form it finds its way to every part of the world, adds millions every year to the wealth of the Italian people.

A BRIGHT LIGHT DIMMED.

Why Eli Perkins Became an Inmate of a Lunatic Asylum.

What ruined me and got me into an Idiot Asylum was this: I used to have a strong contempt for lawyers. I thought their long cross-examinations were brainless dialogues for no purpose. But ever since Lawyer Johnson had me as a witness in a wood case I have had a better opinion of the lawyer's skill. In my direct testimony I had sworn truthfully that John Hall had cut ten cords of wood in three days. Then Johnson sharpened his pencil and commenced examining me.

"Now, Mr. Perkins," he began, "how much wood do you say was cut by Mr. Hall?"

"Just ten cords, sir," I answered, boldly. "I measured it."

"That's your impression?"

"Yes, sir."

"Well, we don't want impressions, sir. What we want is facts before this jury—f-a-c-t-s, sir, facts!"

"The witness will please state facts hereafter," said the Judge, while the crimson came to my face.

"Now, sir," continued Johnson, pointing his finger at me, "will you swear that it was more than nine cords?"

"Yes sir. It was ten cords—just——"

"There! never mind," interrupted Johnson.

"Now, how much less than twelve cords were there?"

"Two cords, sir."

"How do you know there were just two cords less, sir? Did you measure these two cords, sir?" asked Johnson, savagely.

"No sir, I——"

"There, that will do! You did not measure it. Just as I expected. All guess-work. Now didn't you swear a moment ago that you measured this wood?"

"Yes sir, but——"

"Stop, sir! The jury will note this discrepancy."

"Now, sir," continued Johnson, slowly, as he pointed his finger almost down my throat, "Now, sir, on your oath, will you swear that there were not ten cords and a half?"

"Yes, sir," I answered, meekly.

"Well now, Mr. Perkins, I demand a straight answer—a truthful answer, sir: How much wood was there?"

"T—T—Ten c-c cords," I answered, hesitatingly.

"You swear it?"

"I—I—d—d—do."

"Now," continued Johnson, as he smiled satirically, "do you know the penalty of perjury, sir?"

"Yes, sir, I think——"

"On your oath, on your s-o-l-e-m-n oath, with no evasion, are you willing to perjure yourself by solemnly swearing there were more than nine cords of wood?"

"Yes, sir, I——"

"Aha! Yes, sir. You *are* willing to perjure yourself then? Just as I thought (turning to the Judge); you see, your Honor, that this witness is prevaricating. He is not willing to swear that there were more than nine cords of wood. It is infamous, gentlemen of the jury, such testimony as this." The jury nodded assent and smiled sarcastically at me.

"Now," said Johnson, "I will ask this perjured witness just one more question."

"I ask you, sir—do you know—do you realize, sir, what an awful—a-w-f-u-l thing it is to tell a lie?"

"Yes, sir," I said, my voice trembling.

"And, knowing this, you swear on your solemn oath that there were about nine cords of wood?"

"No, sir, I don't do anything of——"

"Hold on, sir! Now how do you know there were just nine cords?"

"I don't know *any such thing*, sir! I——"

"Aha! you don't know then? Just as I expected. And yet you swore you *did* know. Swore you measured it. Infamous! Gentlemen of the Jury, what shall we do with this perjurer?"

"But I——"

"Not a word, sir.—hush! This jury shall not be insulted by a perjurer!—

"Call the next witness!"

This is why I am now keeping books in a Lunatic Asylum.—*Eli Perkins.*

A New Kind of Bank Note.

An entirely new kind of bank note, printed in colors instead of the black and white of the Bank of England notes, is being prepared for issue by the Bank of Scotland. The promise to pay in the body of the note is surrounded on two of its sides by a broad ornamental band, and on the other two sides by a border in which the value of the note is printed a great number of times. On one border the seal and counter seal of King William II. of Scotland are printed in brown on a yellow ground, and between them are the royal arms on a blue ground. On the upper border are the arms of the bank in brown on a yellow ground, with the date of the establishment of the bank, 1695. The chief novelty of the new note is in its colors, which will, of course, make reproduction by photography impossible, and it is believed will prevent forgery. The paper on which the new note is printed is made by the same firm as produces the Bank of England note paper.—*N. Y. Post.*

A Mannerism.

"Billings ought to be ashamed of himself," said Alf Rainey.

"Why?" Spellers asked.

"He knocked me down."

"He did?"

"Yes, he did."

"What for?"

"Because I disputed his word."

"Was that the only cause?"

"Yes."

"Didn't you say something else?"

"Not a word."

"Perhaps he did not like your manner."

"May be he did find fault with my manner-isms."

"What did you say?"

"Told him that he was a blamed liar."—*Arkansaw Traveler.*

HUDSON, N. Y.

A City Which Is to all Intents and Purposes a Rhode Island Colony.

It is not generally known that the city of Hudson, New York, was founded by a colony consisting of several respected residents of Providence, belonging to families still deservedly prominent in our local history. The two most active in the work of settlement, about 100 years ago, were Thomas and Seth Jenkins, and the object of the voluntary exile, as we learn from an interesting contribution in the Hudson *Register*, was to seek a site for commercial purposes on the North, or Hudson River. A granddaughter of Seth Jenkins, now dead, has left a letter, in which she states:

"While visiting Nantucket some years ago, I found an old paper among the archives of that city, giving this account of the pioneer enterprise to Hudson: Seth and Thomas Jenkins, of Nantucket, sailed from Providence to New York to find a place of settlement on the Hudson River.' On their arrival at the City of New York they called upon Colonel Rutgers, an old friend of my grandfather, to whom they unfolded their plans, whereupon Colonel Rutgers proposed that they should buy his farm. They talked over the matter, and finally concluded to make him an offer, which they did. After some day's negotiation they came within $200 of striking a bargain, but at this point, no concessions being made on either side (both were obstinate), and as neither would yield further, the trade fell through, and they started up the Hudson, reconnoitering all the way up until they came to Claverack Landing, where they finally purchased and settled."

The two merchants appear to have scanned the ground carefully and taken note as to where on the river they could find the most advantageous site for commerce. They foresaw, with a sagacity not frequent in that day and generation, that in the vicinity of New York would center the traffic of the continent and that the wharves of the East would in time be deserted for the superior facilities offered by the great river which made Manhattan an island. It was not by any chance that they settled upon the site of Hudson. According to Winterbotham's history, they found the stream up to that spot navigable for vessels of any size, and perhaps they dreamed that they were founding a city that would attract the commerce of Europe and of the Indies. Their dream, if such it was, has not been realized; but Providence has no reason to be ashamed of her thrifty and flourishing colony which constituted one of the most substantial communities in the Empire State of New York.

The mayoralty of the new city, which was incorporated in 1785, was held for many years in the Jenkins family. Seth held the office until his death, in 1793, and was succeeded by his brother, Thomas, who also held the position until his death—consecutively for fifteen years. Robert Jenkins, son of Seth, succeeded Thomas, and, with a lapse of two years, was Mayor until his death in 1819. Like their kinsmen in Rhode Island, they embarked early in domestic manufactures, Robert, and his brother Seth and John F. Jenkins establishing the first manufactory of cotton fabrics in the State of New York, at Columbiaville. They also owned vessels which carried their goods to the principal markets. Under the enterprising direction of the Jenkins family, Hudson rapidly grew in prosperity, until it became the third city in the State. While it has since been outstripped by some other municipalities, it has never lost the sound and solid character impressed by its founders.—*Providence (R. I.) Journal.*

HER LITTLE MAN.

The Nearest Approach to Heaven the Love of an Honest, Faithful Heart.

"Here comes my Little man." The voice sounded pleasantly on my ear, and I turned to look at the speaker. She was a ruddy cheeked woman of some forty years, plainly but neatly dressed; a clean, comfortable looking body. She was standing at the garden gate of a small house, and the words spoken were not spoken to any visible person. I then looked ahead, and lo and behold! her little man was approaching. He was a little, feeble looking body, rather shabbily dressed, with a little round red nose and little twinkling eyes. I should put him down as a clerk with a by no means gigantic salary. There was nothing romantic or particularly lovable in his appearance, but at the moment the face of the woman was beautiful to look upon by reason of the pleasant and strong affection that beamed from it. "Her little man." He ought to have been proud of it, and I dare say he was.

It is good to be somebody's little man, or big man, if you like that better—to feel that your heart is filled, and not empty and withering for want of the glory of the warmth and light of true love. If, as many of the poets have sung, the nearest approach to heaven is true and honest love of one dearer than all, love that never wavers and is returned in all its satisfying fullness, what a long way from Heaven must an old bachelor be, with his heart full of nothing but missing shirt buttons, smoky club rooms, cheerless lodgings and vixenish landladies.

We laugh at the pictures of those old bachelors sewing on buttons and making their own gruel, but some of these pictures darken into a very somber background, as the weary and uncared for old fellows gradually drop into petulant decay.

Nobody's little men. I know some of them by sight. Day after day they may be seen wearily plodding through the same streets, with the same pipe and the same umbrella, and the same look of grim dissatisfaction on their faces. Deeper down dip the corners of their mouths, higher up go their shoulders and thinner grow their noses and cheeks. They go home and there's never a kindly soul with a pleasant smile or kiss or word of love. Nobody's little man.—*Detroit Free Press.*

—It is not the sole aim of people in this world to endeavor by hook or crook to place each other under the yoke, and it is no excuse for the grabber and jobber of to-day to say that his exploits may be equaled or surpassed by somebody else in the future.—*Chicago Herald.*

FOR OUR YOUNG FOLKS.

POLLY'S QUIET FOURTH.

Did ever you hear of Miss Polly Shannon
Who nearly goes mad at the sight of a cannon?
Just outside of Bristol she lives all alone,
And hasn't so much as a cat of her own?
While dreading the thought of the Fourth of July,
She said to herself: "I shall certainly fly!"
Then suddenly there popped in her head the way
Most serenely to spend our National day.

At evening, she plugged all the key-holes with wax,
And over each window hung blankets from tacks,
Then, filling her ears full of pink cotton-batting,
She tied on her night-cap, all ruffles and tatting,
And said to herself: "Now we'll see if that cannon
At four in the morning will rouse Polly Shannon!"

The Mayor of Bristol however was sick,
And even so low as to mind the clock's tick,
And, therefore, the Council made haste to proclaim,
By means of great posters, in letters of flame:
"Because of His Honor the Mayor's condition,
Pronounced very critical by the physician,
To-morrow no cracker, gun, cannon, or pistol
Shall once be shot off in the city of Bristol,
Police are instructed, and will, without fail,
Most promptly remand all offenders to jail."

Just think of the grief of those poor Bristol boys
When reading this placard which vetoed their joys!
But Polly slept sweetly, for no thunderous roar
Of cannon terrific awoke her at four!
'Twas late when she rose, with supreme satisfaction
Preparing herself for a day of inaction,
For how could she work—the house dark as a pocket,
And mercury going 'way up like a rocket?
But when perspiration meant peace and protection,
She felt she could stand it with little objection.

So all the day long in the darkness and heat
She sweltered and worried, while outside the sweet,
Ripe fragrance of summer pervaded the air,
The birds gave their concerts, all nature was fair,
While never a gun, a torpedo, nor pistol,
The ghost of a sound woke in solemn old Bristol!

The next morning came. With a sense of release,
Which filled her whole soul with contentment and peace,
She tossed wax and cotton far out of sight,
Threw wide doors and windows, and gazed with delight!
Her neighbor, Dick Jones, came and lounged on her gate:
"Good mornin'! How are ye? You're up rather late.
I thought you was sick, 'twas so sort o' shut up!"
Too bad on the boys thet 'are bill they put up!"
"What bill?" "Ain't you heard? Thet's why 'twas so still!
They put off the Fourth 'cause the Mayor's so ill."
"And didn't they shoot off the cannon at all?"
Cried Polly amazed. "Not a gun, great or small;
There ain't been a day, as I know on, this year
So dead level still as 'twas yesterday here!"

Miss Polly said only: "Well, there! I declare!"
Then slammed-to the door, and dropped into a chair.
With look very sheepish, and manner less curt,
She thought: "After this I won't cry till I'm hurt."

—*Fannie E. Newberry, in Wide Awake.*

THE SPIDERS' ENEMY.

How It Builds Its Houses, and the Disposition It Makes of Its Victims.

"What a beautiful spider, Cousin Allie!" exclaimed Katie; and then she added, with a face full of amazement; "why, where has it gone?"

"As you turned to draw my attention to it, dear, an enemy came and took him away," answered Cousin Allie.

"An enemy?" said Katie, with a puzzled look that made three lines right down the middle of her forehead; "have spiders enemies?"

"Yes, a great many, not only of their own kind, for they are cannibals and eat one another, but men, and birds, and other insects also."

"Which is their worst enemy, Cousin Allie?"

"From all that I have observed I should say that the enemy the spider fears the most is a little insect that people who are very wise about such things say belongs to the genus Sphex, and in talking or writing of it they always give it its hard scientific name of Sphex Sabulosia Lin. But I shall depart from this rule, and call the spider's enemy by its every-day name of Dirt-dobber, because I know you will then understand of what I am speaking."

"Please go on," said Katie, as Allie paused.

"First let us walk down to the pond and see if we can not find out something there about our dirt-dobbers," answered Allie, gayly.

After a few moments' watching from among the reeds Allie pointed to a dirt-dobber who had just alighted on the wet bank. After settling herself, the dirt-dobber took a piece of earth with her feelers, or hands, and rolled it into a small ball no larger than a pea, but quite as smooth and round. Taking this ball between her jaws, she flew away with it.

"Now," said Allie, "if you will come up to the garret with me I will show you what the dirt-dobber does with those little round balls, my dear."

"Allie, it will sting us!" cried Katie, drawing back as her cousin bade her sit down upon a pile of cotton seed that lay just opposite to, and very near, a dirt-dobber's nest.

"No, no, Katie, they do not sting. I have had them in my hand. Wait a moment or so, and the owner of this tiny dirt house will commence work. She is afraid of us, but her fear will be over as soon as she sees that we are not going to harm her." After several uneasy flights in and out of the window, near which the nest was, the dirt-dobber decided to go to her home, one cell of which was already finished and sealed up. Her first act was to crawl carefully over the finished cell, as if to assure herself that it had received no crack or injury during her absence; then she began work on another cell by laying the ball of earth close to the side of the closed one, and then with her feelers, or hands, spreading the earth out and molding it into the proper shape, making a sharp, buzzing noise as she did so. Having worked up all of the dirt she had brought, the dirt-dobber flew down upon the window-sill and carefully washed her feelers by putting them into her mouth and then rubbing them together. This she did every time before going for a fresh supply of earth. After two days' constant work the cell was finished. It was perfectly smooth and round inside, and quite dark.

The third morning found Allie and Katie at their post in good time to see Mrs. Dirt-dobber begin her work. Indeed, Katie began to fear that something had happened to her, when she flew in heavily laden with a spider half as large as herself. This she carefully stuffed into the very back of the cell, and, after washing her hands, was off once more.

"Allie, how does she catch the spiders without them stinging her?" asked Katie.

"Very easily, my dear. When the cell is ready for the spiders she flies into the woods or down on the marsh, and as soon as she sees one lying in or near its web, ready to jump upon the first luckless fly that attempts to rest on its net, she says to herself: 'Ah, you will do,' and pounces down upon the spider before he can say 'Good gracious! what's the matter?' catching him by the back of the head or neck, buzzing very loud. As she does so she flies away with her victim, and by the time she reaches her house the spider is stiff and dead. Sometimes I have seen the spider show fight, but generally the dirt-dobber is too quick to give him a chance.

"How many spiders does she put in one cell, Cousin Allie?"

"I have found from six to ten. It depends, I think, upon the size of the spiders."

"When it's full of spiders what does the dirt-dobber do?"

"She then deposits a tiny egg, that looks almost like a wee, wee worm. I have read that the egg is laid in the body of the dead spider, but this spring I have examined some thirty or forty nests almost as soon as they were closed up, and in all cases I have found the egg on, not in, the spider."

"What does she do when the egg is laid, Allie?"

"As soon as the egg is laid she goes to work and seals the cell up air-tight with dirt, and then begins a new one."

"But what becomes of the egg and the spiders, shut up in that dark hole?" asked Katie.

"Out of the egg comes a tiny worm, scarcely so large as a rose thorn, and it begins and eats the spiders up."

"Oh, dear! it will starve when the last spider's gone," exclaimed Katie.

"No, it will not, for as soon as it has eaten all of the spiders it weaves out of its body a silk white sheet, and, rolling it all about itself, goes to sleep for about two months; at the end of which time the ugly white worm has become a beautiful dirt-dobber, with wings and legs and feelers and eyes, and a body like, but far more graceful, than a wasp's."

"But it is still in the dark prison?" said Katie.

"Yes."

"And still rolled up in the sheet?"

"Still rolled up, but the silky sheet has changed, too; it is now a thin brown shell, very brittle and easily broken."

"How does the dirt-dobber get out of his prison, Cousin Allie?"

"By boring a round hole through the wall of his cell."

"Did you ever see one come out, Allie?"

"Oh, yes. Only a few weeks since. I had taken a nest down, so that I could look at it more closely, and about eleven o'clock that night I heard such a buzzing in one cell that it startled me. Ten minutes after the buzzing began, a bit of round earth fell from the upper side of the cell and out crawled the dirt-dobber. It was very unsteady on its legs at first, and its wings seemed damp and stiff for awhile, but in a few minutes I had to put him inside of the net, because he would insist upon flying on the hot lamp chimney. The next morning, when I opened the window, no one who had seen it come out of the little dark cell would ever have believed that it was a brand-new dirt-dobber, to see with what an at-home air he flew away into the sunshine and the great outside world."

"Does the nest have to be air-tight, Cousin Allie?" asked Katie, as she watched the dirt-dobber sealing up a cell.

"I think it does, for I have noticed that if the nest gets cracked, the dirt-dobber stops all other work and patches every crack carefully; but it is not often that even after all this trouble the worms come to life. I have examined several of these mended nests, and nearly always found the worms dead. I have also noticed two other species of dirt-dobbers, besides this one that we have watched," continued Allie, "but there is not very much difference in their habits, although some in their looks. You see this one is black and hairy, and builds its nest in the cells lying side by side."

"Real one-story houses," said Katie.

"Yes, that illustrates my meaning very well. Besides these, there are the more common kind, with the yellow legs and handsome body, which build their cells one on top of the other, sometimes having three layers."

"Three-story houses, you should say, Allie."

"Very well, dear. The third kind are black and slender. If they can not find a suitable hole they build a rough three-storied house of dirt, but close it up with a fine white sunstance, which I think they make from their saliva, but of that I am not sure. This kind seems to use only a small round black spider, with scarlet dots on it, as food for their young; while the other dirt-dobbers use any kind of small wood or house spider that they can find."

"Do they live on spiders only?"

"No, they make a rough honey, but they never store it away as the bees do."

"What becomes of them in the winter, Allie?"

"They hide in cracks and crannies, lying torpid until Spring comes, when such as have escaped the frost and cold come forth to build houses which they never live in themselves."—*Lillie E. Barr, in Christian Union.*

—The Austrian Government has refused to authorize the establishment of private cremation societies, on the ground that they might encourage crime. The decree states that murders are often detected by the exhumation of bodies, and that, even if bodies were to be examined before cremation, there would be no time to apply in every case those delicate chemical tests which are used where poisoning is suspected.

—It is related of a distinguished lawyer who observed that his wife always delayed ten or twelve minutes before she came down to dinner, being loath to lose so much precious time daily, he commenced the composition of a work which he prosecuted only while he was thus kept waiting. The result was at the end of fifteen years a book in three volumes quarto, which has met with a large sale and is much needed.—*Tidbits.*

—The hedge-hog is very fond of fruit, and adopts a curious way to obtain it. It is known that they often climb walls and run off upon low boughs, and instead of scrambling down in the same manner, they boldly make the leap from the top to the ground, sometimes ten or twelve feet. They coil into a ball in the air, strike upon their armor of spines and bound away unharmed. In taking this jump, they have been seen to strike upon fallen fruit, which, thus impaled upon their spines, was carried away by them.—*Chicago Herald.*

—The first of the five-inch breech-loading rifle guns built at the Washington Navy Yard for the new steel cruisers was recently tested at Annapolis with powder invented and manufactured by a prominent American powder maker. This gun, designed by the Naval Ordnance Bureau and built of American steel, developed an initial velocity of over 1,900 feet a second, with a pressure of only twelve and a half tons per square inch, which is better than has been done by any other gun of its size.—*Washington Post.*

—An almanac three thousand years old, found in Egypt, is in the British Museum. It is supposed to be the oldest in the world. It was found on the body of an Egyptian, who had doubtless regarded it with as much reverence as he did the Egyptian Bible —"The Book of the Dead"—and, indeed, it is strongly religious in character. The days are written in red ink, and under each is a figure, followed by three characters signifying the probable state of the weather for that day. Like the other Egyptian manuscripts, it is written on papyrus. It is written in columns.

—If walking alone is adopted as the means to counteract the effect of too much sitting, then care should be taken that system enters into the walk. A slow, desultory sort of walk is of no earthly use; it simply tires one without any beneficial result. The walking should be brisk, with the head up and the chest thrown forward. The breathing should be regular and as free as the swing of the limbs. The distance is optional, of course, but two miles ought to be no task for the man who wants to improve his health. The distance can be increased as the pedestrian begins to feel the benefit of the walking.—*N. Y. Star.*

—It is a singular fact that the population of France is decreasing instead of increasing. The mortality among infants belonging to the poorer classes is appalling. So, also, is the death rate among the orphans or foundlings left to the charge of the communes, who are placed out to nurse, and drop out of life in large numbers during the first year of their existence. This can hardly be wondered at when babies in the first year of their existence are paid for at the rate of only six to fifteen francs a month, and of this sum of from four to ten sous a day the nurse is supposed to lodge, feed and care for the child.—*N. Y. Sun.*

Pride of Character.

"Register and I'll accommodate you, sir," said the keeper of a one-horse hotel in a wayside place to a traveler from the city as he applied for a room.

"Never mind that. I'll pay in advance."

"But you must register."

"No, I'll be sizzed if I do."

"Why not, sir?"

"Some friend of mine might happen this way some day, and I wouldn't have anybody that knew me find out I'd ever degraded my manhood by stopping at such a confounded beastly place as this for a thousand dollars, sir. No, sir; money wouldn't induce me to take such an awful risk, sir. I'm poor, but gad, sir, I've got a little pride of character for all that."—*Chicago Ledger.*

GREAT GAMES OF CHESS.

A Caliph Who Played While His Enemy Assaulted His City—A Civil War Which Owed Its Origin to a Game of Chess.

In the history of the Saracens, it is said that when Al Amin, the caliph of Bagdad, was besieged in his city by his hereditary enemy, Al Murum, he was engaged in a game of chess with his freedman and attendant, Kuthan. The enemy was advancing in tremendous force upon the city gates. Terror-stricken, the courtiers rushed in to warn the caliph of his danger, but he would pay no attention to them. "Let me alone," he said, "I see a checkmate against Kuthan." This ruler was so devoted to chess that he had his kingdom searched for all the good players, and had them brought to his palace, where, whatever their rank, he made them friends, and heaped gifts upon them. Among these was the slave Kuthan, who became the caliph's favorite antagonist in the game. The case of Al Amin furnishes a by no means singular instance of the absorption of interest possible in this fascinating game. King John was at chess when the deputation at Rouen came to tell him that Philip Augustus had besieged the city, but he refused to give them an audience until the game was done. Charles I. was engaged in playing chess when the news was brought to him that the Scots were going to sell him into the hands of the English, and manifested no interest whatever in the intelligence until his game was finished. So, too, John Frederic, Elector of Saxony, when imprisoned in 1547, was beguiling the time by playing chess with a fellow-captive at the moment when a messenger came to tell him that the Emperor had sentenced him to be beheaded before Whittenberg. He betrayed no agitation at the news, but proceeded with the game, and expressed the heartiest satisfaction at the close over the fact that he had beaten his opponent. The Hindoos say that chess was the invention of an astronomer who flourished several thousand years ago, and who was possessed of supernatural knowledge and acuteness. The Greeks claim that it was the invention of Palamedes to beguile the tedium of the siege of Troy. The Arab legend is that it was devised for the instruction of a young despot by his tutor, a learned Brahmin, to teach the youth how a king was dependent upon his subjects for his safety. Oriental chess is of two kinds, Chinese and Indian chess. The Chinese game is played generally in eastern Asia; but in India and the adjacent islands, and, with some slight modifications, all over the civilized world, Indian chess is played. The bishop is the elephant in India, the castle the boat, and the queen the minister; otherwise the pieces are identical with those known to us. There is a chess school in India with its salaried professors, and success in the game is held in very high regard. Monesh Ghutuck, it was said, could play a fabulous number of games when lying on the ground with his eyes closed. The complications of the game called the Indian problem are known all over the Occident as among the most difficult ever devised. The Chinese chess-board has sixty-four squares and a broad strip called the River Ho across the middle. The castle is known to them as the war-chariot, the bishop as the elephant, the knight as the horse, and for the king and queen they have a general and two officers. They have but five soldiers or pawns, and two cannon, the latter being able to move over the heads of the others. The general, cannon and chariot can not pass the river. The Persians call chess Timour's game, because of the favor in which it was held by Timerlane, the great Tartar ruler who lived in the fifteenth century. This king found the game so easy that he introduced additional men and moves to complicate it. This was the origin of what is known as great chess in Persia, in contradistinction from little chess, the common game. This is played on a board with 110 squares and fifty-six men. A Persian emperor is said to have called one of his sons Sehahrohk because at the moment he received the intelligence of the infant's birth he was playing chess, and had just given check with his rohk (castle) to his adversary's king (sehah.) Kings and potentates have usually delighted in chess. Charlemange delighted in the game. So did King Canute or (Knut) the Dane. Ivan the Terrible, of Russia, died in 1584 of an apoplectic fit, caused by rage at a checkmate received from a subject. Queen Elizabeth was very fond of chess. So was Napoleon I. He opened his games badly, his biographer assures us, but when warmed up to the game he made some very brilliant moves. At St. Helena he played daily, going over on the board the battles that he had fought, and more than once declared that he ought to have won at Waterloo. Louis XII. of France was so fond of chess that he played it in his carriage.

Casimir II., King of Poland, in the twelfth century, prohibited the playing of chess in his dominions. A similar law was enacted by the Turkish Caliph Hakim, in the year 1025, punishing with the bastinado all who disregarded it. Louis IX. of France (St. Louis) forbade the playing of chess at court under the penalty of a fine, and Edward IV. of England had a law enacted strictly prohibiting chess throughout the kingdom. James I. detested the game. The Knights Templar abhorred chess, and so did St. Bernard, and very many other church dignitaries, but this was probably for the same reason that Montaigne gave, that he hated chess because it fascinated him so.

A civil war in France owed its origin to a game of chess. Regnault, a nephew of Charlemagne, and Berthelot, a knight of the court, had a quarrel while at the game. Berthelot struck his opponent in his anger, whereupon Regnault lifted the chess-board, which, as the story goes, was of solid gold, and struck him dead. A factional war of several years followed, which involved half the kingdom.—*N. Y. Mail and Express.*

—The Yuma tribe of Indians, in California, has decreased from 6,000 souls to 1,500 since their contact with the whites. Yuma understand from this that they do not take kindly to civilization.—*Norristown Herald.*

KEEPING MUM.

Curious Speculations on the Origin of the Common Phrase.

In the fifty-third chapter of "Don Quixote" the Barber says: "Por mi, doy la palabra bara delante de Dios de no decir laque veuftra merced dixere a rey no a roque." Literally: "As for me, I give my word before God not to tell what your Worship shall tell me to king nor to rook," which latter clause is a Spanish phrase meaning nobody. Shelton, the first English translator, in 1652, has rendered it, "neither to king nor to kaiser" (emperor).

The French translators say, "a roi ni a roc." The Dutch have rendered it, "I shall tell it to neither cat nor king." Yet none, not even Cervantes himself, quoted the proverb correctly, which should be rendered, "Before God and your Worship, I'll tell neither king, knight or rooks."

I ascribe its origin to Sacchetti's pleasant novel of the Curate of Valdipea, who often played at chess with a gentleman of his neighborhood whom he used to checkmate five times out of six, notwithstanding which the gentleman would not only allow it, but often boasted of his score with the curate. One day it happened that the curate checkmated him in the middle of the chess board with nothing but a knight and two rooks. This the gentleman, ashamed and displeased, would not allow, which the curate perceiving, ran to the bells, which he began to ring. The peasants, hearing the alarm ran toward him in crowds and wanted to know what was the matter. Said the curate to them, "I want you to see and bear witness that I have given him checkmate in the middle of the board with a knight and two rooks!" The clowns began to laugh, saying, "Master curate, you make us lose our time," and went away. This the curate repeated so often that the peasants at last paid no attention to the ringing of the alarm bell. At length the curate's house took fire and the peasants, hearing the bell, said one to another, "The curate is again playing chess; let him ring; he had better mind his prayers." And so the house burned down. The next day the peasants apologized, saying, "We thought you were playing at chess;" to which the curate answered, "I was playing at chess with the fire, which has given me checkmate and ruined me."

From this incident, doubtless, arose the common proverb, "Non e tempo da giuocar a scacchi quando la casa brussia;" or in English, "It is a time to leave off chess when a man's house is on fire."

The former proverb must have had its origin in the exclamation of the defeated friend of the curate: "Explain the secret of mating in the middle of the board with only a knight and two rooks, and as for me, I give my word before God not to tell what your Worship shall show me, not even to king, knight or rooks."

It is strange that this anecdote, with a curious problem involved, should have been criticised in all languages and yet stood the test of centuries before anyone thought of the simple and common-sense plan of utilizing the chess board and finding out how to checkmate the black king in the middle of the board with only a knight and two rooks. It is a pretty little problem, the solution of which does much toward explaining the exuberant spirit of the victorous curate.—*Chessman, in N. Y. Telegram.*

HOW THIEVES ARE CAUGHT.

The Methods In Vogue by Detectives to Secure Arrests—Thieves' Slang.

"When a detective makes an arrest on suspicion he generally relies on the prisoner to criminate himself," said a Central Station detective. As soon as such a prisoner is locked up a fly officer is sent to talk with him, and, although you may not know it, it is a fact that a man behind the bars is more confidential and confiding to an officer than to any one else. Of course, I make an exception to this rule in the case of old offenders. Many of the latter, however, unconsciously betray themselves during these interviews. I can illustrate that best by citing a case that occurred here several weeks ago, when three men, named Davis, Jones and Henderson, were arrested on suspicion of robbery. Henderson claimed to come from Ohio, and protested that he had never been East before. When arrested a revolver was found in his possession. An officer was sent to interview him, and, after a time, asked him: 'Did you attempt to use your gun when they arrested you?' 'No,' replied the thief; 'the flatty was on top of me before I could pull.' The use of the word 'flatty' betrayed him as a New York crook, and he was afterward identified as a criminal from that city. 'Flatty' signifies, among New York thieves, a policeman. In Philadelphia policemen are called 'cops,' and in Baltimore 'guys.' The detectives are known to thieves throughout the country, by the uniform appellation of 'fly cops,' in contradistinction to 'flat cops,' or patrolmen. Thieves' slang varies as much throughout the United States as does the English language in the different counties of England, and in this way we are often able to locate the home and particular 'lay' of a visiting criminal."

"How about detectives' slang?" was asked.

"O, that varies almost as much as the slang employed by the thieves, and, as a matter of fact, is influenced greatly by them. If several smart thieves are operating in town we would speak of them as a 'mob of good people.' If they are burglars in their profession we would refer to them as a 'gang of chumps.' A 'good mob of guns' indicates a clever party of pickpockets. One expert pickpocket is known as a 'knucks' or, in New York as a 'wire' or a 'good gun.' When we speak of 'good store men,' or 'good night men,' we mean fearless burglars. 'Good day men' are clever thieves, who lack, however, the nerve to become burglars, or 'night men.' This list could be carried out to the extent of columns, but I have told you enough to illustrate my meaning. Colloquial thieves' slang undoubtedly gives us many important clues in tracing a criminal's antecedents.—*Phildelphia Times.*

REPORTORIAL ZEAL.

How Too Much of It Came Near Hanging Its Possessor.

Probably one of the most remarkable instances of reportorial zeal ever heard of, which came near ending very seriously to the main actor, was the exploit of a young man named Armstrong, connected at the time with the city staff of a morning paper in New York. The incident transpired about sixteen or eighteen years ago. Armstrong lived across the East River, just back of Williamsburg. At that time the outlying district was sparsely settled, and many pretty little cottages were rented cheap. One summer night the reporter left the office about midnight. After crossing the ferry and going to the end of the street car line, Armstrong had quite a piece to walk before he reached his cottage. A portion of the way led through a dense grove. On the night in question, while the reporter was sauntering leisurely through the grove, his attention was suddenly attracted to an object suspended from the limb of a tree about a dozen yards from the road he was traversing. It was a bright, moonlight night, and there was little difficulty in seeing objects near by. As he passed over to examine what had caught his gaze, he was startled upon coming up to it to find the dead body of a man swinging from a very low limb of a tree. His feet were not above twelve inches from the ground. A knife was plunged to the hilt in his left breast. The reporter was in a quandary. Here was a big item and it was too late to get a line in about it. What should he do? He was the discoverer of this first-class sensation, and he hated to be cheated out of the sweet privilege of "beating" all the other papers by giving it to his own first. He thought only of this, and finally resolved upon a very strange proceeding. He deliberately cut the body down, carried it off to a huge log near by that lay upon the bank of a little brook, and covered it entirely with leaves, sticks and other debris. He then departed with the intention of "discovering" the body at an hour in the afternoon of the next day too late for any publication in the afternoon papers. As Armstrong struck the road he was not aware that two neighbors were jogging along just behind him, both of whom had seen him come from the log near the brook. As the reporter was several rods ahead they did not hail him, so he walked rapidly to his cottage and went in at the front door. About ten o'clock the next day, while the sun was streaming through the window of the reportorial bedroom, where Armstrong lay, possibly dreaming of his big sensation, a constable and two men called at the cottage and told his wife that they wished to see him on important business. She aroused her husband, informed him what was wanted, and he at once got up, dressed himself, and went out into parlor, where the visitors were waiting. He was then informed by the constable that he had come to arrest him on the very serious charge of murder, and a request was made that Armstrong accompany the officers at once to a neighboring justice of the peace. Before reaching that functionary's place, the reporter was made aware of the fact that the body he had so carefully concealed the night before had been discovered, and that he had been arrested on suspicion of knowing how the man came to his death, the neighbors who saw him come from the brook, as related, having testified to what they had witnessed. There was intense excitement for a time in the locality. Armstrong told his story, but there were a good many suspicious glances thrown at him. Fortunately, however, a letter in a pocket of the deceased man's coat, and other supplementary facts, proved that he was a suicide, and that he had put a rope about his neck while sitting on the branch of the tree where he was found, and subsequently drove a knife into his heart. Armstrong kicked up a bigger sensation than he at first imagined he build.—*Cor. Hartford Courant.*

HE BEGAN TOO EARLY.

The Sad Fate of an Ambitious Young Man Who Was Too Fresh.

"Is this the first time you ever killed a man?" asked an Arkansaw Judge of the prisoner he was about to sentence.

"Yes, sir."

"First offense, hey?"

"Yes, sir."

"Ever stab anybody?"

"No sir."

"Ever steal mules?"

"No, sir."

"Ever claim that you were a wild Texan with three horns and four tails?"

"No, sir."

"Ever drink a gallon of whisky on a bet?"

"No, sir."

"Ever allow that you could dive deeper, come up drier, and holler louder than any five men in the Southwest?"

"No, sir."

"Ever hold five jacks and two revolvers in a game of poker?"

"No, sir."

"How long have you lived in Arkansaw?"

"Two weeks."

"How old are you?"

"Twenty-three."

"Twenty-three years old and have lived in the State only two weeks, and yet you have killed a man. My young friend, you hang on Friday week, rain or shine. A young man like you should begin at the foot of the ladder, not at the top. You are too ambitious. Fling away ambition; by that sin fell the angels. Next case."—*St. Paul Globe.*

The Shortest Way.

Old Friend—"You made your money very fast, Mr. Goldleaf?"

Goldleaf—"Yes, sir, very fast. Ten years ago I was not worth five cents; now I can count my millions."

"That is a very smart son of yours. I suppose he will be making money as fast as you did?"

"He will make it faster. I am going to give him a trade."

"A trade! What trade will it be possible for him to accumulate more money than you in so short a time?"

"He is going to be a plumber."—*Philadelphia Call.*

SATURDAY, AUG. 1, 1885.

Death of General Grant.

Just as we were going to press last week we received the news of Gen. Grant's death. This sad event has been looked forward to and watched for during a period of many months, and, although it has been generally known for a long time that his disease would prove fatal, still the blow to his family, friends and country, was none the lesss severe on that account.

A great man has fallen, and the Nation weeps by his coffin. In this hour of sadness and darkness, when so many hearts are torn with anguish, it is consoling to know that it is not the North which mourns, nor the South which laments over the dead hero, but the united people of a restored Union who mingle their tears, showing their esteem for the dead patriot and their sympathy for each other in the great sorrow which has come alike to all.

As a statesman Gen. Grant would, perhaps, hardly be considered great as greatness is generally understood when taken in connection with statesmen. But whilst this may be and perhaps is true, it is altogether probable that the one thing which detracted more from his greatness, or rather which prevented him from being great in the sense above refered to, was the fact that he was a man who always stood firm and true to his friends. He was never known to desert a friend because that friend made an error or fell into trouble, and whilst his unbounded confidence in his friend may have prevented him from being considered a great statesman, it showed conclusively that he was great in those qualities of heart which are so rarely found in great men. He was twice elected President and his two administrations were among the most eventful in the history of the country, and although eventful, his party associates and warmest admirers do not claim that his administration was faultless. Whilst his devotion to friends often led him into grave errors and frequently brought upon him the severest criticism, still the success of his administration compares very favorably with any which had preceded it.

As a soldier Gen. Grant was preeminently great. He rose from the captaincy of a company to the Generalship of the army in an incredibly short time. His military achievements and successes followed each other in rapid succession. His career as a soldier is without a parallel in the annals of war, and when we look the whole field over we find there is no chieftain of modern times who equeals him. His greatness as a military commander, his wonderful foresight in planning campaigns, and his signal ability in executing his plans must not be judged entirely by his success, but must be considered in connection with the immense difficulties which he overcame, the times in which he lived and the peculiar circumstances under which his campaigns were planned and executed.

The greatest, the grandest, the crowning glory of his military career, the one thing in which he showed himself to be great without a parallel, that beside which all his other military achievements sink almost into insignificance, was his magnanimity to his foes, when the great civil war between the States was brought to a close. All the mistakes of his military career, all the errors of his civil administration, all the faults of his life are, in the effulgent splendor of this grand and glorious magnanimity rendered invisible to mortal eyes.

In the walks of private life Gen. Grant was greatly beloved by all with whom he came in contact. He was tender and affectionate in his domestic relations, true to his friends, magnanimous to his foes, and generous to a fault; and whether in the Presidential chair or on the victorious field of military glory, he was always the true, quiet, dignified, unassuming man.

He was not only honored by his countrymen, but distinguished honors were confered upon him by kings, princes and potentates of foreign countries, and his name was a household word at home and abroad. But he is gone to the "grave where all fallacies are detected, where all ranks are levelled and where all distinctions are done away." Our hearts are sad, our eyes are moist, and whilst we drop the sympathetic tear let us throw around his feibles, whatever they may have been, the broad mantle of a Christian's charity and strive to emulate his many virtues and noble qualities of heart and keep them green in our memory.

MT. MCGREGOR, N. Y., July 23.—General Grant died at 8:08 A. M., surrounded by all his family. He passed out of life peacefully and without evident pain.

At 3 o'clock, though he frequently attempted to do so, Gen. Grant was unable any longer to clear the gathering mucus from his throat. It accumulated and remained, and as four o'clock drew on and the daylight came a point had been reached when expectoration was impossible. There was not left enough of strength, and from four o'clock on there was in the throat the significant rattle of mucus that was filling the lungs and clogging the throat.

At three o'clock the General asked for water, and after that it is not remembered that he uttered any word. At four o'clock the breathing was quickened and reached fifty to the minute. An hour later the respirations had reached sixty, and between five and six o'clock the finger nails had become blue and the hands gave further evidence of the progress of the numbness at the extremities. At every breath the mucus clogging in the throat was growing more noticeable.

A few minutes before 8 o'clock Drs. Douglass, Shrady and Sands stood on the cottage veranda conversing of the condition of General Grant and discussing the probabilities of his death, and the limit of life left the sick man. Mrs. Sartoris and Stenographer Dawson were conversing. The nurse stepped hastily upon the piazza and spoke quietly to the physician. He told them he thought the General was very near to death. The medical men went hastily to the room where the sick man was lying and approached his side. Instantly upon viewing the patient face Dr. Douglas ordered the family to be summoned to the bed side. Haste was made and Mrs. Grant, Mr. Jones and wife, U. S. Grant, Jr., and wife, and Mrs. Col. Grant were quickly beside the doctors at the sick man's cot. Mrs. Sartoris and Mrs. Dawson had followed the doctors in from the piazza and the entire family was present except Col. Fred Grant. Hastily summons were sent for him, but he entered the sick room while the messenger was searching for him. The Colonel seated himself at the head of the bed with his left arm resting upon the pillow above the head of the General, who was breathing rapidly and with slightly gasping respirations. Mrs. Grant calm, but with intense agitation, bravely suppressed, took a seat close by the bed side. She leaned slightly upon the bed resting upon her right elbow, and gazed with tear-blinded eyes into the General's face; she found there, however, no token of recognition, for the sick man was peacefully and pleasantly passing into another life. Mrs. Saratoris came behind her mother, and leaning over her shoulder, so witnessed the close of a life in which she had constituted a strong element of pride. Directly behind Mrs. Grant and Mrs. Saratoris, and a little distance removed, stood Drs. Douglas, Shrady and Sands, spectators of a closing life their efforts and counsel had so prolonged.

On the opposite side of the bed from his mother and directly before her stood Jesse Grant and U. S. Grant, Jr., and near the corner of the cot on the same side as Jesse and U. S. Grant and near to each, was Mr. N. E. Davison, the General's stenographer and Confidential Secretary. At the foot of the bed and gazing directly down into the General's face was Mrs. Colonel Fred Grant, Mrs. U. S. Grant, Jr., and Mrs. Jesse Grant, while somewhat removed from the family circle, Henry, the nurse, and Harrison Tyrell, the General's body servant, were respectively watching the closing life of the patient, their master. Dr. Newman had retired to the hotel to breakfast, and was not present. The General's little grandchildren, U. S. Grant, Jr., and Nellie, were sleeping the sleep of childhood in the nurse room above, otherwise the entire family and household were gathered at the bedside of the dying man. The members of the group had been summoned not a moment sooner than was prudent. The doctors noticed on entering the room and pressing to the bedside that already the purplish tinge which is one of Nature's signals of final dissolution had settled beneath the finger nails. The hand that Dr. Douglas lifted was fast growing colder than it had been through the night. The pulse had fluttered beyond the point where the physician could distinguish it from the pulse of health in his own finger tips. The respiration was very rapid, and was a succession of shallow pouting inhalations, but happily the approaching end was becoming clear of the rattling fullness of the throat and lungs, and as the respirations grew quicker and more rapid at the close, this fact was in its results a comfort to the watchers by the bedside, to whom was spared the scene of an agonizing or other than a peaceful death. The wife almost constantly stroked the face, forehead and hands of the dying General, and at times, as the passionate longing to prevent the end so near would rise within her, Mrs. Grant pressed down his hands and leaning forward tenderly kissed the face of the sinking man.

Colonel Fred. Grant sat silently but with evident feeling, though his bearing was that of a soldierly son at the death-bed of a hero father. U S. Grant, Jr., was deeply moved, but Jesse bore the scene steadily, and the ladies, while watching with wet cheeks, were silent, as befitted the dignity of a life such as was closing before them. The morning had passed five minutes beyond eight o'clock and there was not one of the strained and waiting watchers but who could mark the nearness of the life tide to its final ebbing. Dr. Douglas noted the nearness of the supreme moment and quietly approached the bedside and bent above it, and while he did so, the sorrow of the gray-haired physician seemed closely allied with that of the family, Dr. Shrady also drew near.

It was seven minutes after eight o'clock and the eyes of the General were closing. His breath grew more hushed as the last functions of the heart and lungs were hastened to the closing of the ex-President's life. A peaceful expression seemed to be deepening in the firm and strong-lined face, and it was reflected as a closing comfort in the sad hearts that beat quickly under the stress of loving suspense.

A minute more passed and was closing as the General drew a deeper breath. There was an exhalation like that of one relieved of long and anxious tension. The members of the group were impelled each to step nearer the bed and each waited to note the next respiration, but it did not come then—it never came. There was absolute stillness in the room, and a hush of expectant suspense, that no sound broke the silence save the singing of birds in the pines outside the cottage, and the measured throbbing of the engine that all night had waited by the little mountain depot down the slope.

"It is all over," quickly spoke Dr. Douglas, and there came heavily to each witness the realization that General Grant was dead.

Then the Doctor withdrew, the nurse closed the eyelids and composed the dead General's head, after which each of the family group pressed to the bedside, one after the other, and touched their lips upon the quiet face so lately stilled.

MT. MCGREGOR, N. Y., July 24.—This afternoon Mr. Turner, Mayor Grace's chief clerk, received a message which determined the question of General Grant's burial place in favor of Central Park, New York.

ROCHESTER, N. Y., July 24.—The Stein Manufacturing Company, of this city, yesterday received an order for the casket in which the remains of General Grant are to be laid in their last resting place. The casket will be the finest ever made in this country and the first of its kind manufactured. It is called the Style E State casket, covered with metal, and will be six feet long, covered with the finest purple silk velvet, banded with solid silver frames and portals. The metallic part which is inside the red cedar covered shell, will be of highly polished copper. The top will be French plate beveled glass, open full length. The inside of the casket will be lined with cream colored satin and an elegant pillow of the same material. The handles will be of solid silver. The outside box will be of red cedar, lined with lead and highly ornamented with silver mountings. The casket will be completed by Sunday.

NEW YORK, July 24.—The canopy to be used above General Grant's coffin was sent to Saratoga to-day. It was last used at the funeral of Bishop Simpson. It consists of four heavily carved mahogony posts with black broadcloth and silk curtains looped with silk and chenelle tassels.

WASHINGTON, July 24.—President Cleveland was to-day advised by telegram from Adjutant-General Drum, now at Mt. McGregor, that he had delivered the President's letter to Mrs. Grant, and that she and the children expressed a desire to have Gen. Grant buried with national honors.

Their wish will be respected and the ceremonies will take place as already indicated in the press dispatches, President Cleveland and members of the Cabinet will attend the funeral in New York, Saturday, the 8th of August.

MT. MCGREGOR, July 26.—It is desired that friends and the public should know that on the morning of Tuesday, August 4, they will be free to view the remains of General Grant in the cottage parlor where they will lie in state that day. On that day the principal funeral service will be held at the cottage where Dr. Newman will deliver a funeral oration and at that time the President and State Governors are expected to be present. The interment services in New York will be confined to the Methodist ritual.

MT. MCGREGOR, July 25.—While in conversation to-day with the correspondent of the Associated Press, Dr. Douglas very kindly read to the writer the following remarkable document, which was written by General Grant in Dr. Douglas' presence on Thursday, July 2.

"I ask you not to show this to any one, unless the physician you consult with, until the end. Particularly I want it kept from my family. If known to one man the papers will get it, and they (the family) will get it. It would only distress them almost beyond endurance to know it, and by reflex it would distress me.

"I have not changed my mind materially since I wrote you before in the same strain. Now, however, I know that I gain strength some days, but when I do go back it is beyond where I started to improve. I think the chances are very decidedly in favor of your being able to keep me alive until the change of weahter toward winter. Of course, there are contingencies that might arise at any ttme that would carry me off very suddenly. The most probable of these is choking.

"Under the circumstances life is not worth the living. I am very thankful (for thankful, 'glad' was written but scratched and 'thankful' substituted) to have been spared this long, because it has enabled me to practically complete the work in which I take so much interest. I cannot stir up strength to review and make additions and substractions that would suggest themselves to me, and are not likely to suggest themselves to anyone else. Under the above circumstances I will be happiest the most pain I can avoid. If there is to be any extraordinary cure, such as some people believe there is to be, it will develop itself.

I would say, therefore, to you and your colleagues to make me as comfortable as you can. If it is within God's providence that I should go now, I am ready to obey His call without a murmur. I should prefer to go now to enduring my present suffering for a single day without hope of recovery. As I have stated, I am thankful for the providential extension of my time to enable me to continue my work.

"I am further thankful, in a much greater degree thankful, because it has enabled me to see for myself the happy harmony which so suddenly sprung up between those engaged but a few short years ago in deadly conflict. It has been an inestimable blessing to me to hear the kind expression toward me in person from all parts of our country, from people of all nationalities, of all religious and of no religion, of Confederate and National troops alike, of soldiers' organizations, of mechanical, scientific, religious and other societies, embracing almost every citizen in the land. They have brought joy to my heart, if they have not effected a cure.

"So to you and your colleagues I acknowledge my indebtedness of having brought me through the Valley of the Shadow of Death to enable me to witness these things.

U. S. GRANT.

"*Mt. McGregor, July 2, 1885.*"

LONDON, July 23.—United States Minister Phelps, on being handed a copy of the Associated Press dispatch announcing General Grant's death, expressed the greatest concern at the sad event. He instantly ordered the building of the American legation draped in mouruing and the flags at half-mast.

The newspapers contain long obituary notices of General Grant, many of them taking up most of their available space in accounts of scenes and incidents connected with the old patriot.

The *Times* this morning, in an editorial says: "With all his faults General Grant loomed larger in the people's eyes than any of his rivals or contemporaries. If his nature was of metal of far more mixed alloy than that of the founder of the Republic, as even his warmest admirers must admit, it may be fairly pleaded that he was in this only the creature of his time. If his faults were those of his age and country, the military qualities on which the fortunes of his country at the critical moment depended were his own.

The *Telegraph* devotes two columns to a review of General Grant's military career, and editorially says he was the greatest leader whom the United States has produced.

The *News* says: "There have been few brayer men than Grant. England will sincerely regret his death. It is as a soldier that he will be remembered. His name will ever be associated with the great and righteous struggle of which Lincoln was the brain and heart and Grant the arm and weapon."

MT. MCGREGOR, July 26.—"I have heard many persons since his death comparing General Grant with the great generals of history," observed General Porter this afternoon while chatting quietly with the writer, "but to my mind the fact that such comparisons are sought to be made best proves that General Grant was most unlike any of them."

"No," added General Porter; "he was cast in a different mould from any of the hisiorical generals. I think he was the most ready man I ever have known. Persons have come to him while busy and asked for letters upon some subject, and instead of putting them off General Grant would nearly always immediately write what was requested, and it would be so clear and compact as though done by some literary man who had studied it out and revised it twice. I recall an instance of General Grant's readiness in emergency: On the night of the second day of the Wilderness fight, when Sedgwick's corps had been broken and Shaller and Seymour captured, General Grant sat in his headquarters and listened to fastcoming reports of perplexity and trouble, but he turned to one and another and talked off his orders with as much precision and display of judgment as though he had been studying that unexpected situation for two months and all who saw him watched and listened and wondered. And again General Grant was called upon to give a hearing unexpectedly in a case he had not before heard of. The case involved a quantity of cotton, and in its decision it also involved questions of international and maritime law, and also of contraband laws and cotton in foreign bottoms. Well, the lawyers came before the general and argued at length, and when they had done he turned and rendered a decision that left no room for further argument, so clear and cogent were its points. Afterward one of the lawyers came to me and asked where that man, meaning the general, had studied law, but I told him General Grant had never studied law, and his comprehensive grasp and information were facts that I could tell nothing about.

"Did General Grant ever grow nervous or excited, you ask? I never saw him angry but once, and that was when he saw a brutal fellow clubbing a horse over the head. The general seized the man, told him he was a brute, and punished him for impudence, of which he was guilty to the general, but I never heard him utter an oath, nor any approach to it, and I was with him nine years without ever being away from him two weeks. Grant was a splendid rider and a fine whip as well. He could ride 40 or 50 miles and come in perfectly fresh. He was much attached to a little horse that was called Jeff Davis, because he was secured on Jeff Davis' plantation. He was an easy animal to ride and was easily guided through ins and outs, but when fording streams Jeff was at a disadvantage. There was, besides, a noble, big bay-colored fellow named Cincinnati, which General Grant used to ride. That horse could ford a stream magnificently. It was on little Jeff that General Grant, accompanied by myself and an orderly, rode out to the front on the morning when there was that hour of delay in the explosion of our mine at Petersburg. The general wore a blue blouse that morning, and many of the men as we passed to the front did not know that its wearer was General Grant. The firing was getting very heavy and I suggested to the general that we dismount, because we could get about much easier. I did not say that the firing was terrific, for that would have been to him an argument for dismounting. So we dismounted, the orderly holding little Jeff by the bridle, and then General Grant made his way through the lines and works clear out to the front, where the firing was heavy, indeed. He was a man who never winked in the face of missiles, and the only one of two men I ever saw who would not involuntarily do so. General Grant enjoyed being among his men during the war, and in private life, when riding in a special car, perhaps, he would go forward and take half a seat with some passenger in the front car when he wanted to smoke."

NEW YORK, July 25.—Rabbi Browne, as a personal friend and admirer of General Grant, this morning preached a sermon eulogistic of the deceased in the Temple Gates of Hope, in this city.

He said: "I wish to say from this sacred spot that the Jews have lost a great friend in the death of General Grant. I know a great deal of irritation was at one time caused by 'Order No. 11,' and in reference to that order I will speak the whole truth. Last April, you may remember, I wrote an article on the subject, quoting my conversation with General Grant in his cottage at Long Branch, August 27, 1884. General Grant later read my communication to the press, and said to Dr. John P. Newton: 'I consider it now my duty to make known a secret that I have kept these twenty years, and locate the responsibility upon the proper parties. That order came to me from Washington direct. I protested against it, but had to promulgate it against my will. I shall make this statement in my book likewise.'

"Mr. Newman communicated that message to me in the name of General Grant the following Monday in his own house. Grant was a providential man, and was carried providentially around the world, so that all nations and religions should see the noblest American. Moses liberated three millions of people, his own brethren, from Egyptian bondage. Grant liberated three millions of people, a race not his own, from American bondage, over the dead bodies of his own brethren breaking the negros' chains. These three millions of broken chains the angels of heaven have been linking together, so that our American Moses might climb on his self-made path to the realms of bliss and shake hands with his prototype—our Moses of old. The day of Grant's death comes so near to the anniversary of the fall of Jerusalem, that the fact is thus fixed in the Jewish calendar to be remembered by all Jews."

At the conclusion, Rabbi Browne prayed for the departed soul, the whole congregation, by order of President Frey, rising and reciting with the Rabbi the Kadish.

"This is a prayer," said Rabbi Browne, "never recited for a non Jew before."

"We only say it for our death priests," said one of the officers, "and no Rabbi ever bestowed such honor on a Gentile."

Rabbi Browne and the congregation shed tears during the eulogy and prayer for the dead.

MT. MCGREGOR, N. Y., July 27.—Reports which have been sent out in regard to the condition of Mrs. Grant are unduly alarming. She expects to accompany the remains to Albany, and no reason is known to the family why she should not do so. Mrs. Grant has not till the last days become convinced that no remarkable cure was to be effected in the General's case, as she had believed, and when his death occured the effect of disappointed hope, combined with the natural shock of her bereavement produced a reaction from which she has not yet recovered so as to enable her to mingle as freely with the family as before the General's demise. She is not confined to her bed; on the contrary, she yesterday felt that she would like to descend to the cottage parlor and view the remains. From this purpose, however, Mrs. Grant was dissuaded by those who felt that the experience would further trouble and depress her. She cannot be said to be sick nor absolutely prostrated, There has been a reaction and no unusual prostration from the cause stated has followed.

NEW YORK, July 27.—Col. Fred. D. Grant, Mayor Grace and the President of the Board of Aldermen, visited various points in Central Park to-day with a view to selecting one for the final resting place of General Grant's remains. Mayor Grace favors an elevated spot in the as yet unfinished Riverside Park, on the Hudson river. Colonel Grant said he could not decide without first consulting with the other members of the family. He left for Mt. McGregor this evening.

MT. MCGREGOR, July 27.—At this time everything showing how General Grant bore himself in his last days is of peculiar interest. In conversation Dr. Newman related some personal recollections of the General in his sickness.

"In looking back over his illness," Dr. Newman said, "I think that which is most strikingly characteristic is the fact that he left nothing unprovided for. He was just as comprehensive in arranging for the future when he would be dead as he was in arranging his campaigns. He even designated what the burial services were to be, wishing to relieve his family of as much care as possible. All that Colonel Fred. has to do is to follow out the written direction of his father, and thus far nothing has occurred to suggest an addition. Another more beautiful thing is a letter which he wrote to the family before his death for their future guidance. If it should ever be made public it will show the General in an aspect which entitles him to the highest esteem. One morning in the spring, about 5 o'clock, he was seated in his chair, and death seemed very near. I knelt beside him,

and he said. 'Doctor, I am going.'

"Said I, 'I trust that the prospect of the future is clear and bright.'

" 'Oh, yes,' said he, speaking feebly, but with the most entire assurance. In a subsequent conversation he said; 'Three times I have been down in the valley of the shadow of death,' evidently referring to the words of the Psalmist. I said to him, 'What was your supreme thought when you supposed you were going?' His answer was, 'that I had tried to lead a good and honorable life; that was my chief consolation.' Another time, I think in that same connection, he said: 'In one of those extreme moments I had a dream or a vision, I could not well understand which; but it seemed that the lower part of my house was a church, and that I had the keys to it. I looked around the room, but there remained that strong impression that beneath me was a church.' Most significant, too, I think, was that letter which he wrote to Dr. Douglas, where he spoke of his thankfulness that he had been spared to finish his book and make all arrangements for the future, so that he could say that he was *fully prepared to die whereas so* many people are never prepared to die."

MT. MCGREGOR, July 28.—The day broke bright, and on the mountain passed without event until 10 o'clock, when the train arrived at the summit. Col. Fred Grant was one of the passengers upon it. He proceeded at once and alone, upon his arrival, to the cottage, his brother Jesse having remained behind. The colonel immediately repaired to his mother's apartment, where the family gathered to hear the result of the colonel's trip to and conference in New York. He detailed his movements and explained that there seemed to be reasons for the choice of some other than Central park. Riverside park had, at the time of Gen. Grant's death, been suggested as the spot of interment, and it seemed best to the colonel, after seeing and hearing all, to change the place of sepulture to Riverside park. The matter having been thus presented to the family, a conclusion was reached in accordance with the colonel's suggestion.

The President's Proclamation.

By the President of the United States of America:

A PROCLAMATION.

The President of the United States has just received the sad tidings of the death of that illustrious citizen and ex President of the United States, Gen. Ulysses S. Grant, at Mount MacGregor, in the State of New York, to which place he had lately been removed in the endeavor to prolong his life.

In making this announcement to the people of the United States, the President is impressed with the magnitude of the public loss of a great military leader, who was in the hour of victory magnanimous; amid disaster, serene and self sustained; who in every station, whether as a soldier, or as a chief magistrate twice called to power by his fellow countrymen, trod unswervingly the pathway of duty, undeterred by doubts, single-minded and straight forward.

The entire country has witnessed with deep emotion his prolonged and patient struggle with painful disease, and has watched by his couch of suffering with tearful sympathy.

The destined end has come at last, and his spirit has returned to the Creator who sent it forth.

The great heart of the nation that followed him when living with love and pride, bows now in sorrow above him dead, tenderly mindful of his virtues, his great patriotic services, and of the loss occasioned by his death.

In testimony of respect to the memory of General Grant, it is ordered that the Executive Mansion and the several departments at Washington be draped in mourning for a period of thirty days and that all public business shall on the day of the funeral be suspended; and the Secretaries of War and of the Navy will cause orders to be issued for appropriate military and naval honors to be rendered on that day. In witness whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. Done at the City of Washington, this twenty-third day of [s. s.] July, A. D. One Thousand Eight Hundred and Eighty-five and of the Independence of the United States the one hundred and tenth.

GROVER CLEVELAND.

By the President.

T. F. BAYARD, Secretary of State.

We are under obligations to Hon. S. B. Elkins for a bound copy of his able address on "The Industrial Questions in the United States," delivered before the Alumni Association of the University of the State of Missouri, June 3d, 1885. It will be remembered by our readers that we published a portion of the address shortly after its delivery.

LOCAL NEWS.

LODGE MEETINGS.

OAKLAND LODGE, I. O. G. T., meets in Sturgiss' Hall every Tuesday night.

LOCAL BRANCH, No. 85, of the Iron Hall, meets in same Hall 1st and 3d Saturday nights of each month.

ALTA LODGE, No. 574, K. of H., meets in same Hall 2d and 4th Thursday nights of each month.

SHEALTIEL LODGE, No. 122, I. O. O. F., meets in Legge's Hall every Monday night.

PATMOS COUNCIL, No. 386, A. L. of H., meets in same Hall 2d and 4th Friday ntghts of each month.

ANNOUNCEMENTS.

[Advertisements under this heading will be inserted at the following rates: For Members of the Legislature, Clerk of the Circuit Court and Sheriff, $4 00; Surveyor and County Commissioners, $3.00, and for Register of Wills, $2.00. Advertisements to run till the meeting of the Nominating Convention. The space allowed will be six lines or less, and 50 cents per line will be charged for each line in excess of that number. No name will be announced until the fee is paid.]

FOR SHERIFF.

At the solicitation of many friends I hereby announce myself as a candidate for Sheriff of Garrett county, subject to the action of the Republican County Convention.

JOHN H. RILEY.

July 7, 1885.

—Hon. Simon Wolf is at the Glades Hotel.

—Judge Hoffman was in town Tuesday.

—Hats, hats, hats at cost, at Harne & Lawton's Grocery.

—Mr. R. S. McCulloch is among the guests at the Glades Hotel.

—Rolled white oats and oat meal at Harne & Lawton's Grocery.

—Rev. S. E. Jones will preach in M. E. Church Sunday at 10:30 A. M., and conduct a general class meeting at 2:30 P. M. No services at night.

—Don't fail to go to Harne & Lawton's Grocery and get 16 pounds sugar for $1.

—The funeral of Mary Catharine, daughter of J. A. and M. A. Sowers, will be preached at the Bray Schoolhouse Sunday, Aug. 2nd, at 3 o'clock P. M.

—Mrs. Stahl, widow of the late John Stahl, desires to dispose of her house and lot in Oakland. Persons desiring a cheap property should make a note of this. 7 18 tf

—Mr. Lewis Grauer, Grand Master of the Grand Lodge, I. O. O. F. of Maryland, attended a special meeting of Shealtiel Lodge, Wednesday evening of last week, and exemplified the unwritten work.

—Use Frank Siddalls, Ivory and Cottage soaps at Harne & Lawton's Grocery.

—The game of base ball between the Oakland and Mt. Lake Park clubs, played at Mountain Lake Park Saturday afternoon last, resulted in the defeat of the Oakland team by a score of 9 to 12.

—Miss Mollie Monroe, of Kingwood, W. Va., is visiting friends in Oakland and Altamont this week.

—Reopening services for the Methodist Church at Terra Alta will be held Saturday and Sunday, August 8th and 9th. Rev. George McGrew and Mrs. McGrew, returned Missionaries from India, and Rev. John Thompson, of Philadelphia, will officiate. The public are invited to attend.

—A military and civic ball in honor of the officers and honorary members of the Second Battalion, M. N. G., was given at the Oakland Hotel Tuesday night last. About 50 Cumberlanders were present. Excellent music was furnished by Prof. Jungnickel's orchestra. The Piedmont cornet band was also present and played at interyals during the evening, to the delight of the large crowd in attendance.

—Died, at the residence of Geo. P. White, Mountain Lake Park, July 7th, 1885, Bani G. White, aged 44 years, 1 month and 25 days. Deceased was converted at the age of 12 years, during a camp meeting held near Oakland, and joined the M. E. church of which he lived a consistent member, and died leaving bright evidence that he has gone to the realms of the blessed. The funeral services were conducted by Rev. John Thompson, of Philadelphia, Pa.

—Tuesday last two cases were tried before Esquire A. B. Gonder, which were of considerable local importance, and brought together quite a crowd. The first case was the State of Maryland vs. John Miller, Jr., and the other the State of Maryland vs. Dr. B. T. Keller, each on a charge of violating the Local Option Law. The cases were submitted for trial before the above named Justice, who, after hearing the evidence, promptly rendered a verdict of not guilty in each case. The State was represented, in the absence of State's Attorney Veitch, by Thos. J. Peddicord, Esq., and the defendants by G. S. Hamill, Esq.

For Sale.

Will be sold on favorable terms—30-horse power steam saw mill complete, with cut-off saw.

Apply to

D. E. OFFUTT, Admst.,
Oakland, Md.

Church Services--Sunday.

M. E. Church—Preaching at 10½ A. M., by Rev. S. E. Jones.

St. Peter's, Catholic— Preaching every Sunday at 10½ o'clock A. M., except the second Sunday of each month.

Garrett Memorial (Pres.) Church—Preaching at 11 A. M. by Rev. John S. Foulk, and at 8 P. M by Dr. Norris, (Union Service) in the interest of the Maryland Tract Society.

Meeting of Stockholders.

The Stockholders of Mt. Lake Park Association will hold their annual meeting on Tuesday, August 25th, at 10 A. M., in their office, for the purpose of electing a President, Board of Directors, and the transaction of other business.

J. M. DAVIS, Secretary.

List of Letters.

List of letters remaining unclaimed in the Post Office at Oakland, Garrett county, Md, August 1ts, 1885.

Advertise

If you want a farm put a small advertisement in THE REPUBLICAN; you will get more information in that way, in spending $3 or $5, than you would by spending $50 in traveling. If you want to sell your land, advertise in THE REPUBLICAN; it goes to all parts of our county, as well as to adjoining counties in Maryland, West Virginia and Pennsylvania, and is seen by those who are looking for new homes. If you have anything to sell or buy, any wants, advertise in the paper having much the largest circulation of any paper in the county. It gives value received, and can not fail to reach the most desirable parties, and bring excellent results.

"You Will get Left"

If you don't go to Pritchard's Gallery and have your photos taken at once and without delay. Bring your babies. Success made sure by our instantaneous process. First class work guaranteed to all for the next ten days. I shall only remain during the extreme hot season. Come before the rush and get your "lookness tooken" as quick as you could snap your finger, an opportunity that will not often come. Gallery near the post-office.

A. A. ROGERS,
Late of Frostburg, formerly of Washington.

For Sale--Thoroughbred Short Horn Bull, Jerome.

(REGISTERED 42111.)

Bred by Gen. N. M. Curtis, Ogdensburg, N. Y. Dropped March 2, 1881. A very fine animal. Weight now, in good service condition, 1600 pounds. His get are famous in this section. His owner desires to dispose of him because he is making a specialty of Jersey cattle, and has not room for both breeds. Will sell cheap for cash, or will exchange for a young Jersey cow with a good butter record, or for a second-hand portable steam engine in good order, of three or four horse power. Pedigree of Jerome runs back sixteen generations to Hubback, 319. Is perfectly kind and gentle.

Address

CHAS. H. GREENLEAF,
Brookside, Preston Co., W. Va.

Friendsville Cullings.

Mr. Gabrial Friend was badly hurt one day this week by falling from a barn. He is now better.

Mr. J. T. Garey is building a fine dwelling house, which will add very much to the appearance of our town. By the way we will soon have a corporation.

Mr. John A. Steele is home from Ohio, where he has been attending school for a long time. His many friends gave him a right royal welcome.

The good people here are making extensive improvements on the M. E. Church at this place, by way of new carpet, &c.

Mrs. S. M. Friend, of Sang Run, who has been visiting her parents at this place, returned home last Sunday.

Miss May White, who has been at Petersburg, Pa., for a few weeks, returned home last week.

Mr. Wm. Ryland, our genial and enterprising merchant, has erected a fine large store room, and is doing a very extensive business.

Miss Huldah Sterling, of near this place, has gone to Petersburg, Pa., where she will remain a few weeks.

BETSIE.

Deer Park.

The thermometer during the past week has indicated the hottest weather ever known in Deer Park. The maximum was 93°.

Hon. H. G, Davis and wife are at present sojourning at Bedford Springs. Miss Ella Warfield of Washington is visiting Miss Kate Davis.

Miss Leigh Jones, of Richmond, and Miss Kate Downey of Piedmont are visiting at Mrs. W. R. Davis'.

Miss Willie Plant, of Washington, and Miss Laura Dunnington of Fairmont, W. Va., are at Mrs. A. C. Lott's.

Mrs. A. S. Steele and daughter came last week from Chattanooga, Tenn., where they have been spending the winter, and will leave for Boston in a day or two.

Masters Willie Davis and Frank Schoolfield had a delightful trip to Blackwater last week. They were gone from Monday until Saturday and caught a great many trout, and Willie was fortunate enough to shoot a large deer. Quite an achievement for a 13 year old boy.

Mr. Malcolm Sinclair and son, of Cumberland, were in Deer Park one day last week.

A Ladies' Aid Society has been organized in our town by members of the Lutheran church. The officers are as follows: President, Mrs. E. J. Tice; vice-president, Miss Ella Hoye; secretary, Mrs. C. H. Tillson; assistant secretary, Miss Georgie Hoye; treasurer, Miss Mona G. Tillson.

Mr. D. F. Graham will move to Elk Garden in September, where he will join his brother Mr. Jas. Graham in business. Mr. Wm. Armstrong, of Baltimore, will succeed him in Messrs. Davis & Bros. store.

Registered at Wing-and-Wing:

Baltimore, Md.—A. C. Hopper.

Philadelphia—Geo. W. Brown and wife, Edwin C. Young, John Bennett.

Wheeling, W. Va.—Chas. Chadduck.

***

Mountain Lake Park.

Instead of the Jubilee of Song being simply an evening of pleasant pastime, it was a gospel sermon in song, and it had a telling effect upon the audience. Upon Prof. Hudson's invitation quite a number came to the altar for prayers.

Very good cottage meetings were held during the week.

On Thursday the Y. M. C. A. Convention began, and closed Friday evening. Although the delegation was small, their meetings were very good. The influence of these young men with us was very good, and I hope they will be more than successful in their home work.

On Friday there were between 700 and 800 people from Lonaconing and Piedmont, from the various Sunday Schools. Although it rained hard during the day at different, times they all appeared to enjoy the day greatly, all the more, perhaps, because they had had no rain at home for some time. Two good meetings were held during the day which added greatly to make the occasion a very joyful one.

The Sabbath was spent very pleasantly. Rev. Pierce, of Baltimore, preached for us in the morning and Miss Harris, of Franklin, Va., conducted the meeting in the evening.

The Sabbath School is prospering under the supervision of Hon. G. W. Atkinson.

The schools of Art, Elocution and Photography are progressing nicely.

The Directors met to-day (Monday). They are selling a number of building lots.

Mrs. Lamb, of Wheeling, is occupying the Tarr cottage. Mrs. Atkinson and Rev. S. E. Jones, of Wheeling, are occupying cottages in Cosey Row.

Our population will be greatly increased next week by persons attending the Assembly. If persons living in the country and the adjoining towns cannot attend regularly, perhaps they can come at night, and enjoy those rich intellectual feasts provided for every day and night. If you have not a programme apply to J. M. Davis, who will furnish to any who may wish to attend.

Application was made to the Board of Directors by the State Superintendent of West Virginia, for the use of the Hall for the meeting of the Educational Association next July. The request was granted, as was also the request of the "Friends" to repeat the camp meeting next summer.

J. A. E.

Bucklen's Arnica Salve.

The best Salve in the world for Cuts, Bruises, Sores, Ulcers, Salt Rheum, Fever Sores, Tetter, Chapped Hands, Chilblains Corns, and all Skin Eruptions, and positively cures Piles, or no pay required. It is guaranteed to give perfect satisfaction, or money refunded. Price 25 cents per box. For sale by W. D. Nydegger, Druggist, Oakland, Md.

State of Trade.

NEW YORK, July 25.—*Bradstreet's Journal* in its commercial summary says: There is some encouragement in the general feeling in commercial circles reported in special telegrams to *Bradstreet's* this week. This is found mainly in dry goods. The display of autumn samples at Boston is large and attractive, and dealers there claim that sales have been rather better than they had reason to expect. The disposition of autumn prints has been noticeably free, but it remains to be added that liberal discounts have been necessary in order to stimulate purchasers. At Philadelphia as well as Boston the feeling in dry goods circles has materially improved, though no cause there has been cited. This situation brings to mind a like one early in the current year, when a steady improvement in the spring trade was freely predicted. There was some activity shown, of course, as there doubtless will be this autumn, but it was not followed by evidences of an enlarged demand.

The movement of general merchandise is of moderate proportions, the prolonged season or extreme heat serving to check business. At the West the beginning of harvesting operations tends to check operations of country buyers, particularly in those districts where the wheat crop prospects are not favorable. No improvement is reported in carrying rates by rail, lake or canal, the lowest terms recorded having been made within a week, without stimulating the movement of produce or merchandise.

At Chicago a "better feeling in iron" is reported, which is noticeable from its isolation. The surplus bank funds there give no signs of returning business, nor do they at Eastern money centers.

Grocery staples move slowly, with lower prices on sugar and tea. Dairy products are dull and in buyers' favor.

Baltimore Live Stock Market.

[From Baltimore American.]

MONDAY, July 27, 1885.

PRICES OF BEEF CATTLE AT THE MARKET TO-DAY.

Very best on sale to-day 5¼@5 4-5c. that generally rated first quality 4@5 cts; medium or good fair quality 3¾@4 cts; ordinary thin steers, oxen and cows 3@3¾ cts; extreme range of prices 3@5 4-5 cts; most of the sales were from 3½@5¼.

REMARKS ON BEEF CATTLE.

The arrivals of Cattle during the week amounted to 2,576 head, against 1,828 last week and 2,927 head the corresponding week of last year, and the sales were 1,002 head, against 939 last week, and 1,744 head the corresponding week of last year.

The offerings to-day will average a fair improvement on last week's receipts. The tops, though better than were those of last week, were fewer in number, but the lower grades were of a better order than they were then. The state of the weather after the welcome and refreshing rain of yesterday and to-day, made trade much more satisfactory than last week. Prices for tops and the better grades—eight head selling at our extreme top quotations, 5 4-5c.,—show no appreciable change from last Monday, while other grades are a shade off. Prices 3@4 4-5c., with most sales from 3½ to 5¼c.

THE SWINE MARKET.

The receipts number a few less than they did last Monday, and their quality will average a little better than the offerings then. The supply is about equal to a moderately fair demand. Prices are generally expected by the trade to range higher next week. Quotations of nearly all the sales range from 6 to 6¾c. though there are a few rough sows and stags quoted as low as 5¼@5¾.

THE SHEEP MARKET.

The market is fairly supplied with sheep, the number being about 100 more than there were last week. There is but little difference, if any, in the quality of the offerings, as compared with those of last Monday. There is no outside demand, and trade is reported dull in all the yards. We quote sheep at 2@4c., as to quality, and lambs at 3@5¼c. few selling at either extreme.

Odds and Ends.

When you see a counterfeit coin on the sidewalk pick it up. You are liable to arrest if you try to pass it.

A writer of newspaper communications who signs himself "Justice," "Old Subscriber" and "One Who Knows," has just been sued for $10,000 libel damages. This should be a warning to "Civis" and "Taxpayer."

Father (getting ready to go down town). "Yes, Robert, my son, bear in mind what your mother has told you, and always say 'please.' It's a little word, my boy, but full of meaning, and the use of it marks the gentleman. Now, wife, my overcoat and hat; and be quick about it."

"I hear your wife left you, Mr. Biff?" "Ya-as, 'Riah's gone." "Left for good?" Ya-as, 'Riah's left for good." "Don't it make you feel kind of anxious?" "No, 'Riah was a woman of strong determination. I ain't got no anxieties. She won't come back."

A man in Kansas has started five newspapers, each of which died within a short time. He has just started another and calls it *Kind Words*, because, he says, kind words can never die.

An eagle kept in Vienna, Austria, died after a confinement of 114 years. Swans on the River Thames have been known to live 159 years and more.

NEW ADVERTISEMENTS

BUY YOUR GROCERIES —AT— HARNE & LAWTON'S GROCERY, OAKLAND, MARYLAND.

Immense profits to agents. All intelligent people want it. Any one can become a successful agent. Terms free. BALLETT BOOK Co., Portland, Maine.

The Republican.

JAS. A. HAYDEN, Publisher.

OAKLAND, GARRETT CO., MD.

NO MORE TO ME.

Alone and silent I sit in my room,
When the garish light has fled,
And wait to hear, through the gathering gloom,
The footsteps of the dead.
But no sound I hear, and no sight I see,
For my love comes back no more to me.

How soft the light of her tender eyes,
As she smiled in her sad, sweet way;
As we stood beneath the glowing skies
At the close of that blissful day!
That smile, when I close my eyes, I see,
But my love comes back no more to me.

Too fond for kisses or warm embrace,
What could we do but stand,
And give and take, with tender grace,
The thrill of a clasping hand?
That hand no more in mine shall be,
For my love comes back no more to me.

If love and pity go hand in hand,
How quickly they may learn
What grief remains for those who stand,
And wait their love's return.
That grief in my heart must always be,
For my love comes back no more to me.

—*Henry Schell Lobingier, in Current.*

STEP-MOTHERS.

A Few Words in Behalf of This Misjudged Class.

The world is every day growing more humane, more just and charitable. The narrow, social, secular and religious walls that have so long divided man from man are breaking down. Human sympathies are broadening, ample elbow-room and fair play seems to be the motto of the present generation.

But amid all the humanitarian progress of our age there remain a few prejudices that like rank weeds defy all efforts at extermination, and foremost among these is the old-time prejudice against step-mothers, a class that with mothers-in-law may justly claim to be the most ill-treated portion of the human race.

The step-father and the father-in-law awaken none of this antipathy which society, with an unpardonable lack of chivalry, visits upon that so-called weaker sex it claims to protect and cherish.

The very word step-mother recalls a series of portraits now pathetic, now repellent—portraits stowed away in most memories from fairy tales and picture-books that were both the delight and torture of childish days. On the one hand we see the step-child, half-clad, half-fed, groaning under the lash of a cruel task-mistress and tyrannical usurper—a pale, sad, forlorn, ghostly little creature, who, after the arduous tasks of the day are ended, steals softly to the grave of the own mother to pour forth unavailing plaints and tears upon that senseless sod—to pray in agony to be laid at rest from life's sorrows by the side of the one heart that has beat in unison with its own.

The reverse of this doleful picture is the step-mother—a grim, remorseless female with cast-iron features and Medusa glance, with a nose and chin sharp as her temper and almost meeting over the toothless jaws, with long arms ending in skeleton fingers that delight in blows, with a heart hard, preverse and hideous as its outward tenement.

The world abounds in step-mothers. We all know them, but who has ever seen one answering to this picture? The actual step-mother is no being apart; like men and women in general, she has her full share of faults and virtues. But in her case the faults are exaggerated, the virtues scarcely recognized. She is a martyr to whom few are willing to accord the martyr's crown; a tragic heroine who may never expect to find her poet. Her history, save in exceptional cases, may be sketched as follows:

By marrying a widower she has become at the same moment both wife and mother. She enters the new home with a heart full of kindly sentiments, with a sincere desire to take the own mother's place to the child or children Heaven has bereft of maternal care. The more children there are, the harder and more complicated becomes her task. We will take the easiest case and suppose there is only one, but that this one is a girl—a less facile subject for step-motherly management than a boy.

The step-mother's first meeting with her little charge (whom its father's fond eulogies had led her to believe an angel all but the wings) is not encouraging. She finds averted glances where she had hoped for the gaze of truthful, trustful eyes; her caresses are repelled, her loving words awaken no response.

"The little one is shy and distant like most children in the presence of strangers," says the father; "she will soon learn to love you."

Months pass. The child has grown accustomed to the new mother's presence, to the new atmosphere of care and tenderness, but she remains distant. The little soul, that should warm to these caresses as the spring soil warms to the sunlight, is still cold and unresponsive. The sweet cherub has smiles for others, sunny glances, kindly words and merry laughter for all the world but her step-mother. Her gayety abroad is in strange contrast with her sullen obstinacy at home. Her heart seems an Æolian harp, responsive to every kindly outside breath, echoing every voice of affection save that from her step-mother's lips.

The step-mother broods over all this, asking herself the reason, and questioning her own conscience as to any remission in duty. She little dreams that some outside Penelope is all the while busy unraveling her home-work. This Penelope is presumably a relative or bosom friend of the first wife, who from a misguided sense of loyalty to the dead thus wrongs the living.

The child, on her visits to these old friends and relatives, finds herself the constant object of tearful lamentation. The one theme upon which they ring all sorts of changes, is her own mother—the one mother who loved her so dearly, who, were she living, would do so differently from the stranger who has usurped her place; this stranger whom it is nothing less than sacrilege to call by the sacred name of mother. In short, the child is given to understand, more by covert insinuation than by direct words, that any love or respect she awards the living mother is robbery of the dead.

Perhaps she learns this lesson at home from some old family servant or governess—a person not bad at heart, but the victim of a suspicious nature that magnifies molehills into mountains, or of a mawkish sentimentality that discerns in the dear departed—rendered doubly dear and sacred by death—virtues that would be impossible to any inhabitant of this world. "Poor motherless little creature!" "Sweet, forsaken darling!" "Lovely innocent!"—these words—uttered in every note of the gamut of sympathy—form the constant refrain of the tune the child hears early and late, and it is no wonder that she ere long comes to regard herself as the most forlorn and ill-treated of human beings. Thus early schooled in self-pity, in distrust and hatred, she is indeed an object of commiseration.

For the wisest reasons the step-mother denies the child some wonted yet harmful indulgence, and thereby rouses a revolt among the whole circle of spies and meddlers. Their manner declares to the object of their jealous care, even though words be wanting, that this woman, who has thrust herself into the own mother's place, takes a malicious delight in crossing her, and grudges her even the most harmless pleasure.

How is this young creature to believe in one whom all around her distrust! How, in her inexperience, can she be expected to obey that golden rule of love even to one who despitefully uses and persecutes her?

Now comes the Christmas and fairy story books, with their gaily-colored pictures, to confirm what all the world says about step-mothers. These stories and illustrations are of all grades, from that of the step-mother who clothes herself and her own daughters in purple and fine linen and fares sumptuously every day, while the little step-child occupies a sort of Cinderella's place in the household, to that crowning atrocity of a step-mother, who murdered her little step-son and set his heart, nicely cooked and placed in a daintily covered dish, before his own father!

Credulity is the leading trait of early youth. To the child, printed books and painted pictures never lie. This child fairly groans under the weight of so much cumulative evidence against step-mothers, and learns to doubt at an age whose supreme happiness is unquestioning faith; to hate when the most beautiful privilege of the human heart is to love.

This poisoning of the very sources of the child's love and trust must needs react upon the step-mother. The noblest woman is still human. The Danaides of the old Greek myth, doomed through all eternity to attempt to fill a bottomless cask with water, were assigned no more hopeless task than that of the unloved step-mother.

The strongest sense of duty, the most unselfish magnanimity, are likely, in the long run, to succumb to ingratitude. To give out love, the heart must receive love. The stream not replenished from a living fountain soon runs dry. The kindest and most affectionate nature grows unsympathetic if it meet only indifference, and a slighted affection often changes into dislike and even hatred.

The wicked step-mothers of the story-books and of the popular imagination have now and then found their counterpart in real life, but in only exceptional cases. The care of children, even if not one's own, tends to call out the best, rather than the worst, traits of womanly character.

Many a woman, in taking upon herself the office of step-mother, seeks to kindle on the altar of a deserted temple the holy flame of a new affection and reverence. She sets for herself the high task of re-creating a domestic hearth in the midst of loneliness and desolation; of being a true mother to children who have suffered that supreme earthly affliction, the loss of an own mother.

She gives to this work the best years, the best energies of her life, only to find the result estrangement, perhaps hatred. This state of things, deplorable as it is for her, is unutterably more so for the step-children, who are now forming characters for life, who must in after years look back upon childhood which should have been to them "a moment of God," as to a period of unrest, discontent and bitterness. Silent, intangible influences have been at work undermining the happiness of the home which might have been an Eden, but which has become a desert.

Who is to blame for all this? The common verdict of society, constituting itself both judge and jury, would condemn the step-mother, while the father and the step-children would be pronounced innocent. In the step-mother all family sins find a convenient scapegoat. We contend that while all these three parties may be at fault, the burden of guilt rests with outside people, with those influences of which we have spoken which come from without the home.

Let the woman who is not prepared to steel her heart against the steady assault of outside enemies, who is not confident of her power to conquer by love and good works the foes that may arise in that new household, remain far from the home where a bereaved husband bewails his loneliness, and where children, every one, most likely, an angelic being in his love-blinded eyes, await a step-mother.

If she feels within herself the spirit of both hero and martyr, she may venture to assume this cross, hoping for the crown that in the end awaits faithful endeavor and pious sacrifice. It may be given to her to perform that miracle possible but to few step-mothers—to win the entire love and confidence of the children confided to her care.

When she, too, lies beneath the sod, they may cherish her memory as that of a ministering angel who came to them in life's sorest need and desolation to replace the angel they had lost. And when light lips profane the name of step-mother, these step-children, burdened yet with an unpaid debt of affection and gratitude, may attest that next to the name of own mother it is the most sacred word on earth.—*Francis A. Shaw, in Chicago Interior.*

—A horse should neither be watered nor fed solid food when tired out. Prepare four quarts of warm gruel, and after he has taken that in half an hour he may be fed, first allowing him half a bucket of water to drink.—*Chicago Tribune.*

SCHOOL AND CHURCH.

—Atlanta has raised $75,000 for the erection of a building for the Young Men's Christian Association.

—A church in Jersey City, N. J., has been deeded to trustees on condition that instrumental music shall not be allowed in the services.—*N. Y. Sun.*

—Dr. McCosh, of Princeton, is of the opinion that a child's mind is best fitted for the beginning of school education when the child is twelve years old.—*Newark Register.*

—The annual report of Commissioner of Education Eaton shows that the school population of the thirty-eight States is 14,227,784. Of this number there are in daily attendance 4,919,408.

—A recent report of the French Minister of Public Instruction shows that in January last 23,222 schools had a school savings bank, and that 488,624 schoolboys were depositors in these banks, and possessed there the sum total of 11,285,046 francs.

—A young Japanese nobleman has graduated from the Rutgers College grammar school, at New Brunswick, N. J., receiving the prize for the best oration, and another for the cleverest work done in history during the past year.

—Professor James D. Dana, of Yale College, has been made an honorary member of the Royal Society of England. Professor Asa Gray, of Harvard College, is the only other American who enjoys this distinction.—*Boston Journal.*

—The Southern Baptist Convention does not believe in rotation in office when the best men are once in position. At the meeting in Augusta, it re-elected as President, Dr. P. H. Mell, who has filled the chair for so many years, and who, among other works, has written a convenient manual of parliamentary usage.—*N. Y. Examiner.*

—Although a state of war exists between France and Madagascar the Malagasy Government have in no respect relaxed their efforts in the cause of education. Two Malagasy youths of considerable promise, who have been educated in London during the last four years, will return to their own country in a few days in order to occupy a position as teachers in the public schools. Since the war there has been no interruption of educational work in Madagascar.

—In Germany teaching is evidently regarded as its own reward. At Easter the schoolmaster Schnell, in Fleeth, aged seventy-six years, was put on the retired list, with the grant of an annual pension of 144 marks ($36 United States currency) and seven metres (measurement) of firewood, after having faithfully and conscientiously served for over fifty-two years, and for nearly three years supported from his own means an assistant, to whom he was obliged to furnish free board and lodging, inclusive of light and washing.

—When Rev. Mr. Rainsford, of Cambridge University, England, was offered, in 1883, the rectorship of St. George's Church, New York, on the retirement of Dr. Tyng, Sr., he accepted on one condition—that the seats should be made absolutely free. This was acceded to, and during the year 1884 the church raised over $48,000. The congregations fill the church at every service. Mr. Rainsford said recently that "the way to hold people to the church is to give them work to do, and not to try and hold them by the tie of a seat or the tie of fashionable associations."—*N. Y. Herald.*

PUNGENT PARAGRAPHS.

—A Boston young lady has married a German Baron with an unpronounceable name. Her maiden name was to capture him.—*N. Y. Sun.*

—"Is the man honest?" asked old Hyson. "Honest as the day is long." "Ye-es," said old Hyson; "but then he won't do at all. I want him for a night watchman."—*N. Y. Independent.*

—"I wonder, uncle," said a little girl, "if men will ever live to be five hundred or a thousand years old?" "No, my child; that was tried once, and the race grew so bad that the world had to be drowned."—*New York Citizen.*

—Somehow or other everybody some time or other wants to sing "Auld Lang Syne," and only one man in a million knows the words. And he only knows the first verse, and he doesn't sing it right.—*Cincinnati Commercial Gazette.*

—"Waiter!" cried Fogg, "bring me a quail on toast." "Sorry, sir," replied the waiter; "but we are all out of quail." "Well, then, bring me the toast. I'm not the man to make a fuss about such a little thing as a quail."—*Boston Transcript.*

—A Pennsylvania girl recently jumped rope two hundred times, and then died. The moral of this event would seem to be that a young woman should confine her jumping to jumping at the first offer, and offer to jump no more.—*Philadelphia Call.*

—The Good-natured Girl:

I do not sigh for the stately maid,
Though her face be o'er so fair,
For the truth to tell, I'm half afraid
Of the girl with the haughty air.
There's a sweeter charm, a rarer grace,
That homage will always win;
'Tis found in the bright and smiling face
Of the girl with the double chin.
—*Boston Courier.*

—"What makes you look so down in de mouf?" asked Uncle Mose of Jim Webster. "My wife done broke anudder plate dis mawning." "Dat's nuffin. De plate don't cost you more den a dime. Dat don't hurt much." "Hit don't hurt! I reckon yer don't know dat hit's my head she busts de dishes on." "Yes, dat's rough on de crockery."—*Texas Siftings.*

—First funny fellow—"I saw some horses run away to-day, and they knocked the wagon speechless." Second funny fellow—"Knocked the wagon speechless! How absurd! A wagon can't be knocked speechless." First funny fellow—"That's where you're mistaken—they knocked the tongue out of the wagon, and so I say it was speechless."—*Golden Days.*

—Miss Betty was a remarkable young and handsome-looking woman for her years, and she never told anyone how old she was. "Gracious me, Miss Betty," said an old acquaintance admiringly one day, "how well you keep your age." "Thanks," she replied with a smile. "How do you ever manage to do it?" "O, easy enough; I never give it away."—*Merchant Traveler.*

THE IMPROVISATORE.

Italy the Fatherland of the Species—A Peculiar Italian Product.

Nothing is more easy than to rhyme in Italian—the difficulty is to abstain from doing so. The absence of the apparently inevitable jingle is one of the chief charms in the prose of such writers, as Dante, Boccaccio, and Machiavelli: and its natural and easy recurrence was probably one of the causes which rendered the earlier critics of the country so exacting with respect to the external form of the verses they considered worthy of their attention. But what the critic loathes the amateur loves, and the half-cultured will often listen agape with admiration to declamations that are neither prose nor verse, and admire the man who produces a torrent of unreasoned and badly-rhymed twaddle as if it were a work of art, though it has neither the substance nor the form of poetry. Thus Italy was for centuries the fatherland of the improvisatore. He has fortunately fallen with other and better things before the strong inflow of a larger and healthier national life, and, like Prince Florizel, been compelled to shift for himself; but, being unfortunately without the genius, the force of character, and the most admirable moral sentiments of that inimitable prince, he has continued his old business of intellectual princelet, though on a sadly reduced scale.

Occasionally when you are seated in the Villa before one of the cafes a man will appear, and glance furtively round to see if Germans are present. His coat is seedy and his air dejected. The quick eye at once recognizes in him all the tokens of a misunderstood and somewhat damaged genius. He seems to be a note of interrogation, a being who passes his whole life in silently apologizing for his own existence. The Germans are supposed to be sentimental: they have certainly a habit of being kind to the man of talent whose wardrobe is less perfectly adjusted and fully furnished than his mind, and it is to them that the shabby genteel improvisatore makes his appeal. If he finds a company likely to recognize his merits, at least to the amount of fivepence, he steps forward hurriedly, takes a fitting place, and begins to declaim a suitable piece. He knows three or four of them by heart. One treats of the greatness of Germany, another of the unity of Italy and the efforts by which it was accomplished, generally with a passage referring to the speaker's own real or imaginary deeds. This is rather out of date now in Naples, but it is still effective in radical country towns, and often with Germans who are enjoying their honeymoon, and sometimes look as if gall had been substituted for the honey. The most forcible of these introductions, however, deals with the misfortunes of genius and the want of liberality in our own age. When his first part is finished he moves round among the guests, and receives such soldi as may not be wanted for better purposes. If no one gives him a comparatively large sum he moves off in the same sad, undecided way in which he came; if he receives more than twopence from any table, he informs the occupants of his true character, and offers to rhyme on any subject they may suggest. If they accept his proposal, he expects a lira for the first piece, and half a one for each that follows. If he gets more, he is pleased; if less, he is apt to become disagreeable in his own shy, apologetic manner. He thanks his patrons profusely for their bounty, and then begs leave to add just one more piece, not for any profit, but merely to amuse them. If the request is granted, he ridicules every one at the table, and concludes by an ironical praise of their generosity, announcing and showing the sum he has received; if not, he moves to some table near, and delivers the same address, after the permission of its occupants has been asked and granted, in a voice loud enough to be heard by all the guests.—*London Saturday Review.*

LATE STYLES.

Excerpts from the Book Most Diligently Read by Fashionable Women.

Short skirts are very fashionable.

Black grenadine dresses broche with velvet remain in vogue and rival those of etamine and lace.

Lace flounces are worn on grenadine dresses, the trimmings of the corsage being also of lace.

The Marquise Catogan style of coiffure is much in favor in Paris. It is worn low in the nape of the neck and formed of light fluffy loops of hair.

Lace flounces on grenadine dresses are very wide, laid flat, and are only slightly felled, or not at all, and form the tablier and pouf in the back, sometimes panels and side robes.

White mohairs figured with small designs in color are among the pretty, inexpensive dress fabrics that make up tastefully with trimmings and combinations of velveteen of the color of the patterns.

Some women—fashionable ones, too—wear their dresses long enough to touch the ground in the back. This is a graceful fashion for the house, but in the street it is inexcusable, or worse—it is disgusting.

Women with small and pretty feet, especially the women of St. Louis and along the Mississippi River to New Orleans and Baton Rouge, will rejoice over the present style of very short, coulisse skirts; but the Chicago girls need not despair, for the English women are rejecting this style, and are even trying to introduce the skirt that touches the pavement in the back for street as well as house wear.

A pretty combination for a dressy summer frock consists of cream-colored Beaupre veiling and a small quantity of the same kind of veiling and in stripes of blue and cream made up thus: A coulisse skirt opening on both sides with panels of the stripes for borders falls over a petticoat of dull red velveteen. This same velveteen appears in the form of an open waistcoat, showing a blouse chemisette of blue surah in the short bodice jacket or corsage, a large sailor collar under one of blue surah falling over a high neck band of the velvet; in narrow band cuffs at the wrist, repeated in bands on the sleeve just below the elbow. The cuffs and bands on the sleeves are edged with a piping fold of blue surah.—*N. Y. Sun.*

TEMPERANCE.

WHO FOOTS THE BILL?

Figures that Demonstrate the Enormity of the Drink and Tobacco Waste in the Country, and Upon Whom the Burden Bears Heaviest.

The economic aspect of the drink and tobacco waste, already presented in these columns, show that the direct burden thus unnecessarily laid upon labor is something enormous. As already stated it amounts to fully one-sixth of the entire productive labor of the United States, so that the wonder is not that we occasionally have hard times, but that we ever have anything else. When we divide the community into its representative groups, or units of commercial relation, we find that we have four—the "agricultural," the "manufacturing, mechanical and mining," the "personal and professional services," and the "trade and transportation." Attending to these more minutely we find that the first two groups furnish the substance of commerce, and that the second two groups derive their support from services rendered to them, in the way of facilitating the interchange of products or of performing certain personal services for them and for the more prosperous of their own members. The proportions of these groups are nearly as follows: agricultural, 16; manufacturing, etc., 8; personal and professional services, 8; trade and transportation, 4. In the third group seven of the eight are in service or in semi-servile relations and do not earn to exceed an average of $300 a year; the eighth is a professional man whose value we may fully estimate at $1,000 a year. So, also, in the fourth group there are three in trade, at an assumed income of $800, and one in transportation at not to exceed $400 a year. Whatever there is of necessary hard times must be traceable in the condition of these elementary relations, and if the drink and tobacco waste have any injurious influence upon commercial prosperity it must be possible to show how and where. The tables last presented already do this to some extent, but largely by inference. We readily admit that the figures themselves are not infallible. The grouping of facts in the census returns are imperfect, and no doubt the aggregates are wanting in accuracy. There is no reason, however, to suppose that these imperfections affect one part of the conclusions more than another. Some of the positions are wholly reliable, especially the following:

Upon the average the total annual production of the farms will not exceed $465 per head for each worker. The wages in manufacturing range from $260 in some lines to $460 in others, the average for the whole country being $358. The average consumption of farm products is $60 per head for every man, woman and child, or $180 per year for every person engaged in wage-earning occupation. The aggregate of manufactured products of all kinds amounts to an average of $100 a head for every man, woman and child of the population, or $300 a year for every worker. It is plain from the facts already given that certain large classes of workers do not and can not take and pay for their quota of manufactured goods. The unused surplus must be worked off as "luxury and extravagance" by the favored few, or lie in warehouses as overproduction. We may also add that in the present state of things the manufacturing operatives can not expect an increase of wages, for the reason that manufacturers are not making money. These are the essential conditions of the industrial situation as it exists.

The fatal disturbance which waste brings into the commercial world is intensified by its unequal distribution. Unfortunately it is quite certain that the expenditure for drink and tobacco amounts to $20 or $24 per year for every man, woman and child in the country. This, too, in the face of a growing prohibitory sentiment which in many localities amounts to substantial unanimity. Twenty dollars a year is not the drink tax upon the laborer, but only a third of it, for, since every worker has two other persons dependent upon him he has to pay $60 or even $72 a year for this waste, which if evenly distributed would be a most burdensome tax but when unequally distributed becomes ruin. Here, for example, is the agricultural group, which, at the most liberal estimate, can not be supposed to consume more than half of its pro rata of drink. It is in the rural communities that abstinence is the rule rather than the exception, the farming class being in fact the sheet anchor of Temperance reform. It is even doubtful whether the farmers use so much as half of their pro rata of drink; but whatever amount they may leave, it must be charged over to the account of the other classes, the aggregate amount of the consumption resting upon evidence which does not admit of our discounting it at all.

We have, therefore, in our tables of elementary commercial relation an error in the drink estimate equal to a half quota for sixteen agriculturalists, which must be added to the consumption of the other classes. Now it is evident that the trade and transportation class can hardly be expected to do more than to drink its average, although possibly it might smoke considerably beyond the pro rata. Drink is not the vice of this class. One-fourth of its members are railway operatives and employes, who upon many roads are abstainers by contract if not upon principle. The remaining three-fourths are the retail merchants of every sort and their employes who drink but little, the habit of drinking being generally recognized by the proprietors as detrimental if not destructive. Thus we are compelled to divide among the second and third classes the unused drink quota of the farmers, the result being a set of tables like the following:

Sixteen agricultural producers at $465 each		$7,440
Food consumption for 48 persons @ $60	$2,880	
Drink and tobacco at half rate, $30 per worker	480	
	$3,360	
Balance		$4,080
Pro rata of manufactures		$4,800

Here we see that drink cuts off enough of the manufacturer's market to employ one additional worker for about every thirty-two farmers, or more than 239,000 workers in the country. What this means may be inferred from the fact that the number of operators in 1880 employed in making agricultural implements was 39,580; in boots and shoes, 131,967; in carriages and wagons, 45,304. For the farmers to stop drink and tobacco would liberate money enough to double these industries and still have enough left over to add half to the present production of woolen goods.

Eight manufacturing producers @ $400 earn		$3,200
Food for them and their dependents costs	$1,440	
Whisky and tobacco at 1/5 pro rata $90	720	
Balance for other uses		$1,040

This is in place of $2,400 which would be the pro rata of manufactured goods for this class.

Eight in professional and personal service gives:

Seven @ $300		$2,100
One @ $1,000		1,000
Food, 24 persons	$1,440	
Drink and tobacco	720	
Balance		940

In place of $2,400 which this class should use for manufactures.

Trade and transportation:

Three in trade @ $800		$2,400
One in transportation @ $400		400
		$2,800
Food	$720	
Drink and tobacco	240	
Balance		$1,840
Pro rata for manufactures		$1,200

Thus we see that this class is the only one that comes out of the comparison in a solvent condition.

The burden which drink lays upon the third class is even greater than here shown, owing to the larger number of women and children belonging to it. While in the whole country the proportion of women and children among wage-earners is 2.5, in trade and transportation it is only 1.22 but in professional and personal service it is 7.10 or nearly three-fourths of the whole. It follows therefore that if this class drinks anything like the aggregate we have computed the results of it must be well nigh totally destructive to the men who belong to it.

Thus all the considerations together point to the conclusion that the drink and tobacco wastes disarrange exchanges, cut off the manufacturers' markets and condemn one-sixth of the wage-earners of the country to a condition of absolute misery, and another sixth to a condition but little better through the unfair diversion of their earnings for buying food and fuel for the unfortunate victims of drink.—*Union Signal.*

A GLORIOUS WARFARE.

A Victory Which Brings Blessedness and Prosperity—Temperance Recitation for Boys.

Friends: It is my pleasant duty to explain to you the object of our coming together and banding ourselves into a society called "The Band of Hope." First of all, we are volunteers, and they are always the happiest and readiest soldiers. One brave, willing recruit is worth ten pressed men. We do not wear any uniform, except the uniform desire to do good. Our bands are not often of brass, but always of hope. Our music is not particularly martial, but when we stand to sing in martial order the melodies are more heartily and earnestly rendered than those performed at military reviews and sham fights. The oath of allegiance is our pledge. We have no regulations about height or age. Nothing disqualifies for service except desertion.

Our warfare is against no man, but for the benefit of all men. We fight the foes of disease and crime, of poverty and wretchedness. The only arms we use are the weapons of facts and truth, and arguments for sobriety, economy, health and happiness. We neither kill nor wound any; we only seek to annihilate the foes that slay our countrymen by thousands and fill our hospitals with the sick and wounded. We contend for peace. Our victory brings blessedness and prosperity as surely as the morning sunshine banishes the darkness of night. Is not ours a glorious warfare? Will you enlist with us to carry it still further on?—*Christian at Work.*

TEMPERANCE ITEMS.

THERE is a Temperance Insurance Company in Scotland; and by its regulations a total abstainer can obtain insurance at ten per cent. less premium than a moderate drinker.

JOHN MILTON said: "Reformers look small in the eyes of the world, they are so far in advance, but large in the eyes of God, they are so much nearer Him; for all real reform is Godward."

DON'T drink, treat or be treated. No man ever made an ounce of reputation or money by doing it, and enough has been lost to make a paradise of the United States, and pave the streets with gold.—*National Educator.*

OCCASIONALLY a mad dog rushes through the street, and forthwith the authorities are called upon to muzzle or kill every dog. And yet whisky kills 300,000 people, and brings millions of others to misery and want, where a single one is killed or injured from a rabid dog. The moral is plain. Do more muzzling of whisky.—*Inter Ocean.*

THERE are, at the very latest accounts, 11,827 total abstainers in the British Army in India. The Duke of Connaught, in a letter to Rev. Mr. Gregson who is the founder of the Soldiers' Total Abstinence Association, says: "Experience has taught me how much of the crime in the army in India is either caused or aggravated by drink, and one can not too often impress this upon the men themselves." Evidently the men are being impressed.

THE London Temperance Hospital, which has just celebrated its anniversary, finds a death rate during the past year of only five per cent. The number cared for in the hospital was 584, of which 309 left the institution cured and 109 had been relieved. Abstaining and non-abstaining patients are received in about equal numbers, and in only two cases since establishment has alcohol been administered. A new wing, with accommodation for seventy patients, has been added during the year.

BAALBEC.

Description of the Ruins of the Ancient Damascene City.

The ruins of the ancient city of Baalbec, situated on the plain forty-three miles northwest of Damascus, are the wonder of modern architects.

Everything is colossal. The area is larger than that of the temple at Jerusalem. We may begin with the walls, which are half a mile around, and of such height and depth as are rarely attained in the most tremendous fortress. Where from within I climbed to the top, it made me giddy to look over the perilous edge to the depth below; and when from without the walls I looked up at them, they rose high in the air. Some of the stones seem as if they had been reared in place, not by Titans, but by the gods. There are nine stones thirty feet long and ten feet thick, which is larger than the foundation stones of the temple at Jerusalem, dating from the time of Solomon, or any blocks in the great Pyramid.

But even these are pygmies compared with the three giants of the western wall, sixty-two feet, sixty-three and a half feet, sixty-four feet long. These are said to be the largest stones ever used in any construction. They weigh hundreds of tons, and instead of being merely hewn out of a quarry, which might have been on the site, and left to lie where they were before, they have been lifted nineteen feet from the ground, and there embedded in the wall. Never was there such cyclopean architecture. How such masses could have been moved is a problem with modern engineers.

Sir Charles Wilson, whom I met in Jerusalem, is at this moment in Baalbec. Standing in the grounds of the temple, he tells me that in the British Museum there is an ancient tablet which reveals the way such stones were moved. The mechanics were very simple: rollers were put under them, and they were drawn up inclined planes by sheer human muscle—the united strength of great numbers of men. In the rude design on the tablet the whole scene is pictured to the eye.

There are battalions of men, hundreds to a single roller, with the taskmasters standing over them, lash in hand, which was freely applied to make them pull together, and the king sitting on high to give the signal for this putting forth of human strength en masse as if an army were moving to battle. A battle it was in the waste of human life it caused. These temples of Baalbec must have been a whole generation in building, and have consumed the population of a province and the wealth of an empire.—*Rev. Henry M. Field, in Evangelist.*

CHEAP MONEY.

The Woman Who Mistook the Character of a Broker's Shop.

She pushed her way through the little crowd of ex-capitalists that was congregated about the "ticker" and set her shopping-bag down upon the counter with a slam.

"I see by the papers that money is cheap," she began.

"Never so cheap as at present," replied the broker, affably.

"How are you selling tens?" she continued.

"Tens, madam?" said the broker in surprise.

"Yes, ten-dollar bills. Where do you keep them? This doesn't look at all like a bankrupt sale. I expected to find them in little baskets ticketed: 'Anything in this basket $5,' and so on. Have you any remnants—quarters, halves, and all that—at a great sacrifice? What is the cause of this fearful reduction, anyhow? Must you close out your entire stock of money within the next thirty days, regardless of cost, to make room for fresh goods? Or is your stock damaged by fire?"

"We have some stocks that are damaged by water that we can let you have at a very low figure," said the broker.

"Yes? By the way, you didn't tell me what you get for the ten-dollar bills."

"O, wine and cigars and theater tickets," said the broker, absent mindedly.

"I mean, how much do you sell them for?"

"Ten dollars."

"Do you call that cheap?"

"Yes, I do," growled the financier. "I've seen the time when I had to pay $15 for the use of ten on my personal note at thirty days, and it was dirt cheap, too, considering the security. What did you expect to pay?"

"O, not more than five. I'm looking for bargains. Good morning."—*Detroit Free Press.*

THEY WON'T STAND IT.

A Michigan Farmer Who Complains of the Æsthetic Ways of His Hired Men.

"Yes, I come in after a hired man," said the old farmer as he sipped his root beer on the market yesterday, "but I've got disgusted and shan't try very hard to find one."

"What's the matter with hired men?"

"Too high-toned and important. Why, I had one last spring who rigged up an umbrella over the plow, so as not to get tanned, and he refused to eat with the family because we stuck our knives in our mouths! At the end of a week he quit. Said that labor was ennobling, and so forth, but the landscape in that vicinity offended his taste."

"Yes."

"Wall, I took on another, and he put on cuffs and polished his boots before going to work and he quit at the end of a fortnight, because we didn't have a pianner in the house. Why, that chap never got up till seven o'clock and he insisted on going to the village to get shaved and perfumed up every other evening.

"The third one quit me yesterday. He wanted stained glass in his bedroom winder. He wanted me to buy him a guitar. He wanted to paint all the roofs red and put pea-green on the corn-cribs. He suggested a hog-pen with a parlor to it, and he spent two days of my time trying to arrange a way for the wind mill to milk the cows. I found him writing poetry in the cornfield, and because I spoke up sharply he quit the job, polished up his boots and sent for a coupay to bring him to the city."—*Detroit Free Press.*

FARM AND FIRESIDE.

—Boil coffee in a salt sack; it is nicer than egg to settle it.—*Chicago Journal.*

—Raisin pie: One cup of raisins, remove seeds, and boil in one-half cup of water fifteen minutes, add a small piece of butter and two teaspoonfuls of sugar; bake with two crusts.—*Hartford Courant.*

—It used to be an old joke with farmers that more corn grew on crooked than on straight rows, simply because they were greater in length. In the best farming districts straight rows of corn are now the rule and crooked ones the exception.—*N. Y. Herald.*

—Hot water gingerbread: One cup molasses, one teaspoon soda, one tablespoon ginger, one of butter melted, one-half teaspoon salt, one-half cup boiling water, two cups flour. Mix in order given and beat well. Bake in a deep cake pan.—*Boston Globe.*

—A white birch, cut in March or April, and left exposed to the weather without splitting, will, by August, often be so rotten that no axe will be needed for dividing it into stove lengths; but birch bean poles, cut in midsummer, we have used two seasons and then found them comparatively sound, and so tough that they would bend almost double without breaking.—*New England Farmer.*

—We can not burn stubble where land is seeded with clover or grass without injuring these. We would not burn it under these conditions if we could, as it is worth more to remain on the ground. But dry stubble ploughed under is apt in a hot summer to do more harm than good, and it is better economy on most kinds of soil to turn it into ashes where it grew.—*Prairie Farmer.*

—Lemon jelly cake: One cup of sugar, piece of butter the size of an egg, two eggs; put sugar, eggs and butter together and beat them; add one-half cup of water, two cups of flour, one tablespoonful of baking powder; this makes three layers and is to be put together with jelly. The juice and grated rind of one lemon, one cup of sugar, one egg, a piece of butter the size of a nutmeg; cook it over hot water, as custard, till it boils.—*The Household.*

—The Indians had no almanacs, nor any means of knowing the day of the month. But their rule for planting corn was a very simple and good one, and that was when the leaves of the hickory or butternut were of the size of squirrels' ears. At this time the ground has become warm enough to germinate the seed and push it forward. Corn is a semi-tropical plant, and more impatient of cold than the smaller grains.

—An exchange remarks that a hand hoe which is never ground will wear much longer than one which frequently comes in contact with the grindstone, but the extra amount of labor that can be performed with the sharp implement will be sufficient to pay for a new hoe every three days, to say nothing of the saving of muscle. It is poor economy to work with a dull axe, scythe or hoe.—*N. Y. Examiner.*

SHEEP MINING.

The Golden Fleece Not Repeated as a Fable, but as a Newspaper Fact, in Montana.

A local sheep raiser has lately discovered that the wool of his sheep is very rich in gold, and it is now thought that sheep mining will become the most profitable industry in the territory.

A man who owns a thousand sheep averaging forty ounces of gold to the sheep has a bonanza. Unlike the ordinary mining bonanza, the sheep bonanza will be practically inexhaustible. Sheep breed rapidly, and a man can increase his flock almost as easily as he can water the stock of a silver mine, and with much more profit. His mines, so to speak, will double in number at least every year, and the number of his gold yielding sheep will be limited only by the extent of his pasture land.

The sheep mine is far easier to work than is any other mine. The miner does not have to sink a shaft or to drive a tunnel in his sheep. He simply cuts off the wool—a process easier than surface mining in the best days of early California gold hunting—and separates the gold and the wool. This may be done either by smelting the wool in a bonfire or by mixing it with mercury. In the latter place the gold amalgamates with the mercury, and the wool is left as a residuum. The mercury is afterward driven off by heat, and as a result the miner has both his gold and his wool.

How the gold gets into the wool of the Montana sheep is a problem. There is a theory that the sheep in cropping grass take a certain amount of gold-bearing earth into their mouths, and that the gold afterward exudes from the pores and is caught by the wool. There is, however, no reason to suppose that gold taken into the stomach will find its way out through the pores. If this were the case, there can be no doubt that gold would be largely consumed by girls anxious to dye their hair easily and permanently. Then there is the theory that the gold in the wool of the sheep has been deposited there in the same way that gold has been deposited in the strata of the earth. It is needless to say that this theory is held only by persons who derive their idea of the longevity of sheep from the spring lamb of boarding houses. The Montana sheep does not live through long geological periods, and hence gold is not deposited in its wool by the same process by which it is deposited in the rocks.

The simplest explanation of the matter is that sheep roll on ground impregnated with gold dust, and thus fill their wool with gold. However this may be, there can be no doubt that gold-bearing sheep are desirable animals, and that Montana is lucky in possessing them.—*N. Y. Times.*

—In the *Outing* there is a good argument in favor of the tricycle for the health and pleasure of girls and women. The argument is full of both theory and fact. The fresh air, the exercise and the inspiration of these wheeled toys are better than any three doctors. The tricycle costs less than a trip to Newport, and is much more valuable.—*Chicago Current.*

WOODLANDS.

A Little Judicious Attention Will Immensely Increase Their Value.

While we make great exertions to improve our cultivated lands by the introduction of food-producing plants, and by the destruction of all undesirable plants, we make no effort to improve the condition of our woodlands, but let nature have her own way. If, by chance, a few seeds of an undesirable tree find their way to a desirable timber lot, they are permitted to grow, though they may be of a character to crowd out all the other more desirable trees. This is a great wrong that ought to receive immediate attention. That it should for so long a time have escaped the attention of farmers can only be accounted for by the fact that our country is comparatively new, and has been covered by large quantities of good timber, and that until within a few years, even in the older States, wood large enough for lumber has been cut and reduced to ashes, to clear the land. While such a state of things existed it was very natural that no effort should be made to encourage the growth of the better class of trees, and discourage the growth of the poorer. But now when we have more cleared land than we need for cultivation, and when we find ourselves running short of many kinds of lumber, and at the same time overrun with firewood, we naturally turn our attention to our woodlands to discover some way, if possible, to so improve them as to turn the surplus firewood into valuable timber, and thus, not only supply our pressing wants, but at the same time greatly increase the value, as well as income of our farms.

The moment our attention is turned to this subject we begin to realize how great has been our neglect, and the great loss we have already sustained by permitting nature to have her own way. What would be thought of a farmer who should make no effort to destroy the undesirable plants in his cultivated fields, but let the thistles, milk weeds and wild carrots to grow in quantities sufficient to overshadow all desirable plants? Would it not be said that such a farmer did not make the best of his farm, in fact, that his farming must be a failure? Now the farmer who lets nature take her course in the woods is not much in advance of the farmer who lets her take her course in the cultivated fields.

Since the general introduction of coal firewood has become very cheap in comparison with the price of timber; for while the price of timber has continued to rise the price of firewood has remained stationary, or has dropped to a lower price; so that to-day, in all parts of the State, the difference between the price of trees that are only suitable for firewood and those that are fit for timber is so great that the farmer can not spend his time to more profit than in assisting nature in filling his woodlands with such trees as will make timber instead of firewood. At first thought this may be considered to be a work very difficult to perform, but a little investigation will show that with forethought the work is comparatively very trifling. We can not change a forest at once from undesirable to desirable trees, but it must be the work of years. Our first efforts should be to cut out all undesirable trees that interfere with the desirable ones, especially if they produce seed. For example, when a pitch pine and a white pine stand near each other, the pitch pine should be cut and the white pine left to seed the land, because, if the pitch pine be left, all of the surrounding territory will in a few years be covered with seedling pitch pines; but if only the white pine be left, then the surrounding territory will be covered with white pines, which are far more desirable than the pitch pines.

There are many thousands of acres of land, which are now covered with pitch pines, that might have been covered with white pines if our fathers had spent a few hours time on each acre, in cutting the first seedling pitch pines, and setting in their places white pines. A single white pine to the acre is sufficient to seed the whole land in a few years after it begins to bear seed, providing the undesirable trees be kept down to give the young seedings a chance.

The chestnut tree is a very desirable tree to have in a timber lot, it makes timber that commands a ready market at a good price wherever there is a railroad. It will grow from a seed in twenty-five years large enough for railroad ties, and the stump will send up sprouts that will grow very much more rapidly than the seedlings; in this respect, it is better than the white pine; therefore, wherever the land is rocky, and so unfit for cultivation that it is to be kept continually in wood land, the the chestnut is really the most profitable tree, not excepting the white pine.

In deciding what trees to encourage on any lot, there are many things to be considered. If the white pine grows naturally and a few large trees are scattered over the land then it would not be best to supplant them with chestnut until one crop of pine was obtained, then chestnut might follow to advantage, unless when the pine was cut it be found, as is often the case, that young oaks were scattered over the land, ready to grow as soon as let into the sunlight, then the oak should be encouraged.

Before deciding what to cut, and what to encourage to grow, the value of each kind of timber should be considered. In some localities the poplar commands a ready market at a good price, in other localities it is almost worthless. As this is a rapid growing tree, where it commands a good price it should be encouraged, but where it will not, it should be cut when small to leave room for better trees.

The white pine, chestnut, oak, walnut, butternut, beech, spruce, hemlock and maple are all valuable for timber in all of the settled portions of the country. Therefore, these varieties of trees should be encouraged wherever woodland is to be continued; and such trees as the grey birch, pitch pine, red cherry, and all other trees unfit for timber, should be cut down and kept out of the wood lot.

Is it not our duty to commence this work of selection, that our children may reap the benefit of our labors?—*Massachusetts Ploughman.*

Everybody's Air-Brake.

"Yes, sah," said Uncle Zach, "I'se watched it forty years an' its as I sez: De fust of May an' Christmas day of de same year allers comes on de same week day."

Further conversation proved Uncle Zach a most incredulous person. Chancing to mention Dr. Carver's feat of breaking glass balls with a rifle, he said:

"I heerd 'bout dat shootin' and knowed right off it wasn't squar'; dat was a Yankee trick, boss, sho's you born."

"What was the trick?"

"Dar wuz loadstone put into de glass balls, an' likewise onto de bullets; so when de bullet fly outen de gun, it an de ball jes drawed togedder, which, in course, brokes de glass—dat's de trick!"

Later, Uncle Zach observed a rope running along the side of the car.

"Boss, what's dat line fur?"

"To apply the air-brake in case of accident." Then we had further to explain how the force of the brake was obtained, to which Uncle Zach responded:

"Look a here boss, you sholy don't 'spect me to b'leeve dat foolishness? Why, de biggest harricane whatever blowed couldn't stop dis train, runnin' forty mile a hour. An' you think I gwine to b'leeve a little pipe full of wind under de kyars can do it? No, sah-ree!"

There are a great many Uncle Zachs who judge everything simply by appearances. The air-brake does not seem to be a very powerful thing, but power and efficiency are not necessarily equivalent to bigness and pretense.

Phillip Beers, Esq., who resides at the United States Hotel, New York City, and is engaged in raising subscriptions for the New York *World* Bartholdi Pedestal Fund, was once upbraided by a distinguished relative who was a physician, for commending in such enthusiastic terms a remedy that cured him of bright's disease eight years ago. He said: "Sir, has the medical profession, with all its power and experience of thousands of years, anything that can cure this terrible disorder?" No, no, that is true; there is no mistake about it but that Warner's safe cure is really a wonderfully effective preparation. That remedy is an "air-brake" that every man can apply, and this fact explains why it has saved so many hundreds of thousands of lives.—*Copyrighted. Used by permission of American Rural Home.*

WHAT is regarded as inspiration by the poet is by the editor regarded as insanity.—*N. Y. Herald.*

It Should Be Generally Known

that the multitude of diseases of a scrofulous nature generally proceed from a torpid condition of the liver. The blood becomes impure because the liver does not act properly and work off the poison from the system, and the certain results are blotches, pimples, eruptions, swellings, tumors, ulcers and kindred affections, or settling upon the lungs and poisoning their delicate tissues, until ulceration, breaking down and consumption is established. Dr. Pierce's "Golden Medical Discovery" will, by acting upon the liver and purifying the blood, cure all these diseases.

"I'm having a rattling time," said the cur with a can tied to his tail.—*Weekly Mavertick.*

Pile Tumors

when neglected or improperly treated often degenerate into cancer. By our new and improved treatment without knife, caustic or salve, we cure the worst cases in ten to thirty days. "That Minds Me,"

Says Sandy, "o' that awfu' Eczema I had, before I left home, in Scotland. I was maist covered wi' eruptions, when I saw an adverteesment o'

Ayer's Sarsaparilla

in a Glasgow paper. The itchin' fairly drove me mad, but I took the Sarsaparilla, an' it worked like magic. Man, it wrought a perfect cure."

Several years ago I was troubled with Nettle Rash, which itched so badly I could not rest day or night. A few bottles of Ayer's Sarsaparilla entirely cured me.—John Lehmann, Editor and Proprietor *Freie Presse*, Crown Point, Ind.

I have had a dry scaly humor, from which I suffered terribly. As my brother and sister were similarly afflicted, I presume it was hereditary. Last winter Dr. Tyron, (of Fernandina, Fla.), said to me: "Take Ayer's Sarsaparilla, and continue it for a year." For five months I took it daily; and, had you seen my condition before I commenced its use, I would travel a thousand miles to show you the wonderful effects of your remedy. I have not a blemish upon my body, and I attribute my cure wholly to Ayer's Sarsaparilla.—T. E. Wiley, 146 Chambers st., New York City.

Ayer's Sarsaparilla,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists. Price $1; six bottles, $5.

A MAN

WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE

CHICAGO, ROCK ISLAND & PACIFIC RAILWAY

By reason of its central position and close relation to all principal lines East and West, at initial and terminal points, constitutes the most important mid-continental link in that system of through transportation which invites and facilitates travel and traffic between cities of the Atlantic and Pacific Coasts. It is also the favorite and best route to and from points East, Northeast and Southeast, and corresponding points West, Northwest and Southwest.

The Rock Island system includes in its main line and branches, Chicago, Joliet, Ottawa, La Salle, Peoria, Geneseo, Moline and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Watertown in Dakota, and hundreds of intermediate cities, towns, villages and stations.

THE GREAT ROCK ISLAND ROUTE

Guarantees its patrons that sense of personal security afforded by a solid, thoroughly ballasted road-bed; smooth tracks of continuous steel rail; substantially built culverts and bridges; rolling stock as near perfection as human skill can make it; the safety appliances of patent buffers, platforms and air-brakes; and that exacting discipline which governs the practical operation of all its trains. Other specialities of this route are Transfers at all connecting points in Union Depots, and the unsurpassed comforts and luxuries of its Passenger Equipment.

The Fast Express Trains between Chicago and the Missouri River are composed of well ventilated, finely upholstered Day Coaches, Magnificent Pullman Palace Sleepers of the latest design, and the sumptuous Dining Cars, in which elaborately cooked meals are leisurely eaten, "good Digestion waiting on Appetite, and Health on both." Between Chicago and Kansas City and Atchison, are also run the Celebrated Reclining Chair Cars.

THE FAMOUS ALBERT LEA ROUTE

Is the direct and favorite line between Chicago and Minneapolis and St. Paul, where connections are made in Union Depots for all points in the Territories and British Provinces. Over this route, Fast Express Trains are run to the watering places, summer resorts, picturesque localities, and hunting and fishing grounds of Iowa and Minnesota. It is also the most desirable route to the rich wheat fields and pastoral lands of Interior Dakota.

Still another DIRECT LINE, via Seneca and Kankakee, has been opened between Newport News, Richmond, Cincinnati, Indianapolis, and Lafayette and Council Bluffs, Kansas City, Minneapolis and St. Paul and intermediate points.

For detailed information see Maps and Folders, obtainable, as well as Tickets, at all principal Ticket Offices in the United States and Canada; or by addressing

R. R. CABLE, President and General Manager, Chicago.

Frightful Case of a Colored Man.

I contracted a fearful case of blood poison in 1883. I was treated with the old remedies of Mercury and Potash, which brought on rheumatism and impaired my digestive organs. Every joint in me was swollen and full of pain. When I was given up to die, my physicians thought it would be a good time to test the virtues of Swift's Specific. I improved from the very first dose. Soon the rheumatism left me, my appetite became all right, and the ulcers, which the doctor said were the most frightful he had ever seen, began to heal, and by the first of October, 1884, I was a well man again. BAALBEC.

Description of the Ruins of the Ancient Damascene City.

The ruins of the ancient city of Baalbec, situated on the plain forty-three miles northwest of Damascus, are the wonder of modern architects.

Everything is colossal. The area is larger than that of the temple at Jerusalem. We may begin with the walls, which are half a mile around, and of such height and depth as are rarely attained in the most tremendous fortress. Where from within I climbed to the top, it made me giddy to look over the perilous edge to the depth below; and when from without the walls I looked up at them, they rose high in the air. Some of the stones seem as if they had been reared in place, not by Titans, but by the gods. There are nine stones thirty feet long and ten feet thick, which is larger than the foundation stones of the temple at Jerusalem, dating from the time of Solomon, or any blocks in the great Pyramid.

But even these are pygmies compared with the three giants of the western wall, sixty-two feet, sixty-three and a half feet, sixty-four feet long. These are said to be the largest stones ever used in any construction. They weigh hundreds of tons, and instead of being merely hewn out of a quarry, which might have been on the site, and left to lie where they were before, they have been lifted nineteen feet from the ground, and there embedded in the wall. Never was there such cyclopean architecture. How such masses could have been moved is a problem with modern engineers.

Sir Charles Wilson, whom I met in Jerusalem, is at this moment in Baalbec. Standing in the grounds of the temple, he tells me that in the British Museum there is an ancient tablet which reveals the way such stones were moved. The mechanics were very simple: rollers were put under them, and they were drawn up inclined planes by sheer human muscle—the united strength of great numbers of men. In the rude design on the tablet the whole scene is pictured to the eye.

There are battalions of men, hundreds to a single roller, with the taskmasters standing over them, lash in hand, which was freely applied to make them pull together, and the king sitting on high to give the signal for this putting forth of human strength en masse as if an army were moving to battle. A battle it was in the waste of human life it caused. These temples of Baalbec must have been a whole generation in building, and have consumed the population of a province and the wealth of an empire.—*Rev. Henry M. Field, in Evangelist.*

CHEAP MONEY.

The Woman Who Mistook the Character of a Broker's Shop.

She pushed her way through the little crowd of ex-capitalists that was congregated about the "ticker" and set her shopping-bag down upon the counter with a slam.

"I see by the papers that money is cheap," she began.

"Never so cheap as at present," replied the broker, affably.

"How are you selling tens?" she continued.

"Tens, madam?" said the broker in surprise.

"Yes, ten-dollar bills. Where do you keep them? This doesn't look at all like a bankrupt sale. I expected to find them in little baskets ticketed: 'Anything in this basket $5,' and so on. Have you any remnants—quarters, halves, and all that—at a great sacrifice? What is the cause of this fearful reduction, anyhow? Must you close out your entire stock of money within the next thirty days, regardless of cost, to make room for fresh goods? Or is your stock damaged by fire?"

"We have some stocks that are damaged by water that we can let you have at a very low figure," said the broker.

"Yes? By the way, you didn't tell me what you get for the ten-dollar bills."

"O, wine and cigars and theater tickets," said the broker, absent mindedly.

"I mean, how much do you sell them for?"

"Ten dollars."

"Do you call that cheap?"

"Yes, I do," growled the financier. "I've seen the time when I had to pay $15 for the use of ten on my personal note at thirty days, and it was dirt cheap, too, considering the security. What did you expect to pay?"

"O, not more than five. I'm looking for bargains. Good morning."—*Detroit Free Press.*

THEY WON'T STAND IT.

A Michigan Farmer Who Complains of the Æsthetic Ways of His Hired Men.

"Yes, I come in after a hired man," said the old farmer as he sipped his root beer on the market yesterday, "but I've got disgusted and shan't try very hard to find one."

"What's the matter with hired men?"

"Too high-toned and important. Why, I had one last spring who rigged up an umbrella over the plow, so as not to get tanned, and he refused to eat with the family because we stuck our knives in our mouths! At the end of a week he quit. Said that labor was ennobling, and so forth, but the landscape in that vicinity offended his taste."

"Yes."

"Wall, I took on another, and he put on cuffs and polished his boots before going to work and he quit at the end of a fortnight, because we didn't have a pianner in the house. Why, that chap never got up till seven o'clock and he insisted on going to the village to get shaved and perfumed up every other evening.

"The third one quit me yesterday. He wanted stained glass in his bedroom winder. He wanted me to buy him a guitar. He wanted to paint all the roofs red and put pea-green on the corn-cribs. He suggested a hog-pen with a parlor to it, and he spent two days of my time trying to arrange a way for the wind mill to milk the cows. I found him writing poetry in the cornfield, and because I spoke up sharply he quit the job, polished up his boots and sent for a coupay to bring him to the city."—*Detroit Free Press.*

FARM AND FIRESIDE.

—Boil coffee in a salt sack; it is nicer than egg to settle it.—*Chicago Journal.*

—Raisin pie: One cup of raisins, remove seeds, and boil in one-half cup of water fifteen minutes, add a small piece of butter and two teaspoonfuls of sugar; bake with two crusts.—*Hartford Courant.*

—It used to be an old joke with farmers that more corn grew on crooked than on straight rows, simply because they were greater in length. In the best farming districts straight rows of corn are now the rule and crooked ones the exception.—*N. Y. Herald.*

—Hot water gingerbread: One cup molasses, one teaspoon soda, one tablespoon ginger, one of butter melted, one-half teaspoon salt, one-half cup boiling water, two cups flour. Mix in order given and beat well. Bake in a deep cake pan.—*Boston Globe.*

—A white birch, cut in March or April, and left exposed to the weather without splitting, will, by August, often be so rotten that no axe will be needed for dividing it into stove lengths; but birch bean poles, cut in midsummer, we have used two seasons and then found them comparatively sound, and so tough that they would bend almost double without breaking.—*New England Farmer.*

—We can not burn stubble where land is seeded with clover or grass without injuring these. We would not burn it under these conditions if we could, as it is worth more to remain on the ground. But dry stubble ploughed under is apt in a hot summer to do more harm than good, and it is better economy on most kinds of soil to turn it into ashes where it grew.—*Prairie Farmer.*

—Lemon jelly cake: One cup of sugar, piece of butter the size of an egg, two eggs; put sugar, eggs and butter together and beat them; add one-half cup of water, two cups of flour, one tablespoonful of baking powder; this makes three layers and is to be put together with jelly. The juice and grated rind of one lemon, one cup of sugar, one egg, a piece of butter the size of a nutmeg; cook it over hot water, as custard, till it boils.—*The Household.*

—The Indians had no almanacs, nor any means of knowing the day of the month. But their rule for planting corn was a very simple and good one, and that was when the leaves of the hickory or butternut were of the size of squirrels' ears. At this time the ground has become warm enough to germinate the seed and push it forward. Corn is a semi-tropical plant, and more impatient of cold than the smaller grains.

—An exchange remarks that a hand hoe which is never ground will wear much longer than one which frequently comes in contact with the grindstone, but the extra amount of labor that can be performed with the sharp implement will be sufficient to pay for a new hoe every three days, to say nothing of the saving of muscle. It is poor economy to work with a dull axe, scythe or hoe.—*N. Y. Examiner.*

SHEEP MINING.

The Golden Fleece Not Repeated as a Fable, but as a Newspaper Fact, In Montana.

A local sheep raiser has lately discovered that the wool of his sheep is very rich in gold, and it is now thought that sheep mining will become the most profitable industry in the territory.

A man who owns a thousand sheep averaging forty ounces of gold to the sheep has a bonanza. Unlike the ordinary mining bonanza, the sheep bonanza will be practically inexhaustible. Sheep breed rapidly, and a man can increase his flock almost as easily as he can water the stock of a silver mine, and with much more profit. His mines, so to speak, will double in number at least every year, and the number of his gold yielding sheep will be limited only by the extent of his pasture land.

The sheep mine is far easier to work than is any other mine. The miner does not have to sink a shaft or to drive a tunnel in his sheep. He simply cuts off the wool—a process easier than surface mining in the best days of early California gold hunting—and separates the gold and the wool. This may be done either by smelting the wool in a bonfire or by mixing it with mercury. In the latter place the gold amalgamates with the mercury, and the wool is left as a residuum. The mercury is afterward driven off by heat, and as a result the miner has both his gold and his wool.

How the gold gets into the wool of the Montana sheep is a problem. There is a theory that the sheep in cropping grass take a certain amount of gold-bearing earth into their mouths, and that the gold afterward exudes from the pores and is caught by the wool. There is, however, no reason to suppose that gold taken into the stomach will find its way out through the pores. If this were the case, there can be no doubt that gold would be largely consumed by girls anxious to dye their hair easily and permanently. Then there is the theory that the gold in the wool of the sheep has been deposited there in the same way that gold has been deposited in the strata of the earth. It is needless to say that this theory is held only by persons who derive their idea of the longevity of sheep from the spring lamb of boarding houses. The Montana sheep does not live through long geological periods, and hence gold is not deposited in its wool by the same process by which it is deposited in the rocks.

The simplest explanation of the matter is that sheep roll on ground impregnated with gold dust, and thus fill their wool with gold. However this may be, there can be no doubt that gold-bearing sheep are desirable animals, and that Montana is lucky in possessing them.—*N. Y. Times.*

—In the *Outing* there is a good argument in favor of the tricycle for the health and pleasure of girls and women. The argument is full of both theory and fact. The fresh air, the exercise and the inspiration of these wheeled toys are better than any three doctors. The tricycle costs less than a trip to Newport, and is much more valuable.—*Chicago Current.*

WOODLANDS.

A Little Judicious Attention Will Immensely Increase Their Value.

While we make great exertions to improve our cultivated lands by the introduction of food-producing plants, and by the destruction of all undesirable plants, we make no effort to improve the condition of our woodlands, but let nature have her own way. If, by chance, a few seeds of an undesirable tree find their way to a desirable timber lot, they are permitted to grow, though they may be of a character to crowd out all the other more desirable trees. This is a great wrong that ought to receive immediate attention. That it should for so long a time have escaped the attention of farmers can only be accounted for by the fact that our country is comparatively new, and has been covered by large quantities of good timber, and that until within a few years, even in the older States, wood large enough for lumber has been cut and reduced to ashes, to clear the land. While such a state of things existed it was very natural that no effort should be made to encourage the growth of the better class of trees, and discourage the growth of the poorer. But now when we have more cleared land than we need for cultivation, and when we find ourselves running short of many kinds of lumber, and at the same time overrun with fire-wood, we naturally turn our attention to our woodlands to discover some way, if possible, to so improve them as to turn the surplus firewood into valuable timber, and thus, not only supply our pressing wants, but at the same time greatly increase the value, as well as income of our farms.

The moment our attention is turned to this subject we begin to realize how great has been our neglect, and the great loss we have already sustained by permitting nature to have her own way. What would be thought of a farmer who should make no effort to destroy the undesirable plants in his cultivated fields, but let the thistles, milk weeds and wild carrots to grow in quantities sufficient to overshadow all desirable plants? Would it not be said that such a farmer did not make the best of his farm, in fact, that his farming must be a failure? Now the farmer who lets nature take her course in the woods is not much in advance of the farmer who lets her take her course in the cultivated fields.

Since the general introduction of coal firewood has become very cheap in comparison with the price of timber; for while the price of timber has continued to rise the price of firewood has remained stationary, or has dropped to a lower price; so that to-day, in all parts of the State, the difference between the price of trees that are only suitable for firewood and those that are fit for timber is so great that the farmer can not spend his time to more profit than in assisting nature in filling his woodlands with such trees as will make timber instead of firewood. At first thought this may be considered to be a work very difficult to perform, but a little investigation will show that with forethought the work is comparatively very trifling. We can not change a forest at once from undesirable to desirable trees, but it must be the work of years. Our first efforts should be to cut out all undesirable trees that interfere with the desirable ones, especially if they produce seed. For example, when a pitch pine and a white pine stand near each other, the pitch pine should be cut and the white pine left to seed the land, because, if the pitch pine be left, all of the surrounding territory will in a few years be covered with seedling pitch pines; but if only the white pine be left, then the surrounding territory will be covered with white pines, which are far more desirable than the pitch pines.

There are many thousands of acres of land, which are now covered with pitch pines, that might have been covered with white pines if our fathers had spent a few hours time on each acre, in cutting the first seedling pitch pines, and setting in their places white pines. A single white pine to the acre is sufficient to seed the whole land in a few years after it begins to bear seed, providing the undesirable trees be kept down to give the young seedings a chance.

The chestnut tree is a very desirable tree to have in a timber lot, it makes timber that commands a ready market at a good price wherever there is a railroad. It will grow from a seed in twenty-five years large enough for railroad ties, and the stump will send up sprouts that will grow very much more rapidly than the seedlings; in this respect, it is better than the white pine; therefore, wherever the land is rocky, and so unfit for cultivation that it is to be kept continually in wood land, the the chestnut is really the most profitable tree, not excepting the white pine.

In deciding what trees to encourage on any lot, there are many things to be considered. If the white pine grows naturally and a few large trees are scattered over the land then it would not be best to supplant them with chestnut until one crop of pine was obtained, then chestnut might follow to advantage, unless when the pine was cut it be found, as is often the case, that young oaks were scattered over the land, ready to grow as soon as let into the sunlight, then the oak should be encouraged.

Before deciding what to cut, and what to encourage to grow, the value of each kind of timber should be considered. In some localities the poplar commands a ready market at a good price, in other localities it is almost worthless. As this is a rapid growing tree, where it commands a good price it should be encouraged, but where it will not, it should be cut when small to leave room for better trees.

The white pine, chestnut, oak, walnut, butternut, beech, spruce, hemlock and maple are all valuable for timber in all of the settled portions of the country. Therefore, these varieties of trees should be encouraged wherever woodland is to be continued; and such trees as the grey birch, pitch pine, red cherry, and all other trees unfit for timber, should be cut down and kept out of the wood lot.

Is it not our duty to commence this work of selection, that our children may reap the benefit of our labors?—*Massachusetts Ploughman.*

Everybody's Air-Brake.

"Yes, sah," said Uncle Zach, "I'se watched it forty years an' its as I sez: De fust of May an' Christmas day of de same year allers comes on de same week day."

Further conversation proved Uncle Zach a most incredulous person. Chancing to mention Dr. Carver's feat of breaking glass balls with a rifle, he said:

"I heerd 'bout dat shootin' and knowed right off it wasn't squar'; dat was a Yankee trick, boss, sho's you born."

"What was the trick?"

"Dar wuz loadstone put into de glass balls, an' likewise onto de bullets; so when de bullet fly outen de gun, it an de ball jes drawed togedder, which, in course, brokes de glass—dat's de trick!"

Later, Uncle Zach observed a rope running along the side of the car.

"Boss, what's dat line fur?"

"To apply the air-brake in case of accident." Then we had further to explain how the force of the brake was obtained, to which Uncle Zach responded:

"Look a here boss, you sholy don't 'spect me to b'leeve dat foolishness? Why, de biggest harricane whatever blowed couldn't stop dis train, runnin' forty mile a hour. An' you think I gwine to b'leeve a little pipe full of wind under de kyars can do it? No, sah-ree!"

There are a great many Uncle Zachs who judge everything simply by appearances. The air-brake does not seem to be a very powerful thing, but power and efficiency are not necessarily equivalent to bigness and pretense.

Philip Beers, Esq., who resides at the United States Hotel, New York City, and is engaged in raising subscriptions for the New York *World* Bartholdi Pedestal Fund, was once upbraided by a distinguished relative who was a physician, for commending in such enthusiastic terms a remedy that cured him of bright's disease eight years ago. He said: "Sir, has the medical profession, with all its power and experience of thousands of years, anything that can cure this terrible disorder?" No, no, that is true; there is no mistake about it but that Warner's safe cure is really a wonderfully effective preparation. That remedy is an "air-brake" that every man can apply, and this fact explains why it has saved so many hundreds of thousands of lives.—*Copyrighted. Used by permission of American Rural Home.*

WHAT is regarded as inspiration by the poet is by the editor regarded as insanity.—*N. Y. Herald.*

It Should Be Generally Known

that the multitude of diseases of a scrofulous nature generally proceed from a torpid condition of the liver. The blood becomes impure because the liver does not act properly and work off the poison from the system, and the certain results are blotches, pimples, eruptions, swellings, tumors, ulcers and kindred affections, or settling upon the lungs and poisoning their delicate tissues, until ulceration, breaking down and consumption is established. Dr. Pierce's "Golden Medical Discovery" will, by acting upon the liver and purifying the blood, cure all these diseases.

"I'm having a rattling time," said the car with a can tied to his tail.—*Weekly Maverick.*

Pile Tumors

when neglected or improperly treated often degenerate into cancer. By our new and improved treatment without knife, caustic or salve, we cure the worst cases in ten to thirty days. WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE

CHICAGO, ROCK ISLAND & PACIFIC RAILWAY

By reason of its central position and close relation to all principal lines East and West, at initial and terminal points, constitutes the most important mid-continental link in that system of through transportation which invites and facilitates travel and traffic between cities of the Atlantic and Pacific Coasts. It is also the favorite and best route to and from points East, Northeast and Southeast, and corresponding points W est, Northwest and Southwest.

The Rock Island system includes in its main line and branches, Chicago, Joliet, Ottawa, La Salle, Peoria, Geneseo, Moline and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Watertown in Dakota, and hundreds of intermediate cities, towns, villages and stations.

THE GREAT ROCK ISLAND ROUTE

Guarantees its patrons that sense of personal security afforded by a solid, thoroughly ballasted road-bed; smooth tracks of continuous steel rail; substantially built culverts and bridges; rolling stock as near perfection as human skill can make it; the safety appliances of patent buffers, platforms and air-brakes; and that exacting discipline which governs the practical operation of all its trains. Other specialties of this route are Transfers at all connecting points in Union Depots, and the unsurpassed comforts and luxuries of its Passenger Equipment.

The Fast Express Trains between Chicago and the Missouri River are composed of well ventilated, finely upholstered Day Coaches, Magnificent Pullman Palace Sleepers of the latest design, and sumptuous Dining Cars, in which elaborately cooked meals are leisurely eaten, "good Digestion waiting on Appetite, and Health on both." Between Chicago and Kansas City and Atchison, are also run the Celebrated Reclining Chair Cars.

THE FAMOUS ALBERT LEA ROUTE

Is the direct and favorite line between Chicago and Minneapolis and St. Paul, where connections are made in Union Depots for all points in the Territories and British Provinces. Over this route, Fast Express Trains are run to the watering places, summer resorts, picturesque localities, and hunting and fishing grounds of Iowa and Minnesota. It is also the most desirable route to the rich wheat fields and pastoral lands of interior Dakota.

Still another DIRECT LINE, via Seneca and Kankakee, has been opened between Newport News, Richmond, Cincinnati, Indianapolis, and Lafayette and Council Bluffs, Kansas City, Minneapolis and St. Paul and intermediate points.

For detailed information see Maps and Folders, obtainable, as well as Tickets, at all principal Ticket Offices in the United States and Canada; or by addressing

R. R. CABLE, President and General Manager, Chicago.

E. ST. JOHN, General Ticket and Passenger Agent, Chicago.

Frightful Case of a Colored Man.

I contracted a fearful case of blood poison in 1883. I was treated with the old remedies of Mercury and Potash, which brought on rheumatism and impaired my digestive organs. Every joint in me was swollen and full of pain. When I was given up to die, my physicians thought it would be a good time to test the virtues of Swift's Specific. I improved from the very first dose. Soon the rheumatism left me, my appetite became all right, and the ulcers, which the doctor said were the most frightful he had ever seen, began to heal, and by the first of October, 1883, I was a well man again. LEM McCLENDON.

Lem McClendon has been in the employ of the Chess-Carley Company for some years, and I know the above statements to be true. W. B. CROSBY, Manager Chess-Carley Co., Atlanta Division.

Conquering Physical Terror.

If it be certain that the terror of death is most potent among the strong and vigorous, those whose life blood recoils at the merest threat of danger, it follows then that those who conquer natural fear are the true heroes, and not those who never felt it. There is a story current, applied to many different circumstances, from the battles of the rebellion back to Waterloo, of a couple of young officers who had been selected by the commander to carry a message to a distant part of the field. The danger of the mission was so great that two men were sent on the expedition that one might possibly escape the flying bullets. Their chargers had hardly taken a dozen strides when one, a ruddy-faced, stalwart fellow, noticed that his companion was ghastly white, the beads of perspiration rolling down his forehead and his bridle hand shaking with terror. "Why, you're afraid," cried he of the ruddy countenance with an air of contempt. "I know I am," was the answer, "and if you were half as much afraid as I you would not go at all." That story, true or false as to the event, contains the whole philosophy of heroic deeds.

One instance of the disgust a man can feel at his own irrepressible symptoms of fear is related by a veteran. He was at Shiloh, in command of a battery of light guns. For his Lieutenant he had a young soldier who had recently joined. They were in a hot corner where Albert Sydney Johnson fell, and the bullets were flying thick and fast. An impatient cry from the young Lieutenant attracted his chief's attention. "What is it?" "Oh, blame it! look at my feet—I can't keep them still." And, sure enough, they were rattling in his stirrups with unconquerable physical terror. The young fellow was in despair, for he thought himself a hopeless coward, until the veteran praised him for his bravery in not being overcome by his too visible terror. The man made a brave soldier and died in the front of a desperate fight.—*St. Louis Globe-Democrat.*

Typical Western Fertility.

The following story of an engineer on a Western railroad shows how fast the country is growing. We do not hold ourselves responsible for the truth of the story, but we do not hesitate to say that it is "not much of a story" compared with that of the Western man who makes an effort:

"One day I was driving my engine over the prairie at the rate of forty miles an hour, without a house in sight, and supposing the nearest town to be thirty miles distant. But as I glanced ahead I was astonished to see that I was approaching a large city. I rubbed my eyes, thinking it was a miracle.

"'Jim,' says I to the fireman, 'what's this place?'"

"'Blamed if I know,' says Jim, staring out of the cab. 'I declare, if there ain't a new town growed up here since we went over the line yesterday.'"

"'I believe you are right, Jim. Ring the bell, or we shall run over somebody!'"

"So I slowed up, and we pulled into a large depot, where more than five hundred people were waiting to see the first train come into the place. The conductor learned the name of the town, put it down on the schedule, and we went on."

"'Jim,' says I, as we pulled out, 'keep your eyes open for new towns. First thing you know we'll be running by some place.'

"'That's so,' said Jim. 'And hadn't we better get one of the brakemen to watch out on the rear platform for towns that are springing up after the engine gets by?'"

Model English Judges.

Gath in Cincinnati Enquirer.

The facts which exist at the summit of affairs in London, if they were possible at the city of Washington, would be thoroughly presented in the American press. The late Chief Justice of England, Alexander Cockburn, lived in the midst of his illegitimate family during nearly his entire term of office. He sentenced men for adultery, &c., in sublime hypocrisy of the universally-known fact that he returned from the bench to the very conditions he had punished. Every club and every free-and-easy in London bruited about this fact, but nobody dared to print it. Yet he was a baron and was the chief-justice of England over 20 years. His successor, Mr. Coleridge, has just given the British and American public an indication of the punishing powers of the high classes when their wickedness are exposed. Coincident with Mr. Edmund Yates being sent to prison for having published a paragraph which a female sent him, the son of the chief justice was brought into court and prosecuted for libel, and the jury found for the plaintiff, and the judge threw the verdict out. Then the plaintiff came back with a suit against the chief justice himself, and the aggrieved person was incidentally the daughter of the justice who had been forbidden to keep company with her equal, and she was reduced, like Cinderella, to sit by the fire in her father's house and cook his food. By this time the public impatience was up, and before the case went to the jury the chief justice paid about $3,000 or $4,000 a year to his daughter to take the man and go off.

Domestic Customs Among the Hindoos.

From a Lecture in the Omaha Herald.

The custom of making matches, of pledging wives and husbands at an early age, he recommended as an improvement over the system prevailing in so-called civilized countries. Girls were pledged before they were eight years of age, and consequently families have no grown-up misses on their hands. It is considered a dishonor in a family to have a grown-up daughter unpledged in marriage. Strict habits of cleanliness prevail there which are unregarded here; no person dare eat without first taking a bath, and a different costume must be worn at each meal. Another feature he laid much stress on, was the happiness and contentment of the women. Marriage, he said, was regarded as a divine institution, and divorce was unknown. Women at the time of marriage take no oaths nor enter into any contracts. The men swear to protect their wives, and that they will keep them well pleased and supply their spiritual wants. Woman is, after all, a fortunate creature on this earth. She is everywhere protected and well taken care of. In India, when she wills, moonlight parties and dark midnight feasts are provided; new dishes are invented to please her palate and flower gardens to please her fancy. She is worshiped Goddess of Goodness, and, when ill, musicians play gentle melodies at her chamber window,

The Mecca of a Mother

It may be only a Barlow knife with a rusty blade and a broken point, or it may be a peg top half split down in the middle, or only half a dozen battered spools. But there it lies, whatever it is, stowed carefully away in the far-off corner of the bureau drawer, under a yellow pile of little linen and stockings, patched and darned at heel and at knee. But all the gems of Golconda cannot buy them; no, nor the gold of all the wide world size their preciousness. For they are the holy of the holiest. It is not often that she goes to that drawer, not often she looks upon the treasures there. But once in a while, sometimes, the time when a knock comes to the heart, that comes to mother's hearts alone, like the famished and thirsty, she goes to the nest of her jewels. Slowly, with soft hands, the little linens are laid aside, and slowly, with trembling hands, the knife, the top, or the string of dingy spools are drawn forth. Ah, how gently they are pressed to the heart and lips! What words are they singing? Kissed and cried on and kissed. Then yearningly, reluctantly, clinging back they go to their nest in the far-off corner, and the yellowing little linens are put back one by one. All alone jealous that mortal eyes should see her worship at a shrine, the drawer is closed, and she who knelt before it comes to earth once more.—*Pittsburg Chronicle.*

"If you are innocent," said a lawyer to his client, on old darkey, who was charged with stealing a ham, "we ought to be able to prove an alibi." "I don't 'spees we kin," the darkey replied doubtfully. "At what time was the ham stolen?" "'Bout lebben o'clock dey say." "Well, where were you between eleven o'clock and midnight—in bed?" "No sah. I wah hidin' de ham."

A paper gave an account of a society event, and, speaking of one beautiful lady, of quite large proportions, it said: "Mrs.——possessed a form that Juno might envy." The editor went home and left a subordinate to get out the paper, and the next morning he read in his pager that "Mrs. ——possessed a form that Jumbo might envy."

Mrs. S. C. Sanford, Alameda county, California, is said to have 1,000 strawberry plants growing through augur-holes, quite close together, in the staves of hogsheads, casks and barrels almost filled with fine rich soil, into each of which is pressed, near the top, a leaky bucket of fertilizer, through which water is poured.

For positive curative effects, one bottle of Ayer's Sarsaparilla is worth three of any other name.

Christopher Mann, aged one hundred and eleven years, died in Independence, Mo., on the 12th inst. He was born in Virginia in 1774, and came to Missouri in 1838.

NEW ADVERTISEMENTS.

A Mother's Love—A Practical Illustration of Its Power.

A mother's love! What a potent thing it is! It will melt the heart of the most hardened criminal, when no other influence would be effectual. No one but a mother knows its full meaning, but every one can appreciate it if they will. It is known, though, that it means sleepless nights, care, inconvenience, and, if necessary, want, hardship and death. But the subject has been too eloquently treated by the sweetest poets and the ablest writers to furnish an essay for these columns. Too many practical illustrations occur in every day life for it to be dwelt upon, so that it is unnecessary to speak of the subject further in order to make the reader understand the full meaning of what is to follow.

Mrs. Henry Schualen, of Ashland, Ky., writes that her daughter has been cured of deafness which resulted from chronic catarrh. She tells how she had lost all hope of her daughter (her ideal) being cured, and how overjoyed she is at the result. After trying many remedies, she says PERUNA brought a cure, and that the daughter's hearing is restored. She concludes, by speaking in the most flattering terms of PERUNA, and then describes in the most lovely manner the happiness it has brought her, and reviews the distress she experienced while her daughter was afflicted.

Dr. A. R. Ong, Martins Ferry, O., writes: "I have a large trade on your PERUNA. Think it is a grand remedy."

Mr. Robert C. Hannah, Tolesborough, Lewis county, Ky., writes: "I write to inform you of the great benefit I received by the use of your medicines, PERUNA and MANALIN. I had been low spirited and very sick for about six months with a bad cough, and my friends thought I had consumption; tried a number of patent medicines, and most of the doctors in the vicinity (and we have some as good as you can find in the country), but they did me no good whatever. Our merchant, Mr. Gillespie, insisted upon me trying your remedies. I did so, but must say, I had little faith in them at first; before I had consumed my first bottle, I noticed a change for the better, and to-day I am entirely well, and as sound a man as there is in the vicinity. I credit my cure to your valuable remedies, PERUNA and MANALIN, and recommend them to all of my friends."

FROM THE PRESIDENT

OF BAYLOR UNIVERSITY.

"Independence, Texas, Sept. 26, 1882.

Gentlemen:

Ayer's Hair Vigor

Has been used in my household for three reasons:—

1st. To prevent falling out of the hair.
2d. To prevent too rapid change of color.
3d. As a dressing.

It has given entire satisfaction in every instance. Yours respectfully,

WM. CAREY CRANE."

AYER'S HAIR VIGOR is entirely free from uncleanly, dangerous, or injurious substances. It prevents the hair from turning gray, restores gray hair to its original color, prevents baldness, preserves the hair and promotes its growth, cures dandruff and all diseases of the hair and scalp, and is, at the same time, a very superior and desirable dressing.

PREPARED BY

BLACKSMITHING.

I am prepared to do all kinds of blacksmithing. Farmers' work a specialty. Prices as low as can be had for first class work. Shop near "Browning House."

tf 24 DAVID LITTLE.

AYER'S Ague Cure

contains an **antidote for all malarial disorders** which, so far as known, is used in no other remedy. It contains no Quinine, nor any mineral nor deleterious substance whatever, and consequently produces no injurious effect upon the constitution, but leaves the system as healthy as it was before the attack.

WE WARRANT AYER'S AGUE CURE to cure every case of Fever and Ague, Intermittent or Chill Fever, Remittent Fever, Dumb Ague, Bilious Fever, and Liver Complaint caused by malaria. In case of failure, after due trial, dealers are authorized, by our circular dated July 1st, 1882, to refund the money.

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists.

NEW ADVERTISEMENTS.

IT LEADS ALL.

No other blood-purifying medicine is made, or has ever been prepared, which so completely meets the wants of physicians and the general public as

Ayer's Sarsaparilla.

It leads the list as a truly scientific preparation for all blood diseases. If there is a lurking taint of Scrofula about you, SCROFULA AYER'S SARSAPARILLA will dislodge it and expel it from your system.

For constitutional or scrofulous Catarrh, CATARRH AYER'S SARSAPARILLA is the true remedy. It has cured numberless cases. It will stop the nauseous catarrhal discharges, and remove the sickening odor of the breath, which are indications of scrofulous origin.

ULCEROUS SORES "Hutto, Tex., Sept. 28, 1882. "At the age of two years one of my children was terribly afflicted with ulcerous running sores on its face and neck. At the same time its eyes were swollen, much inflamed, and very sore. SORE EYES Physicians told us that a powerful alterative medicine must be employed. They united in recommending AYER'S SARSAPARILLA. A few doses produced a perceptible improvement, which, by an adherence to your directions, was continued to a complete and permanent cure. No evidence has since appeared of the existence of any scrofulous tendencies; and no treatment of any disorder was ever attended by more prompt or effectual results.

Yours truly, B. F. JOHNSON."

PREPARED BY

Dr. J. C. Ayer & Co., Lowell, Mass.
Sold by all Druggists; $1, six bottles for $5.

DR. JOHN BULL'S Smith's Tonic Syrup

FOR THE CURE OF

FEVER and AGUE

Or CHILLS and FEVER,

AND ALL MALARIAL DISEASES.

The proprietor of this celebrated medicine justly claims for it a superiority over all remedies ever offered to the public for the SAFE, CERTAIN, SPEEDY and PERMANENT cure of Ague and Fever, or Chills and Fever, whether of short or long standing. He refers to the entire Western and Southern country to bear him testimony to the truth of the assertion that in no case whatever will it fail to cure if the directions are strictly followed and carried out. In a great many cases a single dose has been sufficient for a cure, and whole families have been cured by a single bottle, with a perfect restoration of the general health. It is, however, prudent, and in every case more certain to such a result, that its continuance in smaller doses for a week or two after the disease has been checked, more especially in difficult and long-standing cases. Usually this medicine will not require any aid to keep the bowels in good order. Should the patient, however, require a cathartic medicine, after having taken three or four doses of the Tonic, a single dose of BULL'S VEGETABLE FAMILY PILLS will be sufficient.

BULL'S SARSAPARILLA is the old and reliable remedy for Impurities of the blood and Scrofulous affections.

Mysterious Influences.

"I'm going to tell you something that's true," said a Brooklyn man the other day. "You can believe it or not, but its true. I have a cousin who went to Europe last year. While in France she died. Comparing time between France and America it must have been within an hour of her death that her mother, who was knitting in the sitting room at home, laid her knitting work in her lap and looked with a sort of stunned expression. 'Why! Alice is dead!' she said. Next day we got a dispatch by cable saying she was dead."

"There was," said another member of the party, "a curious illustration of mind reading, or spiritual telegraphy, or whateyer you might like to call it, during the war. You remember that the battle of Gettysburg was settled on the 3rd of July, though Lee lay on his arms expecting another attack on the 4th, and began his retreat that night. The surrender of Vicksburg occurred on the 4th. Gettysburg and Vicksburg are eight hundred miles apart, or perhaps more, and no telegraph message had been received at Gettysburg announcing the surrender of Vicksburg—at least, if there had been, it could hardly reach headquarters before sundown on the 4th. The Twelfth corps had been drawn up in line on the afternoon of the 4th with a view to changing position, and was standing at 'place rest,' when one of the soldiers exclaimed, 'Vicksburg's taken!' The word passed down the line, and a cheer broke from the troops. That news and the certainty that Lee had sustained a severe defeat put new life into them. But when an attempt was made to trace the news to official sources it couldn't be done. That soldier 'felt it in his bones,' and had spoken right out. Next day dispatches arrived that the soldier had spoken the truth."

"Yes, these things are unaccountable," said a third speaker. The intuitions, or whatever they are, needn't be so important either. I remember that my father was sitting in his library one afternoon, when he took out his watch, looked at it, and said: 'E—— will be here in ten minutes.' E—— was his brother in-law, who lived in a neighboring town, and, though he called over frequently, he was not expected that day. After he had spoken, my father seemed surprised at himself, and laughed a little awkwardly. My mother asked how he knew that E—— would be there, and he said he didn't know; he had spoken on the impulse of the moment. Sure enough, in ten minutes the bell rang. E—— was at the door. He had only come to dinner, and his visit was not important, but he had, somehow, projected his personality ahead of him."

Said a fourth: "There really is such a thing as seeing beyond the limit of human vision. I'll tell you a little circumstance that I can swear to, and then let's talk about something else. When I was 16 years old I had no more idea of going to London than I had of going to Nova Zembla. I knew practically nothing about the city. One night I dreamed that I was there in a park facing some public buildings, and over the trees and roofs at the right were the towers of Westminster abbey and parliament buildings. That night an important letter was on its way summoning me to London. I arrived there as the man who had written the letter was leaving his house for a walk. I saw my trunk safely stowed and went along with him. We strolled out to St. Jame's park to hear a band play. At one point in the park I looked behind me, and there was the picture I had seen in my dream—trees, towers, public buildings and all. Before I went there I hadn't the slightest idea of how the city was built. For ought I knew St. Paul's, Westminister abbey, Temple bar and the British museum stood in a row on one street. How did I manage in a dream to see those buildings east of St. James' park just in the positions and size, shape, and color that they really were?"—*New York Sun.*

A good story is told about a Kentucky Congressman's pretty daughter who visited Washington recently. She went up to President Cleveland upon the occasion of a White-House reception and said: "I'll bet a horse you don't know who I am." The President was equal to the occasion. "No," said he, "I don't know who you are, but I'll bet a horse you are from Kentucky." "Shake," said the young lady, and she has been on good terms with the President ever since.

A Burglar's Back-Down.

It was night—midnight. This indicates that there is going to be something goreful about this story. But there isn't. Wait.

The soft murmur of a sou'-sou' West zephyr was audible in the interstices of the darkness. Mr. Bucephalus K. Smock did not hear it. He was wrapped in the arms of slumber.

Beside the bed stood a solemn figure. It was a man clad in mystery, a paper mask, and a ten-dollar suit of clothes.

The man was a burglar.

He had entered the palatial residence of B. K. Smock by means of a skeleton key, and he carried in his hand a glittering stiletto.

While he was preparing to toss up a cent to see whether he should murder B. K. Smock or not, B. K. awoke.

"What do you want?" he asked.

"Your money or your life!" replied the burglar, in a ghastly, corpse-like, Tombstone, Arizona, whisper.

"Well," said B. K. Smock; "this is where you don't get either."

And he drew a forty-four caliber navy revolver from beneath his pillow and pointed it at the burglar's soul.

"Hold on!" exclaimed the burglar; "don't want all your money. I'll take three dollars, and let it go at that."

"No three," said Smock.

"Make it two-fifty."

"No."

"I'll take thirty-seven cents," said the burglar, desperately.

"Not a thirty-seven," said Smock.

"Now, see here," said the burglar, persuasively; "you aren't going to send me away without anything, are you?"

"Yes sir; I am."

"Well, hold on; let's talk this thing over. I've come all the way down here from Saratoga County to get something or other, and I don't want to go back empty-handed. I should die of mortification. My mother and sister would blush at my want of success, and my little brother call me a blamed big chump. I've got a girl up there, and she'd marry the other fellow, sure, if I went back without anything. Don't send me away like that. Think of my future. I'm new in this business. I want to get a fair start. There's no hope of success for a man in any calling if he dosen't get a fair start. You want to ruin my prospects now, do you?"

B. K. Smock was touched. He disliked to admit it, but his sympathy was aroused.

"What will you take?" he asked.

"I'll take a sheet of paper with your autograph on it," said the burglar.

"All right," said B. K.; "but tell me first how it is that you can begin by demanding so much, and then go away contented with so little."

"Well," said the burglar, wiping away a warm salt tear: "I began life as an office-seeker."—*Puck.*

How Consuls Make Money.

It is said at the state department that there are as many applications for the smaller consulships and little commercial agencies as for some of the more important diplomatic positions. There have been instances where native merchants of some such country as Egypt would bid against each other for subordinate commercial agencies under the United States at the disposal of the consul-general until as high as $10,000 has been given for a little place with scarcely any salary at all, simply because the position was an advantageous one in point of its exemption from troublesome law, taxation, etc. One consul in Asia is known to have made a great deal of money in renting out American flags to local trading vessels that were willing to pay $200 apiece for the sake of sailing under the United States colors. Another consul suggested that the inspection of emigrants was very necessary to the good health of America, and he was given permission to charge an inspection fee. He fixed the fee at twenty-five cents per head, and had made about $20,000 out of it before it was discovered that he paid a native ten cents per head, while he pocketed the other fifteen cents for overseeing the job. In China there used to be a system of fees whereby consuls received $1 each for shipping sailors; but since Colonel Mosby has been at Hong Kong he has broken it up. Thus it is plainly to be seen that there are more ways than one to make money in consular service.—*Globe Democrat.*

Ayer's Sarsaparilla never before equaled its present daily record of marvelous cures and immense sales.

Mark Twain's Way.

Kansas City Times.

The Rev. J. Hyatt Smith knows more stories about more people than ten average citizens. Among them he relates this: When I was living with my brother in Buffalo, Mark Twain occupied a cottage across the street. We didn't see very much of him, but one morning as we were enjoying our cigars on the veranda after breakfast, we saw Mark come to his door in his dressing-gown and slippers and look over at us. He stood at his door and smoked for a minute, as if making up his mind about something and at last opened his gate and came lounging across the street. There was an unoccupied rocking chair on the veranda, and when my brother offered it to him he dropped into it with a sigh of relief. He smoked for a moment and said:

"Nice morning."

"Yes, very pleasant."

"Shouldn't wonder it we had rain by and by."

"Well, we could stand a little."

"This is a nice house you have here."

"Yes, we rather like it."

"How's your family?"

"Quite well—and yours?"

"Oh, we're all comfortable,"

There was another impressive silence, and finally Mark Twain crossed his legs, blew a puff of smoke into the air and in his lazy drawl exclaimed: "I suppose you're a little surprised to see me over here so early. Fact is, I haven't been so neighborly, perhaps, as I ought to be. We must mend that state of things. But this morning I came over because I thought you might be interested in knowing that your roof is on fire. It struck me that it would be a good idea if——"

But at the mention of fire the whole family dusted up-stairs, trailing language all the way up. When we had put the fire out and had returned to the veranda Mark wasn't there."

The Mechanic.

A young man began visiting a young lady recently, and was well pleased with her. One evening it was quite late when he called, and the young lady inquired where he had been.

"I had to work to-night," he said.

"What! do you work for a living?" she inquired in astonishment.

"Certainly," replied the young man, "I am a mechanic."

"I dislike the word mechanic," and she turned up her pretty nose.

That was the last time the young man visited the young lady. He is now a wealthy man, and has the nicest little wife in the city. The lady who disliked a mechanic is now the wife of a miserable fool—a regular fool—and the soft, miserable girl is obliged to take in washing to support herself and children. You dislike the name of mechanic, eh?—you, whose brothers are but well-dressed loafers. Any girl is to be pitied who is so silly as to think less of a man because he is a mechanic—one of God's noblemen, a most dignified and honorable personage. Beware, young ladies, how you treat young men who work for a living, for you may be a menial to one of them yourself. Far better discard the well-fed pauper, with all his jewelry, brazenness and pomposity, and take your affections to the callous-handed, industrious mechanic. Thousands have bitterly repented their folly, who have turned their backs to honcity. A few years have taught them a severe lesson. Labor is honorable in all, whether rich or poor.

Grant and His Fellow-Creatures.

Chicago Tribune.

It is a fact of curious interest relating to General Grant that has been looked upon by more people than any other man that ever lived. The heroes of ancient times handled lesser armies than he, and their movements were limited to a comparatively small field. Of the famous men of the present day none has been much of a spectacle outside his own country. Bismarck has been seen by Germans and travelers, Gladstone has been seen by Englishmen and travelers—no man save Grant ever became famous all over the world and then traveled all over the world. It was, of course, but the accident of his extended travels which made it so, but the fact still remains that of all human beings who have peopled the earth the great captain who died on Thursday had been seen by the largest number of his fellow-creatures.

OAKLAND, GARRETT CO., MD.

ALTRUISM.

A TALE.

The Lovely Mary, on her way
From Singapore to Boston Bay,
Had cloudless skies and glorious weather,
With favoring winds for days together;
And everything was going well,
When, near the Cape, it so befell
That, with a most decided shock,
The Lovely Mary—struck a rock.

She sank; but as the night was clear,
The ocean calm, an island near,
All who could keep themselves afloat
With cask, spar, life preserver, boat
(In short, whatever came to hand,)
Put off, and safely reached the land;
Leaving the gallant ship to sleep
Beneath the waves nine fathoms deep.

Now, as it chanced, upon that ship,
Returning from an Eastern trip,
Two scholars sailed, of great renown,
Jones, and the yet more famous Brown;
And when 'twas plain that naught could save
The vessel from a watery grave,
As Fate or Chance would have it, each
Espied within convenient reach
Something that both desired to own—
A life-preserver, which, 'tis known,
Can never be relied upon
To hold up safely more than *one*.
Yet on this life-preserver *both*
Seized in an instant, nothing loath;
And all of it Brown couldn't clasp
Was quickly locked in Jones' grasp;
And Jones' keen, determined eye
In grim resolve was equaled by
The stern, uncompromising frown
Upon the lofty brow of Brown.

But lest you think that selfish thought
In those two noble bosoms wrought,
I will relate, from first to last,
The high, heroic words that passed
From Brown to Jones, and Jones to Brown,
While the good ship was going down.
Dear Reader, bear them well in mind,
And think more nobly of your kind!

Quoth Jones: "Dear Brown, pray do not think
'Tis selfish fear that makes me shrink
From yielding up this wretched breath
To save a fellow-man from death.
I long to cry: 'Dear friend, oh take
This life-preserver, for my sake!'
But this, alas! I can not do:
I am not free, dear Brown, like *you*.
You may enjoy the bliss divine
Of giving up your life for mine;
But ah! 'tis different with *me!*
I have a wife and children three;
And, for their sake, I must control
The generous impulse of my soul.
Yet trust me, Brown, most willingly,
Nay, with unfeigned alacrity,
This life-preserver I'd resign,
Were my case yours, or your case mine!"

"Dear Jones, your reasons," Brown replied,
"Are good, and can not be denied.
All that your words imply is true;
I have no wife nor child, like you.
But, Jones, I have a tie to life
Far stronger (do not start) than wife
Or child, though dear, could ever be:
I mean my great 'Cosmogony,'
Of which, as you have doubtless heard,
One volume is to come—the third.
O, were that mighty task complete
Down to the last corrected sheet,
Believe me, Jones, to save your life
To your dear family and wife,
I'd yield to you, unmurmuring,
This frail support to which we cling!
But what are wife and children three
Compared with a Cosmogony?
Or what—confess it, dearest Jones—
Are *many* wives' and children's moans
To that loud cry of grief and woe
With which the learned world shall know
That it can never hope to see
The long-expected Volume Three?"

"Quite true," sighed Jones. "And yet—and yet—
I think, dear Brown, that you forget
The theory of Average
As held in this enlightened age.
Had all the mighty men of old—
Kings, scholars, statesmen, heroes bold—
Suffered untimely taking-off
With measles, croup, or whooping-cough,
Think you that this great earth would then
Have nourished only common men?
Had Homer died a stripling lad,
Should we have lost the Iliad?
Would Shakespere's early, timeless death
Have cost us Hamlet, Lear, Macbeth?
The voice of reason answers: 'No;
Wrong not prolific Nature so.'
Now, if this theory is true,
It must apply, dear Brown, to you;
And, fearless, you may leave behind
This master-product of your mind
(Though all unfinished, as you say,)
Assured that, at no distant day,
Another will be found to do
The work so well begun by you;
But I ——"

"Allow me!" struck in Brown.
"The ship is plainly going down;
And, ere she sinks beneath us, I
Would most decidedly deny
The theory of which you speak,
It is ingenious, but weak—
A vain though pleasing fallacy,
That never has deluded me.
Besides, the theory, if true,
Applies with equal force to you:
For, dearest Jones, if you are drowned,
Doubtless *another* will be found
To comfort your dear wife, and be
A father to your children three!"

"Nay, nay!" cried Jones, "you jest, dear Brown ——"
But at this point the ship went down;
The arguments of both, you see,
Balanced to such a nicety,
So fine, so subtile, so profound,
That both held on—and both were drowned!

—*Robertson Trowbridge, in Century.*

THE BLACK MUSEUM.

A Collection of Curios Connected With Crime and Criminals.

Representations of the Heads of Sundry Executed Criminals—The Stocks-in-Trade of Various Noted Burglars—A Little Piece of Professional Advice.

The name at the head of this paper will be a puzzle to a good many of our readers. Even among Londoners born and bred, not one in a hundred perhaps has heard of the Black Museum. Whitaker's Almanac knows it not; and Dickens' "Dictionary of London," that "guide, philosopher and friend" of the wanderer in the great metropolis, makes no mention of it. Mr. Samuel Weller himself, "extensive and peculiar" as his knowledge of London is admitted to have been, might have had to plead guilty of ignorance in this one particular. And yet the Black Museum can show names of mark in its visitors' book. "Counts a many, and dukes a few," from royal highnesses downward, have here inscribed their signatures. Literature and music are represented by Mr. W. S. Gilbert and Sir Arthur Sullivan, the drama by Miss Minnie Palmer, the fire brigade by Captain Shaw, and the last offices of the law by Mr. William Marwood, who, we are told, was a frequent visitor. Not to keep the reader in suspense, the Black Museum is a small back-room on the second floor of the offices of the Convict Supervision Department, Scotland Yard, and its curios consists exclusively of articles connected in one way or another with crime and criminals. The objects exhibited are about one hundred and fifty in number. They are carefully labeled, and are further described in a bulky catalogue, which, in addition to names, dates and other particulars, contains a number of photographs and newspaper cuttings having relation to the various items.

The collection is so arranged as to allow free inspection of the various objects, and the curator, Sergeant Bradshaw, takes an evident pride in his charge, and furnishes the history of any given item with remarkable promptitude and accuracy. Round three sides of the room, on a high shelf, are ranged a number of plaster casts from Derby Jail and York Castle, representing the heads of sundry criminals who, for one offense or another, have suffered the last penalty of the law. If it were customary to hang people on the strength of their personal appearance, we should say that most of these gentry fully deserved their fate. They are not a pleasant sight, and for the most part have not even notoriety to recommend them. One of them, however, a big heavy head, ticketed as that of "John Platts"—executed in 1847 for the murder of one George Collis, of Chesterfield—acquires a factitious interest from the fact that the identical rope which hanged the original is looped over the gas pendant in the center of the room. The halters connected with the other casts are also preserved in the museum, but this one chances to have the place of honor. The curator calls our attention to the thinness of the rope—about five-eighths of an inch only—in comparison with that at present used, which is **nearly or quite an inch in diameter.** He further points out that the rope is much shorter than that now in use. Under the old regime it was an even chance whether the criminal died by strangling or by dislocation of the neck; whereas, by the present more merciful "long drop," the neck is invariably dislocated, and death is practically instantaneous. Together with the halter are seen the cords—now replaced by a leather strap—for pinioning the arms of the condemned man, and the cap—a tall conical affair like a large cotton night-cap, but of double material—for drawing over his head at the supreme moment. These three items, the halter, the pinioning gear and the cap, constitute the complete "hangman's kit." Sergeant Bradshaw informs us, not without a touch of regret, that Mr. Marwood, on paying his last visit to the Museum, promised to present to it the ropes with which the murderers of Lord Frederick Cavendish and Mr. Burke were executed, but died without having redeemed his promise.

From the appliances of the hangman, we pass by an easy transition to the last relics of the late Mr. Charles Peace, which rank among the chief lions of the collection. Sergeant Bradshaw shows us, handling them "tenderly, as if he loved them," the working tools of the venerable miscreant; the neat little picklocks and skeleton-keys; the gimlet, muffled in an India-rubber casing; the handy little "jemmy;" the crucible for melting down his spoils; and last, but not least, his "ladder," a simple wooden contrivance, folding into so small a compass as to go into an ordinary hand-bag, and yet, when extended, affording ample foothold for the cat-like "prince of burglars," as he is called, to climb up to a first-floor window. So original is the contrivance that until Peace himself revealed its object, the police were quite at a loss to imagine its use. Here, too, are the inventor's blue spectacles and his artificial arm—a leather stump with a hook in it—worn for the purpose of disguise, the real arm lying snugly within the coat. The secret of Peace having so long kept out of the hands of the police is that he had no accomplices, but worked entirely alone. Under cover of his disguise he collected the necessary information for his exploits; and after some daring burglary, wherein the activity of a practiced gymnast had been displayed, the last person to be suspected was the little one-armed old man with the blue spectacles. Wonderful are the ways of hero worshipers. Some eccentric relic-hunter has actually cut a piece out of the artificial arm, and in some obscure corner of the universe doubtless dazzles his kinsfolk and acquaintances by the exhibition of a veritable bit of leather formerly belonging to a deceased burglar and murderer. The reader may remember that Peace, after having escaped the consequences of many previous crimes, was convicted of attempting the life of a policeman, and of the actual murder of a Mr. Dyson, at Bannercross, near Sheffield, and after a determined attempt to escape by jumping from a railway train, was executed at Leeds on the 25th of February, 1879. A *carte de visite* of Peace, taken by the Stereoscopic Company, is preserved in the catalogue, and should be a valuable example to the student of physiognomy; the high forehead, deep-set eyes and bulldog lower jaw indicating a singular combination—fully verified in the life of the man—of strong intellectual power and force of will, unbalanced by corresponding moral qualities.

From the Peace collection we pass to the stock-in-trade of less notorious burglars. Here is a miniature dark-lantern, manufactured by some ingenious scoundrel out of one of Bryant & May's three-penny tin match-boxes. "To such base uses may we come at last!" The bull's eye is a mere bit of window-glass, oval in shape, and so small that the operator can, when necessary, mask it with his thumb, no slide being used. The light-giving power of such a lantern must naturally be small, but it is probably quite sufficient to enable the burglar to avoid stumbling over tables and chairs or to illuminate a key-hole.

Here are the working tools of Wright and Wheatley, the Howson burglars, now undergoing penal servitude, Wright being condemned for life, Wheatley for twenty years. Each carried a revolver; that belonged to Wright, with which he shot at and wounded two of the police, being stamped "British Constabulary," a queer illustration of the irony of fate, and of the proverbial "engineer hoist with his own petard." Each of these practitioners carried his tools in a sort haversack slung at his side. A later expert, captured in the act of an attempted burglary at the British Museum in 1884, took a bolder course, and carried his implements—also here preserved—in an ordinary carpenter's tool basket, over his shoulder. This gentleman affected the early morning for his exploits, and unless caught in the very act, would naturally be taken for a harmless British workman going about his lawful vocation.

As might perhaps be anticipated, we find here an ample collection of crowbars or "jemmies" of various descriptions. These formidable appliances are made, it appears, in regular gradations of size, the three largest being known as the "Lord Mayor," the "Alderman" and the "Common Councilman." The Lord Mayor is four feet three inches in length, and is only used on great occasions, say, the breaking open of a strong room or very heavy safe. The specimen here shown was used in what is known as the Hatton Garden burglary in 1880, by Smith and others. The Alderman is three feet three inches in length; the Common Councilman about two inches shorter, and, as befits its lower dignity, not quite so stout. Whatever may be said as to the projected reform of the city of London, our readers will agree with us that the sooner *this* corporation is abolished the better. Passing downward from the Common Councilman, we come ultimately to the "pocket" jemmy—James the less, in more respectful language—which is about twelve inches' in length. The Black Museum specimen is of finely tempered steel, and hinged so as to fold in half, in which condition a curate might carry it in his breast-pocket without exciting suspicion. The larger sizes divide into two or three lengths, which are screwed together when required for actual use. Some are solid, some of tubular steel, the latter construction giving increased lightness without any sacrifice of strength. Each end terminates in a chisel point, the one straight, the other slightly bent. In close contiguity to the crowbars we are shown specimens of the "knuckle-duster," a small but formidable weapon, for which we are indebted to our American cousins. The ordinary knuckle-duster is a flat piece of iron or brass about half an inch thick, with four oval openings of such size as to allow the passage of the four fingers. The fingers being passed through these holes, the hand closes with a firm grip on the "butt" of the weapon, while the remainder of the metal stands out in the shape of an iron ring or guard over each knuckle, a blow from the hand thus armed coming with terrific force. Still more formidable is the "spiked" knuckle-duster. Here each loop of the projecting guard over the knuckles, instead of being rounded, as in the former case, is fashioned into an angle of about ninety degrees, giving a cutting effect in addition to the natural force of the blow.

Passing on from the knuckle-dusters, we give a cursory glance at a varied collection of life-preservers, pistols, daggers and other lethal weapons, all of which have seen service at some time or other. The butcher's knife, we note, is a decidedly popular weapon. There are also some half-dozen razors, all of which have been used in the commission of murders or attempted murders. It is a curious fact that they are without exception black-handled, the innocent whiteness of bone or ivory being apparently uncongenial to the murderous instinct.

Our attention is next directed to sundry tin canisters, which prove to be infernal machines. As a rule, they look harmless enough, one even assuming the innocent semblance of an ordinary lump of coal. The imitation is so good that it is only on taking it in the hand that we discover that the supposed coal is in reality metal, hollow, but of great weight and substance. This singular article was brought to the police by one Fraser Palmer, otherwise Farrell, otherwise "Warhawk," a man who had a mania for warning our own and foreign governments of plots which in reality had no existence save in his own imagination. He asserted that this supposed piece of coal, with others of the same kind, was intended to be charged with explosives, and mixed with the genuine coal in the bunkers of some doomed steamship. It is said that, in consequence of his revelations, an examination was made of the whole of the coal in the bunkers of the late Czar's steam-yacht Livadia, then lying at Glasgow, but without result. Side by side with this last item is a far more formidable looking affair. It is of small size, but the solidity of its construction and the peculiarity of its shape—a flattened oval, tapering down at the extremity, where the fuse is inserted—indicate that special thought and ingenuity have been expended on its design. Even the most accomplished of criminals, however, can not always be on his guard, and this deadly contrivance was inadvertently left in a tramcar. The conductor was persuaded that his "find" was an infernal machine of more than ordinarily diabolical character, and he conveyed it with infinite precaution to the police, who at first were of the same opinion. Further investigation, however, satisfied them that the supposed explosive was merely a model, artistically cast in lead, of a new design for an infant's feeding-bottle.

A more serious interest attaches to the truncheon-case—pierced with a bullet—of the unfortunate policeman Cole, shot at Dalston in 1882 by the cowardly ruffian Orrock, in an attempted burglary at a Baptist chapel. Orrock's soft felt hat, found on the scene of the murder, is also here preserved, as also the chisel, with the letters "rock" scratched upon it, which led to his identification. A photograph of the chisel is also shown; and it is a curious illustration of the detective powers of science that the mark, which on the chisel itself is imperceptible to ordinary eye-sight, is plainly legible in the photograph.

Among the cartes-de-visite which adorn the Museum Catalogue is that of O'Donnell, the man who shot the informer Carey. Here, too, are the two bullets which were extracted from Carey's body, and the revolver, a small pocket weapon, from which they were fired. A larger revolver, found among O'Donnell's luggage, lies beside it. Under a glass shade hard by lies a gelatine capsule, a harmless looking affair enough, but belying its appearance, for it contains a deadly poison, aconite—being, in fact, the fellow to that used by Dr. Lamson in 1882 to destroy his youthful brother-in-law. We are shown the carte of this criminal also, a gentlemanly looking man, by no means answering to the conventional type of assassins. Appearances, however, are deceitful, as the copybooks of our youth so persistently reminded us. Under another glass shade is a piece of dark brown leather, which proves to be a portion of the tanned skin of Bellingham, the murderer of Mr. Perceval. Side by side with this is a curiosity of a different kind, a pin-cushion, skilfully worked in human hair, with the inscription: "I will instruct thee and teach thee in the way thou shalt go. I will guide thee with Mine eye." Here, apparently, the worker's stock of scriptural quotation failed, for she continues: "My home is in Heaven." It is painful to have to relate that the good lady who worked these pious sentiments has been over three hundred times convicted of drunkenness and disorderly conduct! She presented this pin-cushion—in honor, we presume, of old acquaintance—to Rev. Mr. Horsley, chaplain of the House of Detention, who in turn presented it to the Black Museum.

A tall hat on a peg and much covered with dust next attracts our attention. This homely relic was the property of Rev. Mr. Speke, the eccentric clergyman who suddenly disappeared, leaving his headgear—here present—in the Green Park, and was believed to have been murdered, but was subsequently discovered, in the garb of a laboring man, at Padstow, in Cornwall. He ultimately died, we believe, in a lunatic asylum. Close beside Mr. Speke's hat hang a coil of rope, a pair of boots and an old horse-pistol. These articles were the property of another clerical gentleman, Rev. John Selby Watson, an eminent scholar, of St. Michael's Road, Stockwell. He was convicted in January, 1872, of the murder of his wife, whose body he had inclosed in a packing-case, corded with the piece of rope here shown. He was, however, respited on the ground of insanity, and thenceforth kept in confinement. He died quite recently at Parkhurst Prison, in the Isle of Wight, falling out of his bunk in a fit and fracturing his skull.

Not far distant are mementos of other well-known murderers. Here is the portrait, cut from the *Daily Telegraph*, of Lefroy, the murderer of Mr. Gold, on the Brighton Railway. Here is the rope used by Marguerite Dixblanc to strangle her mistress, Madame Riel, in Park Lane. Here are the boots of the unfortunate girl, Maria Clausen, murdered at Kidbrook Lane, Eltham, and the plasterer's hammer which did the deadly deed. With another plasterer's hammer, also here preserved, Mullins murdered Mrs. Emsley at Stepney, in 1860. Here, too, are sundry memorials of the Wainwright case, or Whitechapel murder, of 1874. Here are the chopper with which the unfortunate Harriet Lane was dismembered, and the spade which dug her grave. Here is one of the buttons cut from her dress, and a corresponding button found with her body; and—stranger item still—the piece of shinbone taken by a surgeon from the leg of the living Harriet Lane, and which formed a last unmistakable proof of the identity of the nameless corpse. Even the cigar which Henry Wainwright was smoking when arrested is here preserved.

Turning to offenders of a more frivolous character, we have the peep-show apparatus wherein a pretended astrologer, calling himself Prof. Zendavesta, and residing in Homer Street, Marylebone Road, London, was wont, "for a consideration," to call up the image of an inquirer's future wife or husband. To illustrate the audacity of the Professor and the fatuity of his dupes, we may mention that among his pictorial collection of promised husbands were found Mr. Holman Hunt and Mr. Henry Neville. Another branch of the Professor's business was the casting of nativities; and a number of his hand-bills, showing the great advantages to be derived from possessing the "straight tip" in this particular, are preserved with the peep-show apparatus. Next to this latter is a circular board with a number of shallow cups or depressions, painted of different colors, but higgledy-piggledy, like a solitaire board "gone wrong." This is an appliance for public-house gambling. A marble, being dropped into a cylindrical arrangement at the side, is allowed to wander at will over the board, bets being made as to the particular color in which it will finally settle. Not far distant is a bundle of "flash" notes, used by sharpers to simulate unbounded wealth, for the purpose of the "confidence trick" and similar frauds. "Flash" differ from "forged" notes, the latter being intended to be actually passed as money, and consequently made as like the real thing as possible. The flash note is a very rough affair, and only aims at simulating the general appearance of a genuine note. The specimens before us are headed "Bank of Engraving," and run: "I promise to engrave and print in letter-press on demand for the sum of ten pounds, in the first style of the art, or forfeit the above sum. London 29 April, 1840. For Self & Co., Bank of Engraving. J. DUCK." There is the customary "Ten" in large Gothic letters in the left-hand corner, and the paper and printing of a genuine note are imitated with sufficient closeness to deceive an unwary observer who merely sees the note in the hands of another person.

Among curiosities of a different kind is an Egyptian courbash, or bastinado, an article having the appearance of an ordinary walking-cane, tapering considerably. It is said to be of rhinoceros hide. Whatever the material, it is of great weight and flexibility; and when applied, after the mild Oriental fashion, to the soles of the victim's feet, must be extremely persuasive. The specimen before us had the honor of being exhibited during a recent debate in the House of Commons. Hard by it is an ancient watchman's rattle, with which an expert performer, if allowed full opportunity to use it, could make a noise audible at nearly two hundred yards' distance. As a matter of fact, however, it was chiefly used to batter the head of the watchman himself, for which purpose it was greatly approved by the malefactors of the period. A similar appliance in an improved form was used by the police up to a recent date, but is now happily superseded by a powerful whistle, which leaves the wearer full use of his hands for attack or defense, and can be heard for nearly three-quarters of a mile. Here, also, are handcuffs of various dates and construction, including the pair in which the notorious Jerry Abershaw, the highwayman, was hanged in chains (1795) on Wimbledon Common; and an ingenious wristlet of Yankee contrivance for securing an offender on his way to durance vile. It is not unlike a pair of caliper-compasses, but with a cross-handle, like that of a corkscrew. The compass portion, being slipped over the wrist of the criminal, closes with a spring; and the handle being grasped firmly by the officer in charge, the captive has small chance of freeing himself, for a broken wrist would be the probable consequence of a struggle. Apropos of the useful appliance, Sergeant Bradshaw favors us with a little piece of professional advice, which will appropriately conclude our paper. "Always grip your man," he tells us, "on his *right* side. Then, if he shows fight, he can only let you have it with his left, and you have your right hand free to tackle him. If you grip him on his left side, you leave him the use of *his* right hand to *your* left, and like enough he'll get the better of you."—*Chambers' Journal.*

FORMOSA.

Life Among the Savages of the Island—An Interesting Account.

The hut in which I found myself, and it was a fair sample of the rest, was of the rudest possible description. The doorway was so small that it was a task to get in; the walls were composed of the branches of trees stuck into the ground a little apart, the interstices being filled with bits of chopped wood; the roof was thatched with grass. Three sides were occupied by raised bamboo sleeping platforms, some fifteen inches above the ground; there were no windows. At one side was a slight depression in the ground, which served as a fireplace, logs of trees being laid over it, end to end, and constantly pushed farther in as they gradually consumed away. All the village crowded in—women, young girls and children of all sizes; but the male savages, with the exception of those referred to, were all absent on a hunting expedition, having been gone several days. From the roof were suspended various requisites of the chase—bows, arrows and deer skins—besides sundry articles of domestic use, all of the rudest kind. Having had something to eat, I strolled out amongst the other huts, and everywhere was well received. What particularly struck me was the fearlessness of the women and girls and the frankness of the children, who were most interesting. They came close up to me, examined my clothes with their large dark eyes, pulled my whiskers, and were never tired of looking at my watch. They are bright, and I should say intelligent, and incomparably more interesting than Chinese children—so simple, natural and unsophisticated. All smoke, from the youngest to the oldest of both sexes, and it was truly ludicrous to see tiny mites of certainly not three summers—stark naked—with pipes in their mouths. The women and girls carry their pipes of bamboo stuck in their hair, somewhat in the style of the liang-pat'ou head-dress of the Pekingese ladies, and keep the tobacco bags hung round their necks. They at once offered me a smoke. Some of them were playing upon a curious kind of jew's harp, made out of a slip of bamboo with threads at each end, whilst one girl, of about sixteen, danced. The dance was neither a fandango nor a bolero, nor yet a minuet, but bore some resemblance to all three; it was so intensely grotesque that I laughed uncontrollably. No sooner had she finished than the girls came up to me, and offering me a jew's harp, made signs to me to dance. The harp alone was a sufficient mystery to me, but when the minuet was added the tableau was complete; the audience threw themselves down and screamed with laughing. From this performance I passed to a scene of somewhat different character—a few yards along a path, a step to one side, and I stood before a scaffold of camphor branches on which reposed a grinning row of human skulls, the heads of Chinese slain in raids.—*Good Words.*

ROSES.

How this Queen of all Flowers Should Be Cared for.

This most lovely of all flowers that lend a charm to the lawn and the border, is besides one of the most patient under neglect and adverse conditions. Yet not a flower is grown that will so abundantly repay the trouble and expense of good culture and liberal treatment as will this, the most attractive of all. Grown in sterile soil, and choked with weeds and grass until its very life is threatened, it still pushes out beautiful flowers that load the air with fragrance and charm the eye with their beauty.

But to have roses that ravish the senses with the perfection of loveliness, good care and generous treatment must be given the shrubs that bear them. The soil where they grow needs to be made rich with the best fertilizers known, well worked in to a depth of a foot or more. Neither grass nor weeds should be allowed to infringe on the space allotted them, nor partake in the least of the nourishment provided for their sustenance. The bushes should be trimmed of all unnecessary sprouts, as well as such branches as would mar the symmetry of proportion. The soil should be kept loose and porous by frequent stirring. Insect pests that prey on the foliage of the plant or gnaw into the bud, should be carefully watched and promptly destroyed before getting in any of their mischievous work.

If the above precautions are taken, there will be a wealth of bloom that will richly reward the labors expended, the eye be greeted with beauty, the smelling propensities with fragrance, and all the senses delighted. To insure the greatest amount and the highest perfection of bloom, care must be taken to clip the fading blossoms from the stems, so soon as their beauty begins to wane. It is a universal law with all plants, that the process of ripening seeds more severely taxes the energies and draws upon the life of the plant than all other processes of growth. If relieved of this burden, rose bushes will perfect their growth and fill out their functions for future blooming far more perfectly than if permitted to suffer this needless and exhaustive drain.—*Burlington Hawkeye.*

—"I'm afraid this depression in tobacco will ruin me." "Indeed, why, I thought you were engaged in raising cabbages?" "I am, and that's why I'm kicking."—*Boston Post.*

SCHOOL AND CHURCH.

—Three of the six star graduates at the United States Naval Academy recently are Pennsylvanians.

—Bowdoin College will expend $90,000 on her gymnasium, and the University of Pennsylvania $7,000 on her new athletic field.

—Protestant meetings at Gratz, Austria, are tolerated by the police and are well attended, but no children under fourteen years of age are allowed to be present.

—Sixteen years ago there were in the State of Kansas forty-three Presbyterian churches and 1,453 members. Now thre are in that State 321 churches and 14,289 members.—*Chicago Times.*

—The total receipts of the Board of Foreign Missions of the Southern Baptist Church the past year were $81,-299.59, of which the women raised about $18,000. The year closed with a balance of $1,000 in the treasury.—*N. Y. Tribune.*

—The cities of Boston and New York pay more for school education, in proportion to population, than any other cities in the country. In the former the schools receive twelve and one-half per cent. of the city's annual expenditure.—*Chicago Current.*

—In Teheran, Persia, the tea houses are all open to the public, and even the schools are exposed like the shops, often having shops on each side. The boys sit on their heels in rows and repeat the lesson after the master, apparently undisturbed by the continual hubbub going on around them.

—The entire missionary debt of the Presbyterian Societies is $196,000. Of this amount the Home Board, with the Woman's Executive Committee, owes $139,000, the Foreign Board $57,000. The General Assembly adopted a resolution recommending that every church "take a special collection, or adopt such other measures as shall seem best in each case to cancel the debts."—*N. Y. Examiner.*

—The spirit of conservatism which is supposed to obtain so firmly in European educational institutions has yielded to the popular demand for the education of women to such a degree that they are now admitted to many of the leading universities of Russia, Germany, France and Belgium. The influence of these examples will certainly have great weight in America.—*Current.*

—The organ in the Stewart Cathedral at Garden City is, it is said, the largest in the world, being in fact five organs in one—the great, the swell, the choir, the solo, the echo and the pedal organs. There are four manuals, 115 speaking stops, 7,252 pipes, and 43 couplers, mechanical accessories and pedals, with a switch connecting the chimes with the organ, so that both may be operated from one key-board.—*N. Y. Sun.*

—The Scotch Presbyterian Church of Jersey City has recently been relieved of a burdedsome debt, which threatened the loss of their house of worship. Mr. George R. McKenzie, who paid off the indebtedness, in a modest communication to the church declaring his intention, simply asked in return that it should continue to be called by its old name, "the Scotch Presbyterian Church," and that the music should be that of the human voice alone.—*N. Y. Times.*

PUNGENT PARAGRAPHR.

—A Keep Street old maid who keeps four cats finds a scuttleful of coal in her backyard every morning. By strict economy she only buys a half ton of coal a year.—*Brooklyn Times.*

—Dr. Hammond says that "love and poetry go hand in hand." Shouldn't wonder a bit. It is well known that the course of true love never did run smooth, and the same is true of amateur poetry.—*Lowell Citizen.*

—"I wish I had eyes in the back of my head," said a young lady the other evening. "Why?" asked a devoted admirer, breathlessly. "So that I could see what was going on without the trouble of turning my head." "You can turn my head without any trouble," responded the youth with a gloomy sigh.

—What one letter will do.—
There is a word of plural number,
A foe to peace and tranquil slumber.
Now any word you choose to take,
By adding "s" will plural make;
But if you add an "s" to this,
Strange is the metamorphosis!
Plural will plural be no more,
And sweet what bitter was before.
Answer: To cares add an "s," and it will make it caress.

—A little child was besieging her father to take her to visit her grandmother, who lived at a distance. To get rid of her he said: "It costs ten dollars every time we go to see grandma, Florence, and ten dollars doesn't grow on every bush." "Neither do grandmas grow on every bush," answered the little girl promptly, and her logic was convincing. They went.—*Chicago Interior.*

—"Is there a bird called 'Riches?'" asked Jack of Jill. "No," said Jill. "Why?" "Because I have heard you say, 'Riches have wings,' and I thought that if they have wings they must be birds or ducks or geese." "You little goose!" cried Jill, as Jack started to run. The very next moment Jack fell down, and Jill tumbled after him, as the reader probably has heard once or twice before.—*Golden Days.*

—Uncle Mose met a very dandified darkey, who said in a very dignified manner: "How do you enjoy dis balmy wedder, sah?" "I don't know yer, sah. You has me at a disadvantage," responded Mose. "You cussed ole bow-legged, lantern-jawed gorilla, yer is de same ole mutton-headed baboon yer allers was." "Now I knows yer. As soon as yer quit talkin' like a gemman I knowed yer right off." And they embraced like Blucher and Wellington on the field of Waterloo.—*Texas Siftings.*

—"I asked for strawberry cream," said the lady, eyeing the refreshment askance. "You've got it, mum," replied the waiter. "But what makes it look so pale?" "Cochineal's riz, mum—way up; can't afford to make 'em any pootier for the money." "Mercy!" exclaimed the lady, "you don't mean to say that you color your strawberry cream with cochineal? At the fashionable places where I am used to going they never use anything but aniline dye. It's expensive, of course, but then it is so lovely!"—*Boston Transcript.*

FARM AND FIRESIDE.

—Rock salt, put where it can be licked at pleasure, suits sheep.—*Prairie Farmer.*

—To stain wood blue, boil a pound of indigo, two pounds of wood and three ounces of alum in a gallon of water; brush well over until thoroughly stained.—*Philadelphia Press.*

—Lemon Pie: Into one pint of boiling molasses put one-half cup of water, the grated rind and juice of three lemons, one tablespoonful of corn starch and two beaten eggs; bake with only an under crust.—*The Household.*

—A very good way to clean rag carpet is to cut fresh grass and sprinkle over the carpet and sweep. A good way to clean wall paper is to take new baked cold bread and rub the paper. It will take off almost all kinds of dirt.—*N. Y. Times.*

—A clothes-pin apron is made of two pieces of ticking the same size; these are fastened together in a band for the waist; the lower corners are rounded; in the upper piece of ticking make two round holes large enough to admit the hands, bind, or stitch firmly around the edge. This is convenient for hanging out or taking in clothes, and the pins can be kept in it and be always ready for use.—*Boston Budget.*

—Lancashire Pie: Take cold beef or veal, chop and season as for hash; have ready hot mashed potatoes seasoned as if for the table, and put in a shallow baking dish first a layer of meat, then a layer of potatoes, and so on till dish is heaping full; smooth top of potatoes and make little holes, in which place bits of butter; bake until a nice brown.—*N. Y. Examiner.*

—For Scotch shortcake (not strawberry) take one-half pound of slightly salted butter and one pound of flour; then mix flour and butter with the hands; then add four ounces of loaf sugar, and work all into a smooth ball; then roll out until it is an inch thick; prick over with a fork and pinch round the edges, and bake for half an hour in an oven, with a moderate fire, in a round or square pan, according to taste.—*Toledo Blade.*

—Mr. Thomas Meehan says: Rose cuttings are generally easily raised by those who know little about it. In proportion as one becomes a skillful florist, the failures to strike rose cuttings increase. Almost every one who puts in a few "slips" of half-ripe wood into a pot of earth, and sets the pot under a shady fence, succeeds; but as soon as he or she knows "all about it," they can't strike roses. Here, at least is an encouragement to the beginner.—*N. E. Farmer.*

—For a good common whitewash take a piece of stone lime as large as a child's head, having it new and entirely unslacked, and put it into an iron kettle that will hold a pailful. Pour over it a few quarts of boiling water at night; cover and let it stand till morning; then fill up with water and set on the stove. Add a handful of salt and stir occasionally till hot. Pour off into a pail, and if too thick, add more water. Allow it to become cool before using, as the smoke will strike through worse if used hot.—*Rural New Yorker.*

FASHION NOTES.

Some of the Trifles in Dress Which Delight the Metropolitan Woman.

Stripes are coming in vogue.

Very little crinolette is worn by the best-dressed people.

The Marquise Catogan coiffure grows in fashionable favor here and on the other side.

Large wooden or porcelain beads are some of the decorations of the latest woollen laces.

The new woollen laces with velvet figures applique thereon come in colors to match fabrics.

"Housemaid" frocks of white lawn, nainsook, and mull are the order of the day.

Fluffy Fedora hair curlers are in demand this warm weather.

Woollen lace comes for fall enriched with the addition of a velvet pattern chain-stitched on the wool ground.

For evening, dinner, and garden party toilets young ladies wear one small tuft of natural flowers in the hair and another on the shoulder.

The coarser and rougher the fabric the more fashionable it is for the day wear, but for evening it must be the reverse, as fine or sheer or elegant as possible.

Drawn thread work, filled in with braidene, the new fancy embroidery stuff for flower petals, is the popular occupation for mornings on the piazzas at Saratoga and Newport.

A woman must have a good figure to wear the English housemaid's dress, for its plain skirt reveals all deficiencies, and to try to cancel them with crinoline makes the matter much worse.

The "housemaid dress," so popular in England, is gaining ground here. It is a good dress, but its chief charm, simplicity, is entirely lost when it is worn over crinolette or artificial protuberances of any kind.

The costumes seen on the various beaches near the city yesterday, when the wearers were near enough to be seen under their portable canopies of red, blue, black, beige, and white—their parasols—showed that the art of dressmaking has progressed lately among the masses. But for all that, there are still plenty of women that nothing can ever float into the heaven of taste in color, form, and niceties of detail.

A gown or printed lawn, rhythmic in form and harmonious in color, is made by having the ground of the material a warm, pinkish shade of cream falling in a full straight conlisse skirt over a white petticoat, banded with maroon satine edged with narrow cream-color woollen lace, the blue bodice of lawn worn under a short cutaway Figaro jacket of maroon satine, bordered and edged with woollen lace, and a high collar and cuffs of maroon velvet to match the satine. This frock, worn by a tall, slender, pale brunette, along with a hat of pinkish cream straw trimmed with a nodding tuft of maroon and cream feathers, and lined with maroon velvet, makes a picture worthy of the study of a Vandyke, Joshua Reynolds, or Angelica Kauffman.—*N. Y. Sun.*

—Dyspepsia is said to be unknown in Japan. So are boarding houses.—*Chicago Ledger.*

BALKY HORSES.

A Cure Not Usually Effected by Whipping and Cruelty.

Balking is not natural to horses, indeed they know nothing about it until they are brought into it by improper management, and when a horse balks it is generally from mismanagement, excitement, confusion, or from not knowing how to pull, but seldom from any unwillingness to perform his duty.

High-spirited, free-going horses are the most subject to balking, and only so because drivers do not properly understand how to manage. This kind of free horse in a team may be so anxious to go that when he hears the word he will start with a jump, which will not start the load, but give him such a severe jerk in the shoulders that he will fly back and stop the other horse. The teamster will continue his driving without cessation, and by the time he has the slow horse started again, he will find that the free horse has made another lunge and again gone back, and now he has them both badly balked, and so confused that neither of them knows what is the matter, or how to start the load.

Next will come the slashing and cracking of the driver's whip, till something is broken, or he is through with this course of treatment. It takes a steady pressure against the collar to move a load, and you cannot expect him to act with a steady determined purpose while you are whipping him.

Almost any team, when first balked, will start kindly if you let them stand five or ten minutes as though there was nothing the matter, and then speak kindly to them and turn them a little to the right or left, so as to get them both in motion before they feel the pinch of the load. But if you want to start a team that you are not driving yourself, that has been balked, fooled and whipped for some time, go to them and hang the lines on their hames, or fasten them to the wagon so that they will be perfectly loose; make driver and spectators stand off some distance, so as not to attract the attention of the horses, and unloose the check reins so that they can get their heads down if they choose; let them stand a few minutes in this condition till you can see they are a little composed.

When you have them ready to start, stand before them, and as you seldom have but one balky horse in a team, get as near in front of him as you can, and if he is too fast for the other horse, let his nose come against your breast; this will keep him steady, for he will go slow rather than run on you. Turn them gently to the right without letting them pull on their traces, as far as the tongue will let them go, stop them with a kind word, gentle them a little and turn back to the left by the same process; as you turn them again to the right, steady them in the collar, and you can take them where you please.

If you want to break a horse that has long been in the habit of balking, you ought to set apart a half day for it. Put him by the side of a steady horse, have check lines on them, tie up all the traces and straps, so that there will be nothing to excite them. Do not rein them up, but let them have their heads loose, walk them about as slow as possible, stop often and go to your balky horse and gentle him; do not take any whip about him, or do any thing to excite him, but keep him just as quiet as you can; he will soon start off at the word, and stop whenever you tell him.

As soon as he performs right, hitch him to an empty wagon and have it stand in a favorable place for starting. It would be well to shorten the stay-chain behind the steady horse, so that if it is necessary he can take the weight of the wagon. The first time you start them do not drive more than two rods at first; watch your balky horse closely, and if you see he is getting a little excited stop him before he stops of his own accord, caress him a little and start again, drive them over a small hill a few times, and then over a larger one, all the while adding a light load. This process will make any horse pull true.—*Cleveland Leader.*

EASTERN BEGGARS.

Mendicancy as Practiced in Northern Persia.

Here in rich and happy America we know knothing of begging as it is practiced in less favored lands. To know this disagreeable experience in all its fulness, we must cross the ocean and travel in Ireland, Spain, Italy, but more especially Asia; then we shall be less inclined to complain at our few home-made mendicants.

Here is a description of what a recent traveler was forced to encounter from professional beggars in Northern Persia:

"On leaving my caravanserai," he says, "I thought I was rid of the mendicants and dervishes who had beset me, but I soon discovered my mistake. Taking short cuts across the field, they had posted themselves at different points of vantage along the narrow path, from which they had not only recommenced their importunities, but almost made use of physical force to arrest my horse. There were dervishes with beards stained of a fiery-red color, and wearing queer conical hats, who, if they did not regularly belong to the howling sect of Constantinople, most decidedly showed themselves qualified for admission to it by the fashion in which they yelled, screamed and groaned, exhorting me in the name of the blessed Ali and the Imans Hassan and Hossein, not forgetting Haziret Abass and many other holy people, to give them charity. Then there were the old, the blind and the lame—men, women and children—hanging on to my stirrup and seizing my bridle. Some were horribly deformed, and it seemed marvelous that they should have undergone such apparently frightful disasters as were necessary to reduce them to their then present mutilated condition, and yet continue to exist. They seemed to consider that in my supposed quality of hadji on my way to Meshed I must be bursting with the desire to distribute all my worldly property to the first comers who might think fit to ask me for it."—*Youth's Companion.*

—The height of the tallest mountain in the world is a little less than six miles.—*Chicago Herald.*

THE ANT-LION.

Its Astonishing Sagacity in Obtaining Food.

In Africa deep pits are often made by human hunters to capture game, and among the insects we find the ant-lion *(Myrmeleon)* adopting a similar ruse. Its eggs are laid in sandy places, and when the young ant-lions appear they have no wings, and are flat little creatures with immense jaws. As soon as born, the curious larvæ proceed to work. Each young ant-lion selects a soft place in the sand, and by turning itself around and around, it traces an exterior circle; and by continuing the spiral motion, and gradually retreating to the center, it marks out and forms a cavity having spirals like those of a snail shell. Next, these are smoothed down by an ingenious process. If a pebble rolls in, or is found in the slope, the ant-lion places it upon its head, and with a sudden jerk sends it far out of the pit. But sometimes pebbles are found that are too heavy to be thrown out in this way, and then another plan is adopted. The pebble is carefully rolled upon the flat back of the ant-lion, which starts up the incline with its tail high in air, so that the load is kept upon a level, and finally deposited upon the outside. If the pebble is round, many attempts have to be made. The pit completed is seen to be a circular or conical depression, at the bottom of which the wily hunter conceals itself, only its jaws and many eyes being visible; and here it awaits its prey, that sooner or later comes tumbling in. Ants that happen to be off on a foraging journey are the most frequent victims. The ant comes running along rapidly, and is over the edge of the pit before he knows it, the treacherous sand giving way and precipitating him down toward the concealed lion. A moment more and two (to him) enormous jaws open, and the ant quickly disappears from sight forever. Sometimes, instead of tumbling down into the pit, the ant obtains a foothold and almost escapes; but in such a case the ant-lion throws aside all concealment, rushes out, and shovels sand upon its struggling victim, and by successive jerks bombards it with such a fusillade of sand that, beaten and confused, it rolls down into the open jaws of the cruel hunter. For two years the ant-lion carries on its predatory warfare, gradually growing larger and enlarging its pit, until finally it is ready to change into a chrysalis. It then envelops itself in a round ball of sand, cemented together by fine silken chords. In this cocoon it lives for about three weeks, when it emerges a perfect four-winged insect resembling the dragon-fly.—*C. F. Holder, in St. Nicholas.*

He Drew the First Train.

William Wilson, of Fonda, bears the honor of having hauled the first train of cars between Schenectady and Albany. He drew it with a team of horses. When the first locomotive was put into use on this road he was employed, with other young men, in sodding the sides of the embankments along the line. He said that the trains ran so slow that he often amused himself and provoked the engineer by running across the track in front of the engine with an armful of sod, and back again, while the train was making its best time. He has lived to see wonderful improvements in railroad locomotives and the manner of operating them. He can not recall the exact day of the month when the first train was run between Schnectady and Albany, but he says it was either in the latter part of July or the first of August, 1831. Ground for the road-bed was broken on the 25th of July, 1830.—*Utica Observer.*

THERE are 103 different species of sharks. Take your choice.—*Detroit Free Press.*

All "Played Out."

"Don't know what ails me lately. Can't eat well,—can't sleep well. Can't work, and don't enjoy doing anything. Ain't really sick, and I really ain't well. Feel all kind o' played out, someway." That is what scores of men say every day. If they would take Dr. Pierce's "Golden Medical Discovery" they would soon have no occasion to say it. It purifies the blood, tones up the system and fortifies it against disease. It is a great anti-bilious remedy as well.

"O, Lor' Hit 'Im Again!"

In the early days of Methodism in Scotland, a certain congregation, where there was but one rich man, desired to build a new chapel. A church meeting was held. The old rich Scotchman rose and said: "Brethren, we dinna need a new chapel: I'll give £5 for repairs."

Just then a bit of plaster falling from the ceiling hit him on the head.

Looking up and seeing how bad it was, he said: "Brethren, it's worse thon I thought; I'll make it 50 pun'."

"Oh, Lord," exclaimed a devoted brother on a back seat, "hit 'im again!"

There are many human tabernacles which are in sore need of radical building over, but we putter and fuss and repair in spots without satisfactory results. It is only when we are personally alarmed at the real danger that we act independently, and do the right thing. Then it is that we most keenly regret, because we did not sooner use our judgment, follow the advice born of the experience of others and jump away from our perils.

Thousands of persons who will read this paragraph are in abject misery to-day when they might be in a satisfactory condition. They are weak, lifeless, full of odd aches and pains, and every year they know they are getting worse, even though the best doctors are patching them in spots. The origin of these aches and pains is the kidneys and liver, and if they would build these all over new with Warner's safe cure as millions have done, and cease investing their money in miserably unsuccessful patchwork, they would be well and happy and would bless the day when the Lord "hit 'em" and indicated the common-sense course for them to pursue.—*London Press.*

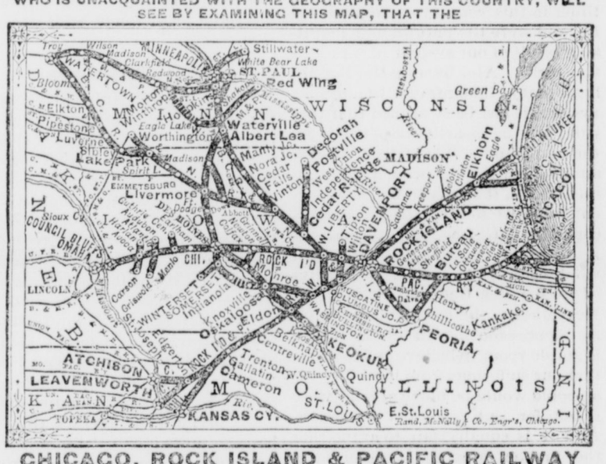
PARSONS' PURGATIVE PILLS
MAKE NEW RICH BLOOD
Positively cure SICK-HEADACHE, Biliousness, and all LIVER and BOWEL Complaints, MALARIA, BLOOD POISON, and Skin Diseases (ONE PILL A DOSE). For Female Complaints these Pills have no equal. "I find them a valuable Cathartic and Liver Pill.—Dr. T. M. Palmer, Monticello, Fla." "In my practice I use no other.—J. Dennison, M.D., DeWitt, Iowa." Sold everywhere, or sent by mail for 25 cts. in stamps. Valuable information FREE. J. S. JOHNSON & CO., BOSTON, MASS.

Don't Discharge your Doctor
But tell him frankly you are getting desperate. Perhaps he will review his treatment, and advise a trial of
Ayer's Sarsaparilla.
In this case, as in many others, the change worked wonders:—

Three years ago I suffered greatly from Liver Complaint, General Debility, Loss of Appetite, and Headache; my stomach was disordered, and, although I ate sparingly, of carefully selected food, I was in constant distress from indigestion. I was troubled with sleeplessness, and became so emaciated and feeble that I was unable to leave my room. After remaining in this reduced condition over a month, and receiving no benefit from the medicines prescribed for me, I obtained my doctor's consent to a trial of Ayer's Sarsaparilla. Before I had finished the first bottle of this medicine I began to improve. By its continued use the troubles with my liver and stomach gradually disappeared, and my appetite and strength returned. After taking eight bottles my health was fully restored, and I am again able to attend to my business.—Isaac D. Yarrington, Bunker Hill st., Charlestown District, Boston, Mass.

Copyrighted.
For all disorders of the Blood, use
Ayer's Sarsaparilla.
Prepared by Dr. J. C. Ayer & Co., Lowell, Mass. Sold by Druggists. Price $1; six bottles, $5.

A MAN
WHO IS UNACQUAINTED WITH THE GEOGRAPHY OF THIS COUNTRY, WILL SEE BY EXAMINING THIS MAP, THAT THE



CHICAGO, ROCK ISLAND & PACIFIC RAILWAY
By reason of its central position and close relation to all principal lines East and West, at initial and terminal points, constitutes the most important mid-continental link in that system of through transportation which invites and facilitates travel and traffic between cities of the Atlantic and Pacific Coasts. It is also the favorite and best route to and from points East, Northeast and Southeast, and corresponding points West, Northwest and Southwest.
The Rock Island system includes in its main line and branches, Chicago, Joliet, Ottawa, La Salle, Peoria, Geneseo, Moline and Rock Island, in Illinois; Davenport, Muscatine, Washington, Fairfield, Ottumwa, Oskaloosa, West Liberty, Iowa City, Des Moines, Indianola, Winterset, Atlantic, Knoxville, Audubon, Harlan, Guthrie Centre and Council Bluffs, in Iowa; Gallatin, Trenton, Cameron and Kansas City, in Missouri; Leavenworth and Atchison, in Kansas; Albert Lea, Minneapolis and St. Paul, in Minnesota; Wentworth in Dakota, and hundreds of intermediate cities, towns, villages and stations.

THE GREAT ROCK ISLAND ROUTE
Guarantees its patrons that sense of personal security afforded by a solid, thoroughly ballasted road-bed; smooth tracks of continuous steel rail; substantially built culverts and bridges; rolling stock as near perfection as human skill can make it; the safety appliances of patent buffers, platforms and air-brakes; and that exacting discipline which governs the practical operation of all its trains. Other specialties of this route are Transfers at all connecting points in Union Depots, and the unsurpassed comforts and luxuries of its Passenger Equipment.
The Fast Express Trains between Chicago and the Missouri River are composed of well ventilated, finely upholstered Day Coaches, Magnificent Pullman Palace Sleepers of the latest design, and sumptuous Dining Cars, in which elaborately cooked meals are leisurely eaten, "good Digestion waiting on Appetite, and Health on both." Between Chicago and Kansas City and Atchison, are also run the Celebrated Reclining Chair Cars.

THE FAMOUS ALBERT LEA ROUTE
Is the direct and favorite line between Chicago and Minneapolis and St. Paul, where connections are made in Union Depots for all points in the Territories and British Provinces. Over this route, Fast Express Trains are run to the watering places, summer resorts, picturesque localities, and hunting and fishing grounds of Iowa and Minnesota. It is also the most desirable route to the rich wheat fields and pastoral lands of interior Dakota.
Still another DIRECT LINE, via Seneca and Kankakee, has been opened between Newport News, Richmond, Cincinnati, Indianapolis, and Lafayette and Council Bluffs, Kansas City, Minneapolis and St. Paul and intermediate points.
For detailed information see Maps and Folders, obtainable as well as Tickets, at all principal Ticket Offices in the United States and Canada; or by addressing
R. R. CABLE, President and General Manager, Chicago.
E. ST. JOHN, General Ticket and Passenger Agent, Chicago.

RIDGE'S FOOD
A physician of large practice says of Ridge's Food: "I can say of this preparation of food that it has never failed me, or failed to agree when given strictly according to my directions. With scrupulous care, there need be very little trouble from bowel complaints; and to this I ascribe the fact that I have never yet lost a child with any form of diarrhœa or cholera infantum."

SATURDAY, AUG. 8, 1885.

There seems to be a general and widespread complaint of hard times. Great business depression seems to prevail all over the country and affects all classes of business. There is a wide difference of opinion as to the cause of this business depression, and nobody has been able to explain the matter to the satisfaction of all classes. The hard times of which we as a people are complaining seem to be felt with equal severity in England. An English writer says "that few Englishmen can recall a period of depression which for severity and duration can compare with that which that country now suffers from, and the end of which none are able to see." So severe is the depression there, that all national industries are likely to come to a stand still. In view of these facts the Government of Great Britain has appointed a commission to inquire into the causes of the present business depression in that country. Numerous opinions have been advanced in explanation of the hard times. But the problem so far as we can see is still unsolved. There is one explanation which has been frequently referred to by politicians, political speakers and partisan newspapers to which we desire at this juncture to call attention. It has often been asserted by the authorities above referred to, that the hard times in this country were produced by, and were the natural and inevitable result of our system of a protective tariff. And because the Republican party inaugurated the present system, it has been argued that that party was necessarily responsible for the hard times. The fallacy of such an explanation or of such an argument must, it seems to us, be apparent when we reflect upon the present condition of free trade England. England has no protective tariff, and whatever advantages are to be derived from a free trade policy is her's. Nevertheless she has all the suffering and depression of hard times. There is ample room to believe and to argue that our sufferings from hard times as a people would be much greater were it not for our system of protection. And it is equally fair to argue that the greater amount of suffering in consequence of the hard times (much greater than ours) in Great Britain, is in a great measure due to the free trade policy of that country. Whatever may be the cause of hard times, we think the fault is not in the tariff.

The Nation's Dead.

MT. MCGREGOR, August 3.—At 2 o'clock yesterday afternoon Mrs. Grant and her daughter, and three sons and their wives, were in the cottage parlor on Mount McGregor. Rev. Dr. Newman and wife were also there. The family circled the catafalque, beneath which the calm peaceful face of the general made one of the group. Mrs. Grant from a table brought her husband's Bible. She opened it, passed it to Mrs. Newman, and the latter handed it to Dr. Newman, and when the minister had adjusted his glasses he found that on the opened page was printed the 11th chapter of Job. The chapter was read, and then the clergyman re-read with tender emphasis the 16th and 19th verses. A slight pause, and then Dr. Newman bowed for prayer, and each one of those present knelt about the silent member of the group.

MT. MCGREGOR, August 3.—Gen. Hancock arrived here this morning. He telegraphed here from Saratoga that no salutes should be fired in his honor upon his arrival at Mt. McGregor, as it would be in bad taste. The General marched at the head of his staff up the slope to the cottage, where he was met by Col. Grant. None but the General and his staff were admitted to the cottage at that time, but later the doors were thrown open to the general public.

Notwithstanding the heavy rain storm trains up the mountain were crowded and the single file of those who passed through the cottage to view the remains did not cease till 6 o'clock.

The funeral service over the remains of the departed General will be held at 10 o'clock to-morrow morning and will probably be concluded about noon. Rev. Dr. Newman will deliver the funeral sermon inside the cottage if it is too stormy, and from the veranda if it is fair. Dr. Newman will not speak either at Albany or New York. The Grand Army ritual service will be conducted at New York by Meade Post, of Philadelphia. Gen. Hancock and staff will come up from Saratoga in the morning in time for the service and General Sherman will accompany them.

The programme of saluting with cannon to-morrow according to the order of the War Department will be thirteen guns at sunrise, thirty-eight at sunset and one gun every half hour throughout the day. After the ceremonies to-morrow the remains will be taken to the train and conveyed thence to Albany.

Colonel Grant this evening issued an invitation to all the representatives of foreign nations accredited to this Government to participate in the ceremonies at New York.

ALEXANDRIA, VA., August 3—The following telegraphic correspondence passed to-day:

GOVERNOR'S ISLAND, August 2.
Gen. Fitz Hugh Lee, Alexandria Va:
Would it be agreeable to you to be appointed as an aide on the occasion of the ceremonies in connection with the obsequies of Gen. Grant? If it would you will be so announced. Please reply by telegraph.

W. S. HANCOCK,
Major General.

ALEXANDRIA, August 3.
Gen. W. S. Hancock, Mt. McGregor:
Your telegram received. I accept the position because by so doing I can certify my respect for the memory of a great soldier, and thus return as far as I can the generous feelings he has expressed toward the soldiers of the South.

FITZ HUGH LEE.

Funeral services over Gen. Grant took place Tuesday morning in the cottage on Mount McGregor. Rev. Dr. Newman preached the sermon. The remains were then placed on the funeral train and taken to Albany, N. Y.

An imposing Grant memorial service was held in Westminster Abbey, London, Tuesday. Canon Farrer delivered an eloquent address.

Grant's Pall-Bearers.

WASHINGTON, July 31.—One of the most noticeable features of the preparations for the funeral of Gen. Grant has been the care that has been taken for the presence at the obsequies of representative men of both the South and the North. When President Cleveland was requested to select the pall-bearers he at once asked Mrs. Grant if she had any preferences to suggest. She replied that she had but one request to make in that connection. If either General Sherman or General Sheridan were to be selected, she hoped some ex-Confederate general would be chosen also. Mr. Cleveland met this suggestion more than half way. He selected both Sherman and Sheridan, and also two ex-Confederate generals—Buckner and Joe Johnston. Considerable comment has been caused by the fact that no ex-president of the United States was named as one of the pall-bearers. At the White House to-day it was stated officially that this was because the ex-presidents were provided for with the mourners in the official program, but it is generally understood that the real reason is that Mr. Arthur could not have been made a pall-bearer unless Mr. Hayes was also chosen, and that the selection of the latter would have been unpleasant to those Southern Democrats and others who have never recognized him as having been legally elected president. It is also learned here in Washington that quite a number of bodies of ex-Confederate soldiers are arranging to take part in the funeral parade in New York.

Refering to the regrets that has been expressed in some quarters that General Grant is not to be buried in his uniform, with one of his swords by his side, and to the supposition that none of his uniforms or swords are available for that purpose, because they were all turned over to the government some months ago with his other military relics, Adjutant General Drum to-day said to an Associated Press reporter that any or all of them are at the disposal of Mrs. Grant while they remain in the War Department awaiting the action of Congress.

It is said that as one of the results of Mr. Gorman's visit to Garrett county last week Dr. B. T. Keller, of Oakland, was agreed upon as the Democratic candidate for State Senator in Garrett this fall to succeed Mr. Getty.—*Cumb. News, Tuesday.*

An ex-Confederate, in Richmond, recently said to a gentleman from Iowa: "We Democrats vote the Democratic ticket first, and attend to religion and prohibition afterward."

A Wrong that Rises Up.

The Dolphin matter may become a standing source of trouble in the Navy Department. Injustice never will rest tranquil. Wrong will continue to cry out for redress. The altercation now going on between the Naval Advisory Board and the Dolphin Board of Examiners shows very plainly that there may exists at least a valid difference of opinion between competent judges as to the merits or demerits of that ship. There are two opinions everywhere. The navy is divided—some standing by the Secretary, and others favoring the acceptance of the ship as a substantial fulfilment of the requirements of the contract,

There are two aspects of this case that may give trouble: those of the law and those of the facts. The rejection of the ship is based on the facts as found by a board which knew the Secretary's desire to reject the ship. The finding of this board was a foregone conclusion. Its officers understood how to find favor with the department. But the facts that they find are contradicted by competent persons, and the question cannot fairly be regarded as closed.

The view of the law which declares that the contract was controlled by the law, and that, besides, the contract was void, is one that carries difficulties with it. If there was no valid written contract, then the relations of the parties must require adjudication. Thus there are troubles thickening both in regard to the facts and the law. Injustice is always troublesome.

The great desire of the Navy Department had always been to score a point against the former administration of that department. In its haste to condemn a very fine ship, which competent authorities pronounce to be fully equal to the demands made upon her, the department did not carefully consider the complications certain to arise under any injustice in the decision. As matters now stand, the navy is dissatisfied and divided; the people are dissatisfied; the government is in the toils of complications woven by itself, and the largest shipyard in the country is made insolvent. And the end is not yet.—*Baltimore American.*

Bridges Destroyed.

BALTIMORE, August 3.—A heavy rain has prevailed here since last night, but no serious damage has been done. In western Maryland there was a severe storm and much damage was done. Catoctin creek, in Frederick county, overflowed its banks and much fencing was washed away. In Carroll county, on the line of the Western Maryland railroad, several bridges between Westminster and Union Bridge are swept away, and all railway travel between those points suspended; besides there are several washouts, and several days will be required before travel can be resumed. On the Hanover branch railroad one bridge has been thrown down and a passenger train this morning narrowly escaped. As the last car of the train passed over, the bridge fell and the ties were supported only by the rails. In Washington county there was a submerging of the different valleys. Near Boonsboro and Funkstown the crops were considerably damaged by the flow of water. A man named Geisman was struck by lightning and killed while standing in the door of his house. The house was set on fire and considerably damaged.

Educating a Wife in Finance.

From the Boston Transcript.

Mr. W. is quite an elderly, wealthy gentleman, having for his second wife a lady many years his junior and much petted. Any expressed wish of hers he has at once gratified, if money could be the medium. One evening she remarked in her charming way: "I saw to-day, at —— store, a lovely camel's-hair shawl that I want ever so much. Would you bring home to-morrow a check? It's only $1,500. "Yes. dear," he replied; "I will bring the money, and the next evening, with the assistance of the porter, he did bring home and placed on the parlor table 1,500 silver dollars. At the sight of this pile of metal, weighing nearly 100 pounds, the wife exclaimed: "What are you going to do with all that money?" "Why, love, it's the money you wanted for the new shawl." "Good gracious! Does it take all that to make $1,500? Why, I had no idea it meant so much. I will do without the shawl and put it all in the savings bank if you will let me," and she did so, and has since added several sums to the deposit. Mr. W. affirms on his honor that since that event she has not asked for a quarter part so much money as before the incident.

Six lives were lost by the cyclone in Philadelphia Monday, and the total losses to property in Philadelphia, Camden, N. J., and to river craft will foot up over half a million.

SEASIDE SAUNTERINGS.

From Our Regular Correspondent.

ATLANTIC CITY, N. J., July 31, 1885.

"The panting City cried to the Sea,
I am faint with heat; O! breathe on me.
So, to the City, hot with flame
Of the pitiless sun, the east wind came.
It came from the heaving breats of the deep,
Silent as dreams are, and sudden sleep."

As great storms drive neat cattle to the barns and homesteads, so does the terrible heat that beats down upon Philadelphia, Washington, and other cities of the east, this year as never before within the memory of the oldest inhabitant, drive depressed, enervated, sweltering humanity to the sea coast resorts, most prominent of which, and the largest patronized in this country, is Atlantic City.

As this is rapidly looming up as the great elysium and sanitarium, now that it is reached so quickly and easily by competing lines of railway from Philadelphia and other places, it is well to know of it somewhat in detail.

Fifty-seven miles south-east from Philadelphia by rail is a strip of made land. An island washed up by the sea and fastened to that which halted its drifting sands. It was made by the sea as man's reputation is made, adding a letter year after year to good foundation.

"Ever drifting, drifting, drifting,
With the shifting
Currents of the restless main,
Till in sheltered coves and reaches
Of sandy beaches,
The tides ebb and flood again."

Thus the Atlantic Ocean added an island to the coast of New Jersey. A strip of land or sand dunes, about ten miles in length from northeast to southwest, and from one-fourth to three-fourths of a mile in width. It lies parallel to and is about five miles distant from the mainland of New Jersey, from which it is separated by numerous bays, sounds, thoroughfares and salt meadows. These thoroughfares are great ditches or canals, so deep and wide that ships drawing twelve feet of water can be warped through. Thus, at the north of Atlantic City is an inlet by which ships laden with ice from the coast of Maine can enter and be worked or warped along the thoroughfares clear around the city and emerge south. By this means cargoes of ice, etc., are brought here and run inland to be stored in great ice-houses close to the railroad tracks till wanted for use in city or country.

It was discovered a few years ago that the air here is laden with iodine and chloride of sodium. That the winters here are about as at Charleston, S. C. That the soil here, being nothing but sand or silica, with no clay above the sea level, is drained of its accumulating impurities soon as rain-drenched. That the Gulf-stream with its forty miles width of warmer water runs along to a point a little north of this, then shoots away to the east and around into the ice regions. Thus the east winds are made endurable as they sweep over the warm waters of the Gulf stream in winter. A few years ago, returning from Europe in midwinter en route from Liverpool to New York, we were out in a terrible storm. The rigging of the ship was so encrusted with ice that sailors could not handle it till the captain dropped away to the south about due east from Philadelphia to be thawed out.

It was also found that the air here is dryer than at any other bathing resort on the coast. That silks and colors in ladies dresses are not so injured and bedimmed here as at Cape May, which is south, or at Asbury Park, Ocean Grove, Long Branch, etc., and other places north. Therefore it is for Philadelphia to boast of the most attractive coast resort in this country from a sanitary point of view, even if she does have to run across the kidney-shaped State of New Jersey to get to it.

To reach this point from Philadelphia cross the Delaware river by a first class ferry to Camden, a live city of renown and wriggling politicians, each of whom is ever anxious to get there. Then take the cars direct for Atlantic City. A ride of an hour and a half, across a strip of rich, well improved gardening country; then across an undulating sandy barren, covered with a furze of dwarf pine and worthless underbrush till the salt meadows are reached. The water ways are bridged, the cars speed on and into the cool, life-giving breeze coming in responsiye to the cry of the panting city, faint with heat, trying to reach the interior, but made prisoner and walloped out by the heat waves rising in their merciless shimmer from sand plains that are several degrees hotter than is the revised edition. Like coming from a hot, prickly barley field in harvest time to the cool of a good old fashioned milk cellar; like coming home from a hot and hateful war to the clover fields and cherry orchards is the coming here from Philadelphia or other locality where the sun is merciless and where health faints, fails and goes down from lack of proper rest and care when in the conflict of elements infants and adults alike vainly seek restful sleep with one hand down in the cool of the grave.

Thus by cars we reach Atlantic City. A few days since nearly 300 car loads of passengers came here from Philadelphia, each to bathe, to rest, to be cool, to rejoice. For many years this was simply Absecom Beach. A light house whose light can be seen twenty-six miles out at sea is known as Absecom Light. The inlet above noted is known as Absecom Inlet, along whose mouth not many years ago was a growth of oak duly converted into stout ships. That was when the United States had a navy and power on the waters. This is in Atlantic County that has about 20,000 resident population, the chief native pursuits are oystering, fishing and farming, profitable in the order named. In Philadelphia Absecom oysters are the way up bivales, before whom all others bow down and tremble. They are small, but very sweet and delicious. In a round with the Blue Points as popular in New York as brown shelled hen's eggs are in Boston, the Absecom oysters would knock the Blue Points out as quick as a hard shell Democrat would gag at the civil service law.

So it is that Atlantic City is really noted for its oysters, crabs, fish of various kinds to be taken by the hundreds by any novice who care to go out in one of the hundreds of little boats with lateen sails to be had here for a trifle and which go right into the inlets, thoroughfares, bays, etc., where table fish are to be had by the millions. Now that we have told where Atlantic City is, it will be in order to describe its hotels, cottages, bathing houses, magnificent surf, and its manifold and curious attractions, in one or more subsequent original letters.

State of Trade.

NEW YORK, August 1.—*Bradstreet's*, in its commercial summary, says: "Special telegrams to *Bradstreet's*, while indicating no material change in the general movement of merchandise, continue to report greater steadiness in Eastern and other leading dry goods, wool, and boot and shoe markets. There are no changes in the prices of these commodities, but sales are a little more frequent and dealers inclined to be correspondingly cheerful. The cotton goods market has been slightly stiffened porticularly that for mourning goods, owing to the special demand at this time. A number of special makes of the latter are reported to have been exhausted.

Iron and steel are as dull as ever. The decreased production and increased stocks during the past half year are especially significant. Coal is in no better demand, and the arrangement to take out a large quantity per month during the next few months encourages buyers to hold off. Petroleum speculation has lost its snap, so far as the bulls are concerned, though the statistical position of the product has remained quite as strongly in favor of higher figures as heretofore.

A special to *Bradstreet's* from St. Paul states that the weather in that region has greatly favored the bull side of the wheat market as there has been great heat, followed by rain and serious damage to the crop. The measure of the injury has not been determined. This has been particularly true as to the north. In the southern portion of the region indicated some damage has been done by chinch-bugs, but there has been little or no rain. The demand for grocery staples has been moderate and without and special improvement. Dairy products are lower, with a restricted demand both for the home trade and for export.

The reports from financial centres East and West bring no signs of improvement. Those from Chicago point to a decline in the demand for money during the week.

Delirium Tremens Cured.

Justice Casey, of Tompkinsville, Staten Island, was seated in his office on Wednesday evening when a man named Brown came in, and said that he wanted an officer to arrest another man who was constantly following him about with a shotgun and threatening murder. 'Squire Casey saw at once that Mr. Brown was in a wild state of delirium tremens, but that it was not a desperate case. The 'Squire turned to Constable McVey, who was in the room, and ordered him to go out and arrest the supposed murderous artilleryman and bring him into the back yard, where they would saw him in two. Constable McVey was told quietly by the Justice to go out in the yard and fix some wood in the sawbuck, which he did. The rest of the novel cure for delirium tremens was told by the Justice.

"I had just got in a full cord of unsplit wood. Constable McVey fixed a log of it in the sawbuck, and led the shivering Mr. Brown out to it. McVey told the fellow that there was his man lying there, and to take the saw and saw him in two. Brown went at the task with a will. When he had got through one log he was given another one, the constable remarking as he adjusted each log that the saw had slipped.

"It was a warm night and the perspiration rolled off Brown in torrents. The whiskey was working out of his system and brain at an equally rapid rate. But a man who has taken so much that he has the 'horrors' must work out a good deal before he is aware of it. So Mr. Brown went on hour after hour sawing log after log. He worked up half my wood pile. I told McVey to stand by, and myself and neighbors, who had been watching the novel cure, went to bed at midnight, with Brown still hard at work. This morning I was told by the constable that his patient had come to his senses about two o'clock, and had then gone into a sound sleep from which it is likely he will awake feeling natural and with a fine appetite. I guess good, honest and hard work would cure a good many other men who are suffering from tarrying about gin mills too much."

ADDITIONAL LOCAL NEWS.

A Card.

Inasmuch as the *Democrat* of last week charges the arrest of Dr. B. T. Keller upon the charge of violating the Local Option law to the "excess of zeal that caused the imagination of the prosecuting witness to make a quart of whisky out of a pint," and inasmuch as I swore out the warrant against Dr. B. T. Keller, I desire to state the facts upon which the charge was made, and then I shall leave the people to draw their own conclusions in the premises. The facts are as follows:

On the 15th of July H. P. Tasker went to Dr. Keller and stated that he was suffering with neuralgia, and thought he needed a stimulant, and asked the Doctor to give him a prescription for a pint of whisky. The prescription was given by Dr. Keller as requested, with the direction to use it three times a day. After obtaining the whisky Mr. Tasker took more than was directed, and went to his boarding house in an intoxicated condition and made some disturbance, which caused the lady of the house to send for me, as town Bailiff, to arrest Mr. Tasker. When I went to the house I was informed that Mr. Tasker was drunk and had a quart bottle of whisky with Dr. Keller's name upon it. That is the way in which the matter became public and not through a "smelling committee," nor through any excessive zeal on my part.

The charge was made in the utmost good faith, because Mr. Tasker's unfortunate habits of intemperance are well known to Dr. Keller and he must have supposed, indeed, as a matter of fact, he could not reasonably have supposed anything else than that Tasker would get drunk if he obtained the whisky.

I do not wish to injure Dr. Keller, but hold that he is as much bound to obey the law as anybody else. If his hands be clean in this matter no harm can come to him. The law is most odious to those who are engaged in violating it. If any man is high enough or honorable enough to openly violate this law, he is certainly honorable enough to take the consequences. So far as I am concerned the present course will be persisted in, and I shall make an information when ever I deem it my duty to do so.

I am willing to leave it to the Grand Jury and the Court to determine whether Dr. Keller acted in good faith or not. I acted upon my honest belief and after hearing the testimony I am satisfied I was not mistaken. I am further prepared to state that the people who are complaining about the treatment of Dr. Keller are those who are either engaged in violating the law or sympathize with the liquor interests. They know that in the person of Dr. Keller one of their number has been touched, and I know when I am opposed by such men that I am right.

Respectfully,
C. E. B. BOYER.

Oakland, Md., Aug. 4, 1885.

Marriage Licenses.

Marriage Licenses were granted to the following parties during the month of July:

Stephen Duckworth and Ida R. Warnick,

Victor N. Brant and Nettie R. Wilson.

Joseph Smitley and Louisa Knox.

D. W. Cormany and Ella B. Elliott.

P. N. Morris and Mary May.

Gilbert W. Paugh and Mary C. Bernard.

George Parker and Annie Printy.

George Weaver and Lizzie Current.

Charles Shobe and Florence McAvoy.

LOCAL NEWS.

LODGE MEETINGS.

OAKLAND LODGE, I. O. G. T., meets in Sturgiss' Hall every Tuesday night.

LOCAL BRANCH, No. 85, of the Iron Hall, meets in same Hall 1st and 3d Saturday nights of each month.

ALTA LODGE, No. 574, K. of H., meets in same Hall 2d and 4th Thursday nights of each month.

SHEALTIEL LODGE, No. 122, I. O. O. F., meets in Legge's Hall every Monday night.

PATMOS COUNCIL, No. 386, A. L. of H., meets in same Hall 2d and 4th Friday ntghts of each month.

The Y. M. C. A. of Oakland meets in the Pritchard Building Friday night of each week

ANNOUNCEMENTS.

[Advertisements under this heading will be inserted at the following rates: For Members of the Legislature, Clerk of the Circuit Court and Sheriff, $4.00; Surveyor and County Commissioners, $3.00, and for Register of Wills, $2.00. Advertisements to run till the meeting of the Nominating Convention. The space allowed will be six lines or less, and 50 cents per line will be charged for each line in excess of that number. No name will be announced until the fee is paid.]

FOR SHERIFF.

At the solicitation of many friends I hereby announce myself as a candidate for Sheriff of Garrett county, subject to the action of the Republican County Convention.

JOHN H. RILEY.

July 7, 1885.

—Mr. John E. Gnagey was in Oakland Wednesday.

—Mr. J. M. Crim is erecting a large addition to his residence on Alder street.

—There are a great many more summer guests at Oakland, Mountain Lake Park and Deer Park now than at any time last year.

—There will be an excursion of Maryland Senators to Deer Park Saturday. Monday they will be taken over the W. Va. C. & P. R. R.

—Col. J. W. Veitch returned home Friday of last week, after an absence of two or three weeks. He had been visiting the scenes of his childhood.

—Mrs. Stahl, widow of the late John Stahl, desires to dispose of her house and lot in Oakland. Persons desiring a cheap property should make a note of this. 7 18 tf

—Died, Saturday, August 1st, 1885, near Deep Creek, Mr. Eli H. Sell. After services at Deep Creek School House, the remains were interred in the Thayer Cemetery.

—We have in our office a head of wheat, of the Golden Mediterranean variety, raised this season on the farm of Mr. S. P. Specht, McHenry, this county, which is six inches in length and well filled.

—The Young Men's Christian Association of Oakland has secured a hall in which to hold its meetings regularly, in the Pritchard Building, near the Postoffice. The association meets every Friday night. All are invited.

—We notice in the Rockland, Me., *Free Press*, of July 22, an account of a reunion of the old Rockland band, which was organized in 1838, and in 1839 became the regular band of Col. Edward Tillson's regiment. Their old commander is still hale and hearty, and is one of our best citizens.

—A number of farmers near Oakland complain that hunters pass over and through their lands, and even through meadows and grain fields, nothwithstanding the fact that they have been at the expense, year after year, of posting their lands by advertisements in the county papers. They now say that they propose to adopt vigorous measures for their protection.

—Farmers who bring produce to town for sale often have trouble in disposing readily of their marketing, and frequently the loss of time takes all the profits on their sales. For their accommodation, and in order to turn an honest penny for himself, Mr. Theo. F. Combs, near the depot, will take marketing and sell it on a small commission and make prompt returns. Give him a trial.

—Alfred Howell, Esq., and his son George D. Howell, Esq., prominent lawyers of Uniontown, Pa., left the Oakland Hotel for their home Friday of last week. When they came here they expected to reman but a few days, but found everything so pleasant and agreeable that their stay was extended to three weeks. They speak highly of the management of the Oakland Hotel.

—Hon. P. Hamill has been appointed postmaster at Oakland, *vice* R. Thayer, removed. The office will remain in the old building until the completion of the new building which is being erected by Mr. Wm. P. Totten near his store, on Alder street, when it will be removed to the latter building. Very general regret is expressed at the removal of Mr. Thayer, who has been an efficient postmaster for many years.

—Died at the residence of Mr. J. R. Browning, near Deep Creek, this county, Wednesday morning, Mrs. Jane H. Browning, in the 79th year of her age. Deceased leaves three sons and five daughters, two of the sons, Messrs. J. Z. and J. R. Browning, being residents of this county. Deceased had been a consistent member of the Catholic church for over thirty years, and was much respected.

—A grand full dress ball will be given by guests of the Deer Park Hotel, Saturday evening, for the benefit of Prof. Jungnickel's Orchestra. A special train will leave Oakland after supper for the convenience of residents and summer guests of Oakland, and will return at the close of the ball. The music on this occasion will be by the full band of fourteen pieces, which, alone, will be well worth the trip.

—Since our last report four cases for alleged violation of the Local Option law have been heard before Esquire Gonder. Thursday of last week the case of the State vs. Dr. B. T. Keller was tried and the accused was held in the sum of $300 for his appearance at Court. Friday the cases of the State vs. James Wiseman and James Tuhill were heard and the defendants discharged. Wednesday last the case of M. J. Miller came up and occupied about four hours in the trial. The accused was held in the sum of $400 for his appearance at Court. In all of the above cases the State was represented by Thos. J. Peddicord, Esq., and the defendants by G. S. Hamill, Esq In our report last week we were in error in stating that Mr. Hamill appeared for Mr. John Miller, Jr. Mr. Miller made his own defence.

Church Services--Sunday.

Garrett Memorial (Pres.) Church—Preaching at 11 A. M. and 8 P. M. by Rev. John S. Foulk.

Lutheran Church—Preaching at 10½ A. M. and 8 P. M. by Rev. C. W. Sechrist.

Preaching at Deer Park, by Rev. C. W. Sechrist, at 2½ P. M.

Preaching at the Deer Park Chapel at 4 P. M. by Rev. J. S. Foulk.

M. E. Church—Preaching at 10½ A. M. by Rev. N. L. Reynolds, and also at 3:30 P. M for the colored people by Rev. Reynold.

St. Peter's, Catholic— Preaching every Sunday at 10½ o'clock A. M., except the second Sunday of each month.

Fair and Festival.

The ladies of the Presbyterian church will hold a fair and festival in the Brooks building, commencing Wednesday evening, August 19th, and will continue three or four days. Lunch will be served during the day. Proceeds to be used in building a parsonage. We respectfully solicit the patronage of the public.

For Sale.

Will be sold on favorable terms—30 horse power steam saw mill complete, with cut-off saw.

Apply to

D. E. OFFUTT, Admst.,
Oakland, Md.

Real Estate Transfers.

The following is a list of real estate transfers filed for record in the office of W. H. Tower, Clerk of the Circuit Court for Garrett county, for the month of July:

Fannie B. and Alpha Hinebaugh to Elmira Hinebaugh, a tract of land called "Fannie's Prize," containing 55 acres and 53 perches; also an undivided half interest in a tract of land called "The Falls of Muddy Creek," containing 500 acres; $10.

Joseph R. Anderson and wife to Jacob Lohr, part of a tract called "Republic," containing 50 acres of land; $350.

Joseph Spiker and wife to Benjamin Sweitzer, 10 acres of military lot No. 3064; $72.

Josiah Bittinger to Solomon Bittinger, a lot of land situated in Garrett county; $200.

Peter Garrahan and wife to Alfred Kelly, military lot No. 3140; $50.

Wm. C. Pennington and wife to The J. S. Rumbarger Lumber Company, an undivided 7-10 interest in a tract of land called "Fairfax," containing 400 acres; $3,360.

Moses R. Hamill, Sheriff, to Ambrose Mattingly, military lots Nos. 1136 and 1652, the property of J. McClure Mason; $1,335.

William Junkins and wife to Chas. E. G. Junkins and wife, military lot No. 1014; $625.

Wm. B. Hutson and wife to David and Virginia Mosser, 25 acres of military lot No. 1228; $350.

George Ruckle and wife to Chas. Raminoff, 15 acres of military lot No. 2388; $100.

Joseph R. Anderson and wife to Franklin L. Warnick, military lot No. 1175; $300.

Wm. C. Pennington, Trustee, to Wm. H. Hall, 55 acres of the tract of land called "Herrington Hanor;" $180.

George D. Browning to Ed. A. Browning, all his interest in a lot of land lying in Garrett county; $1000.

Aaron Ogden, Extr., and others to Lloyd Lawndes, lots Nos. 114 and 115 on the plat of "White and Burton's Addition to the town of Oakland;" $345.

Nathaniel Hallock and wife to Eva F. Riggs, 50 acres of a tract of land called "Emancipation;" $100.

William C. Pennington to Conrad Fratz, 80 acres of the tract of land called "Rights of man"—2nd part; $160.

Truman W. Casteel and wife to Isabella Merrill, 110 acres of the tract of land known as the "Merrill Farm" and called "Veronica the Nun;" $1,291.66.

George Schley and others to Norman Barnard, military lot No. 1530; $225.

Gilmor S. Hamill and wife to Handy Gipson, lots Nos. 2 and 3 of the Subdivision of lot No. 67 in "Wilson's Addition to Oakland;" $450.

Silas Teats and wife to Jackson Teats, 50 acres of the "Gleanings;" $5 00.

Jos. R. Anderson and wife to Hannah Spiker, 20 acres and 5 perches of "Glen Eyry;" $100.

Jos. R. Anderson and wife to Mrs. M. A. West, less than ¼ of an acre of "Latent Worth;" $50.

Jos. R. Anderson and wife to Thos. R. McRobie, 25½ acres of "Pink of Alleghany;" $182.

Fredk. Gortner and wife to Peter P. Gortner, part of "Swan's Meadows," 11½ acres; $115,

A Pleasant Entertainment.

Agreeable to published notice, the ladies of Swanton and vicinity held a Pink Festival and concert in Swanton Wednesday evening, July 29th, surpassing in all commendable features anything of the kind ever previously attempted here. By the courtesy of Mr. C. T. West the large grim-looking grist and flouring mill was temporized into a fancifully embellished concert hall. The spacious room of the lower floor, artistically decked with evergreens and flowers, with gracefully contrived festoons circling the walls and pillars, was occupied by tables of most every luxury that taste could desire, or the season suggest. Among which were ice cream, cakes, watermelons, lemonade, iced teas, peaches, oranges, bananas—the full list would crowd your columns and craze your appetite.

The entire upper room was devoted exclusively to the concert part of the evening's programme. And here too the dust and memory of mill, meal and flour had vanished, and the whole scene blossomed as a fresh bower of wild enchantments. Every seat and standing space over the broad floor was filled. Close upon the left flank of the stage was a Piedmont band of a deservedly high reputation, animating the well-packed audience with many merry airs. On the corresponding flank of the stage eager eyes fell and lingered, for there grouped about the organ could be seen in several types, the very soul of song and beauty--young ladies who came and conquored. When in all the varieties brought by time and the arts down the centuries to us, does

"Music with its silver sound"

so charm the ear and pervade the soul as when rippling over the lips of a transcendently beautiful woman? We pause for your answer, Mr. Editor.

Among many prominent visitors in the crowd we noticed Dr. E. H. Parsons, of Piedmont, Mr. W. A. Brydon, of Bloomington, Rev. Mr. Shoup, of Accident, and others.

The moving motive of this concert was to procure means to paint the Episcopal chapel at this place. After paying all expenses the ladies find they have realized from the concert $76, and that, likely, will be sufficient to accomplish the purpose in view.

RELLIM.

A Big Eleghant Holiday.

For many years elephants have played a prominent part in the Circus world. There have been big elephants and baby elephants, and elephants of all sorts and conditions, but W. W. Cole still maintains his position at the front as the owner of Samson, the largest Asiatic elephant known to be in captivity, which, with the herd accompanying him of the most intelligent specimens of their kind ever imported, form a salient feature of W. W. Cole's New Colossal Shows, which besides contain almost everything that curious humanity cares to see. The circus is so large that it takes several rings and an elevated stage to give all the performers an opportunity to display their accomplishments, and the only fault to be found with this truly enormous show is that it is too big. At every performance sixty distinct acts are given, combining the Circus, Menagerie, Theatre, Roller Skating Rink, Gallery of Wax Statuary, Mexico and the Mexicans, the Living Two-Headed Cow and other distinctive features, all in one pleasing and harmonious exhibition. Performances are given in the Menagerie tents as well as in the Circus rings. The troupe of real Bedouin Arabs are a pronounced novelty, as are also the Human Fly, or aerial ceiling walker, the aerial Bicyclists, the artistic and grotesque Roller Skaters, the Roman Gladiators wrestlers, leapers, gymnasts and rival bareback riders, all of whom enter into spirited competition for supremacy. All kinds of trained animals are introduced and performed, among them that rarest of animals, the white hippopotamus, a two horned rhinoceros and the wonderful horse Blondin, in his tight-rope act. A side-splitting act is that performed by the educated racing pig, ridden by a monkey jockey who "makes nice of no vile hold" when there is a possibility of the Darwinian Dude's losing his balance or being "unhorsed." Take the show all in all, it presents such an array of novelties as to justly entitle it to the title of a "Big Elephant Holiday." The day of exhibition in Oakland is set for Friday, August 21st, when every feature above named and many that space will not permit us to enumerate will be presented furnishing a feast of amusement outranking any three shows that have heretofore existed.

Mountain Lake Park.

The three schools are going steadily on with increased interest, but the school of Photography closed Wednesday, to give place to the Assembly on Thursday. No special programme has been provided for religious services, yet our beloved Bishop (as we call Bro. Thompson) by the help of other willing workers, provides something for nearly every day. We were especially favored on last Sabbath by a grand sermon from Prof. Reynolds. The ladies conducted the meeting at night, which was very good indeed.

The Ryan cottage is occupied by a family from Wheeling. Ex-Senator White and Judge Campbell of Ohio are in another of the cottages on Cosey Row. They will likely be all occupied during the Assembly.

As next Saturday afternoon is to be devoted to excursions and social enjoyment, a special entertainment will be given in the evening, beginning at 8 o'clock. The programme provides excellent music, a variety of addresses, &c., and another very tasteful portion of it will be the variety of refreshments which the ladies are providing for.

The people are gathering for the Assembly. Dr. Frysinger and Prof. Cronce are among those who have arrived.

A large first class hotel will likely be built here in the near future.

I understand that there are two contracts let already for the erection of cottages to be ready for next season. J. A. E.

Davis City.

The excursion from Davis to Piedmont Sunday was a grand success.

The J. S. Rumbarger Lumbering Co. is preparing to build a dam at this place, and will also erect a large saw mill shortly.

Mr. J. W. Bonafield, of Thomas, W. Va., had a fine cow killed Sunday evening by No. 6, on the W. Va., C. & P. R. R.

Senators Gorman and Davis and Hon. S. B. Elkins were in town one day last week.

Dr. Johnson, of Thomas, W. Va., had the misfortune to lose his pocket book Sunday.

Considerable rain fell here Sunday, Monday and Tuesday.

It is reported that No. 6 passenger and express train on the W. Va., C. & P. R. R. will be taken off the road about the last of August.

For Sale--Thoroughbred Short Horn Bull, Jerome.

(REGISTERED 42111.)

Bred by Gen. N. M. Curtis, Ogdensburg, N. Y. Dropped March 2, 1881. A very fine animal. Weight now, in good service condition, 1600 pounds. His get are famous in this section. His owner desires to dispose of him because he is making a specialty of Jersey cattle, and has not room for both breeds. Will sell cheap for cash, or will exchange for a young Jersey cow with a good butter record, or for a second-hand portable steam engine in good order, of three or four horse power. Pedigree of Jerome runs back sixteen generations to Hubback, 319. Is perfectly kind and gentle.

OAKLAND, GARRETT CO., MD.

A SUMMER SONG.

O, lovely sunbeams, through the meadows dancing,
On golden pinions, all the livelong day,
Kissing young leaves, on crystal streamlets glancing,
Changing to living gold their silver spray.
Wee amorous elves, coquetting with the roses,
Wooing the daisy in her grassy bed,
Till the shy flower unconsciously uncloses
Her dew-gemmed leaves, and blushes rosy red!

Gilding gray rocks, on rugged mountains streaming,
Bidding the flowers in sheltered nooks awake,
Calling young song birds from their happy dreaming,
Waking the laughter of the dimpling lake!
Playing "Bo-peep" amid the white buds blowing
In pearly clusters on the hawthorn tree,
To the round eyes of wondering childhood showing
The rapid journeyings of the wandering bee.

Shedding a halo bright on youthful tresses,
Bidding young hearts for very rapture sing,
Touching the brow of care with kind caresses,
Or glinting lightly on the skylark's wing!
Ah, merry sunbeams, like sly cupids straying
In the glad footsteps of the rustic lass,
On sun-tanned cheeks and snow white kerchief playing,
Twinkling like fireflies in the emerald grass.

O, lovely sunbeams, like blest angels gliding
Through courts of squalor, sickness, want and gloom,
Telling of clouds like golden chariots riding
Proudly majestic o'er a world of bloom;
Of winding lanes, and milk-white homesteads peeping
Like modest virgins from secluded bowers;
Of shallow pools, and baby streamlets leaping
In giddy gladness 'neath down-drooping flowers.

Dance, lovely sunbeams, through fair country meadows,
Bathe hill and cottage in your holy light,
From city slums go chase the mournful shadows
That fill poor homesteads with eternal night.
To those who pine in ignorance and sorrow
May all your tenderest, holiest gifts be given,
That sorrowing hearts one ray of hope may borrow
In the sweet knowledge that ye come from Heaven!

—*Fanny Forester in Argosy.*

"A TRUE HERO."

The Tragic Story of Two Ill-Starred Lovers.

He was only a poor artist; she was an opera singer, playing a long engagement in one of the popular theaters of a great city. She was admired, petted and spoiled—was the recipient of fine presents—and had only to smile to bring the wealthiest to her feet. He lodged and toiled in the garret of a miserable tenement in a crowded portion of the metropolis. He ate—which he did only about six times during a week—at a cheap restaurant.

He had no friends, but he had a pure soul and a noble heart. He had genius, too, but people were slow to recognize it, and so he had to starve and freeze and go without decent clothes in consequence. He was a remarkably handsome man, and to those he liked could be very charming. He was engaged on a picture that, when finished, would bring him both fame and fortune. A certain art firm, very popular with the fashionable world, had seen some of this artist's work and were quick to recognize the merit in it, and had engaged him to paint a picture for them, for which they had contracted to pay a fabulous price—and the picture was nearly complete. Poor as he was, he always managed to attend the opera—especially since Celestine Bordelon had been playing.

This Celestine Bordelon was an uncommonly pretty woman—small, but graceful as a swan, and the glorious golden hair that fell down and around her in shining, clustering curls, had stirred many a masculine heart with the fire of love. Her eyes were the most beautiful ever set in a woman's head—so large and tender and brown; so changeful in expression; so bewitching always. As we have said, her admirers were legion—all kinds, conditions and classes bowed in willing homage at her feet. Lovers, too, she had—rich, aristocratic and proud. A thorough star in the theatrical firmament—she was born for that and that alone.

Nightly she held her vast audiences spell-bound. With a voice like an angel, she would draw tears from the most stony-hearted. Her reign was imperial. The country, far and near, resounded with her name. Presents, smiles—aye, and hearts—were showered upon her. But, with all her marvelous success, her heart remained pure and her soul unsullied.

The poor artist loved her when she first appeared before him in the glare of the foot-lights, with a love he had never experienced before. A month had gone by and she was still playing, and his love all the time grew stronger. He always occupied the same remote seat in the crowded theater, and he failed never to send the beautiful actress a bunch of blue-eyed pansies. Inspired with her beauty and his love, he was painting the picture that was to bring him a fortune.

Celestine, touched by the unassuming flowers—so different from the other gifts that were showered upon her—had fathomed out the donor, and as she observed him nightly in his lonely seat her heart went out to him something like pity; but one night as she watched him, with his face all aglow with love and enthusiasm—far handsomer than any human being she had ever seen—the feeling of pity was changed to love—they are so near akin. This was the beginning. It was not hard to effect that which two loving hearts so much desired, and the brilliant and popular actress and the almost unknown and humble artist met and exchanged vows of eternal love.

Nightly would he escort her to her sumptuous lodgings in the most brilliant portion of the great, gay city. One by one the wealthy suitors were rejected and their costly offerings of love returned. All the city wondered and many tongues were set a-wagging. Little Lucien and Calestine cared for the gossips and scandal-mongers. They knew that they loved each other, and that the love was pure. The poor artist, raised to the seventh heaven of bliss, worked with an inspired brush, and day by day the wonderful picture that was to bring him wealth, fame, his Celestine and happiness grew. Only one more week of labor lay between him and all this. His Celestine, with love-impassioned eyes, gave him sweet encouragement.

The minutes lengthened into hours, the hours into days and the days into a week, and at last the painter pronounced his work complete. With a sigh of infinite satisfaction and relief he laid his brushes and palette aside. Now was his struggle with grinding poverty at an end. The happiness that he had so long coveted, but never hoped to gain, was almost within his grasp. How cheerful the world looked; how brightly the sun shone, and how deliciously sweet the birds sang all around. As he gazed in rapture on his beautiful picture tears of joy coursed down his cheeks; his heart swelled with pride, and a prayer of thankfulness ascended to Heaven from his moving lips.

When night at last infolded the world within her sable arms, and the lighted lamps of the city gleamed like so many stars, the artist sallied forth to the theater, and took his accustomed seat. Never was such a crowd packed within the spacious hall before. Celestine Bordelon closed her engagement on this night, and her friends, of all classes, had gathered to honor her. The orchestra sounded, the curtain was raised and Celestine, in all her dazzling, glittering beauty, stepped upon the stage.

As she gazed on the many upturned faces her heart thrilled with a happiness she had never felt before. The happy face of her lover, turned upon her from his distant seat, filled her with a new enthusiasm, and she sang as she had never sang before.

Hark! What sound is that that interrupts the song upon the singer's lips, and causes every face to blanch and every heart to stand still with sudden terror? It is a voice telling in alarmed tones that the theater is on fire. The voice ceases, and then the panic breaks forth. Every avenue of escape is assailed. Great, strong men, in their agony of fear, dash weak women and children to the ground and trample upon them. Wives, relatives and friends are nothing now—every life is battling for itself.

The red glare of the flames; the great volumes of smothering smoke; the shrill screams of the women and children; the hoarse curses of the men; the groans of the injured; the cries of those endeavoring to command and rescue—altogether make a terrible and heart-rending scene.

In all this confusion and distress where is Luciene Le Fevre, the artist? There he is, with smoke-grimed face and tattered clothing, assisting that old terror-stricken man to escape the burning building. One of the first to escape the flames himself, he has returned again and again to aid those who could not aid themselves. At last all are saved, and he turns to see if his Celestine is among the number. No, she is not there, and no one in the mighty crowd can tell him aught of her.

A sudden chill envelopes his heart, a terrible thought takes possession of his brain. Surely she can not—but, listen! Hear that terrible scream—a woman's scream of mortal agony—borne shrill and piercing to the artist's ear, and causing the blood to turn like ice in his swollen veins. Looking upward in the direction of the cries, at a window of the burning building, surrounded by crackling flames, he sees Celestine Bordelon, waving her hands and calling for help. The sash of the window is down, and the poor girl in her terror has not the strength to raise it. Even had she, it would benefit her none. As leave die in the flames as to be dashed to death on the stony pavement.

For an instant the multitude, looking on from below, is silent, and then a mighty shout arises. Something must be done to save the perishing woman, and that quickly. It is a dangerous undertaking. Already the walls of the building are shaking, and the flames grow fiercer and fiercer.

"Who will risk his life to save yonder woman?" some one shouts; but there is no time given for answer, for Luciene Le Fevre steps forth from the crowd, with compressed lips and determined face, and taking a ladder that is lying near, he plants it firmly against the trembling wall. Celestine sees him, and her heart grows stronger; but when she hears the well-known voice shout up to her: "Have courage, darling, I will save you," her nerves grow strong as steel.

Slowly, step by step, does the heroic artist toil upward. Everything depends upon the utmost care. Again the crowd is silent. Every lip is moving in prayer for the success of the artist. Higher and higher he goes! Angrier and angrier grows the fire. The great building is now one vast sheet of flame, which roars like ten thousand demons turned loose from the infernal regions.

Now! Luciene has reached Celestine. It is but the work of a moment for him to tear the sash of glass away and stretch out his arms and take the trembling girl. Whispering a few words of encouragement in her ear, he clasps her firmly and begins his tortuous, perilous descent. The walls tremble and shake; huge pieces of burning timber fall about him; volumes of smoke surge around him, almost blinding and smothering him. Silently he prays to the God he has always trusted in, to lead him, with his precious burden, safely to the ground. Life has just become of value to him; the future looks so redolent with hope and happiness. Hard, indeed, it would be to die now.

Slowly, oh, so slowly, he toils downward with his lovely burden. To the anxious crowd below every second seems an age. O, he will soon reach the ground. Only a little space lies between him and safety. No sound is heard save the roaring of the flames and the hacking of the axes of the firemen on the adjoining houses.

Merciful heaven! The wall against which the ladder is resting shakes more and more, and is bending outward. The hushed, expectant multitude now realize that the descending couple are doomed to death. A smothered cry breaks the stillness, followed by a tremendous crash and the quaking walls part and fall forward; a cloud of dust and dense black smoke fly upward, and Luciene Le Fevre and Celestine Bordelon disappear forever from life.

Next morning two charred and blackened forms were taken from the ruins of the theater building, and gently borne by tender hands to the city's lovely church-yard, and laid to rest in one common grave. The artist's famous picture was sold, and the proceeds used to purchase a monument, which rises white and grand at the head of the last resting-place of the ill-starred pair, and tells the tragic story of Celestine Bordelon, the famous opera-singer, and Luciene Le Fevre, the "True Hero."—*J. S. Wilson, in Louisville Courier-Journal.*

REBUKING CURIOSITY.

How a Stranger in a California Town Baffled Impertinent Inquiries.

The other day a mysterious-looking stranger appeared in Petaluma and remained five whole days without the inhabitants finding out his name, where he came from, or his business. Even the bar-room loafers were baffled in their attempts to extract some definite information, and the entire town lay awake o' nights worrying over the matter. At last the general agitation grew to such a pitch that the Sheriff volunteered to interview the stranger in behalf of the public weal. Approaching the taciturn visitor, as he sat in the office of the hotel, the functionary remarked:

"Fine day, sir."

"Is, eh?" said the stranger, dubiously.

"Going to stay long in these parts?"

"Just four days, two hours, and thirty-one minutes longer," replied the other, consulting his watch and a time-table.

"Then!—may I-er ahem! may I ask what your business is?" persisted the Sheriff, as the crowd gathered up closer.

"Well, I don't wish it generally known," replied the stranger, confidentially; "but I'm a Russian Nihilist."

"You don't mean it?" gasped the official.

"Fact," replied the man, mournfully.

"But-er-what brings you here?" asked the inquisitive Sheriff.

"Well, you see, I was captured in St. Petersburg last month, and—you know how severe that Goverment is on Nihilists, don't you?"

"O!—yes—of course; go on!"

"Well, they sentenced me to twenty years in Siberia, or a week in Petaluma, and I was fool enough to choose Petaluma."

And with a heavy sigh the condemned man drifted in to dinner.—*Petaluma Times.*

TOURISTS' BAGGAGE.

A New and Convenient Construction of the Immediate Transportation Act.

A recent circular issued by the Secretary of the Treasury appears to have put a new construction upon the Immediate Transportation act of 1880 relative to the baggage of passengers arriving in this country from foreign ports. Heretofore passengers have been subjected to the delay and annoyance of having their baggage examined at New York, whereas, by this finding of the Secretary of the Treasury, this baggage is shipped through in bond direct to forty-four cities named in the act as inland ports of entry, which includes Chicago, Cincinnati, Cleveland, Detroit, Kansas City, Denver, San Francisco, and others. A bond of $1,000,000, is required, however, by the Goverment from the express companies, and the American Express Company is the only one which has as yet given it. Tourists and others who may come from Europe to the United States will thoroughly appreciate this new order of things, as it will be the means of saving much time and vexation heretofore occasioned by the delay of baggage at the New York barge office. Of course the baggage, when shipped through to the interior port of entry, is examined at the latter place, for the Goverment rules as to this are very rigid in order that nothing dutiable shall escape. Should it be the desire of a passenger to have his baggage shipped to an interior point which is not a port of entry he can have it directed to the port nearest his destination, and after examination by the proper officers it will be forwarded by the American Express Company. In case a passenger resides too far from a port where the bonding privilege applies, the company's agent, after the usual examination in New York, will see that it is shipped through to its destination in good order.—*Chicago Tribune.*

THE ROUEN CATHEDRAL.

Description of the Place Where Richard Cœur de Lion is Buried.

The Rouen Cathedral itself, though defaced by an elongated iron nutmeg-grater which has the impudence to call itself a cupola, is magnificent as a mass when first seen from the corner, and finer still when examined in detail from the wonderful gallery of carvings around its great gate to the long-necked gargoyles that stretch their misshapen heads like hungry giraffes from the angles of its mighty tower.

The interior is somewhat disappointing after the grand outside, but beneath its smooth white pavement lies buried many an eventful chapter of history. Here the "lion heart" of Richard Cœur de Lion lies cold and still forever. Here John of Bedford, the destroyer of Joan of Arc, sleeps in the same earth that hides his victim. Here Prince Henry of England, cut off in the flower of his youth, rests in the heart of the fair land that England has lost forever. And here, in the ground that his own right hand wrested from the terrified King of France, molder the bones of grim old Rolf, or Rollo, the first Duke of Normandy, who, when King Charles the Fat offered him his daughter and the seaboard of Normandy on condition of his becoming a Christian, answered with a business-like frankness and promptitude natural to the most eminent pirate of the age:

"I take the maid, or foul or fair, a bargain with the coast,
And for thy creed a sea king's gods are those that give the most."

—*N. Y. Times.*

—A Georgian lost a society badge some twenty years ago and the other day saw it upon the straw bonnet of a negro woman who was passing along the street. The woman said she had been given it some months before by another negro woman, and that it had been worn as a highly prized bonnet ornament.—*Atlanta Constitution.*

COCK-FIGHTING.

An Amusement Which Delights the Natives of Sumatra.

Sumatra, of all places in the world, is the greatest for cock-fighting. It's the national sport. A Sumatra father thinks more of his game cock than he does of his first-born. They pray to the gods for success in their cock battles. Cock-fighting is called kyabung, and the pit galanggan. It is a large inclosure, some twenty feet square, railed in by stakes twelve to fourteen feet high, far enough apart to enable those outside to see all that is going on within. The cocks about to fight were handed over to the care of two officials who direct the affairs of the ring. They attached with great care long, double-edged, steel spurs, sharp as lances. When the sound of the bedoog announced that the arena was to be occupied, all other sports were instantly deserted. The cocks were brought into the ring by the proper official, each holding his bird carefully, with his leg armatures sheathed. No one but officials, owners and a favored few are admitted into the inclosure. The two cocks are held up before each other by the gulongs, who ruffle for them their neck feathers, tug their combs, pat them on their breast and sides, and shake them with a sort of tremulous, instigating motion, which they perform with a knack and neatness that indicates a professional hand. The maneuvers, whose execution are the envy of the on-lookers, are imitated by the children who fight cockerels before they can speak. When the fowls have been thus excited they are allowed to have one dig at each other, just to put them on their mettle, and with their terrible armatures bared they were set facing each other a few feet apart; then came the charge. I shall never forget, for I was utterly unprepared for it from the stolid Malay—the yell and deafening shout of savage delight and excitement that arose from the up to that moment mute and eager, but to all appearances unexcited, crowd as the combatants rushed at each other, and which was kept up while the conflict lasted, nor how the gulongs followed on hands and knees, each close behind his fowl, watching every movement in silence with a glaring and excited eye—the rules of the ring prohibiting them from touching or reinstigating the cocks during the continuance of a round—like nothing I can think of so much as the intense motion of a pointer close behind a warm scent, and at every onset they scanned their bird from side to side to see if it had sustained any injury. In the first contest I saw both cocks were badly wounded in the first round, and even fainted away. The seconds and supporters carried each their bird aside to apply restoratives, if possibly they might continue the contest to a final issue. They bathed its head in cold water, and administered some with a feather down its throat. A cloth was held over it to keep off the sun, and smoking pieces of wood held under its nostrils and over its comb. For a time it seemed as if the worst wounded would have to be declared vanquished, as it was unable to enter the lists, but his spirit came again on instigating him with a strange cock for a few minutes. After the same preliminary patting and forcing and the solitary dig, they were again allowed to rush at each other; but after a few skirmishes, the badly-wounded bird turned tail and was declared the loser. Though the Government prohibits cock-fighting, yet, on special occasion, permission is given for a certain number of days for a chief to hold a tournament. He charges five per cent. on all transactions, and a fee from all stake-holders as a sort of recompense for directing the affair and keeping order. With this percentage the Pongeron is enabled to provide a buffalo at a little cost, which is slain on the last day of this Vanity Fair, followed by a general gormandizing. One hundred and fifty dollars to two hundred dollars often change hands, and as high as $750 has been known to be on the issue of the fight.—*Dr. Forbes, in Cincinnati Enquirer.*

LIFE IN HOLLAND.

How the Sabbath Is Observed in Dutch Towns and Cities—A Dutch Chambermaid.

In Holland the Sabbath is not openly disregarded, as in France and some parts of Germany, but it is not made so gloomy and uninteresting as in England. I have seen the chambermaids in a Holland hotel openly engaged in sewing—that is, making garments, on Sunday, a proceeding that would horrify an English servant. But, I think, could the prim chambermaids of Great Britain, who were never known to make a bed without a given number of motions, see a Dutch girl arranging a bed they would be struck dumb with amazement. After the job is done in Holland the bed-clothes have the appearance of being dumped in a pile and a counterpane thrown over them. Get into it, and your feet are out at the foot of the bedstead in an instant, while you are frantically clutching this side or that for the blankets and sheets. To study the real every-day life of Holland one would have to leave the great cities and visit the towns and villages, many of which can not boast of the modern luxury of a railway. Take such a town as Hoorn, and although its picturesqueness has, I think, been exaggerated by some writers, it is undoubtedly with Alkmaar close by, a good section to learn something of Dutch custom and rural life. It is only within a few months that Hoorn could boast a railroad. This queer old town has stood for centuries on the Zuyder Zee. For miles before it is reached one sees the high embankment, or seawall, that has reclaimed and made land for the track on which the locomotive runs. Generations of sleepy, easy-going people have passed in procession from the cradle to the grave since the days when Hoorn was known and felt in the world. They have dwelt, to be sure, in the same old houses, with narrow, steep stairways, black oaken beams, and gable roofs, that seem to nod and wink and look tipsy and jolly and funny at each other to this day. The doors and the window frames of these houses are painted to-day with the same colors as in the days when the fleet of Hoorn started to take the town of London.—*Cor. San Francisco Chronicle.*

FOR OUR YOUNG FOLKS.

A LESSON IN BUILDING.

"How shall I a habit break?"
As you did that habit make.
As you gathered, you must lose;
As you yielded, now refuse.
Thread by thread the strands we twist
Till they bind us, neck and wrist;
Thread by thread the patient hand
Must untwine, ere free we stand.
As we builded, stone by stone,
We must toil, unhelped, alone,
Till the wall is overthrown.

But remember, as we try,
Lighter every test goes by;
Wading in, the stream grows deep
Toward the center's downward sweep;
Backward turn, each step ashore
Shallower is than that before.

Ah, the precious years we waste
Leveling what we raised in haste:
Doing what must be undone
Ere content or love be won!
First, across the guilt we cast
Kite-borne threads, till lines are passed,
And habit builds the bridge at last!

—*John Boyle O'Reilly, in Wide Awake.*

PATSY'S RED STOCKINGS.

How a Little Boy, Left Alone at a Station, Gave the Signal of Danger to a Passenger Train.

Eight-year-old Patsy was "tending station." The consequence was that eight-year-old Patsy felt exceedingly grown-up.

Not that there was anything under the light of the sun for him to do in the little out-of-the-way railway station. If there had been, Patsy would not have been left there to do it.

The way of it was: Years ago, before there ever was such a boy as Patsy Green, Mr. Thomas Green had been appointed station agent at Green's Corner; a post which he had filled for years. But when Patsy was five years old, God had a higher station for his papa to fill, and so he took him home to Heaven.

Now, Mrs. Green had always helped her husband in the duties belonging to the little station, and had even learned to telegraph; so when she was left a poor widow with her fatherless boy to care for, and clothe, and bring up, and educate and make a man of, the railroad company had asked her to fill her husband's post at the station. And she had been glad to take the place, which she had filled ever since.

All that was the very beginning of it. But the way Patsy came to be 'tending station all alone this afternoon was this: Mrs. Green had received word that her mother was very sick at the other end of the village, and as she could get no one to take her place while she ran over there, she had ventured to leave her boy alone for a little while. Besides there was nothing whatever to do, and wouldn't be until the six o'clock train was due. So Patsy—whose name wasn't Patsy at all, but Alexander—was duly installed and felt extremely important. So much so in fact that he felt at once that going barefooted was not consistent with his new position in life.

Therefore he hurried up-stairs, for they lived over the depot, and donned his best shoes and his one darling pair of red stockings. Then he walked majestically down stairs and about the platform for several minutes; for he now felt that he filled altogether too important a place among men to run and play like a boy.

For some time Patsy squeaked slowly about in his new shoes, trying to be dignified. And although it was hard work he was determined not to give up and play. So he finally went into the waiting room and seated himself on one of the long settees that ran around the room.

"'Taint no matter if I lie down a minute," he finally said to himself. "They do sometimes," and he stretched his heavy shoes and red stockings out on the seat, and tried to look as long as possible.

The afternoon was very warm, and a drowsy feeling was in the air. A big bottle-fly came buzzing monotonously around the window nearest Patsy. The sound of the mowers' scythes in the neighboring fields came floating in upon the stillness. The crickets, too, chirped their sleepy song.

I think it must have been the blended hum of all these sounds, mingled with the excess of dignity that Patsy was trying to bear up under, that did it. Anyway, in about two minutes from the time Patsy lay down he was sound asleep.

A long time after, he was awakened by gruff voices and steps on the platform. The first words he heard caught his attention. "That'll be the end of that bridge! An' as for the train—whe-e-w!"

"Are ye sure the Grand Mogul 'll be on the train? It 'ud be a pity to smash up the train for nothin'."

"Sure, is it? An' didn't I hear him say for sure he'd be on that train? I'll pay him for turnin' off his honest help. When they strike them rails where there isn't any——"

"Come, come," replied the other, nervously. "We'd better be gettin' out o' this. We don't want to be caught within five miles o' that Perry Bridge."

"'Sh! don't talk so loud. You don't s'pose the kid in there can hear, do you?"

"Sound asleep!" was the answer. "Besides he's too little to know what it means. Come, come, hurry." And then Patsy heard the footsteps as they crunched on the gravelly railroad track.

For a few minutes Patsy lay still. He had heard the talk only as one hears in a dream, but soon the words came back to him with a terrible meaning. "It 'ud be a pity to smash up the train." "When they strike them rails where there isn't any?"

Patsy, young as he was, had heard all manner of stories about accidents; how wicked people will sometimes wreck a whole train, killing scores of people, to gratify a spite against one man. Might this not be what was meant by these rough men's talk?

Perry Bridge? It was a mile below the station in an unfrequented, swampy region. O dear! what could such a little fellow do? All his pomposity had vanished. He now felt himself to be a very small boy indeed. If his mother would only come. Patsy was one of those boys who believe in their mother, and he felt sure she would know just what to do. But she didn't appear. Patsy got up and stepped carefully to the door. Looking up the track he could see the forms of two tramps disappearing rapidly. He looked about for some one to whom he could tell his fear.

But no one was in sight. He climbed up to the ticket window and looked at the clock. He had just learned to tell the time of day. It was five minutes past five, and the long, crowded, mountain express train was due at six!

Then Patsy had an inspiration. Without stopping to put on the ragged straw hat, which reposed gracefully on the depot floor, he started down the track, towards the bridge, on the keen run. A mile is a long way for an eight-year-old boy to run under a hot sun; but Patsy's courage never failed him, although for the last quarter of a mile before he reached the bridge, his speed flagged a little.

The cows which grazed in the pasture along his route, stopped eating to gaze in mild-eyed wonder at the diminutive youth who went flying along so wildly; and "Patche's old cross critter" bellowed furiously at the sight of his bright red stockings, and ran after him. But there was a fence between them, and besides Patsy did not notice the creature. His energies were all bent on reaching the Perry Bridge before the six o'clock train was due! Coming to the last curve in the road, Patsy, at last, caught sight of the bridge.

So far as he could see, it was all right.

Perry's Bridge was a long uncovered bridge which ran across the edge of a small, marshy pond. If a train should be wrecked on it, there was no telling what might be the sacrifice of life and limb.

Patsy stopped blankly. Perhaps he had expected to see the bridge half torn up; though if he had, it is hard to say how he could have helped matters. At first he felt that he had been the victim of some mistake, but as he heard the faint whistle of the train down the valley, a second inspiration came to him, and he said to himself: "I'm a goin' over that bridge."

He sat down and hastily pulled off the heavy shoes which had nearly blistered his feet. Between you and me, it would have been a very wise proceeding if he had pulled them off before he started at all, but he did not think of that, and perhaps you and I wouldn't, even if we had had the courage to start at all. But in less time than it has taken me to write it, Patsy was out on the bridge, walking swiftly in his stockinged feet.

Pretty soon the water beneath his feet looked so black and so far below him, and something in his head seemed to be swimming around so fast, that he had to lean over and grasp the slender iron railing. But he did not give it up. He stopped and looked down the track. There it was! For some little distance the rails had all been torn up in the middle of the bridge!

The sight increased Patsy's speed. He scrambled over the bridge, too fast now to think of the dark water so far below him, or of anything but the express train, which he could hear rumbling toward him out of sight.

There! He can see it. A tiny speck away down the straight track, it comes, steadily growing larger. He hurries off the bridge and a little way down the track. He must stop the train and warn them. And how? The approaching train grows larger as it comes nearer, and screeches as if it delighted in the horror that was so near.

Then Patsy had his third inspiration. Quick as a flash, the little fellow pulled off his red stockings, and taking one in each hand, ran down the track, frantically waving them over his head. The train came rushing on like a live thing, nearer and nearer. Oh! would they never stop or would they see the signal?

The boy fairly leaped up in his excitement, and those two red stockings made more effort to attract attention than they ever had while walking to church—and that is saying a good deal, as Patsy himself will own. But the last effort was a success, and the train with a great "fuzz" and "shoo, shooing" whistled for brakes, and came to a sudden stop.

When a moment later, the conductor and the excited passengers came rushing out, they saw nothing more dangerous ahead than a little freckled-faced boy, who bashfully told his strange story. But afterward, after dozens of them, including the Superintendent of the road, had been down, and examined the bridge, why then good times began for Patsy!

And I could not begin to tell you how he was petted and made much of by the ladies, or praised by the gentlemen. And such stores of candy and all sorts of goodies as that boy had stuffed into his pockets, his hands, and first of all, his mouth, till he seemed to be full and running over with them!

When a few hours afterwards, the "Mountain-train" steamed into Green's Corner, and sat Patsy down on the platform, there was a small package handed off, too, which his mother found contained something over fifty dollars in money. And the Superintendent himself said to wondering Mrs. Green: "See that that boy has the best education the land affords, and I will pay for it. He saved my life."

And Patsy's mother still keeps Patsy's red stockings among her choicest possessions, in her top bureau-drawer.—*Helen M. Winslow, in Christian at Work.*

A Pointed Illustration.

The importance of writing distinctly when writing for publication was recently illustrated in a magazine in London. In a clergyman's letter from Asia he meant to write "the people of Judea," but the printer made it "the people of India." The manuscript was submitted to an expert chirographist, who decided that the printer was entirely justified. The clergyman's "Judea," as written, had an I instead of a J, an *n* instead of a *u*, and it was impossible to decide whether the next to the last letter was intended for an *e* or an *i*, it being as much like one as the other. People who write carelessly and indistinctly, when writing for publication, have nobody but themselves to blame when mistakes are made in printing names of persons or places. The printer is usually wonderfully expert in deciphering bad writing, but he can not perform miracles. As an experiment, let the reader hastily write down the words Judea and India, without dotting the *i* of the latter, and then submit it to a company of friends to decide "which is which and which is 'tother."—*Chicago Journal.*

A NEW CURE.

The Cause and the Prevention of Seasickness.

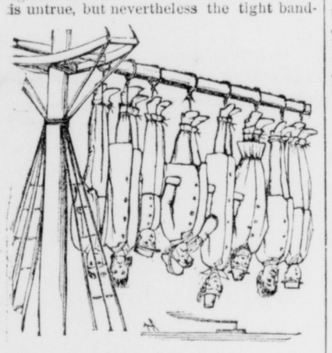
A Scientific Discovery and the Remedies Suggested Thereby—Hint for Steamship Companies, with Suitable Illustrations.

An eminent physician has finally discovered the cause of seasicknes. Of course going to sea is the original cause of seasickness, but the immediate cause of the nausea, headache and prostration which constitutes seasickness is a lack of blood in the brain. Nature, not foreseeing that men would ever trust themselves on the the sea, omitted to supply the vessels of the brain with valves. The result is that when a person is subjected for the first time to the motion of a vessel at sea, the blood, in accordance with the law of gravitation, is drawn from the brain, and there being no valves to retain it, the heart finds

difficulty in pumping enough blood into the brain to supply the drain.

This theory enables us to understand why a sailor on his first voyage recovers from seasickness so much more rapidly than a passenger. The reason is that he is compelled to work, and his circulation being thereby quickened his brain is better supplied with blood than is the brain of the idle passenger. It is the common belief of the seasick person that he obtains temporary relief by emptying his stomach. The facts of the case are that the effort to thus relieve himself throws the blood into his brain and he thereupon feels better. Those judicious persons who spend the first twenty-fours of a sea voyage in their berths frequently escape seasickness, for the reason that while a person is lying down the blood can flow into the brain more readily than when he is in any other position.

Knowing the immediate cause of seasickness, we can be at no loss to know how to treat it. Nothing can be clearer than that the recent proposal to treat seasickness by the exhibition of bromides in strong doses is all wrong. The plan of tying a tight bandage around the waist is supported by those who believe that seasickness is due to the mechanical friction of one organ against another. We now know that this is untrue, but nevertheless the tight band-



age may be of some little use in compressing certain blood vessels, and thus lessening the drain of blood from the brain. Indeed, there is little doubt that were a man to tie a rope so tightly about his neck as to stop the flow of blood in the veins of the neck he would not be seasick, although it is true that he would die of strangulation and asphyxia—a fact that to the minds of some physicians would be an argument against the general use of the remedy.

The proper treatment for seasickness is simply to stand the patient on his head. This would effectually prevent any undue flow of blood from the brain, and would thus render seasickness impossible. It is not necessary that the treatment should be kept up for any great length of time. Twenty-four hours in ordinary cases would be sufficient, for by the end of that time the patient would probably become accustomed to the motion of the ship and his brain would adapt itself to the new conditions.

Steamship companies ought to provide facilities for the proper treatment of seasick passengers. When the number of passengers is small they could be seized up by the feet to the mizzen stay before the ship reaches Sandy Hook, but on board most of our large passenger ships it would be found necessary to provide stout spars to be placed fore and aft at an elevation of, say, twenty feet above the deck.

Now that we know how to treat sea-sickness half the terrors of a sea voyage will disappear. Instead of lying in his stateroom or on the deck miserably sick, the passenger will spend his first twenty-four hours at a breezy elevation above the deck, and without a single abdominal pang. True his position may seem a little cramped and tiresome, but this would soon wear off, and his attention would be attracted and his mind occupied by the novel spectacle of the world when viewed from an upside down position. That this treatment would prevent seasickness there can not be the shadow of doubt, especially when we recollect that the bat, who spends half the year upside down, has never been known in a single instance to be seasick.—*N. Y. Times.*

MISS ROSE E. CLEVELAND.

The President's Sister and Present Mistress of the White House.

Rose Elizabeth Cleveland was the youngest of nine children born to Richard and Anna Cleveland. Her native home was Fayetteville, N. Y., from whence her parents removed to Clinton when she was a little girl, and later to Holland Patent, a little hamlet near Utica, where her father took charge of the Presbyterian Church in 1853. Her father died in that year, leaving little Rose an orphan at the age of seven. The parsonage had to be given up, and the education of Rose became the mother's life thought and labor. In later years she was sent to Houghton Seminary, where she proved a brilliant pupil, graduating with the highest honors. "Original People" was the theme of her graduating essay, her audience pronouncing it a most happy effort. Miss Rose then became a teacher in the Houghton Seminary, when, after remaining in that position two years, she went to Lafayette, Ind., as principal of the Collegiate Institute in that town.

She afterward taught in Pennsylvania at a private school for a short time, and then conceived the idea of lecturing before

classes, and proposed to the principal of Houghton Seminary to make the beginning at her Alma Mater.

The latter entering heartily into the arrangement, Miss Cleveland wrote a course of historical lectures, which she delivered that season. As she devoted herself to her aged mother, she was unable to leave Holland Patent to pursue her work continuously until after her mother's death in the summer of 1882.

After this sad event her brothers and sisters naturally expected that she would make her home with one of them, but being of an independent nature and self-reliant, she preferred to remain in the old home, where she continued to live when not away lecturing until she assumed the exalted position as mistress of the White House.

Miss Cleveland will remain in the White House as long as her brother remains a bachelor, but by her own efforts she has created for herself a position among celebrities in literature that will be more enduring than the honor and fame dependent upon the political fortunes of her distinguished brother.

THE BURRO.

Felicitous Description of a Rocky Mountain Bird.

The burro is a condensed jackass. He is little all over, except his ears and voice. He has long hair all over his body, four legs, two ears and one tail. As a vocalist the burro stands without a rival. He starts off with a low, sweet, "ohy—he—ohy—he—haw—he—haw—haw—haw—he haw!" and keeps it up until you tremble for hit life, and just as you think he will surely stop, or die and get out of misery, he disappoints all your fond expectations by turning on a little more sound, reversing the action and retracting all he has just said.

A vocal solo rendered by a fully equipped burro is an experience never to be for-

gotten. I have seen strong men moved to tears as they listened to his sweetbur melancholy cadence—because they had no club or battering ram with which to show their appreciation, and soothe their perturbed spirits.

The burro can not sing without raising his tail. As his vocal organs limber up, his tail ascends until it is extended in one horizontal straight line, and from the tip of his nose to the tip of his tail he is one continuous, harmonious, exultant wave of sound.

The best way to ride a burro is to hire a cow-boy to do it for you; but if you must do it yourself follow these directions, I've been there.

Place one leg on each side of the thing; then, as your legs may drag, fold them up at the knees. If your knees still drag, unfold your legs and wrap them around the burro three or four times, and hold your feet under your arms. (I used to put mine in my pocket, my feet, not the burro.) Then grasp some of the hair in each hand, close your eyes, speak gently to the burro and off you go. N. B.—You will probably notice that the burro goes off alone and for a very short space of time you are left sitting in the sunlight, about three feet above the ground, with your legs wrapped around a hole about the size of a burro; then you retreat rapidly to the ground and sit down with so much determination that you bite your tongue half off and dislocate your hip. In spite of your wounds you insist in talking until everything is blue and smells of brimstone.

Travelers use burros to climb mountains with. I have discovered that it is as easy to climb alone, as to climb up with a burro between your legs and push him along in front.

It gives a person lots of experience, however, but the next time I will change the programme and climb the burro and carry the mountain. A burro is sure-footed, also four-footed—so is a mule—but we do not love the mule as we do the burro. The mule is all hindfooted.—*Nemo, in Peck's Sun.*

MISCELLANEOUS.

—At the annual sheep-shearing in Vermont the heaviest ram's fleece weighed twenty-eight pounds thirteen ounces, and the heaviest ewe's fleece twenty-one pounds nine ounces. This, it is claimed, exceeds the record at any public shearing.—*Boston Journal.*

—A woe-begone looking specimen of humanity, telling wonderful stories about being captured in the mountains of Syria 250 years ago, shedding six sets of teeth, etc., and claiming to be the veritable Wandering Jew, has been doing up Winston, N. C.—*Charleston (S. C.) News.*

—A man named Selig Voitejtmnotevzky applied to a New York court the other day for the privilege of dropping the last twelve letters out of his name. He based his plea upon sanitary and economical reasons, and the court granted his prayer. His name is now Mr. Selig Voit, and he has our congratulations.—*N. Y. Sun.*

—A Providence *Journal* correspondent recalls that Nathaniel Hawthorne once attended a Bowdoin alumni banquet at which he was expected to speak. The presiding officer at the proper time arose and introduced him with some highly laudatory remarks, and then, turning around, found Hawthorne's chair vacant. That shy genius had slipped out of the room unobserved and was not seen again that evening.

—Toward the close of the reign of Queen Elizabeth, a blacksmith manufactured a padlock of iron, steel and brass, of eleven pieces and a pipe key, all of which only weighed one grain. He also made a chain of gold of forty-five links which he fastened to the lock and key and put around the neck of a flea, which drew the whole with perfect ease. The chain, key, lock and flea altogether weighed one grain and a half.

—B. F. Eastman writes to the Portland (Me.) *Advertiser* that, on the 9th of June, 1816, as he remembers, the ground froze in the region of Portland to the depth of two inches, and summer birds died with the cold. There were frosts in every month of the year except August, and not one bushel of corn ripened. People with money went on horseback to Hallowell to buy the Virginia (or horsetooth) corn at two dollars a bushel. People without money went hungry all the next winter.

—The myth that a large sum of money had been offered by the English Government for 1,000,000 postage stamps is said to have arisen in the following way: An advertisement appeared in London, England, asking charitable people to send their stamps to a poor boy in Brighton, who wished to cover his walls with the portraits of her Majesty. When they should be covered the lad's education was to be paid for by a wealthy lunatic. Thousands of stamps were sent, and then cleaned and sold. The police broke it up.—*N. Y. Mail.*

—Pope Leo spends an hour or so every afternoon, says the *Independence Belge*, of Brussels, in preparing the material for a monumental history of the papacy. He has had a study fitted up adjoining the Vatican library for convenience of access to the archives—for the papal prison is vast and distances are great. The gigantic task will, of course, not be finished in the lifetime of Pope Leo; but even a mere fragment of it would be of the utmost value to the student of modern history, since it must in the main be based upon unpublished documents.

—A congress of philologists will assemble in Vienna to persuade the world to adopt a universal language. The scheme is by no means novel. In the thirteenth century a Toulousian monk named Roger worked very hard to convince his cotemporaries that it would be to the advantage of humanity if a tongue of his own invention was generally spoken. But his mongrel jargon was more wordy than French and nearly twice as diffuse as Greek, and, although the apostle of reform wrote several books in the new language, there is no record that anyone save himself ever knew exactly what they treated of.

—"I remember," said a Detroit boy to his Sunday-school teacher, "you told me always to stop and count fifty when angry, and I've done it." "Yes? Well, I'm glad to hear it. It cooled your anger, didn't it?" "You see, a boy came into our alley and made faces at me and dared me to fight. I was going for him. He was bigger'n me, and I'd have got pulverized. I remembered what you said and began to count." "And you didn't fight?" "No, ma'am. Just as I got to forty-two my big brother came along, and the way he licked that boy would have made your mouth water. I was going to count fifty and then run. —*Detroit Free Press.*

WEBSTER.

A Hitherto Unpublished Anecdote of the Great Expounder.

Here is an anecdote of Webster, told by the late Colonel Munford, who was at one time Secretary of the Virginia Commonwealth, and never published: Colonel Munford was in his office at the State House one day when a distinguished-looking man, accompanied by a young lady, came in, and asked if they could see the legislative chambers. Colonel Munford at once recognized, from portraits that he had seen, the face of Webster, and wishing to see as much of the great statesman as possible, offered to accompany him through the State House. The young lady seemed to be a relative of Webster, and was very bright and piquant in her conversation. There was a constant fire of clever repartee between the two, and when the party reached the Senate Chamber the young lady, turning to him, exclaimed: "Now, everybody says you are a great man and can make a speech without any preparation. I want you to prove it." As she said this she moved to the rostrum and took possession of the President's chair. "The House will please come to order. The gentleman from Massachusetts has the floor." "Webster," said Colonel Munford, relating the incident, "took, as if by instinct, the most favorable position in the room, so that his voice could best be heard, and for ten or fifteen minutes he spoke with an eloquence that I have never heard equalled."—*Boston Transcript.*

RAINBOW-HUED COFFINS.

A Singular Custom in the Down East State—Queer Colors.

While riding with a friend through a town in Lincoln County not long ago, we came upon a small shop curiously decorated with waves of paint of different colors. The front looked as though the occupant of the shop, whenever he wished to test a newly mixed color, dipped his brush into it and then wiped the brush on the outside of the building. In this way or some other he had produced a rude rainbow, the hues dissolving into each other where one brushful of paint encroached upon the margin of its predecessor.

"That is an undertaker's shop," said my friend, "and those are the colors in which he paints his coffins. He splashes those samples on the outside of the building in order that he may see how they look himself, and also that the friends of the departed may pick out the color they want."

"What!"

"Yes. Nearly all the people in this town who have died during the past ten years have been buried in colored coffins. Light blue is the favorite tint here for children, and orange the prevailing shade for old people. You see this is one of the most retired villages in the State and he is the only undertaker anywhere near here. The people have got used to his notions, and now they rather like the painted coffins. One old fellow got disgusted and took a solemn oath that this undertaker should never make a coffin for him. So he drove to Augusta, while he was yet in the land of the living, and had himself measured for a nice coffin. The coffin was made and he carried it home. He tried his best to induce his wife to have her coffin made, too. She said it was ridiculous—the idea of having your coffin made before you were dead! and plumply refused to be measured. This made the old man so mad that he threatened to sue for a divorce, and he and the old lady had many a jar after that, although they had previously lived in peace and content.

"The old man put his coffin in the barn and used it to keep his yellow-eyed beans in. In the course of time he died and was prepared for the grave. The yellow-eyed beans were turned out of the coffin, and an attempt was made to put the old gentleman into it. They found that his body had swollen so much that it could not be squeezed into the coffin. They had to patronize that undertaker, in spite of the enmity existing between him and the late lamented. They tried to get him to swap one of his coffins for the old gentleman's Augusta purchase, but this the undertaker positively refused to do, and insisted upon being paid cash down for the coffin.

"I think this is another good illustration of how the best laid plans of mice and men come to grief, and of the folly of thinking your head is bigger than your wife's."—*Lewiston (Me.) Journal.*

A GREAT POINT GAINED.

Why the French Dress Well—First Selecting a Pattern and Then Buying the Goods.

The French woman is acknowledged to have learned the secret of dressing well beyond all of other nationalities. Isolated cases, exceptions to the rule, prove the statement. Some American women are these isolated cases, not all. Foreigners say that Americans are among the most captivating, and often the best dressed women they meet, but this comes of conglomerate circumstances for which the women as a nation should take little credit. We are not yet the best dressed women in the world. But we are on the road to that distinction. We have learned the secret of being "*bien chasse, bien gante.*" That is one great point gained. Another rule we are learning slowly, to preserve the street costume plain, the carriage or visiting toilet elaborate, and all effulgence, so to speak, of costume for the ball or toilets of high ceremony. These rules are being adhered to more and more with us, but, withal, we need that appearance of the "fitness" of things that is never absent from the toilet of the French woman of fashion. And here is the secret, an open one to all. The American woman sees a material, is caught by its beauty, its colors, its heavy folds, its filmy lightness, any of its attributes that please the eye, and she buys it. Then she looks up the styles, hunts for patterns, consults the modiste and gets it made often without knowing for what occasion she will need it. The French woman is too wise for this. She has made the subject of dress too serious a matter of study. She notes and analyzes the different kinds of treatment given by artists to drapery on the female forms of their canvas. She studies her own height, shape, color, carriage and natural movements. She keeps a list of the probable and possible times and occasions which she thinks she will need preparation for, and when the time arrives for her to have a new costume made she has its general appearance and minor details all familiar to her mind, even to color and cost. Then, and not till then, she goes to the mart and selects the material that comes the nearest she can find or afford to realize the conception of the costume she wants. In other words, the American woman purchases her goods, then finds her pattern; the French woman selects her pattern, then buys her goods. Let some of our lady readers who have never tested this matter see if our idea is not correct. If this French plan were oftener followed there would be fewer magnificent and beautiful fabrics spoiled in the making, by no fault of the dressmaker. The incongruity in the effect of many of the most magnificent toilets is due to the fact that the "fitness of things has been lost sight of."—*Cleveland Leader.*

—Among the Persians, the first time a man is caught stealing he is bastinadoed and made to sign a paper to the effect that robbery has no more attraction for him. With the soles of his feet smarting from the bastinado he is usually willing to do this. At the moment the statement is often true. If he be caught a second time his hands are cut off, and if a third time he is decapitated.

THE ART OF CLOG-DANCING.

How It May be Taught to Men or Women—American vs. English Dancers.

The clog dance, which seems to have lost its popularity in New York, is still a favorite accomplishment in some parts of the country, while in England it is a standard attraction, the most popular of all the acts of the variety theatre programmes. The professors of the art in this country still make a good living through giving instructions in this branch of the saltatory art.

The roller skaters in perfecting themselves in their exercise are adding terpsichorean accomplishments to their saltatory skill on wheels. A roller expert who can not dance a jig on skates doesn't rank first-class now. To learn the steps he has to take lessons, and here is where the professor of the clogs comes in with his big charges. These pupils are male and female.

"There is no doubt," said a "professor," "that roller-skating is attracting general attention to the education of the lower extremities. More ladies, high in social circles, and children are learning to dance than ever before. Many of them learn fancy steps, such as jigs, clogs, hornpipes, etc. In teaching a lady to dance a clog-dance," the professor continued, "the very first thing is to teach her to roll her feet, as it is technically called. This is the key of the whole business, and when a dancer can do this successfully the remainder of the lesson is comparatively easy. Rolling one's foot is merely raising the hip, turning the foot in and striking the toe on the floor. The whole motion must be gone through with gracefully and without effort. As the right side of the body is generally more flexible than the left—simply because it has been used more freely—I generally begin rolling the left foot first, in order to counteract the usual tendency in favor of the right.

"The distinguishing characteristic of the clog-dance is the clear, bell-like tap of the toe or heel on the floor. The slightest shuffling ruins the effect, while in jig-dancing shuffling is the prime merit. In the jig the sand is relied on for what may be called the music, while in the clog the shoes make the melody. Jingles are inserted in a great many clogs, and what do you think they are made of?"

"Give it up."

"In many cases of the old-fashioned copper cent. A hole is cut in the heel of the clog, and a cent set in so that its broad side is flush with the surface of the heel. Then it is fastened through the middle with a screw, and is left to play loosely in the socket. Other devices are of course used to reach the same effect, but jingles and rattles have seen their day. There was a time when it was necessary to go to England to see the clog-dancing in its glory. The people over there take much more interest in such things than we do, and the judging between the comparative merits of two dancers is considered a very serious piece of business.

"The judges generally retire into the cellar, we may call it under the stage, there to remain until both dancers have separately gone through with a series of steps. They have no knowledge, of course, as to which dancer makes the first exhibition, and as the ringing of the clogs is even more distinct under than above the floor, the merits of the dance can be thus readily judged without a possibility of the judge seeing the dancers and allowing his decision to be biased by personal prejudice."

Here the Professor grew emphatic and tapped the writer on the chest with his fore-finger.

"But let the American dancer go on the English stage, among the English people in a concert hall, and it is dollars to cents that he will break down before he has danced ten minutes."

"Why?"

"Because they are much more thorough over there than we are. The artist who makes his appearance on a London variety stage must understand his business thoroughly. Supposing he is dancing a hornpipe, the chances are ten to one some voice in the audience will shout: 'Give us a reel!' or 'Give us a dead march!' and the orchestra will immediately desert the hornpipe and drop into a reel or a dead march without giving the dancer a moment's warning. Few of our men can stand that ordeal. They have a repertoire of some half a dozen dances and continue grinding out those dances, with variations, to the end of the chapter."—*N. Y. Star.*

"On Approval."

In Germany, says the *Academy*, it is the custom for booksellers to send to their customers parcels of new books "on approval," it being understood that the books not returned are accepted, and will be paid for. Relying upon this custom, a boookseller at Worms continued year after year to send books to a person living in the town. None of the books were returned and none were paid for. At last the bookseller sent in his bill, which the other party declined to pay, but offered to return the books. This did not suit the bookseller, for the publishers would no longer take the books back from him. Accordingly he brought his action for the price; but he has been defeated in the Court of First Instance, and also on appeal, on the ground, apparently, that there was no contract.

A New Iron-Clad.

It is proposed to construct a new iron-clad (the fourth) at Nicolaieff, Russia, destined for the defence of the Black Sea coasts. It is to be of steel and iron, the under portion being cased in wood. The center portion will be armored; for the defense of the engines and machinery a portion of the deck will be covered with armor-plates two inches thick. With engines of 8,000 horse-power indicated, the speed of this new iron-clad will reach, it is hoped, sixteen knots. The armament is to be 12-inch guns, firing *en barbette* from a couple of turrets on the upper deck. The estimated cost is 4,000,000 rubles, or in round numbers £400,000. The machinery, etc., will be furnished by the Baltic factory.—*N. Y. Post.*

TEMPERANCE READING.

THE DRINK PLAGUE.

Statistics Showing That the Cholera Epidemic Is Far Less to Be Dreaded Than the Rum Pestilence.

In a recent article in these columns on "Labor in Europe," based upon a volume of Consular reports, we spoke of the effects of intemperance on the condition of the laboring classes in the various countries as evidenced by the statements and statistics furnished by the Consuls. Since writing the article mentioned, an extract from the London *Times* has come to our notice which adds still more abundant and startling testimony on the point under consideration. The statements of the *Times* are based upon Parliamentary reports from her Majesty's Diplomatic and Consular officers on the special subject of the use of intoxicating liquors on the Continent of Europe. We quote a few of the more striking statements: "The consumption of spirits in North Germany is very great; and out of a yearly average of 4,450 suicides in Prussia for five years, 508 have been due to dipsomania and delirium tremens. The percentage of suicides among males due to alcohol was 13.40, whereas among females it only two. With regard to fatal accidents also, a large number of them were attributable to drunkenness. Similar statistics were furnished in connection with the lunatic asylums. Taking 3,106 cases yearly treated in the general hospitals for dipsomania, 690 cases of delirium tremens in the lunatic asylums, 597 private dipsomaniacs, 508 suicides and 311 drunkards accidentally killed, there is a total of 5,212 cases yearly of alcoholism in a fatal form. The Prussian States alone showed 1,921 men and 95 women treated yearly for delirium tremens. It appears that seven-tenths of those suffering from alcohol were in the prime of life—that is, between twenty and fifty years of age. In the kingdom of Prussia in 1882, the estimate expenditure on spirits alone was $65,000,000, while all the direct State taxes for the same period produced but $37,500,000. Taking the whole expenditure upon beer, wine and spirits, it amounted to $231,000,000, or more than double the amount realized by the Prussian exchequer for its taxes and stamp duties, etc."

In Belgium the showing is even worse. "The use of spirits increased 66 per cent. between 1851 and 1881, and of beer increased during the same period 15.75 per cent. The consumption of spirits, wine and beer for 1881 amounted in value to about $95,000,000. Although the country is so small it contained in 1880 no fewer than 125,000 places devoted to the sale of intoxicating liquors. There was a public house on the average for every twelve or thirteen grown-up males. The suicides rose from fifty-four per 1,000,000 inhabitants in 1848 to eighty in 1880. The lunatics advanced from 720 per 1,000,000 inhabitants in 1840 to 1,470 in 1881. The Inspector-General of Belgian Prisons reports that four-fifths of the crime and social misery during the last quarter of a century has been directly attributable to intemperance."

These statistics are only a part of those given summarizing the effects of intemperance in the different countries of Europe, but they are sufficient to indicate to some degree the extent of the ravages of the scourge of drink. If we put over against these facts and figures the statistics of such an epidemic as the cholera now raging in Spain, we shall see that the latter is far less to be dreaded than the plague of the rum traffic. One single day's number of deaths from cholera in all Spain was over six hundred, and the total deaths for a single week have reached some thousands. Startling as are these figures, they appear positively insignificant by the side of the number that yearly fall before the drink scourge. Cholera kills its victims quickly and does not convert them into murderous fiends or raving maniacs, or throw a burden of life-long disgrace and misery over the helpless and innocent. Should any epidemic cause one-half the sorrow and anguish of which the figures we have quoted give but the faintest indication, a cry of horror and alarm would go up such as never yet has been heard on the earth. What an awful visitation is this—this evil that dooms its victims to years of pain and torture, that destroys them piecemeal, until they become objects of loathing and disgust, that converts some into maniacs and imbeciles, and others into outcasts, beggars, thieves, murderers and criminals of every stamp and dye! This evil empties the homes, the churches and the workshops of the land and fills the jails, the poor-houses, the asylums and penitentiaries and brings to thousands of hearts a grief and a desolation to which mere bereavement by death is a joy in the comparison.

And this awful plague is devastating not Europe only but all parts of the civilized world. We can not quarantine against it, for it has been in our midst for many years slaying its thousands. It stalks like a specter of death up and down the streets of our towns and cities and claims for its own many of the best and noblest of the land. It haunts the purlieus of the towns, the alleys and byways, where squalor and misery, hunger and cold, crime and shame ever follow in its train. Thousands of men under the protection of the law are engaged in spreading the rum epidemic, carrying the infection into the homes and households of the land and drawing new victims daily into its power.

A cry of deliverance from this plague of plagues is going up from the hearts of the civilized world to-day. It is voiced in the appeals of the press, the pulpit, the platform, and more potently in the prayers of those who are suffering under its ruthless power. God grant that the day of deliverance may not be far away.—*N. Y. Observer.*

It is computed that the average life of Temperance people is sixty-three years and two months, while the average life of intemperate people is thirty-five years and six months, but little more than half that of a total abstainer. "Yet we are asked to believe that brandy, beer, etc., are promoters to health."

Human Vultures.

Among the wild tribes of the Soudan and Abyssinia, the most degraded and beastlike creatures in human form are the Base, who, we are assured by the English explorer, Mr. F. L. James, have no knowledge whatever of a God or religion. As an instance of their extreme animalism, Mr. James states that one day he shot a buffalo, and no sooner had the head been removed, and the body abandoned, than with yells and shouts the Base precipitated themselves upon the carcass, and no pack of jackals or hyenas ever left a cleaner skeleton. Entrails, and all parts that could not conveniently be transported, were devoured raw on the spot.

Among the curious customs of the Base is this: If any of their number steal anything from his neighbor, the offender, accompanied by a numerous contingent from among his people, is brought to a tree. In order to prove whether the accused person had really stolen anything or not, he is required to pull a piece of bark off the tree without the aid of anything except his own fingers.

If he succeed in doing this, he is acquitted and held innocent; but if not, he is condemned, as proved to be guilty, and punished accordingly. As the tree invariably selected for this purpose is furnished with very tough, closely growing bark, it is usually almost impossible to disengage it with the fingers alone; and the prisoner's sentence is g nerally a foregone conclusion.

Although there is very little doubt that the Base are without religion, they must, if the following custom told me be true, have some belief in a future state. When a Base man dies, his wife or other relations, place something he was fond of during his life—such as the fruit of the baobab-tree, tobacco, etc.—on his tomb.

Perhaps the wind, or some human agency, makes away with the offering; they then believe that the dead man has consumed it, and perhaps shared it with other spirits, inhabitants of neighboring tombs.

General Grant's Simple Habits.

The following anecdote of General Grant, hitherto unpublished, show his utter repugnance to anything like snobbishness or ostentation. Several years ago, shortly after he came to New York to live permanently, a certain noted artist desired to paint his portrait. Consent was given, and, the artist, who is particularly noted for his elegant deportment and aristocratic supply bearing, called at the house. The general met him with his usual blunt and open manner, and invited him into the parlor, where the first sitting was to be given. The artist removed his gloves, daintily perfumed, got the canvass ready, and placed the general in position. He then began work. There was a knock at the door.

"Come in," said Gen. Grant.
